REQ'D. BY SPANS — REQUIRED LIST (Remarks; Weight each Tons)

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞" Un. noted
OPEN HOLES: 15/16" Un. noted.
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in other material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly. Also see Note "A"
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except surfaces at lug Ls on bottom flange and surfaces between stiffeners and lug Ls on web not readily accessible for field sand-blasting, to be given one coat "Acid Resisting Liquid", after thoroughly cleaning and scraping such surfaces.

Shop note- Shop to put (2) shipping bolts in each bolted L (cab) and (cac) and draw same up tight. Erector to remove in field. Where stiffener L occurs opp. bolted Lug, that portion which is not shop riveted shall be thoroughly cleaned and scraped before assembling

Note "A":-
Holes marked "GRT" to be reamed or drilled full size thru a metal templet furnished by Chicago Wks.-McClintic-Marshall Corp.
Holes marked "CRT" to be reamed or drilled full size thru a metal templet furnished by Rankin Wks.-McClintic-Marshall Corp.

Shop note:-
Backs of end conn. Ls need not be milled. These Ls shall be set square and flush with milled edge after girder is milled.
Shop to paint all Erection Marks on left hand end of members as detailed and in an upright position.

Work this sheet with sheets G301, G303 Rev. A-4/8/34

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 7/8"φ Un. Noted.
OPEN HOLES: 15/16"φ " "
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in other material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. Also see note "A".
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except contact surfaces of parts bolted for shipt, surfaces between lug Ls on web and on bottom flange, not readily accessible for field sand blasting, to be given one coat "Acid Resisting Liquid" after thoroughly cleaning and scraping such surfaces. Bolted parts to be assembled after dry.

SECTION C-C - Same as sect C-C for FB16 on sheet G309 - except as shown at ends.

Note "A":-
Holes marked "GRT" to be reamed or drilled full size thru a metal templet furnished by Chicago Wks. McClintic-Marshall Corp. Holes marked "GRT" to be reamed or drilled full size thru a metal templet furnished by Rankin Wks.-McClintic-Marshall Corp.

Shop note:-
Backs of conn. Ls need not be milled. These Ls shall be square and flush with milled edge after girder is milled. Shop to paint all Erection Marks on left hand end of members as detailed and in an upright position.

Work this sheet with sheets G306, G309, G311, G312

MATERIAL: All structural steel to be copper bearing. Assembly welds for carbon steel prefaced with c, thus: cw, cb, etc., for silicon steel with s, thus: sw, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 7/8" ϕ unless noted
OPEN HOLES: 15/16" ϕ
PUNCHING: Holes in material 1/2" thick or less used for stringer laterals, stay plates, facing and diaphragms may be punched full size. Holes in other material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. AREE 1923 Note 9.
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/4" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except surfaces between stiffeners & end log ℄, or which may not be accessible for field sand blasting, shall be given one coat of Red Rosisting Lacquer after such surfaces have been thoroughly cleaned and scraped.

Sect. H-H

Shop Note- Shop to put shipping bolts in Holes (X) and draw same up tight. Erector to remove bolts in field. Contact surfaces of material where these bolts are used shall be thoroughly cleaned and scraped before assembly, but not painted.

Note "A"- Holes marked GRT to be reamed or drilled full size thru a metal templet furnished by Chicago Wks.-McClintic-Marshall Corp. Holes marked "CRT" to be reamed or drilled full size thru a metal templet furnished by Rankin Wks.- McClintic-Marshall Corp.

Note "B"- Holes for Shop rivets in Sects. A-A, B-B, C-C, D-D, & E-E, holes for field rivets in 24 BI 74, Ls (cp)R/L & (cs)R/L, holes in bolted fills, & holes for shop rivets in Ls (can) & (cap) may be punched full size.

Camber diagram same as shown on sheet G309.

Shop note:-
Backs of end conn. Ls. need not be milled. These Ls shall be square and flush with milled edge after girder is milled.
Shop to paint all Erection Marks on left hand end of members as detailed and in an upright position.

Work this sheet with sheets G306, G309, G310, G311, G312.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 7/8" Un. noted
OPEN HOLES: 15/16" " "
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in other material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. Also see note "A" & "B"
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING. All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except contact surfaces of parts bolted for shipt. or surfaces between stiffener and lug Ls in web, not readily accessible for field sand blasting, shall be given one coat of "Acid Resisting Liquid" after such surfaces have been thoroughly cleaned and scraped. Bolted parts to be bolted after painting dry and bolts pulled up tight.

Notes For Span E11 & E22 incl.

Certain holes in top chords at U2 and U6 and in connecting lugs on truss verticals at these points are to be left open for field riveting by others after erection of electric light poles.

For details of truss members at these points see shts. # G1-G3 & G15.

Field rivets for fastening of electric light poles to be furnished by others.

No.	Description	Mark	Remarks	Weight each Tons

REQUIRED LIST

Superstructure fabricated and erected by Mc Clintic Marshall Corporation Year 1934

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION:
RIVETS:
OPEN HOLES:
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

GENERAL NOTES COVERING ERECTION OF TANGENT SPANS 11 to 22 INCL.
THESE NOTES TO BE USED IN CONJUNCTION WITH "ERECTION PROGRAM FOR SUPERSTRUCTURE" DATED JUNE 1934.

(1) Erection marks are painted in shop on same ends of members as they appear on erection plan and in upright position. Members must be erected with marks in these positions. Where marks appear at middle of member on erection plan, the member may be turned end for end.

(2) Matchmarking:-
Top and bottom chord members and end posts for each span have been assembled in shop and span number added (For matchmarking purposes) as suffix to erection mark. Thus (U1-U3) A11; (U1-U3) B11 etc. Erect accordingly. Span mark is also included in erection mark for all other members where member is not the same for all spans. Where span mark is not included in erection mark, member may be used for any span where mark on erection plan does not have span number as suffix. All members for north trusses are marked with suffix A as (U0-U1)A etc. All members for south trusses are marked with suffix B as (U0-U1)B etc.

(3) Before erecting steel, erector to remove all temporary bolts placed by shop for purpose of excluding extraneous material during shipment and sandblasting. Holes in which these bolts occur are designated on detail drawings as "Holes ⊗".

(4) Erector to provide short guns for numerous conditions of close driving.

(5) Erector to pay particular attention to erectors field rivet lists to insure that tapered rivets, round head bolts, flat head bolts, tap bolts, square and hex head bolts, coupling bolts and round and beveled washers are used as required. Washers are to be used for all slotted hole connections and are to be placed on outside of slots. If slots occur on two exposed surfaces of the same connection, washers are to be used on both surfaces. In placing bolts care should be taken that heads are on exposed sides.

(6) Wherever shop shims have been provided for adjustment, normal shims have been provided and shims bolted for shipment. One $\frac{1}{8}$" field shim and one $\frac{1}{16}$" field shim has also been provided at these points in case further adjustment is required.

(7) See sheet GE8 for typical cross section through spans

(8) Erector to take precautions that chords of adjacent spans are aligned laterally in order that closing plates on chords and walks may fit properly and not bind.

(9) At bent E11 drive rivets connecting Exp Dam ED1 to walks C13 & C14 before erecting grating at upper deck.

(10) Layouts:-
One print each of the following layouts have been furnished Erector for his reference.
(a) Trusses - Sheets GL4 to GL8 incl - Top chords
(b) Traction bracing - Sheets GL20 & GL21
(c) Upper and Lower deck roadway joints - Sheets GL22 to 25 & GL35
(d) Trusses - Sheets GL26 to GL31 incl - Bottom chords
(e) Worksheet - GL33
(f) Erection scheme - GL34
(g) Skid girder connections to Trusses - Sheets GL38 to 41 incl
(h) Upper deck layouts - Sheets GL37, GL42 to 45 incl, GL48 & GL49
(k) Upper & Lower deck data - GL52 AE, BE, CE, DE GL58 & GL59
(m) Drainage details - Sheets GL67 AB, BB.
(n) Skid girder connections to Trusses - GL72, 73 & 74
(p) North lower walk details - GL75, 76, 77 & 79
(s) South lower walk details - GL81, 82 & 83
(t) Ladder layouts - GL84, 85 86 & 87
(v) Stringer erection GL92
(w) Ladders at E Sheets GL100 AB & BB

(11) Trusses -
(a) Before erecting top chord sections U7-U8 for spans 11 to 21 inclusive Erector to remove short stub ends (provided for closing purposes and shipped bolted to chords) and matchmark same. After spans are swung and erection tie removed replace stubs, adjust for neat closing appearance and ream out sub-punched holes provided for adjustment.
(b) Before erecting top chord sections U7-U8 for span 22 Erector to remove permanent bolted plates and angles at U8 and replace and rebolt after span is swung.
(c) After spans are swung and temporary erection devices (such as erection ties, temporary erection struts, temporary erection shoes and straining devices) removed Erector to drive up holes for same.
(d) Leave open holes in cover plates on top chord at U2 & U6 for lamp post connection.

(11) Trusses:- continued.
(e) … not rivet up top and bottom chords until it is understood … ch holes are to be left open for ladder connections
(f) … sing plates on west end of top chords (U0-U1) A and (U0-U1) B11 at bent E11 must be removed in order to erect chords U7-U8 of span 10. Do not rivet until span 10 is in place.

(12) Upper and Lower deck floor beams.
(a) Leave open holes in bottom flg. of upper deck floor beams for light connections.
(b) For method of erecting bottom laterals see sketch V on sheet ER5.
(c) Due to camber in floor beams it may be necessary to place load on same in order to make the connection between floor beams and trusses, and between floor beams and brkt. on vertical below upper deck floor beams. Loading of Fl. Bms. to be carried out in such a manner as not to add to critical stresses.

(13) Sequence of erection - Upper deck
(a) Walks must be erected before expansion dams and expansion dams before construction angles.
(b) Upper deck walks to be erected from east to west except that for adjacent walk sections at bents E12 to E16 incl; the west section is to be erected before the east section. Also at bents E12 to E16 incl. adjust adjacent walk sections for elevation so that at bare steel load the east walk is $\frac{1}{16}$" lower than west walk. Then under full dead load walks will be flush with $\frac{1}{8}$" clearance in slip joint both laterally and vert.
(c) Adjacent sections of upper deck walks at piers E17 to E23 incl. to be adjusted so that tops and curbs are flush and so that there is $\frac{1}{8}$" clearance laterally and vertically in slip joint.
(d) Do not erect upper walk sections at U0 - span 11 until adjacent sections at U8 - span 10 have been erected.
(e) Upper walk sections at pier E23 must be erected before adjacent walk sections on mole.

(14) Sequence of erection - Lower deck.
(a) Walks must be erected before expansion dams.
(b) Do not erect lower walk sections at L0 - span 11 until adjacent sections at L8 - span 10 have been erected.

(15) Expansion dam adjustment.
(a) The east half of upper and lower deck expansion dams at bents E12 to E16 should be set about $\frac{1}{16}$" lower than west half under bare steel load, in order to close properly under full dead load.

(16) Adjustment at expansion joint at U4:-
(a) Adjust construction angles at U4 for elevation.
(b) Adjust curb connection to joists near U4 for elevation.

(17) Upper and lower deck stringers:-
(a) See layout sheet GL92 for erection of stringers.
(b) Use shims M33 & M34 for stringer ties M18 to floor beams.

(18) Traction Bracing:-
For connection of D7 to D19 use one $\frac{7}{8}$"ϕ hex hd. bolt and one washer - W4 in hole nearest stringer.

(19) North lower walk:-
(a) In order to erect north lower walk it must be raised approximately 3" vertically to clear adjacent stringer.
(b) Curb angles on walk to be field riveted to floor beams at L0 - west end of each span with $\frac{7}{8}$"ϕ rivets and field bolted to floor bms. at L8 - east end of each span with $\frac{7}{8}$"ϕ bolts - hex hd. At intermediate floor bms, curb angle is bolted to floor beam on west side of panel point - $\frac{7}{8}$"ϕ bolt hex hd. and riveted to floor bm on east side of panel point, except at panel point L4 where it is riveted both sides.
(c) Vertical hand rail post angles to be field bolted to floor bms at all points with $\frac{7}{8}$"ϕ hex hd. bolts.
(d) Channel at top of railing to be field bolted to truss verticals with $\frac{3}{4}$"ϕ hex hd. bolts and to angle on web of truss diagonals with $\frac{3}{4}$"ϕ hex hd. bolts without nuts, the nuts being shop welded to angle on diagonal. For connection of channel to small lugs on truss diagonals use $\frac{3}{4}$"ϕ round head bolts. For special conditions at L4 expansion joint - See layout GL52 DE.
(e) In order to line up adjacent walks vertically at ends of adjoining spans, shop adjusting shims bolted to walks have been provided at L0 of spans 12 to 22 inclusive. One $\frac{1}{8}$" field shims (M19 - M21) and one $\frac{1}{16}$" field shims (M20 - M22) has been provided in case further adjustment is required.

(20) South lower walks.
(a) Curb angles, diaphragms and posts on walk riveted to floor beam at L0 - west end of each span with $\frac{7}{8}$"ϕ rivets, and field bolted to floor beams at L8 - east end of each span with $\frac{7}{8}$"ϕ hex hd. bolts. At intermediate floor beams, curb angle is bolted to floor beam on west side of panel point with $\frac{7}{8}$"ϕ hex hd. bolts and riveted on east side with $\frac{7}{8}$"ϕ rivets. Diaphragms and posts

(20) South lower walks - continued.
riveted to intermediate floor beams. At panel point L4 - (exp joint) - walk is riveted to floor bm both sides of panel point.
(b) In order to line up adjacent walks vertically at ends of adjoining spans, shop adjusting shims bolted to walks have been provided at L0 of spans 12 to 22 inclusive. One $\frac{1}{8}$" field shim (M21 - M23 - M29) and one $\frac{1}{16}$" field shim (M22 - M24 - M30) has been provided also in case further adjustment is required.
(c) In order to line up channel at top of walk adjusting shims have been provided at bottom of posts between flgs of post and lug connecting post to floor beam. One $\frac{1}{8}$" field shim (M25 at L4 - M27 - M31 - M37) and one $\frac{1}{16}$" field shim (M26 at L4 - M28 - M32 - M38) has been provided. Also at center of each panel where channels have been provided for supporting walk post, adjusting shims have been provided between lugs on channels and posts on walk. One $\frac{1}{8}$" field shim (M40) and one $\frac{1}{16}$" field shim (M41) has been provided.

(21) Skid Girders:-
(a) Closing plates have been provided on skid girders at bents E12 to E22 incl. In order to provide horizontal and vertical adjustment for lining up skids at these points, holes in brackets on verticals L0-U0 have been sub-punched $\frac{11}{16}$"ϕ in shop and vertical slots provided in flanges of L0-U0. Erector to line up skid girders and ream holes in brackets to $\frac{15}{16}$"ϕ. Erector to take special care to properly align railing angle on skid girder.
(b) Countersunk field rivets thru face of skid girders need not be chipped in field but must not be more than $\frac{1}{8}$" high.

(22) Lower deck expansion dams:-
(a) At bents E12 to E16 no adjusting shims provided for west half of expansion dams. Normal shims shipped bolted, to east half. Set west half first and adjust east half to suit. One $\frac{1}{8}$" field shim (M35) and one $\frac{1}{16}$" field shim (M36) provided at each floor beam bracket in case further adjustment is necessary.
(b) At piers E17 to E22 normal shims shipped bolted to both east and west sections of dam. One $\frac{1}{8}$" field shim (M35) and one $\frac{1}{16}$" field shim (M36) provided at each floor beam bracket.
(c) At E23 - Both sections of expansion dam E12 have been shipped fastened together with cap screws, and normal shims shipped bolted to east half. One $\frac{1}{8}$" field shim (M35) and one $\frac{1}{16}$" field shim (M36) provided at each floor beam bracket. After E12 is set to proper elevation and concrete on abutment poured cap screws are to be removed. See (15) this sheet.

(23) Upper deck walks:-
(a) Upper deck walks field bolted to lugs riveted to top chords of trusses; $\frac{13}{16}$"ϕ holes in truss lug and $\frac{13}{16}$" x $1\frac{1}{2}$" slots in walk angle. In order to line up adjacent walks on adjoining spans at bents E12 to E22 the first lug on the east side of each bent is shipped bolted to truss with $\frac{1}{8}$" shim between lug and chord. One $\frac{1}{8}$" field shim (M2) and one $\frac{1}{16}$" field shim (M3) has been provided in case further adjustment is required.
(b) Curb angles and walkway brackets on upper deck walk field bolted to floor beam at all points with $\frac{7}{8}$"ϕ sq. hd. bolts; $\frac{15}{16}$"ϕ holes in floor bm; $\frac{15}{16}$" x $1\frac{3}{16}$" slots in curb angles and $\frac{15}{16}$" x $1\frac{1}{2}$" slots in brackets connecting to floor beam. No vertical adjustment at bent E11. At bents E12 to E22 incl. in order to line up adjacent walks on adjoining spans - shims have been provided bolted to walk between walk and floor bm. at U0 on each span. One $\frac{1}{8}$" field shim (M4) and one $\frac{1}{16}$" field shim (M5) between curb angle and floor beam, and one $\frac{1}{8}$" field shim (M6) and one $\frac{1}{16}$" field shim (M7) between walk brackets and floor bm. has also been provided. At mole girder furnished by San Francisco Works east of pier E23, curb angles and walkway bracket to be riveted to girder.
(c) At expansion joint at U4, curb angle connected to joist with $\frac{3}{4}$"ϕ rivets. In order to provide vertical adjustment between adjacent sections of walks at expansion joint, shims have been provided bolted to curb angle. One $\frac{1}{8}$" field shim (M8) and one $\frac{1}{16}$" field shim (M9) has also been provided.

(24) Upper deck expansion dams:-
(a) At bents E12 to E16 no adjusting shims provided for west half of expansion dams. Normal shims shipped bolted to east half. Set west half first and adjust east half to suit. One $\frac{1}{8}$" field shim (M10) and one $\frac{1}{16}$" field shim (M11) provided at each floor beam bracket. See (15) this sheet.
(b) At piers E17 to E22 normal shims shipped bolted to both east and west sections of dam. One $\frac{1}{8}$" field shim (M10) and one $\frac{1}{16}$" field shim (M11) provided at each floor bm. bracket.
(c) At E23 expansion dam cannot be erected until short stringers to east of E23 are in place.

(25) Construction angles:-
(a) Construction angles to be erected after expansion dams are in place.
(b) In order to line up construction angles where same conn.

(25) Construction angles - continued.
to expansion dams and at expansion joints; shop and field shims have been provided as follows.
(1) Shop shims bolted to construction angles where same conn to floor beam at U0 - spans 12 to 22 incl. and U8 - spans 16 to 21 inc. One $\frac{1}{8}$" field shim (M12) and one $\frac{1}{16}$" field shim (M13) provided at each point in case further adjustment is required.
(2) Shop shims bolted to construction angles where same conn. to floor beams at U0 - span 11; at U4 spans 11 to 22 incl. and at U8 - spans 11 to 15 incl. and 22. One $\frac{1}{8}$" field shim (M14) and one $\frac{1}{16}$" field shim (M15) provided at each point in case further adjustment is required.
(3) Shop shims bolted to construction angle where same connect where same connect to expansion dams at panel point U0 - spans 12 to 22 incl. and at panel point U8 - spans 16 to 21 incl. One $\frac{1}{8}$" field shim (M16) and one $\frac{1}{16}$" field shim (M17) provided at each point in case further adjustment is required.

(26) Ladders and ladder platforms:-
(a) All ladder connections to be field riveted except ladder splices which are to be bolted.
(b) All ladder platform connections to be field riveted except slotted hole connections which are to be field bolted.
(c) For complete sketches showing relation of ladder and ladder platforms to trusses - see ladder layouts GL84 to GL87 incl. and GL100 AB & BB.

(27) Drainage:-
(a) Erector to assemble roadway drain boxes DC1 and asbestos gasket DC2 to upper and lower deck walks on ground before walks are erected.
(b) For drainage layouts see sheet GL67 AB & BB.

(28) Pipe railing:-
(a) Railing posts bolted to walks with $\frac{3}{4}$"ϕ round head bolts; to skid girder with $\frac{3}{4}$"ϕ hex head bolts; to ladder platforms with $\frac{5}{8}$"ϕ hex head bolts; and to truss verticals with $\frac{5}{8}$"ϕ round head bolts.
(b) All field joints in railing for upper and lower walks to be slip joints and need not be welded in field.

(29) Threads on all field bolts to be burred at face of nuts after the latter are drawn up tight.

(30) During erection, the top bottom lateral plate at shoes; At L0 + L8 is to be made effective by blocking between the chord and shoes.

(31) After Span E21 has been erected complete and shoes at pier E23 are in their correct position, slotted holes for anchor bolts in shoes at pier E23 to be welded up solid before anchor bolt nuts are permanently tightened.

NOTES ON BOLTING AND RIVETING.

All field connections to be riveted except as noted below.

(1) Coupling bolts:-
(a) Use coupling bolts CB3-5 & 6 for connecting shoes to steel bent at east side of bent E11.
(b) Use coupling bolts CB5 for connecting shoes to shoe castings at concrete piers E18 to E22 incl.
(c) Use coupling bolts CB7 & CB8 for connecting shoes to steel bents E12 to E16 incl.
(d) Use coupling bolts CB9 in two end holes of bottom flg. of lower deck floor beams at points L0 - spans 11 to 22 inclusive; where floor bm. connects to lateral plate and 6x6x½ L.

(2) Flat head bolts:-
(a) Use flat head bolts MB2 for connecting drain castings to upper and lower walks.
(b) Use flat head bolts MB3 for connecting skid girders to truss verticals.
(c) Use flat head bolts MB4 & MB5 for connecting upper and lower deck walks.

(3) Tap bolts:-
(a) Use tap bolts MB6 for connecting drain castings to upper and lower deck walks.
(b) Use tap bolts MB7 for connecting leader pipes to drain castings.

(4) Round head bolts:-
(a) Use round head bolts MB8 for connecting ladder platform Railing GR3 & GR7 to truss verticals L8-U8 at bents E12 to E23 incl.
(b) Use round head bolts MB10 -
(1) For connecting upper deck walks to top chord of trusses.
(2) For connecting skid girders to truss verticals.
(3) For conn. ladder platforms to skid girders and north lower walks.
(4) For connecting ladders at splices.
(5) For conn. lower north walk to truss diagonals.
(6) For conn. angle rail on skid girder at splices.
(7) For conn. lower south walks at splices.
(c) Use round head bolts MB11 -
(1) For conn. upper deck walks to top chord of trusses.
(2) For conn. hand rail to lower deck walks.
(3) For conn. skid girders to truss verticals.

(4) Round head bolts - continued.
(4) For conn. ladders to platforms furnished by Steelton.
(5) For conn. lower south walk at splices.
(d) Use round head bolts MB12 -
(1) For conn. lower walks at splices.
(2) For conn. hand rail to lower deck walk.
(3) For conn. skid girders to truss verticals.
(e) Use round head bolts MB13
(1) For conn. lower walks at splices
(2) For conn. hand rail to lower deck walk.
(f) Use round head bolts MB14 for conn. skid girders to truss verticals.
(g) Use round head bolts MB15 & MB16 for conn hand rail to lower deck walk.

(5) Use $\frac{7}{8}$"ϕ sq. head bolts in all slotted holes connecting upper deck walks to floor beams.
Use $\frac{7}{8}$"ϕ hex head bolts in all slotted holes connecting lower deck walks to floor beams.
Use one $\frac{7}{8}$"ϕ hex head bolt for connecting traction brace D1 to D19 - See sheet G201 for location of bolt hole.

(6) Use one $\frac{3}{4}$"ϕ sq. head bolt - in upper deck curb plate splice - see sheet G250 AE to EE incl. for location.
Use $\frac{3}{4}$"ϕ hex head bolts in lower deck curb plate splices where called for on details - see sheets G258 AH to HH & 259 AG to GG.
Use $\frac{3}{4}$"ϕ hex head bolts for connecting north lower walk to truss verticals.
Use $\frac{3}{4}$"ϕ hex head bolts with no nuts for connecting lower north walk to truss diagonals - see sheet 258 AH to HH for location - nuts welded to diagonals.
Use $\frac{3}{4}$"ϕ hex head bolts for connecting hand rail to skid girder.
Use $\frac{3}{4}$"ϕ hex head bolts for connecting lugs on end posts to skid girders.
Use one $\frac{3}{4}$"ϕ hex head bolt for curb splice in lower south walk.
Use $\frac{5}{8}$"ϕ hex head bolts for connecting hand rail to ladder platform.
Use $\frac{5}{8}$"ϕ sq. head bolts for connecting drain castings to upper walks - see sheet 250 AE, and to lower walks - see sheet 258 BH & 259 AG.
Use $\frac{5}{8}$"ϕ hex head bolts for connecting expansion dam to lower south walk at L8

(7) Beveled washers:-
(a) Use beveled washers W2 for $\frac{5}{8}$"ϕ bolts in channel flanges.
(b) Use beveled washers W3 for $\frac{3}{4}$"ϕ bolts in channel flanges
(c) Use beveled washers W4 for $\frac{7}{8}$"ϕ bolts in channel flanges.

(8) Round washers:-
(a) Use plain washers W5 - for all $\frac{3}{4}$"ϕ bolts in slotted hole connections.
(b) Use two plain washers W5 for $\frac{3}{4}$"ϕ bolts connecting skid girders to L0-U0 where holes are slotted in both skid girder angles and in posts.
(c) Use plain washers W6 for all $\frac{7}{8}$"ϕ bolts in slotted hole connections.
(d) Use plain washers W7 - for $\frac{3}{4}$"ϕ bolts connecting north lower walk to truss diagonals where nuts for bolts are shop welded to truss diagonals.

ERECTION DEVICES

(1) For details of erection tie plates and erection struts and spans on which same are used - see sheet #1 Contract HG209.
(2) For details of horizontal beams and adjustment devices at E11 - see sheet #2 Contract HG209.
(3) All bolts for fastening erection devices to permanent steel to be furnished by erection department.

ERECTION NOTES:-
At the eight points in upper deck walks, where noted on plans for spans E9 & E10, certain walk plates are to be left loose and certain holes to be left open in top flanges of floor beams, for erection and connection of electric light poles.
Electric light poles are to be furnished by others.
All work connected with removal of floor plates, field drilling, erection of light poles, replacing of floor plates, all riveting & bolting and all painting required to complete work to be done by others.
All connections to be field riveted except where holes are slotted in which latter case flat head bolts are to be used.
All rivets and bolts required to fasten floor plates to be furnished by McClintic Marshall. All rivets required to fasten electric light poles in place to be furnished by others.
McClintic Marshall Erection Dept. will turn over to others the following which are to be taken from quantities shipped on shts.# G2076 & G2196:
150 ⅞ in Rivets ⅞"ø x 1⅜" - 552 3/8 Rivets ⅞"ø x 1⅜" - 20 FH Bolts ⅞"ø x 2½ " M185
20 FH Bolts ⅞"ø x 2½" M189 - 40 Washers 2⅜"ø x ⅛" - ⅞"ø hole " W5
Refer to detail shts. noted on plans and to typical layout sht.# GL280
McClintic Marshall Erection Dept. will turn over to others one print each of shts.# G2196J, G2196K & G2196L which are location lists of field rivets and bolts to be placed by others.
ERECTOR'S NOTE
Drainage leader to be leaded into C.I. Drain Pipe in field.

GENERAL NOTES COVERING ERECTION OF SPANS 9 & 10

THESE NOTES TO BE USED IN CONJUNCTION WITH "ERECTION PROGRAM FOR SUPERSTRUCTURE" DATED JUNE 1934

(1) Erection marks are painted in shop on same ends of members as they appear on erection plan and in upright position. Members must be erected with marks in these positions. Where marks appear at middle of member on erection plan, the member may be turned end for end.

(2) Matchmarking.
Some members for each span have been assembled and reamed in shop and span number added (For matchmarking purposes) as suffix to erection mark, Thus (U1-U3)A10, (U1-U3)B10 etc. Erect accordingly. Span mark is also included in erection mark for all other members where member is not the same for both spans. Where span mark is not included in erection mark, member may be used for either span where mark on erection plan does not have span number as suffix. All members for north trusses are marked with suffix A as (U0-U1)A etc. All members for south trusses are marked with suffix B as (U0-U1)B etc.

(3) Before erecting steel, erector to remove all temporary bolts placed by shop for purpose of excluding extraneous material during shipment and sandblasting. Holes in which these bolts occur are designated on detail drawings as "Holes ⊗".

(4) Erector to provide short guns for numerous conditions of close driving.

(5) Erector to pay particular attention to erectors field rivet lists to insure that tapered rivets, round head bolts, flat head bolts, tap bolts, square and hex head bolts, coupling bolts and round and beveled washers are used as required. Washers are to be used for all slotted hole connections and are to be placed on outside of slots. If slots occur on two exposed surfaces of the same connection, washers are to be used on both surfaces. In placing bolts care should be taken that heads are on exposed sides.

(6) Wherever shop shims have been provided for adjustment, normal shims have been provided and shims bolted for shipment. One $\frac{1}{8}$" field shim and one $\frac{1}{16}$" field shim has also been provided at these points in case further adjustment is required.

(7) Erector to take precautions that chords of adjacent spans are aligned laterally in order that closing plates on chords and walks may fit properly and not bind.

(8) Layouts:-
One print each of the following layouts have been furnished Erector for his reference.
- (a) General layout of spans GL
- (b) Trusses - Sheets GL125 to GL132 incl. and GL150 to GL162 incl.
- (c) Control Dimensions - GL201 to GL205 incl.
- (d) Expansion Joints and Drainage - Bent E11 - Sheets GL206, GL207A, GL207B, GL208, GL209A, GL209B, GL210 & GL211
- (e) Traction Bracing - GL212 to GL214 incl.
- (f) Ladders and Platforms - Bents E9 & E10 - Sheets GL215, GL216, GL217, GL218 & GL218A
- (g) Layouts for Walks, Skid Girders, and Truss Closing Plates at Top Chords - Sheets GL219 to GL229 incl., GL234 - GL235 - GL235A - GL236 - GL242 - GL243 - GL246 to 250 incl., GL257 - GL258 - GL97 - GL98 & GL99.
- (h) Drainage (except at Bent E11) Sheets GL244 & GL245
- (k) Typical Light Pole Connection - Sheet GL280

(9) Trusses
(a) When erecting top chords (U7-U8) span E9 and top chord (U0-U1) span E10 closing plates between top chords of the two spans, where shop bolted, shall be removed and matchmarked. These closing plates shall be replaced after span E9 is swung.
(b) Drive rivets in holes provided in top flanges of top chords for connection of traveller stops after stops have been removed.
(c) After spans are swung and temporary erection struts & shoes removed, Erector to drive up holes for same.
(d) Do not rivet up top and bottom chords until it is understood which holes are to be left open for ladder connections.

(10) Upper and Lower deck floor beams
(a) Leave open holes in bottom flg of upper deck floor beams for light connections.
(b) For method of erecting bottom laterals see sketch Y on sheet ER5
(c) Due to camber in floor beams it may be necessary to place load on same in order to make the connection between floor beams and trusses, and between floor beams and brkt. on vertical below upper deck floor beams. Loading of floor beams to be carried out in such a manner as not to add to critical stresses.

(11) Sequence of erection - Upper deck
(a) Walks must be erected before expansion dams and expansion dams before construction angles.
(b) Upper deck walks to be erected from east to west except that walks at U8 span 10 are to be erected before adjacent walks at U0 span 11.

(12) Sequence of erection - Lower deck
(a) Walks must be erected before expansion dams.
(b) Erect walks from east to west except that walks at L8 span 10 are to be erected before adjacent walks at L0 span 11.

(13) Adjustment at expansion joint at U4:-
(a) Adjust construction angles at U4 for elevation.
(b) Adjust curb connection to joists near U4 for elevation

(14) Shop adjusting shims bolted to top flgs. of lower deck floor beams at Bent E10. One $\frac{1}{8}$ field shim M120 & one $\frac{1}{16}$" field shim M121 has been provided at each point in case further adjustment is required.

(15) Traction Bracing:-
For connection of D23 to D22 use one $\frac{7}{8}$"φ hex. hd. bolt and one washer - W4 in hole nearest stringer.

(16) North lower walk:-
(a) In order to erect some North lower walks they must be raised approximately 3" vertically to clear adjacent stringer
(b) For riveted and bolted connections see Erector's field rivet lists and details of walks sheets G261 AI to 261 II incl., G262 and G263AE to G263EE incl.
(c) In order to line up adjacent walks at Bent E10, shop adjusting shims bolted to walks have been provided at L0 of span #10. One $\frac{1}{8}$ field shim M88 and M150 and one $\frac{1}{16}$" field shim M89 and M151 has been provided in case further adjustment is required.
(d) In order to line up adjacent walks at Bent E11, shop adjusting shims bolted to walks have been provided at L8 of span #10. One $\frac{1}{8}$" field shim M102, M104, M110, M128, M134 & M136 and one $\frac{1}{16}$" field shim M103, M105, M111, M129, M135 & M137 has been provided in case further adjustment is necessary.
(e) Shop adjusting shims bolted to C66 - North lower walk at Bent E11 have been provided. One $\frac{1}{8}$ field shim M114 and one $\frac{1}{16}$ field shim M115 has been provided in case further adjustment is necessary.

(17) South lower walks:-
(a) For riveted and bolted connections see Erector's field rivet lists and details of walks shts. G265AJ to 265JJ
(b) In order to line up adjacent walks at Bent E11 - shop adjusting shims bolted to walks have been provided at L8 of span #10. One $\frac{1}{8}$" field shim M100, M104, M110, M126, M138 & M140 and one $\frac{1}{16}$" field shim M101, M105, M111, M127, M139 & M141 has been provided in case further adjustment is necessary.
(c) In order to line up adjacent walks at Bent E10 - shop adjusting shims bolted to walks have been provided at L0 of span #10. One $\frac{1}{8}$" field shim M106, M110, M126 & M140 and one $\frac{1}{16}$" field shim M107, M111, M127 & M141 has been provided in case further adjustment is necessary.
(d) Shop adjusting shims bolted to walk posts at bottom lugs have been provided at all posts. One $\frac{1}{8}$" field shim M124 and one $\frac{1}{16}$" field shim M125 has been provided at L0 of span #9 and L4 of spans 9 & 10. At all other posts one $\frac{1}{8}$" field shim M122 or M126 and one $\frac{1}{16}$" field shim M123 or M127 has been provided in case further adjustment is necessary.

(18) Skid Girders:-
(a) In order to line up skid girders at Bent E11 - shop adjusting shims bolted to supporting post have been provided at L8 span #10. One $\frac{1}{8}$" field shim M108 and one $\frac{1}{16}$" field shim M109 has been provided in case further adjustment is necessary.
(b) In order to line up skid girders at bent E10 - where skid girder SG48 connects to flange of vertical (L0-U0)B10, holes connecting skid girder to flange of vertical have been subpunched $\frac{9}{16}$"φ in shop. Erector to line up girders and ream to $\frac{15}{16}$"φ. Connecting holes in web of vertical L0-U0B10 have been subpunched $\frac{11}{16}$"φ in shop. Erector to ream to $1\frac{1}{16}$"φ after girders are aligned. Erector to refer to Note "A" on layout GL246 covering skid girder connections at E10. Erector to take special care to properly align railing angle on skid girder.
(c) Countersunk field rivets thru face of skid girders need not be chipped in field, but must not be more than $\frac{1}{8}$" high.

(18) Skid Girders - continued.
(d) Expansion joint in skid girders at Bent E11 cannot be made until at least a portion of the slab loads are applied on spans E11 to E16 inclusive. Care should be taken, if skid girders at this point are erected in advance of application of sufficient slab load, that skid girders do not jam and become damaged.
(e) Skid girders to be erected from east to west.

(19) Lower deck expansion dams:-
At Bent E10, normal shims have been shipped bolted to east and west sections of dam. One $\frac{1}{8}$ field shim M90, and one $\frac{1}{16}$ field shim M91 has been provided at each support in case further adjustment is required.

(20) Upper deck walks:-
(a) Upper deck walks field bolted to lugs riveted on web and bottom flange angles of top chords of trusses, $\frac{13}{16}$"φ x $1\frac{1}{2}$ slots in truss lugs, and $\frac{13}{16}$"φ holes in lugs on walks. Wherever the connecting legs of the lug angles are horizontal; the walkway lug rests on top of the outstanding leg of clip angle on truss.
(b) For adjusting C96 and C112 at Bent E11, shop adjusting shims have been provided, bolted to top chord members (U7-U8)A10 and (U7-U8)B10, between chord angles and walk lug bolted to chord angles. One $\frac{1}{8}$" field shim M80 & M112 and one $\frac{1}{16}$" field shim M81 and M113 has been provided in case further adjustment is necessary.
(c) For adjusting C96 and C112 at Bent E11 at floor beam and expansion grating support M63, shop adjusting shims have been provided, bolted to walk. One $\frac{1}{8}$" field shim M98, M130, M132 & M144 and one $\frac{1}{16}$" field shim M99, M131, M133 and M145 has been provided for each walk in case further adjustment is required.
(d) For adjusting C103 at Bent E10, shop adjusting shims have been provided bolted to walkway lugs on web of (U0-U1)A10. Two $\frac{1}{8}$" field shims M82 and two $\frac{1}{16}$" field shims M83 have been provided in case further adjustment is required.
(e) For adjusting C119 at Bent E10 - shop adjusting shims have been provided bolted to top chord member (U0-U1)B10, between chord angle and walk lug bolted to chord angle. One $\frac{1}{8}$" field shim M112 and one $\frac{1}{16}$" field shim M113 has been provided in case further adjustment is necessary.
(f) For adjusting C103 at Bent E10, shop adjusting shims have been provided bolted to walk. One $\frac{1}{8}$" field shim M86 & M130 and one $\frac{1}{16}$" field shim M87 & M131 has been provided in case further adjustment is necessary.
(g) For adjusting C119 at Bent E10, shop adjusting shims have been provided bolted to walk. One $\frac{1}{8}$" field shim M86 & M142 and one $\frac{1}{16}$ field shim M87 & M143 has been provided in case further adjustment is required.
(h) For adjusting C100 - 108 - 116 and 124 at expansion joint at U4, shop adjusting shims have been provided, bolted to lugs on walk which connect to joists. One $\frac{1}{8}$" field shim M84 and one $\frac{1}{16}$" field shim M85 has been provided at each conn. in case further adjustment is required.

(21) Upper deck expansion dams:-
(a) At Bent E11; $\frac{1}{16}$" field shims M116 and M117 have been provided for adjustment purposes, at points where expansion dam ED1 connect to brackets on floor beam FB5.
(b) At Bent E10 normal shims shipped bolted to ED13 and ED15 at each support. One $\frac{1}{8}$" field shim M90 and one $\frac{1}{16}$" field shim M91 has been provided at each support in case further adjustment is required.

(22) Construction angles:-
(a) Construction angles to be erected after expansion dams are in place.
(b) In order to line up construction angles where same connect to expansion dams and at expansion joints; shop and field shims have been provided as follows:-
1. Shop adjusting shims bolted to A30-31 At Bent E11. One $\frac{1}{8}$" field shim M94 and one $\frac{1}{16}$" field shim M95 has been provided in case further adjustment is required.
2. Shop adjusting shims bolted to A28-29-32 & 33, at Bent E10 where same connect to floor beams and expansion dams. One $\frac{1}{8}$" field shim M146 and one $\frac{1}{16}$" field shim M147 provided at floor beam connection, and one $\frac{1}{8}$" field shim M96 and one $\frac{1}{16}$" field shim M97 provided at expansion dam connection, in case further adjustment is required.
3. Shop adjusting shims bolted to A14 and A15 at Bent E9. One $\frac{1}{8}$" field shim M92 and one $\frac{1}{16}$" field shim M93 has been provided in case further adjustment is required.
4. Shop adjusting shims bolted to A21 and A22 at Expansion joint U4. One $\frac{1}{8}$ field shim M148 and one $\frac{1}{16}$" field shim M149 has been provided in case further adjustment is necessary.

(23) Shop adjusting shims bolted to M63 and M64 at Bent E11, at points of support. One $\frac{1}{8}$ field shim M118 and one $\frac{1}{16}$" field shim M119 has been provided in case further adjustment is required.

(24) Ladders and ladder platforms:-
(a) All ladder connections to be field riveted except ladder splices which are to be bolted.
(b) All ladder platform connections to be field riveted except slotted hole connections which are to be field bolted.
(c) For complete sketches showing relation of ladder and ladder platforms to trusses - see ladder layouts GL215 - GL216 - GL217 - GL218 & GL218A.

(25) Drainage:-
(a) Erector to assemble roadway drain boxes DC1 and asbestos gasket DC2 to upper and lower deck walks on ground before walks are erected.
(b) For drainage layouts see sheet GL245 - GL244 - GL210 - GL211
(c) Certain parts of drainage leaders at Bent E11 can not be erected until erection tie at shoes at this point are removed.

(26) Pipe railing:-
(a) All railing connections field bolted.
(b) All field joints in railing for upper and lower walks to be slip joints and need not be welded in field.

(27) Threads on all field bolts to be burred at face of nuts after the latter are drawn up tight.

(28) During erection, the top bottom lateral plate at shoes; at L0 & L8 is to be made effective by blocking between the chord and shoes.

(29) Expansion grating at Bent # E11:-
Holes in supports for fastening of east half of expansion grating, both upper and lower decks have been provided in shop.
Holes in supports for fastening of west half of expansion grating to be drilled in field after west half of grating is set in field to proper clearance to east half of grating.

NOTES ON BOLTING AND RIVETING.

(1) For bolted and riveted connections see erector's field rivets and bolt lists - GM101 to GM191 inclu.

(2) Beveled washers and round washers:-
For use of beveled and round washers see erector's field rivet and bolt lists. All washers noted in lists.

4 Rods - ⅞"φ x 8⅜ Bent - with 2 Hex. Nuts	(cp1)	For (U3-U5) All to A22 Incl.	

Reaming Note -
All holes for field rivets for connection of (U3-U5) to (U1-U3) at point U3 and for connection of (U3-U5) to (U5-U7) at point U5 to be reamed or drilled to size with all top chord members for one span assembled.
All holes for field rivets for connection of web members to chord to be reamed (or drilled) to size thru metal jigs. Holes marked "GRT" to be reamed or drilled to size thru steel template.

Shop Note - Erection Marks.
After all top chord members for one span are assembled; for match marking purposes, add span number as suffix to mark in Table to become part of shipping mark; thus; (U3-U5) All etc; This complete mark to be the erection mark and to appear on B.F.P.

Shop Note
Shop to put shipping bolts in holes (x) and draw same up tight. Bolts to be removed by Erector in field.

Req'd by Spans. — REQUIRED LIST

See shop note regarding erection marks.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1"φ
OPEN HOLES: 1 1/16φ unless noted.
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built-up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolt splice plates (or angles) and surfaces of main material in contact therewith, also projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Reaming Note:
"All holes for field rivets for connecting of U0-U1 to U1-U3 at Point U1 to be reamed or drilled to size with all top chord members for one span assembled.
All holes for field rivets for connection of web members and erection ties to chord to be reamed or drilled to size thru metal Jigs.
All holes for field rivets for connecting of U7-U6 to U5-U7 at Point U7 to be reamed or drilled to size with all top chord members for one span assembled.

Shop Holes - Shipping Bolts:
Shop to put Shipping Bolts in holes (X) and draw same up tight. Bolts to be removed by Erector in field.

Erection Marks:
After all top chord members for one span are assembled, for match marking purposes, add span number as suffix to mark in table to become part of shipping mark, thus (U0-U1)A11 etc. This complete mark to be the erection mark and to appear on B.F.P.

Work Sheets G4AB and G4BB together as one Sheet.
Work this sheet with sheets G1 - G2 & G3.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M Bailey
RIVETS: 1"ø
OPEN HOLES: 1/16" Unless Noted
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in other material ¾" thick or less to be sub-punched 1/4 and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or "lame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except 1 coat Red Oxide Iron Red for base and cap plates of Towers, of Bents, and of built up shoes and 1 coat "Acid Resisting Linseed" to milled ends of members, to machined surfaces of castings, and on inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith, also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1" ϕ
OPEN HOLES: 1 1/16" ϕ Unless noted
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Work sheets G9AC, G9BC, G9CC together as one sheet
Work this sheet with sheets G10, G11, G13

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1"⌀ Un. noted
OPEN HOLES: 1 1/16"⌀ Un. noted
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. also see note "A"
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

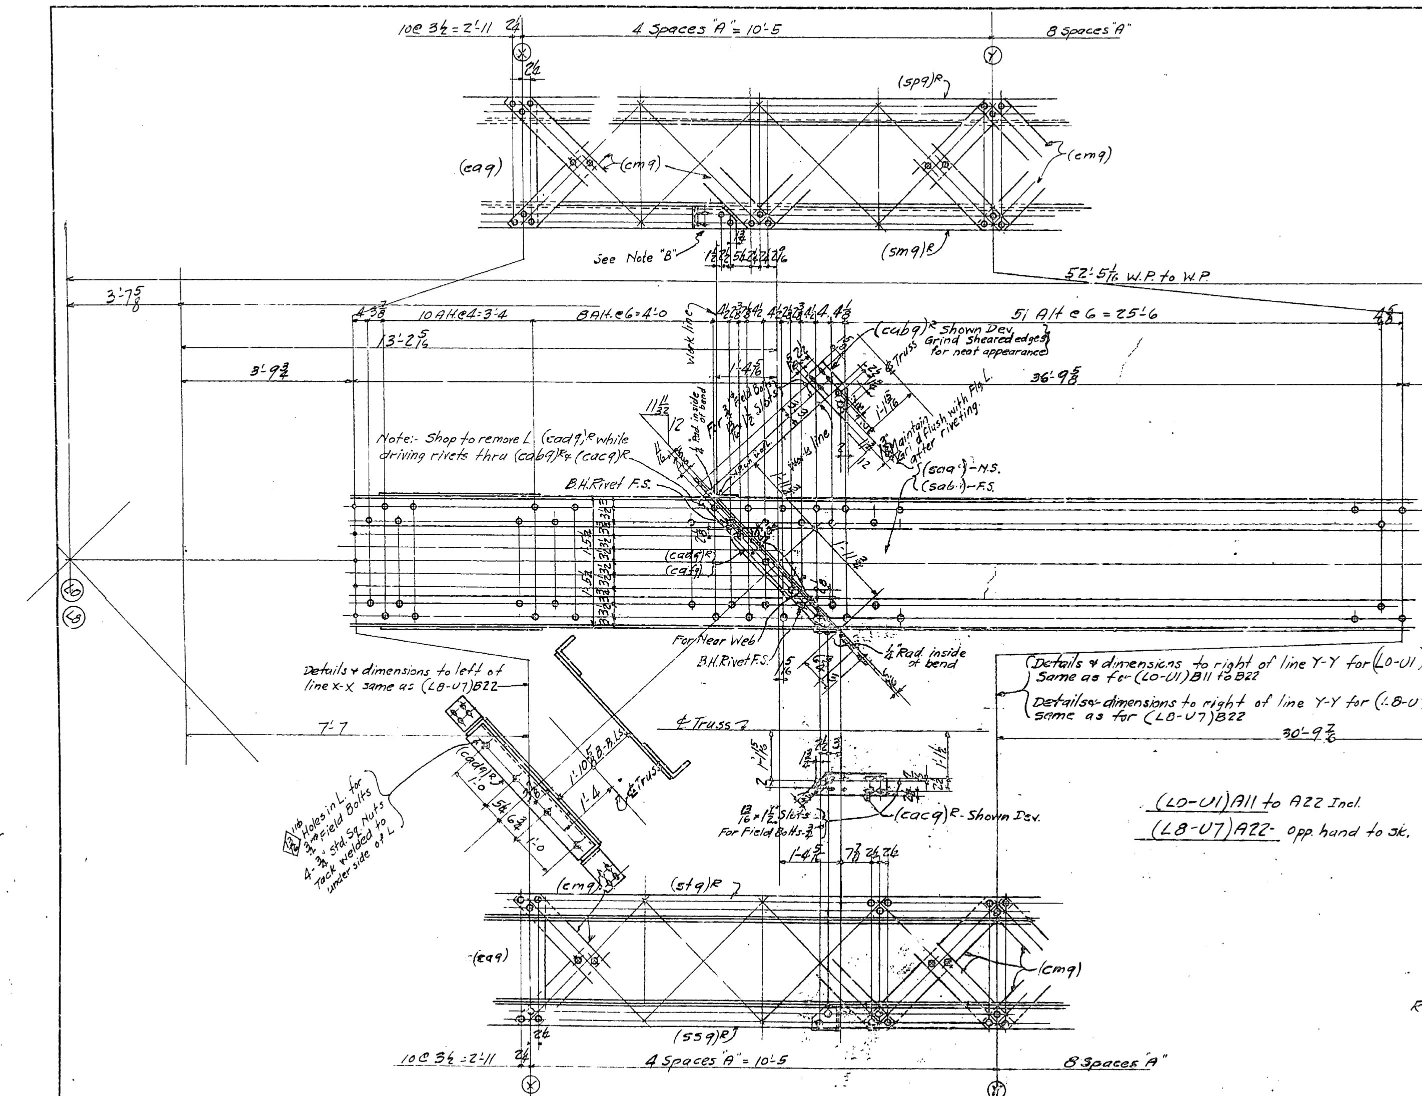
CONTRACT C31580 SHEET G9A

30-1



(L0-U1)A1 to A22 Incl.

(L8-U7)A22- opp. hand to sk.

Note "C":-
As field clearance at these points is only ½" particular attention must be paid to maintaining all dimensions in detail pieces and main material as called for. All exposed edges must be particularly neat as these conns. are for hand rail.

Note "A":-
Holes for shop & field rivets & bolts in all Ps., fills, & Ls used for walk & skid girder conns. may be punched full size.
Shop to put shipping bolts in holes ⊗ and draw same up tight. Erector to remove in field.

Reaming note:-
All holes for field rivets connecting gusset plates on end posts to top & bottom chords, are to be reamed or drilled to size with gusset plate assembled on chords and chords assembled. While gusset plates are assembled on chords for reaming or drilling of chord connections, all other holes in gusset plates for connection of end post or other web members are to be subpunched and reamed or drilled to size thru metal jigs.
All holes in end posts for connection of gusset plates are also to be drilled to size thru metal jigs and gusset plates shop riveted to end post, where called for on drwg.
Holes marked GRT, to be reamed or drilled to size to a metal template.

Shop note: Erection Marks.
Add span number as suffix to mark in table to become part of shipping mark: thus (L8-U7)P11, etc. This complete mark to be the erection mark & to appear on B.F.P.
Work sheets G9AC, G9BC, G9CC together as one sheet.
Work this sheet with sheet G10, G11, G13.

END POST (L8-U7) A14-A15-A16

Note-A- Holes for shop + field rivets + bolts in all Pls, fills + Ls used for walk + skid girder conns may be punched full size.

REAMING NOTE:

All holes for field rivets connecting gusset pls on End Posts, to top & bottom chords, are to be reamed or drilled to size with gusset pls assembled on chords, and chords assembled.

While gusset pls are assembled on chord for reaming or drilling of chord connections, all other holes in gusset pls for connection of End Post or other web members are to be subpunched & reamed or drilled to size thru metal jigs.

All holes in end post for connection of gusset pls are to be drilled to size thru metal jigs and gusset pls. shop riveted to End Post where called for on drwg. Holes marked GR.T. to be reamed or drilled to size to a steel template.

Shop Note - Erection Marks.

Add span number as suffix to mark in table to become part of shipping mark: thus (L8-U7) A11 etc. This complete mark to be the erection mark & to appear on B.F.P.

Shop Note:

Shop to put shipping bolts in holes ⊗ and draw same up tight. Bolts to be removed by Erector in field.

Work Sheets G10AC - G10BC & G10CC together as one sheet. Work this sheet with sheets G5 & G9

REQUIRED BY SPANS — REQUIRED LIST

SEE SHOP NOTE REGARDING ERECTION MARKS

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: BY JOHN M. BAILEY
RIVETS: 1" φ Unless Noted
OPEN HOLES: 1 1/16 Unless Noted
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. See Also Note A
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting. See Note "C" sh. 10AC.

REQUIRED BY SPANS			REQUIRED LIST				

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1" φ Unless noted
OPEN HOLES: 1 1/16" φ Unless noted
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. Also see Note "A".
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No. Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up sheets etc. 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith, also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

INSPECTION: John M. Bailey
RIVETS: 1" ϕ unless noted.
OPEN HOLES: 1 1/16" ϕ unless noted.
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly. Also see Note "A"
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame-cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING. All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Date 7/6/44

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. BAILEY
RIVETS: ⅞
OPEN HOLES: 1⅛ & ⅞ Unless noted
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, facing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ½" and reamed to size after assembly. See Note A on G19BB
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
Shop Paint—See G19BB

1 " 8×6×½ × 0'10½ (cav)
1 " 3½×3×⅜ × 0'7 (cb)
3 " " 0'7 (ca21)

Reaming Note:
All Holes for field rivets for connection of (U5-U3) to (U7-U5) at point U5 and for connection of (U5-U3) to (U3-U1) at point U3 to be reamed or drilled to size with all top chord members assembled for one span. All Holes for connection of web members to chord shall be reamed or drilled to size either with all truss members assembled or thru metal Jigs.

Holes marked "GRT" to be reamed or drilled to size thru metal templet.

Shop Note:
After all Top Chord members for one span are assembled for match marking purposes, add span number as suffix to mark in table to become part of shipping mark thus (U5-U3)B9. this complete mark to be the erection mark and to appear on BFP. Shop to put shipping bolts in holes (x) and draw same up tight. Erector to remove in field.
Holes in walkway lugs for either shop or field connections may be punched full size.

Work Shts G21 A.B & G21 B.B together as one sheet

Work this sh. with shs G16-G17-G18-G20 & G22.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: by John M. Bailey
RIVETS: 1"φ
OPEN HOLES: 1 1/16"φ Unless noted
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly. See shop note.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
Shop Paint: None except one coat "Acid Resisting Liquid" to Milled Ends of Members; To contact surfaces of parts shop bolted for shipment, except where loose ends of partially riveted material are bolted down for shipment, and to surfaces of riveted parts not readily accessible for sandblasting.

Work sheets G24AC, G24BC & G24CC together as one sheet.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION:
RIVETS:
OPEN HOLES:
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.

NOTE "A"
One coat "Acid Resisting Liquid" to Milled Ends of members; to contact surfaces of parts shop bolted for shipment, except where loose ends of partially riveted material are bolted down for shipment; and to surfaces of riveted parts not readily accessible for sandblasting.

Shop Note:- Erection Marks.
After all Bottom Chord members for one span are assembled; for match-marking purposes; add span number as suffix to mark in table to become part of shipping mark, thus -(L6-L8) A9, etc. This complete mark to be the erection mark and to appear on B.F.P.
Shop to put shipping Bolts in holes ⊗ and draw same up tight. Bolts to be removed by Erector in field.
Work sheets G24AC, G24BC & G24CC together as one sheet.
Work this sheet with sheets G25, G26, G27, G28 & G29

Reaming Note:-
All holes for Field rivets for connection of (L0-L2) to (L2-L4) at point L2 & (L6-L8) to (L4-L6) at point L6 to be reamed or drilled to size with all bottom chord members for one span assembled. All holes for connection of web members to chord to be reamed or drilled to size either with all truss members assembled or thru metal jigs. Holes marked "RT" to be reamed or drilled to size to a steel templet.
Holes marked GRT42 in Top & Bottom Lateral plates to be subpunched & reamed or drilled to size thru a metal box templet which shall include the holes for both lateral and floor beam connections.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1"φ
OPEN HOLES: 1 1/16"φ Unless Noted.
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
Shop Paint:- None Except machined surfaces of pin holes shall receive one coat of Blue Lacquer, also see Note "A".

Work this sheet with sheets G24-G26 & G28

SHOP BOLTS: Shop to put shipping bolts in holes ⊗ and draw same up tight. Bolts to be removed by Erector in field.
ERECTION MARKS: After all bottom chord members for one Span are assembled, for match-marking purposes, add Span number as suffix to mark in table to become part of Shipping Mark thus: (L8-L6) B9 etc. This complete mark to be the Erection Mark and to appear on B.F.P.
NOTE "A" One coat "Acid Resisting Liquid" to milled ends of members; to contact surfaces of parts shop bolted for shipment, except where loose ends of partially riveted material are bolted down for shipment; and to surfaces of riveted parts not readily accessible for sand blasting.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1"ϕ
OPEN HOLES: 1 1/16"ϕ unless noted
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
SHOP PAINT: None except Machined Surfaces of Pin Holes which shall receive one coat of Blue Lacquer. (See Note "A")
REAMING: All holes for field rivets for connections of LO-L2 to L2-L4 at point L2 and L8-L6 to L6-L4 at point L6 to be reamed or drilled to size with all bottom chord members for one Span assembled.
All holes for field rivets for connections of web members to chord to be reamed or drilled to size either thru Metal Jigs or with all truss members assembled. Holes marked "RT" to be reamed or drilled to size thru a steel templet.

REAMING:- All holes for field rivets connecting Gusset Rs on End Posts to Top Chord are to be reamed or drilled 1/4 size with Gusset Rs assembled on Chords and Chords assembled. While Gusset Rs are assembled on Chords for reaming or drilling of Chord connection, all other holes in Gusset Rs for connection of End Posts or other web members are to be subpunched and reamed or drilled to size either thru metal jig or with Member assembled. All holes in End Posts for connection of Gusset Rs are also to be subpunched and reamed or drilled to size either thru metal jig or with Member assembled, and Gusset Rs shop riveted to End Post where called for on Drawing.
ERECTION MARKS:- Add Span Number as suffix to mark in table to become part of shipping mark thus: (LO-U1)B9-4, This complete mark to be the Erection Mark and to appear on D.F.P.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1"ϕ
OPEN HOLES 1 1/16"ϕ
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched 3/16" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/16" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
PAINT:- None See Note "A"
NOTE "A":- One coat Red Resisting Liquid to milled ends of members, to contact surfaces of parts shop bolted for shipment, except where loose ends of packing, rivet heads are called out for shipment; and to surfaces of riveted parts not readily accessible for rust abating.
SHOP BOLTS:- Shop bolt shipping bolts in Holes ⊕ and drive same up. Fight Bolts to be removed by Erector in field.

See Shop Note regarding Erection Marks

REAMING:- All holes for field rivets connecting Outer Rs on End Posts to Top Chord are to be reamed or drilled to size with Outer Rs assembled in Fillers and Chords assembled. With Gusset Rs are assembled on Chords by reaming or drilling of Chord connections all other holes in Gusset Rs for connection of End Posts or other work members are to be subpunched and reamed or drilled to size either thru metal jigs or with members assembled.
All holes in End Posts for connection of Gusset Rs are also to be subpunched and reamed or drilled to size either thru metal jigs or with members assembled, and Gusset Rs shop riveted to End Posts where called for on Drawing.
SHOP BOLTS:- Ship to put shipping bolts in Holes ⊗ and drum some up tight Bolts to be removed by Erector in field.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 7/8
OPEN HOLES: 1/16" unless noted
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of materials to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
PAINT:- None - See Note 8"
NOTE "A" One coat "Red Resisting Paint" to milled ends of members, to contact surfaces of parts shop bolted for shipment, except where faces and ends of portions riveted, material and bolted down for shipment, and to surfaces of riveted parts not readily accessible for sand blasting.
ERECTION MARKS:- Add span number as suffix to mark in table to become part of shipping mark, thus: (LO-U1)A9 etc. This complete mark to be the Erection Mark and to appear on all

	1	Built-up Shoe	B514ᴸ	app. reverse	

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special for State of California, Department of Public Works.
INSPECTION: John M. Bailey
RIVETS: 1" unless noted.
OPEN HOLES: 1¼" unless noted.
PUNCHING: Holes in material ¾" thick or less use 1" for stringer laterals, stay plates, lacing and diaphragms may be punched full size. Holes in other material ¾" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled 1½" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except: 1 coat No. Oxide Filler Red for base and cap plates of Towers, at Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces - exterior.
Machined Surfaces of Pin Holes to receive one coat of Blue Lacquer.

BUILT UP SHOE CASTING BSC1R

Shop to assemble the following pieces and mark BSC1R for shipment.

No.	Mark	Description	Det. on Sht.
1	SC2	Shoe Casting	G102
1	BS1R	Built up Shoe	G108
1	R1A	Roller Nest	G110
1	R2	do	G109
4	SB1A	Shoe Bolt	G110
2	SB2	do	G109
2	TB1	Tap Bolt	G109
4	W1	Shoe Washer	G109
2	SW1R	Shoe Wedge	G109
2	SW1L	do	G109
1	SC3R	Shoe Casting	G109
1	M39R	Roller Stop	G109
1	M39L	Roller Stop	G109

Assembled with Shoe BS1R as shown on Sheet G108

Shop Note:—
All finished surfaces of screw assembly to be polished and lubricated with heavy oil & graphite. Wedges are not to be polished or lubricated.

Shop Note:—
Shop to make two extra Tooth Bars (e.f.) as detailed on Sht. G110 and cut in half for use as Dummy Tooth Bars while assembling BSC1R
In assembling Castings SC3R with Castings SC2 Shop to take extra precautions to maintain a sliding fit.

Shop Note —
On this drawing and in the following Notes "Normal Position" refers to the final position of Shoes after erection is completed with Rockers in a vertical position.
Assemble Shoes and Casting as follows:—
① Remove 2⅛" Guide Bars from groove in Casting SC2. Assemble Roller Nest R1A with dummy Tooth Bars. Dummy Bars to extend below bottom of Rollers. Place Bolts SB1A in Casting and lower same to clear Shoe.
② Set Roller Nest R2 on Casting SC2, 6¼" West of its normal position.
③ Set Roller Nest R1A in its normal position on Casting SC2, blocking rockers to keep them in a vertical position. Replace 2⅛" Guide Bars in grooves of Casting SC2.
④ Lower Shoe BS1A until it rests on Roller Nest R2 with the West Pin Hole 19¼" West of its normal position.
⑤ Roll Shoe BS1A East on Roller Nest R2 which will roll toward its normal position. The Shoe must slide on top of Roller Nest R1A until East Pin Hole has reached its normal position.
⑥ Remove 2⅛" Guide Bars from Casting SC2. Remove blocking from Roller Nest R1A. Remove Tie Bars and replace Dummy Tooth Bars with permanent Tooth Bars. Slots have been provided in Slab and Casting for inserting Tooth Bars. Replace Tie Bars on Rollers.
⑦ Replace 2⅛" Guide Bars in groove on Casting SC2 and bolt.
⑧ Place 5¼" Shoe Bolts SB2 in position shown with Washer W1 and nut on each end.
⑨ Drill ⅛" ϕ Hole in Shoe Casting SC3 and Shoe Bolt SB2 and Top Casting. Place Tap Bolt in position and turn down tight to prevent Bolt SB2 from turning.
⑩ Move Shoe BS1A East until 15¼ Rollers are tilted East 1⅜" (East Pin Hole will be 1½" East of normal position.)
⑪ Raise Shoe Bolts SB1A and tighten nuts.
⑫ Tighten nuts on 5¼" ϕ Bolts SB2 and drive Wedges SW1R snug but with only force enough to hold them in place.
⑬ Remove Tap bolts from ends of Rollers Marked "A" and place Roller Stops M39R against Tie Bars of 4" Rollers. Replace Tap bolts as shown in Section C-C. Ends of Roller Stops must have tight fit against lugs on Casting to prevent Rollers from moving during Shipment.

Note "B":-
Holes marked "GRT" to be reamed or drilled full size thru a metal templet furnished by Chicago Wks: McClintic-Marshall Corp.
Holes marked "RT" to be reamed or drilled full size thru a metal templet furnished by Moore Dry Dock Co.
Shop note:-
Shop to place all erection marks on left hand end of members as detailed, and in an upright position. Backs of end conn. Ls need not be milled. These Ls must be flush with milled edge after girder is milled.
Milled ends of Ls (cap206)R (can 206)R (cay206)R to be milled normal to end & flush with respective ends of girder.
Erection marks to be put on with both steel stencils and paint.
Shipping bolts to be drawn up sufficiently tight to exclude foreign particles etc. during shipment & field sand blasting.
SHOP PAINT:- (contd)
All surfaces to be painted to be cleaned & scraped (except (cx)F) before painting. Paint on contact surfaces of parts bolted for shipment to be allowed to dry before assembly.
Contact surfaces betw. Fls. (lan) and Ls (cm) to be cleaned & scraped before assembly and clamped tight while welding.
Work this sheet with sheet G21A
MATERIAL: All structural steel to be open hearth. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc., for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞" Ø un. noted
OPEN HOLES: 13/16" Ø " "
PUNCHING: Holes in material ¾" thick or less to be sub-punched 1/4" and reamed to size after assembly. See note "B".
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
SHOP PAINT: None except that the following is to be given one coat of Special Receiving Paint: (at Bridges between & including E9 & E10) Both sides of (cau206)R on both ends. Bottoms of (cac)F, (cad)F, (cae)F, (caf)F, (cag)F, (cah)F, (cak)F, (cal)F, (cam)F, (can206)R, (cap206)R, (caq)F, (car)F, (cas)F, (cat)F, (cau206)R, (cav)F, (caw206)R, (cax)F, (cay206)R, (caz)F, (cba)F, (cbb)F, (cbc)F, (cbd)F, (cbe)F, (cbf)F, (cbg)F, (cbh)F, (cbj)F, (cbk)F, (cbl)F, (cbm)F, (cbn)F, (cbp)F, (cbq)F, (cbr)F, (cbs)F, (cbt)F, (cbu)F, (cbv)F, (cbw)F, (cbx)F, (cby)F, (cbz)F, (cca)F, (ccb)F, (ccc)F, (ccd)F, (cce)F, (ccf)F, (ccg)F, (cch)F, (cck)F, (ccm)F, (ccn)F, (ccp)F, (ccq)F, (ccr)F, (ccs)F, (cct)F, (ccu)F, (ccv)F, (ccw)F, (ccx)F, (ccy)F, (ccz)F, (cda)F, (cdb)F, (cdc)F, (cdd)F, (cde)F, (cdf)F, (cdg)F, (cdh)F, (cdj)F, (cdk)F, (cdl)F, (cdm)F, (cdn)F, (cdp)F, (cdq)F, (cdr)F, (cds)F, (cdt)F, (cdu)F, (cdv)F, (cdw)F, (cdx)F, (cdy)F, (cdz)F, (cea)F, (ceb)F, (cec)F, (ced)F, (cee)F, (cef)F, (ceg)F, (ceh)F, (cek)F, (cem)F, (cen)F, (cep)F, (ceq)F, (cer)F, (ces)F, (cet)F, (ceu)F, (cev)F, (cew)F, (cex)F, (cey)F, (cez)F, (cfa)F, (cfb)F, (cfc)F, (cfd)F, (cfe)F, (cff)F, (cfg)F, (cfh)F, (cfj)F, (cfk)F, (cfl)F, (cfm)F, (cfn)F, (cfp)F, (cfq)F, (cfr)F, (cfs)F, (cft)F, (cfu)F, (cfv)F, (cfw)F, (cfx)F, (cfy)F, (cfz)F, (cga)F, (cgb)F, (cgc)F, (cgd)F, (cge)F, (cgf)F, (cgg)F, (cgh)F, (cgj)F, (cgk)F, (cgl)F, (cgm)F, (cgn)F, (cgp)F, (cgq)F, (cgr)F, (cgs)F, (cgt)F, (cgu)F, (cgv)F, (cgw)F, (cgx)F, (cgy)F, (cgz)F, (cha)F, (chb)F, (chc)F, (chd)F, (che)F, (chf)F, (chg)F, (chh)F, (chj)F, (chk)F, (chl)F, (chm)F, (chn)F, (chp)F, (chq)F, (chr)F, (chs)F, (cht)F, (chu)F, (chv)F, (chw)F, (chx)F, (chy)F, (chz)F, (cja)F, (cjb)F, (cjc)F, (cjd)F, (cje)F, (cjf)F, (cjg)F, (cjh)F, (cjj)F, (cjk)F, (cjl)F, (cjm)F, (cjn)F, (cjp)F, (cjq)F, (cjr)F, (cjs)F, (cjt)F, (cju)F, (cjv)F, (cjw)F, (cjx)F, (cjy)F, (cjz)F, (cka)F, (ckb)F, (ckc)F, (ckd)F, (cke)F, (ckf)F, (ckg)F, (ckh)F, (ckj)F, (ckk)F, (ckl)F, (ckm)F, (ckn)F, (ckp)F, (ckq)F, (ckr)F, (cks)F, (ckt)F, (cku)F, (ckv)F, (ckw)F, (ckx)F, (cky)F, (ckz)F, (cla)F, (clb)F, (clc)F, (cld)F, (cle)F, (clf)F, (clg)F, (clh)F, (clj)F, (clk)F, (cll)F, (clm)F, (cln)F, (clp)F, (clq)F, (clr)F, (cls)F, (clt)F, (clu)F, (clv)F, (clw)F, (clx)F, (cly)F, (clz)F, (cma)F, (cmb)F, (cmc)F, (cmd)F, (cme)F, (cmf)F, (cmg)F, (cmh)F, (cmj)F, (cmk)F, (cml)F, (cmm)F, (cmn)F, (cmp)F, (cmq)F, (cmr)F, (cms)F, (cmt)F, (cmu)F, (cmv)F, (cmw)F, (cmx)F, (cmy)F, (cmz)F, (cna)F, (cnb)F, (cnc)F, (cnd)F, (cne)F, (cnf)F, (cng)F, (cnh)F, (cnj)F, (cnk)F, (cnl)F, (cnm)F, (cnn)F, (cnp)F, (cnq)F, (cnr)F, (cns)F, (cnt)F, (cnu)F, (cnv)F, (cnw)F, (cnx)F, (cny)F, (cnz)F, (cpa)F, (cpb)F, (cpc)F, (cpd)F, (cpe)F, (cpf)F, (cpg)F, (cph)F, (cpj)F, (cpk)F, (cpl)F, (cpm)F, (cpn)F, (cpp)F, (cpq)F, (cpr)F, (cps)F, (cpt)F, (cpu)F, (cpv)F, (cpw)F, (cpx)F, (cpy)F, (cpz)F, (cqa)F, (cqb)F, (cqc)F, (cqd)F, (cqe)F, (cqf)F, (cqg)F, (cqh)F, (cqj)F, (cqk)F, (cql)F, (cqm)F, (cqn)F, (cqp)F, (cqq)F, (cqr)F, (cqs)F, (cqt)F, (cqu)F, (cqv)F, (cqw)F, (cqx)F, (cqy)F, (cqz)F, (cra)F, (crb)F, (crc)F, (crd)F, (cre)F, (crf)F, (crg)F, (crh)F, (crj)F, (crk)F, (crl)F, (crm)F, (crn)F, (crp)F, (crq)F, (crr)F, (crs)F, (crt)F, (cru)F, (crv)F, (crw)F, (crx)F, (cry)F, (crz)F, (csa)F, (csb)F, (csc)F, (csd)F, (cse)F, (csf)F, (csg)F, (csh)F, (csj)F, (csk)F, (csl)F, (csm)F, (csn)F, (csp)F, (csq)F, (csr)F, (css)F, (cst)F, (csu)F, (csv)F, (csw)F, (csx)F, (csy)F, (csz)F, (cta)F, (ctb)F, (ctc)F, (ctd)F, (cte)F, (ctf)F, (ctg)F, (cth)F, (ctj)F, (ctk)F, (ctl)F, (ctm)F, (ctn)F, (ctp)F, (ctq)F, (ctr)F, (cts)F, (ctt)F, (ctu)F, (ctv)F, (ctw)F, (ctx)F, (cty)F, (ctz)F, (cua)F, (cub)F, (cuc)F, (cud)F, (cue)F, (cuf)F, (cug)F, (cuh)F, (cuj)F, (cuk)F, (cul)F, (cum)F, (cun)F, (cup)F, (cuq)F, (cur)F, (cus)F, (cut)F, (cuu)F, (cuv)F, (cuw)F, (cux)F, (cuy)F, (cuz)F, (cva)F, (cvb)F, (cvc)F, (cvd)F, (cve)F, (cvf)F, (cvg)F, (cvh)F, (cvj)F, (cvk)F, (cvl)F, (cvm)F, (cvn)F, (cvp)F, (cvq)F, (cvr)F, (cvs)F, (cvt)F, (cvu)F, (cvv)F, (cvw)F, (cvx)F, (cvy)F, (cvz)F, (cwa)F, (cwb)F, (cwc)F, (cwd)F, (cwe)F, (cwf)F, (cwg)F, (cwh)F, (cwj)F, (cwk)F, (cwl)F, (cwm)F, (cwn)F, (cwp)F, (cwq)F, (cwr)F, (cws)F, (cwt)F, (cwu)F, (cwv)F, (cww)F, (cwx)F, (cwy)F, (cwz)F, (cxa)F, (cxb)F, (cxc)F, (cxd)F, (cxe)F, (cxf)F, (cxg)F, (cxh)F, (cxj)F, (cxk)F, (cxl)F, (cxm)F, (cxn)F, (cxp)F, (cxq)F, (cxr)F, (cxs)F, (cxt)F, (cxu)F, (cxv)F, (cxw)F, (cxx)F, (cxy)F, (cxz)F, (cya)F, (cyb)F, (cyc)F, (cyd)F, (cye)F, (cyf)F, (cyg)F, (cyh)F, (cyj)F, (cyk)F, (cyl)F, (cym)F, (cyn)F, (cyp)F, (cyq)F, (cyr)F, (cys)F, (cyt)F, (cyu)F, (cyv)F, (cyw)F, (cyx)F, (cyy)F, (cyz)F, (cza)F, (czb)F, (czc)F, (czd)F, (cze)F, (czf)F, (czg)F, (czh)F, (czj)F, (czk)F, (czl)F, (czm)F, (czn)F, (czp)F, (czq)F, (czr)F, (czs)F, (czt)F, (czu)F, (czv)F, (czw)F, (czx)F, (czy)F, (czz)F

{4 of these Ls and extra rivets for same not to be charged to customer. Bill as shipped but not charged.}

Note "B":-
Holes marked "SRT" to be reamed or drilled full size thru a metal templet furnished by Chicago Wks.-McClintic-Marshall Corp.
Holes marked "RT" to be reamed or drilled full size thru a metal templet furnished by Moore Dry Dock Co.

Shop note:-
Shop to place all erection marks on left hand end of members as detailed, and in an upright position. Backs of end conn. Ls need not be milled. These Ls must be square & flush with milled edge after girder is milled.
Milled ends of Ls (cn) ℄ & (cm) ℄ to be milled normal to and flush with respective ends of girder.
Shipping bolts to be placed in holes ⊗ and same to be drawn up sufficiently tight to exclude foreign particles during shipment and Field Bolting.

Shop paint:- (Contract)
All parts to be painted to be thoroughly cleaned and scraped before painting.
Contact surfaces between stiff. Ls (cg) (cf) ℄ (ch) and face of Webs to be thoroughly cleaned and scraped before assembling.
All shipping marks to be put on with both steel stencils and paint.

Work this sheet with Sheets G208 to 214, 217, 218

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞ ℄ on noted
OPEN HOLES: 15/16 " "

PUNCHING:- Holes in material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly. See note "B".

assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
SHOP PAINT:- None, except as follows, which shall be given one coat "metal Resisting Liquid":-
(a) Surfaces between (ca) (cb) ℄ ends of bent Flgs. and surfaces between lug & stiff. Ls on web, not readily accessible for field coat painting.
(b) Contact surfaces between ℄ & face of web ℄.
(c) Contact surfaces between (cam) and top Flg. Ls. Paint noted in (b) & (c) to be allowed to dry before assembling.

Note "B":-
Holes marked "GET" to be reamed or drilled full size thru a metal templet furnished by Chicago Wks.-McClintic-Marshall Corp.
Holes marked "RT" to be reamed or drilled full size thru a metal templet furnished by Moore Dry Dock Co.

Shop note:-
Shop to splice all erection marks on left hand end of members as detailed, and in an upright position. Backs of end conn. Ls need not be milled. These Ls must be square & flush with milled edge after girder is milled.
Milled ends of Ls (cw) ℄ (ca) ℄, (cy) ℄ × (cg) ℄ to be milled normal to and flush with respective ends of girders.
All erection marks to Ls put on with both steel stencils and paint.

MATERIAL: All structural steel to be eye-bar bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞" in Un. noted. ¾" " "
OPEN HOLES: ⅞" " "

Punching: Holes in material ¾" thick or less to be sub-punched 1/4" and reamed to size after assembly. See note "B"

FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
SHOP PAINT: Hoist, except surfaces to be welded and bottom flange, and surfaces between gusset flanges & Ligs. to receive one coat Red Resisting Paint, after thoroughly cleaning & scraping such surfaces.

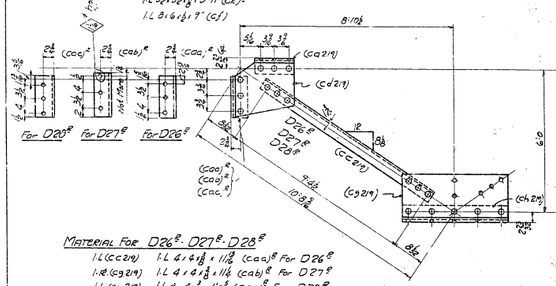
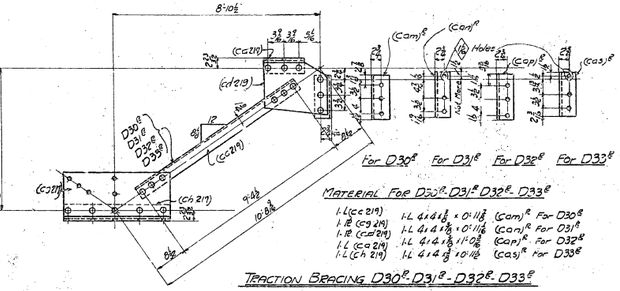
TRACTION BRACING - D20^E - D21^E D22^E D23^E - D24 - D25





Note: Shop must take extra precaution to insure that Connections are riveted up Square and true with respect to diagonals and that distances between Working points are maintained. Tension bars to be riveted up Square and true with respect to Brackets. All pieces to be riveted up in Jigs. All erection marks to be placed on left hand end of pieces as indicated on details except that for D34 mark is to be placed in middle of member. Erection marks to be put on with both paint and Steel Stencils.

Work Sheets G 2/9 & G 2/10 together.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: cx, cb, etc; for Illium steel with i, thus: ix, ib, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞ unless noted
OPEN HOLES: 1⅛ unless noted.

General Notes for Sheets G222 to G225 incl.

Punching:- All holes for shop & field rivets to be subpunched & undersize and reamed to size after assembly. Holes marked R.T. to be reamed thru metal templets furnished by the Moore Dry Dock Co.

Finish:- All sheared or flame cut edges & ends of material to have a neat appearance. No burrs to be left on blocks, notches, copes, cuts, end of beams or on holes at ends of beams as end connections are, in nearly all cases, entering connections in field.

Erection Marks:- All erection marks to be placed on left hand end of members as detailed and in an upright position. Erection marks to be put on with steel stencils and paint.

Note "A":- Gages of angles covered by this note to be varied by shop to suit mill overrun or underrun in depth of beam.

Holes ⊗:- Shipping bolts to be placed in holes marked ⊗. At these holes, contact surfaces shall be cleaned and scraped before assembly.

Shop Paint:- None except that the following are to be given one coat of Acid Resisting Liquid:—

(a):- Contact surfaces at parts entirely bolted for shipment.

(b):- Surfaces between lug angles on bottom flange of stringers 5200 to 5213, and other such surfaces not readily accessible for field sand blasting.

Application of Paint:- All surfaces to be painted shall be cleaned and scraped before painting. Paint on contact surfaces at parts bolted for shipment shall be allowed to dry before assembly.

Shipping Bolts:- All shipping bolts to be drawn up sufficiently tight to exclude foreign particles during shipment and field sand blasting.

Work this sheet with sheets G223-G224-G225.

MATERIAL: All structural steel to be copper bearing. Assembly marks for ex-bars shall prefixed with c, thus: cs, cb, etc., for silicon steel with s, thus: ss, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John H. Bailey
RIVETS: As Noted
OPEN HOLES: ⅞ Unless Noted.
PUNCHING: Holes in Fillers, cs, csB, cc28½ and cd 22½ may be punched full size. Holes in other material ¾" thick or less to be sub-punched 1/4" and reamed to size after assembly. See Note 'B'
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance.
Shop Rivets: None except as follows:
Surfaces between lug angles on both ends of main members, and contact surfaces of parts bolted for shipment to be given one coat of Red Resisting Paint. All surfaces to be painted to be cleaned and painted before painting. Contact Surfaces of parts bolted for shipment to be painted and allowed to dry before assembly.

GENERAL NOTES FOR SHEETS G286, G230 to G243

PUNCHING:- All holes in material ¾" thick or less to be sub-punched ⅝ and reamed to size after assembly. See note "A."

DRILLING:- All holes in material over ¾" thick to be sub-drilled ⅝ and reamed to size after assembly or drilled from the solid.

FINISH:- All sheared or flame cut edges and ends of material to have a neat appearance and where indicated to be planed to remove at least ⅛ of metal.

SHOP PAINT:- None, except that the following are to be given one coat of "Acid Resisting Liquid":-
(a) Contact surfaces at parts entirely bolted for shipment.
(b) Milled surfaces at top of bearing Rs (cs) (ct) (caw) (cba) and (cbb) on Sheet G231. These surfaces to be coated immediately after finishing.
(c) Surfaces between lug Ls and stiffener Ls or other such surfaces not readily accessible for field sand blasting.

APPLICATION OF PAINT:- All surfaces to be painted to be cleaned and scraped before painting, except finished surfaces of Rs (cs) (ct) (caw) (cba) and (cbb) on sheet G231.
Paint on contact surfaces at parts bolted for shipment to be allowed to dry before assembly.

HOLES (X):- Shipping bolts to be placed in holes marked (X). At these holes, contact surfaces for parts not entirely bolted for shipment to be cleaned and scraped before assembly.

SHIPPING BOLTS:- All shipping bolts to be drawn up sufficiently tight to exclude foreign particles during shipment and field sand blasting.

WELDING:- Contact surfaces at welded parts to be cleaned and scraped before assembly, and clamped tight while welding.

NOTE "A":
Holes marked "GRT" to be reamed or drilled full size thru metal templets furnished by Chicago Works-McClintic-Marshall Corp.
Holes marked "RT" to be reamed or drilled full size thru metal templets furnished by Moore Dry Dock Corporation.
Backs of end conn. Ls need not be milled, but shall lay in same plane as milled ends of girders whether girders are milled square or on a skew. Shop to place all erection marks on left hand end of members as detailed and in an upright position. Marks to be put on with ¾" steel stencils and paint.

MATERIAL: All structural steel to be cop per bearing. Assembly marks for carbon steel bolted with c. rivets, on. sh. etc. For nickel steel with c. rivets, se. sh. etc.
SPECIFICATIONS: Special by State of California, Department of Public Works
INSPECTION: By John M. Bailey
RIVETS: ⅞" Unless noted
OPEN HOLES: 1⅛" Unless noted.

For location of sections shown on this sheet see sheets G241 & G242.

Work this sheet with sheets (G250RE to EE incl)

Shop to paint Erection Marks on Left hand end of member as detailed and in upright position. Shop to put shipping bolts in holes Ⓧ and draw same up tight. Erector to remove in Field.

TACK WELDING- Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, parts must be clamped tight and aligned in such a manner as to permit entering of no foreign substance during the sand blasting.
MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special & State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞ø unless noted.
OPEN HOLES: 13/16ø unless noted.
Punching: all holes to be punched full size except holes marked R.T. which are to be subpunched ¼" & reamed to size thru a metal templet.
Finish- All sheared or flame cut edges and ends of material to have a neat appearance and when designated to be ground, shall be ground. Chip and grind, or otherwise cut to a finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a NEAT appearance.
SHOP PAINT: None, except as outlined below which shall be given one coat of "ACID RESISTING LIQUID".
All surfaces exposed by the elements not readily accessible for field sand blasting.
All contact surfaces of parts bolted together.
All painted surfaces must be thoroughly cleaned and scraped before paint is applied.
Bolted parts to be assembled after paint is dry and bolts drawn up tight.

Work This Sheet Together With Sheets G252 & G253.

Shop Note:-
Shop to paint all erection marks on left hand end of members as detailed, and in an upright position.

Rivets C in Central Knobby Fl. Rs. need not chipped unless they project above pattern on plate.

Tack Welding - Where tack welding is called for, contact surfaces must be thoroughly cleaned and scraped before assembly. Parts to be tightly clamped while welding, and welded in such a manner so as to permit entering of no foreign substance during field sand blasting.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc., for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special to State of California, Department of Public Works.
INSPECTION: To Be Done by John M. Bailey
RIVETS: ⅞ Unless noted
OPEN HOLES: 13/16 Unless Noted.
PUNCHING: All holes for shop & field use may be punched full size except holes for shop rivets marked "B" which are to be sub-punched & reamed to size after assembly.
DRILLING: As Noted.
FINISH: All exposed or flame cut edges and ends of material to have a neat appearance, and where designated (as F2.E.) shop must shear a finish, skip and grind, or otherwise cut & finish so that workmanship of a finished appearance and uniform fit shall result in all cases. Ends of all assembled members must be cut to a neat appearance.
SHOP PAINT: None

WORK THIS SHEET TOGETHER WITH SHEETS G251 & G252

Shop Notes
Shop to paint all erection marks on left hand end of members as detailed, and in an upright position.

RIVETS C in Central Knobby FLRs. need not be chipped unless they project above pattern on plates. Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly. Parts to be tightly clamped while welding and welded in such a manner so as to permit entering of no foreign substance during field sand blasting.

1	1	EXPANSION DAM	EDS	
1	2	"	EDG	

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc., for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By Lake M. Bailey
RIVETS: ℄ Cabeza Noted
OPEN HOLES: 1/16"
PUNCHING: All holes for shop and field rivets may be punched at full size except holes for shop rivets marked B which are to be sub-punched 1/4" and reamed to size after assembly. FINISH: All sheared or flame cut edges and ends of material to have smooth appearance, workers designated F.I.M., F.E.E., etc., shop must show a ground chip ground or other cut finish on that number's piece of finished appearance and conform to dimensions on drawing. Ends of all assembled members must present a neat appearance.
SHOP PAINT: Here, except contact surfaces of parts noted, which shall be given one coat of "Rust Resisting Liquid" after such surfaces have been thoroughly cleaned and scraped. Parts to be assembled after paint is dry and bolts pulled up tight.

Required in Spans		REQUIRED LIST				

MATERIAL: All structural steel to be open hearth. Arc. ability marks for carbon steel prefixed with (, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ¾ϕ
OPEN HOLES: As Noted
PUNCHING: All holes to be punched full size

Erection marks to be put on members with both paint and steel stencils.

FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and, where indicated Finish, shop must shear and grind so that members present a neat appearance and conform to dimensions given in drawings.
PAINT: None except one coat of Acid Resisting Liquid to be applied to all contact surfaces of parts bolted for shipping after such surfaces have been thoroughly cleaned and scraped. Assembly after paint is dry and draw bolts up sufficiently tight to exclude sand and foreign particles during shipment and field sand blasting.

General Notes:-

Material- All structural steel to be copper bearing.
Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus sa, sb, etc.
Specifications- Special by State of California, Department of Public Works.
Inspection- By John M. Bailey.
Rivets- 3/4" ϕ unless noted.
Open holes- 13/16 unless noted.
Punching- all holes to be punched full size except holes marked R.T. which are to be subpunched & reamed to size thru a matrix template.
Finish- all sheared or flame cut edges and ends of material to have an eof appearance and where designated FW, F25 etc. Shop must shear and grind, chip and grind or otherwise cut & finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a NEAT appearance.
Shop Paint- None, except as outlined below, which shall be given one coat of "ACID RESISTING LIQUID"
① All surfaces exposed to the elements not readily accessible for field sand blasting.
② Contact surfaces of parts bolted.
All painted surfaces must be thoroughly cleaned and scraped before paint is applied.
Bolted parts to be assembled after paint is dry and bolted in such a manner so as to exclude all foreign particles.
Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, and parts must be tightly clamped while welding.
Welding shall be done in such a manner so as to permit entering of no foreign substance during field sand blasting.

Rivets shown thus ⊖ thru Central Knobby Walk plates are to be ctsk. and have a maximum height of not more than the height of pattern on plate.
All other rivets shown thus ⊖ are to be ctsk. and have a maximum height of 1/8".

Shop to paint Erection marks on Left hand end of member as detailed and in an upright position.

Work this sheet with sheets G 261BI to I Incl, G 262 & G 263 AE to EE incl.
For Sections 1 & 2 see Sheet G 261 HI
All brackets shewn in Sects 1 to 26 incl. to be riveted up in a fixture to assure squareness.

Span 64 | Span 410 | Dwgs. No. 2800 | Description | Mark | Remarks | Weight each lb.

READ BY SPANS — REQUIRED LIST

MATERIAL: All structural steel to be open hearing. Assembly marks for carbon steel prefixed with c, thus: cc, cb, etc.; for silicon steel with s, thus: sc, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John H. Bixby
RIVETS: ⅞"ø
OPEN HOLES: 13/16" Unless Noted
PUNCHING: All holes to be punched full size.

FINISH. All sheared or flame cut edges and ends of material to have a neat appearance and, where indicated finish, shop must shear and grind so that members present a neat appearance, and conform to dimensions given on drawings.
PRINT: None.
ERECTION MARKS to be put on all members with both paint and steel stencil.

General Notes

Material - All Structural Steel To Be Copper Bearing. Assembly Marks For Carbon Steel Prefixed With C, Thus: Ca, Cb, Etc.; For Silicon Steel With S, Thus Sa, Sb, Etc.
Specifications - Special By State of California, Department of Public Works
Inspection - By John M. Bailey.
Rivets - ⅞ϕ Unless Noted
Open Holes 15/16ϕ Unless Noted
Punching - All Holes To Be Punched Full Size Except Holes Marked R.T. Which Are To Be Subpunched & Reamed To Size Thru A Steel Templet.
Finish - All Sheared Or Flame Cut Edges And Ends Of Material To Have A Neat Appearance And Where Designated R.In, R2E, Etc., Shop Must Sheer And Grind, Chip & Grind Or Otherwise Cut & Finish So That Members Present A Neat Appearance And Conform To Dimensions Given On Drawing. Ends Of All Assembled Members Must Present A Neat Appearance.
Shop Paint - None Except As Outlined Below Which Shall Be Given One Coat Of "Acid Resisting Liquid"
① All Surfaces Exposed To The Elements Not Readily Accessible For Field Sand Blasting.
② Contact Surfaces Of Parts Bolted. All Painted Surfaces Must Be Thoroughly Cleaned And Scraped Before Paint Is Applied
Bolted Parts To Be Assembled After Paint Is Dry And Bolted In Such A Manner So As Exclude All Foreign Particles
Where Parts Are Tack Welded, Contact Surfaces Must Be Thoroughly Cleaned And Scraped Before Assembly, And Parts Must Be Tightly Clamped While Welding. Welding Shall Be Done In Such A Manner So As To Permit Entering Of No Foreign Substance During Field Sand Blasting (Continued)

Date 7/16/36

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc., for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞" in ⅞" holes unless noted. See NOTE "A"
PUNCHING: For holes for shop & field Rivets in material ⅝" thick or less may be punched full size.
FINISH: All Sheared or Flame Cut edges and ends of tension members, except where designated F1M, F2E, etc. thus must show a ground, chipped or planed appearance and Conform to dimensions given on drawings. Ends of all compression members must present a neat appearance.

Shop Paint: None except contact surfaces. All parts painted for shipment. Such surfaces shall be given one coat of Red Resisting Linseed oil paint as soon as they have been thoroughly cleaned and scraped. Such parts to be assembled when paint is dry. Bolts to be drawn up tight to prevent entering of dirty foreign substances during shipping or sand blasting. Contact surfaces of parts to be welded before shipment to be thoroughly cleaned and scraped. Welding to be done in such manner as to prevent entraining of any foreign substances. Flame cutting or cold punching

Span 1	Sheet No.	Description	Mark	Remarks	Weight each Piece
Required for Spans	REQUIRED LIST				

For Section F-F See Sheet # G266.
For Section H-H See Sheet # G266.
Section M-M is Opp. hand to Section G-G Shown on Sht # G235
Extra (cm 275)R is opphand to R (cm 275)R Shown on Sht # G275

Note A
All field connections to be bolted except as noted in Sections M-M and H-H and detailed at F1 (cm 275)R.

Work this sheet with Sheets G266, G235, G249, G270 & G275

MATERIAL: All structural steel to be open hearth, assembly marks for carbon steel prefixed with c, thus: ca, cb, etc., for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞"ϕ
OPEN HOLES: 1⅛"ϕ Unless Noted. See Note "A"
PUNCHING: All holes for Shop & Field rivets in material ½" thick or less may be punched full size.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where designated F1F, F2E, etc. Shop must shear & grind, Chip, flame, or otherwise cut & finish so that members are left a finished appearance and conform to dimensions on drawings. Ends of all assembled members must present a neat appearance.
SHOP PAINT: Note: except Contact Surfaces of parts permanently bolted each surface shall be given one coat Red Coating Compound after they have been thoroughly cleaned and scraped. Such parts to be assembled while paint is wet. Bolts to be driven up tight to prevent entering of any foreign substance. During Shipping or Sand blasting. See paint note on Sht # G266

General Notes:-

Material—All structural steel to be copper bearing.
Assembly marks for carbon steel prefixed with c, thus: ca, cb etc., for silicon steel with s, thus sa, sb etc.
Specifications—Special by State of California, Department of Public Works.
Inspection—By John M. Bailey.
Rivets—⅞" unless noted.
Open holes—1/16" unless noted.
Punching—All holes to be punched full size except holes marked R.T. which are to be subpunched ¼" & reamed to size thru a metal templet.
Finish—All sheared or flame cut edges and ends of material to have a neat appearance and where designated PIW, F2E, etc. shop must shear and grind, chip and grind or otherwise cut finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a neat appearance.
Shop Paint—None, except as outlined below, which shall be given one coat of Acid Resisting Liquid—
① All surfaces exposed to the elements not readily accessible for field sand blasting.
② Contact surfaces of parts bolted.
All painted surfaces must be thoroughly cleaned and scraped before paint is applied.
Bolted parts to be assembled after paint is dry and bolted in such a manner as to exclude all foreign particles.
Where —— are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, and parts must be tightly clamped while welding.
Welding shall be done in such a manner as to permit entering of no foreign substance during field sand blasting.
Rivets shown thus ① thru Central Knobby Walk plates are to be countersunk and have a maximum height not more than the height of pattern on plate.
All others rivets shown thus ② are to be countersunk and have a maximum height of ⅛.

Shop to paint Erection marks on left hand end of member as detailed and in an upright position.
Shop to put Shipping Bolts in holes ⑤ and draw same up tight.
Bolts to be removed by Erector in field.

All Brackets shown in Sects. 1 to 4B incl. to be riveted up in a fixture to assure interchangeability.

Work this sheet with sheets G278D5 to J3 incl. & G278D9 to 66 incl.

For Sects. 1 to 4B see sheet G278I5.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: cc, cb, etc., for silicon steel with s, thus: sc, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞ Unless Noted
OPEN HOLES: 15/16"ø
PUNCHING: All holes for shop and field rivets may be punched, full size, except holes for Rivets B which are to be sub-punched ¾" and reamed to size after assembly.

FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated "Finish" shop must shear and grind, so that members present a neat appearance and conform to dimensions given on drawings.
SHOP PAINT: None, except contact surfaces of parts bolted, which are to be given one coat of Acid Resisting Liquid after such surfaces have been thoroughly cleaned and scraped. Assemble after paint is dry and pull bolts up tight to exclude foreign particles during shipment & erection.

Walkway C127

General Notes:-

Material-All structural steel to be copper bearing.

Assembly marks for carbon steel are fitted with c. thus: ca, cb, etc. for silicon steel with s. thus sa, sb, etc.

Specifications- Special by State of California, Department of Public Works.

Inspection- By John M. Bailey.

Rivets- ⅞" unless noted.

Open holes- 15/16" unless noted.

Punching- All holes to be punched full size except holes marked R.P. which are to be subpunched ¼" & reamed to size thru a metal templet.

Finish- All sheared or flame cut edges and ends of material to have a neat appearance and where designated F.M.M, F.E.E, etc. shop must shear and grind, chip and grind or otherwise cut and finish so that members possess a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a neat appearance.

Shop Paint- None, except as outlined below, which shall be given one coat of Acid Resisting Liquid-

① All surfaces exposed to the elements not readily accessible for field sand blasting.

② Contact surfaces at parts bolted

All painted surfaces must be thoroughly cleaned and scraped before paint is applied.

Bolted parts to be assembled after paint is dry and fitted in such a manner so as to exclude all foreign particles

Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, and parts must be tightly clamped while welding.

Welding must be done in such a manner so as to permit entering of no foreign substance during field sand blasting.

Rivets shown thus ◇ thru Central Knobby Walk plates are to be c'sk'd and have a maximum height not more than the height of pattern or plate.

All other rivets shown thus ◇ are to be c'sk'd and have a maximum height of ⅛".

Shop to paint Erection marks on left hand end of member as detailed and in an upright position.

Shop to put shipping bolts in holes ⊗ and draw same up tight.

Bolts to be removed by erector in field.

For General Notes See This Sheet.

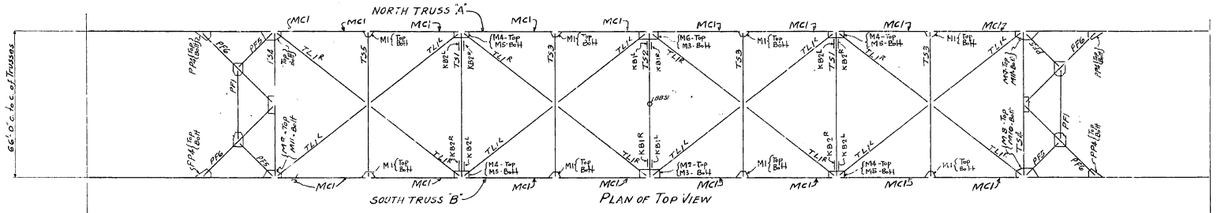
JE1



Steel Erected by McClintic-Marshall Corp.
This diagram to be worked together with the memorandum entitled, "Erection program for Superstructure"
Trusses: All members not marked 'A' or 'B' may be placed in either truss. Example (MT-U9)T. All other members must be placed in the truss indicated by the piece mark. Example (L8-M8)P1 must be placed in Truss 'B'. No members to be interchanged between spans without first consulting the shop.
Portals, Portal Bracing, Sway Struts and Bracing and Top Laterals to be field riveted after trusses are swung.
For location and use of shims for adjusting Walkways, construction angles and Expansion Dams see Plan JE6.
Field rivets connecting Upper Deck Walkways to Truss verticals at L1-L3-L6-L7-L9-L11 span E6 and L1-L5-L7-L9-Spans E4-E5-E7-E8 to be driven before pipe railing is erected.
Field rivets, through end connection angles of lower deck floorbeams above the top chord angles to be driven before walkways are erected at Panel Points L0-L2-L4-L6-L8 L10 and L12.
For anchorages see Plan JE4
For field riveting or bolting of Walkways and skid girders see Plan JE12.
Walkways are to be centered between adjoining floorbeams. Bolts through top flange of floorbeams to be driven tight.
Truss members which do not have span numbers may be used in any span except E6. Top lateral Plates except of U2-U10, may be used with any span.
For special conditions, see sheet JE10.

NOTES:-

End Posts and Top Chords will be shop assembled and reamed while assembled.

All truss members which are assembled will have the span number added to the mark given on detail drawings, except some members for Span E6, marks of which on detail drawings include the span number.

Span numbers to be added to End Posts and Top Chords while same are assembled.

Members which do not have span numbers may be used in any span except E6.

Members which do not have truss marks A or B, on detail drawings, may be used for either truss.

Lateral Plates, except at Points U2 & U10, may be used with any span.

Holes for lateral plates in top chords, except at U2 and U10, are to be reamed in shop in both adjoining members while assembled together with reaming template, simultaneously with web splice reaming.

At points U2 and U10, boat portal plates M8, M9, M10 & M11 to be reamed assembled in shop with end post and top chord. While assembled, the truss mark A or B, and the span number 4, 5, 6, 7 or 8 to be added to the detail drawing mark, example:- M9-A4, to indicate plate on A Truss, Span E4. All details bolted for shipment to be match-marked.

REQUIRED LIST

MATERIAL: All structural steel to be open hearth. Assembly marks for bearing steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sc, etc.
SPECIFICATIONS: Special for State of California Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: ⅞ ϕ Unless noted
OPEN HOLES: 1⅛ ϕ
PUNCHING: Holes in material ⅝" thick or less, except for stiffener intercostals, gusset plates, lacing, and diaphragms may be punched full size. Holes in material ¾" thick or less to be sub punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ¼" and reamed after assembly, or drilled from the solid, while in the shop.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ¼" of metal.
MATCH MARKING: All matching and marking to be made with best layout steamels and paint.
SHOP PAINT: None except 1 coat Red Oxide Paint. Red lead and oil paste, and 1 coat "Mine Painting Liquid" to milled ends of abutting, machined surfaces and fittings, and to inside surfaces of bolted splice plates for contact and surfaces of main material in contact therewith; also to adjoining portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting. See sheet J 71

RIVETS: 7/8" Unless noted
OPEN HOLES: 15/16"
PUNCHING: Holes in material 7/8" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material 1/2" thick or less to be subpunched 3/4" and reamed to size after assembly.
DRILLING: Holes in material over 7/8" thick to be subdrilled 3/4" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MARK MARKING: All pieces shall to be mark with both steel stencils and print.
SHOP PAINT: Upon receipt of each piece of Filler Tan for base and cap plates, as shown, of Black, Rest of built members and all rivet heads of members to be painted surfaces of contact surfaces, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of tubes plates (or angles) which are not riveted to main material and are not fully accessible for sand blasting. See Sheet No. F1

REQUIRED LIST
MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: by John M. Bayley
RIVETS: ¾" unless noted.
OPEN HOLES: 1⅛" unless noted.
PUNCHING: Holes in material ½" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ½" thick to be sub-drilled 3/16" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with steel stamps, not paint.
SHOP PAINT: None required. Before Filler filed for base and cap plates of columns, all bars, and all built up sheets and 1 coat "Aero Resisting Liquid" to millscale ends of members, machined surfaces, faces of joints, and to inside surfaces of flange splice plates for angles; and surfaces of metal material in contact therewith; also to projecting rivetheads of splice plates for angles) which are shop riveted to main material and are not fully accessible for hand blasting. REQUIRED LIST

MATERIAL: All structural steel to be open hearth. Assembly marks for carbon steel prefixed with c, thus: c5, c6, etc.; for silicon steel with s, thus: s5, s6, etc.
SPECIFICATIONS: Specs. of the State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1" Unless Noted.
OPEN HOLES: 1 1/16" Unless Noted.
PUNCHING: Holes in material 7/8" thick or less used for stringer laterals, splices, batching, and connections may be punched full size. Holes in material over 7/8" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 7/8" thick to be sub-drilled 1/4" and reamed. Unless otherwise directed from the solid while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/4" of edge.
MATCH MARKING: All pieces to be match marked as shown on the shop details. Such marks shall be stamped plainly in the metal before it leaves the shop. SHOP PAINT: The exposed surfaces of all shop and field connections, except those to be encased in concrete, shall be painted with one coat of Boiler, engine or locomotive smoke stack paint. Before painting, all rust, dirt, loose mill scale and other foreign matter shall be removed by wire brushing or other effective means. All "Shop Paint" is to be applied in dry weather and only to surfaces which are entirely dry and free from moisture. All surfaces of joints which are to be painted before assembly shall be painted before they are connected. Contact surfaces shall not be painted. Bearing surfaces, machined surfaces, and surfaces adjacent to the same, also the inside surfaces of bolted plates of built members, shall not be painted. Surfaces of steel which are to be encased in concrete shall not be painted. Surfaces of steel which are to be encased in concrete shall not be painted. Surfaces of steel which are to be encased in concrete

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel painted with a thick coat of white paint. Open shall with a thick coat of white paint.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Bailey
RIVETS: 1" Ø Unless Noted
OPEN HOLES: 1 1/16" Ø Unless Noted
PUNCHING: Holes in material 3/4" thick or less, used for stronger laterals, stay plates, traps, and diaphragms may be punched full size. Holes in main metal 3/4" thick or less to be subpunched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be subdrilled 1/4" and reamed after assembly, or drilled from the solid, when accessible.
FINISH: All sheared edges of plates and ends of material to have a neat appearance and where indicated are to be planed or cut to remove all irregularities.
MATCH MARKING: All match marking to be made with red paint stencils and shall not paint. No paint where contact surfaces are to be painted. Before shipment all members are to be assembled in the shop in such a manner as to permit accurate matching in the field, and such assembly will be required before any member is shipped. Any minor adjustments necessary to match field connections shall be made in the shop. All contact surfaces and all finished surfaces, including pins and pin holes, shall be protected from corrosion by a heavy coating of white lead and tallow or other approved method. Before leaving the shop, all finished surfaces shall be carefully cleaned and coated with a heavy coat of white lead and tallow or other approved method. Finished surfaces shall be protected during shipment and handling. See sheet F1

REQUIRED LIST

MATERIAL: All structural steel to be open hearing. Assembly marks for carbon steel marked with a thick dash, thin dash, thin dash, etc. for silicon steel with a thick dash, thin dash, etc.
SPECIFICATIONS: Subject to Standard Specifications of Public Works.
INSPECTION: By John H. Bentley Dept.
RIVETS: 7/8" Unless Noted
OPEN HOLES: 13/16" Unless Noted
PUNCHING: Holes in material 1/4" thick or less used for stringer laterals, strut plates, tie-rods, and diaphragms may be punched full size. Holes in other material not thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 1/4" thick to be sub-drilled 1/4" and reamed out to size, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove all fused metal and all scale.
MATCH MARKING: All pieces marking to be made with hot steel stamps and not with punch.
SHOP PAINT: Before material is delivered to the shop for fabrication it shall be cleaned of dirt, rust, scale and grease by means of a "Sand Blasting Machine" or other suitable method and painted with one coat of boiled linseed oil paint to which has been added a sufficient quantity of lamp black to produce a color approximating that of the adjacent steel. See Sheet F1 for paint specifications.

REQUIRED LIST

Note A
All material marked RT to be sub-punched 1/4" and reamed to a metal templat

MATERIAL All structural steel to be open hearth. Assembly marks for carbon steel prefixed with c, those for silicon steel with s, thus: cb, etc., sb, etc.
SPECIFICATIONS Special by State of California, Department of Public Works.
INSPECTION By John M. Bailey
RIVETS 7/8 Unless Noted
OPEN HOLES 1 1/16"
PUNCHING Holes in material 5/8" thick or less to be punched 1/16" full reamed to size. See Note A
DRILLING Holes in material over 5/8" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid, while assembled.
FINISH All exposed or flame cut surfaces and ends of material to have a good finish, and all sharp projections are to be filed off so as to remove all burrs as far as practicable.
MACHINE MACHINE BOLTS
PAINT Two coats of red lead paint except Red Resisting Liquid (See Sheet F1)

REQUIRED LIST

Holes marked RT to be sub-punched and reamed through a metal Template

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel painted white as shown on plans, for silicon steel with white paint as shown on plans, etc.

SPECIFICATIONS: Special by State of California, Department of Public Works.

INSPECTION: John M. Barley

RIVETS: 7/8" unless noted

OPEN HOLES: 13/16" unless noted

PUNCHING: Holes in material 3/4" thick or less used for stringer splices, stay plates, gusset plates, and diaphragms to be punched full size. Holes in main material 3/4" thick or less to be sub-punched 1/4" and reamed to size after assembly.

DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid, while assembled.

FINISH: All sheared or flame cut edges and ends of material to have a smooth appearance and shall be free of [illegible]

[illegible] MARKING: [illegible] painting in the manufacturer's plant [illegible]

SHOP PAINTING: [illegible] Yellow Ochre [illegible] one shop coat of Iron Oxide Paint [illegible] of Linseed Oil and Turpentine or Benzine, conforming to "Acid Resisting Linseed" to which [illegible] of Iron Oxide has been added. [illegible] members, [illegible] and surfaces to be in contact shall be painted [illegible] before assembly. [illegible] surfaces of bolted splices [illegible] contact thereafter shall be painted [illegible] of spring clamp (or magnetic) [illegible] are not accessible for hand brushing.

Shop Notes:-
Holes for 2" semi-circular drum holes may be burned
Edges of holes to be smooth & neat.

Pin Holes to be bored after shoe is riveted together to base plate.

Thickness of base ℄ not to be reduced more than ¼" by milling.

Note:
Reaming templets marked RT to be secured from Steelton.

Note
Holes marked RT to be subpunched and reamed to a metal templet.

MATERIAL: All structural steel to be carbon steel bearing. Assembly marks for carbon steel prefixed with c, those of alloy steel for stiffener plates with s, shoes etc. with sh, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey.
RIVETS: ⅞"
OPEN HOLES: 1⅛"
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched ⅛" in size. Holes in main material 1¼" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over 1¼" thick to be sub-drilled ¼" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: Heavy except Count Marks in letter that are milled under side of Shoes, and one coat of Blue Lacquer for Pin holes.

Shop Note:
Pin Holes to be bored after shoe is riveted together to ease plate.

Thickness of bars to not to be reduced more than ¼" by milling.

Holes for 2" semi-circular drain holes may be burned Edges of holes to be smooth and neat

Notes:
Counterbore in pin and projection on pilot must be exactly centered.
Clearance between counter bore and projection on pilot nut not to exceed .006 inches
Pilot nuts to be assembled with a number of pins before leaving shop to insure perfect alignment of curved surface of pilot nut with pin.

Driving Nut-DN1 — Rods X10
Rods X11
Thread 3½-6
Pilot Nut-P11 — Use with Pin P1 " " " P2 to P12

Note:
Material: All structural steel to be copper bearing, except Pins, Driving Nuts, Pilot Nuts & Rods X10 & X11. Pins to be Special Heat Treated Steel. Driving Nuts, Pilot Nuts & Rods X10 & X11 to be Structural Steel, not copper bearing

Shop Paint:
None except one coat No-Ox-Id Filler Red for milled under side of Shoes, and one coat of Blue Lacquer for Pin Holes.
Entire surface of Pins to receive one coat of No-Ox-Id Filler Red.
Machined recess of Pin Caps and finished surface to receive one coat of No-Ox-Id Filler Red.
Threaded ends of Rods X1 to X9 inclu. to receive one coat of No-Ox-Id Filler Red.

Assembly marks for carbon steel pieces with a, (hull ca, etc.) for silicon steel with s, (hull sa, etc.)
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey.
RIVETS: ⅞" Unless Noted
PUNCHING: Holes in material ⅝" thick or less used for stringer stiffeners, stay plates, lacings, and diaphragms may be punched full size. Holes in main materials ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ⅜" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All surfaces or fibers cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ¼" of metal.
MATCH MARKING: All match marking to be done with cold steel stencils and paint.

PIN CAPS-PC1 — For fracture only. To be charged to Erection Dept.

See schedule

Note:
Reaming templets marked ERT to be secured from Steelton.

Note
Holes marked RT to be subpunched and reamed to a metal templet.

Note A - Holes marked RT to be sub punched 7/8" & reamed to a metal templet Furnished by Fabricating Works.

MATERIAL: All structural steel to be Open-hearth quality. Assembly bolts for carbon steel parts shall be of carbon steel with a tensile strength of not less than 60,000 lbs. per sq. in. nor more than 72,000 lbs. per sq. in. and shall conform to the requirements for A.S.T.M. Designation A-307. Rivets shall be of carbon steel with a tensile strength of not less than 50,000 lbs. per sq. in. nor more than 62,000 lbs. per sq. in. and shall conform to the requirements for A.S.T.M. Designation A-141-31 T. Bolts for high strength steel structural joints shall be of heat treated steel with a tensile strength of not less than 105,000 lbs. per sq. in. nor more than 125,000 lbs. per sq. in. and shall conform to the requirements for A.S.T.M. Designation A-325-32 T.
SPECIFICATIONS: Steel to be in accordance with the Standard Specifications of the State of California, Department of Public Works, dated 1929.
INSPECTION: by John M. Bailey
RIVETS: 7/8" ϕ
OPEN HOLES: 15/16" ϕ Unless Noted.
PUNCHING: Holes in material 5/8" thick or less may be punched full size. Holes in material over 5/8" thick may be punched 1/8" smaller in diameter than the finished hole, or may be sub-punched and reamed. Holes in main material 3/4" thick or less to be sub-punched 1/8" and reamed after assembly, or drilled from the solid, while assembled. Holes in material over 3/4" thick shall be drilled from the solid, or may be sub-punched 1/8" smaller in diameter than the finished hole and reamed after assembly. Punched holes shall not be enlarged by reaming to remove an inferior punching. Punching shall be clean cut without torn or ragged edges. Holes shall be cylindrical perpendicular to the member. Punching of metal which is subject to cumulative stress shall be done with the die having the burr or fracture on the side of the piece which will be in contact with the head of the rivet. - See Note A.
DRILLING: Holes in material over 3/4" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All exposed surfaces, cut edges, and ends of material to have a neat appearance and where indicated are to be planed so as to remove all trace of metal.
SHOP PAINT: None, except Red Resisting Lignol (Sou. Sheaf Fl)

All Material Carbon Steel.

Note - Beams increased in weight from 1931 lbs. per ft. to 1951 lbs. per ft. on account of being used for erection falsework. Increase in weight to be charged to Erection Department.
All field plugs to be driven rivets

REQUIRED LIST

All Material Carbon Steel.

Note — Beams increased in weight from 1254 ± per ft. to 1314 lbs. per ft. on account of being sized for erection falsework. Increase in weight to be charged to Erection Dept. Material at left end of each beam, indicated to be cut off in field, if to be charged to Erection Department.
All field plugs to be driven rivets

Note A - Holes Marked RT to be punched ⅜ and reamed to a metal templet - Furnished by Sawcon Works.

MATERIAL: All structural steel to be proper bearing. Assembly marks to be shown steel painted with a thick coat of red lead paint. One coat shop paint, which is to be removed from the field, where necessary.
SPECIFICATIONS: General by State of California, Department of Public Works.
INSPECTION: by John M. Bailey
RIVETS: ⅞" ø
OPEN HOLES: 1⅛" ø Unless Noted
PUNCHING: ~~Material over 1" thick to be punched for subpunching and reaming. Holes in shop material 1" thick or less to be punched full size.~~
Holes in shop material ⅞" thick or less to be punched full size and reamed to size ~~where necessary~~ - See Note A.
DRILLING: Holes in material over ⅞" thick to be subdrilled ¾" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All shearred or flame cut edges and ends of material to have a neat appearance and where subjected to stress planed so as to remove all burrs and fins.
MATERIAL MARKING: All pieces must be so marked with paint that they may be identified after erection.
SHOP PAINT: ~~One coat~~ except Faying Surfaces
Resisting Liquid (See Sheet #1)

REQUIRED LIST

All holes marked RT to be Sub-punched and reamed to a matrial Pamp 1/8"

MATERIAL. All structural steel to be of copper bearing. Assembly marks for exterior steel prefaced with a, those for interior steel with b, those for shop connection steel with c, those for field connection steel with d.
SPECIFICATIONS. Specified by State of California, Department of Public Works.
INSPECTION. By John M. Bailey
RIVETS. ⅞" unless noted
OPEN HOLES. 1/16"
PUNCHING. Holes in material 7/8 thick or less used for stringer laterals, strut plates, batten ends, and diaphragms may be punched full size. Holes in main material 1" thick or more to be sub-punched ¾" and reamed to size after assembly.
DRILLING. Holes in material over ⅞ thick to be sub-drilled ¾" and reamed to size. Holes in material ⅞ thick or less may be punched full size.
FINISH. All material or fillers not edges and ends of members to have a neat appearance and where not otherwise specified to be free of burrs, lumps or projections of metal.
MARKING. Members shall be marked as shown on Shop Drawings and match marked.
SHOP PAINT. Steel except faying surfaces of field connections and contact surfaces of bolted splices and angles, and surfaces of joints, contact faces of bolted splices and contact faces of bolted splices for angles) which are inaccessible to paint material are to be painted with one coat of boiled linseed oil paint.
"Shop Painting Exempt" to apply to such of the members, assemblies or portions of members as are inaccessible to paint after assembly.

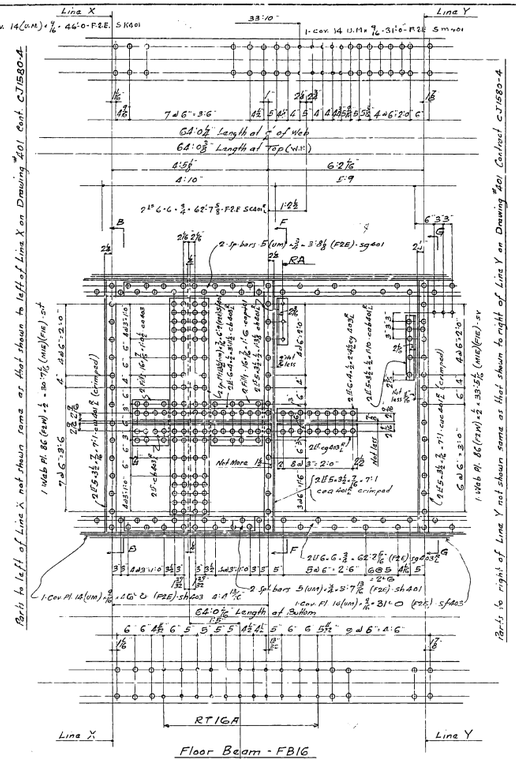
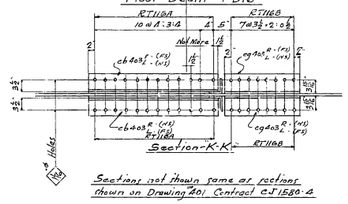
Floor Beam FB3



Floor Beam - FB16



Sections not shown same or reckon shown on Drawing #401 Contract CJ1580-A

Re-entrant cuts at ends of beam webs may be burned. Burned edges of material to be planed, faced or chipped to remove at least ⅛" of metal.

Shop Notes:-
All stiffener ℓs to bear.
Holes marked RT to be sub-punched & reamed or drilled full size through an iron templet.
Holes marked RA to be sub-punched & reamed with material shop assembled.
Backs of end conn.ˡˢ need not be milled.
These ℓs shall be set square & flush with milled edge after floor beam is milled.
Reaming Templet marked RRT to be obtained from Sauveur Works.

No.	Description	Mark	Remarks	Weight each Piece
8	Floor Beams	FB3		
8	"	FB16		

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly shops for carbon steel prefixed with C, thus: CA, CB, etc.; for Nickel steel with N, thus: NA, NB, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: by John M. Bailey Inc.
RIVETS: ⅞ diam.
OPEN HOLES: 1⅛ diam. unless noted
PUNCHING: Holes in material ⅝" thick or less used for stringer laterals, bulb plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled 5/16" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All shearing or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with bold, steel stencil dies, as directed.
SHOP PAINT: None except 1 coat Red Oxide Filler Red Lead base and Linseed Oil Type, on all Bunts, and on both top flange and ℄ of "Acid Resisting Bunts" to match rivets or members, to machined surfaces of abutments and to inside surfaces of bolted splice plates (or angles) and surfaces of web material in contact therewith; also to everything previous to splice plates (or angles) which are then covered by main material &c. and not fully accessible for cleaning.

RIVETS: 7/8" ϕ 15/16" ϕ Unless Noted

PUNCHING: Holes in material 3/4" thick or less shall be punched full size. Holes in material over 3/4" thick, but not over 1" thick, may be punched full size, provided the material is not more than 5/8" thicker than the diameter of the hole. Holes in material over 1" thick shall be drilled full size or may be punched 1/4" small and reamed to size after assembly.

DRILLING: Holes in material over 3/4" thick, but not exceeding 1 1/2" thick, may be punched 1/4" small and reamed after assembly, or drilled from the solid, as hereinafter specified.

FINISH: All sheared or flame cut edges and ends of material, including ends of stiffeners and where indicated are to be planed, or ground, to a smooth finish. All rivet holes shall be accurately spaced, perpendicular to the surface and cylindrical. They shall not be punched or reamed when the two thicknesses of metal not in contact with each other exceed 3/4" in thickness, but may be punched small and subsequently drilled or reamed to size. Holes shall not be punched or reamed when the two thicknesses of metal not in contact with each other exceed 3/4" in thickness, but may be punched small and subsequently drilled or reamed to size. Holes shall not be punched or reamed when the two thicknesses of metal not in contact with each other exceed 3/4" in thickness, but may be punched small and subsequently drilled or reamed to size.

MATCH MARKING: All members pertaining to be made with both steel stamps and paint. Paint shall be applied to the surface of the metal before the steel stamps are applied. Paint shall be applied to the surface of the metal before the steel stamps are applied. Paint shall be applied to the surface of the metal before the steel stamps are applied.

SHOP PAINT: Paint shall be applied to the surface of the metal before the steel stamps are applied. Paint shall be applied to the surface of the metal before the steel stamps are applied. Paint shall be applied to the surface of the metal before the steel stamps are applied.

ERECTION: Erection shall be performed by the contractor. Erection shall be performed by the contractor. Erection shall be performed by the contractor.

2-L (4 cab) 1'-3½" × 8" × 23⅛"
2-L (6 cab) 2'-3½" × 8" × 11½"

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Except by State of California, Department of Public Works.
INSPECTION: John M. Bailey
RIVETS: ⅞" ø
OPEN HOLES: ⅞" ø unless Noted
PUNCHING: Holes in material ½" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¾" ø and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled 1/8" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None. 1 coat Iron Oxide Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted lattice plates (or angles); and surface of main material in contact therewith; also to projecting portions of splice plates (or angles) which are rivoted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

MATERIAL All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.

SPECIFICATIONS Special or State of California, Department of Public Works, for structural steel.

INSPECTION By John M. Bailey.

RIVETS None

OPEN HOLES As Listed

PUNCHING All punching in structural steel may be full size.

DRILLING All Holes in Cast Iron to be drilled unless noted. Holes marked ø to be drilled to steel templets.

FINISH All sheared or flame cut edges and ends of material to have a neat appearance.

CAST IRON For drain boxes to be as per Special Specifications of State of California, Department of Public Works.

CAST IRON companion flanges, asbestos gaskets & Wrought Iron Pipe & Couplings to be Commercial Std. materials.

6"-4 Std. Pipe to be Std. commercial grade steel pipe except as certain 0.20% Copper.

CONTACT SURFACES shown permanently bolted to be cleaned and scraped before painting. Bolts to be drawn up tight to exclude foreign particles during

Shipment or field Sand blasting.

GASKETS To be shop-cut boxed.

SHOP PAINT "N" as except one coat of "Acid Resisting Paint" to be applied to the following (a) All finished surfaces of castings. (b) All contact surfaces of permanently bolted parts. (c) To portion of shops marked "PSI" not readily accessible for field sand blasting.

REQUIRED LIST

Note
Holes marked RT to be sub-punched and reamed to size to a metal templet

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey
RIVETS: Z-8
OPEN HOLES: 1/16" Ø Unless Noted
PUNCHING: Holes in material ⅝" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ½" and reamed when assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ½" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except 1 coat No-Ox-Id Filler Red for base and cap plates of Towers, at Bents, and at built up struts, and 1 coat "Acid Resisting Lead" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and backs of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

CONTRACT CJ1580-B SHEET 3908 A2

MATERIAL - All Structural Steel to be copper bearing
SPECIFICATIONS - Special by State of California Dept of Public Works
INSPECTION - By John M Bailey
RIVETS - 7/8"
OPEN HOLES - 13/16" unless noted
PUNCHING - All holes to be punched full size except holes marked RT which are to be subpunched & reamed to size through a steel templet
FINISH - All sheared or flame cut edges and ends of material to have a neat appearance and where designated F.I.M., F.S.E., etc. Shop must shear and grind, chip and grind or otherwise cut and finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a neat appearance.
SHOP PAINT - None, except as outlined below which shall be given one coat of Red Resisting Linseed Oil. All surfaces exposed to the elements not readily accessible for field sand blasting.
All contact surfaces of parts bolted. All painted surfaces must be thoroughly cleaned and scraped before paint is applied. Bolted parts, to be assembled after paint is dry and bolts drawn up tight.

8- Bolts	⅞" - 2½" lg.		Hex. Hd. & Nut		

Notes:-
Rivets shown thus ▽ through Central Knobby Walk Plates are to be c'sk. and have a maximum height not more than the height of cutters on plate. All other rivets shown thus ▽ are to be c'sk. and have a maximum height of ⅛".
Shop to place Erecting Marks on left End of members as detailed and in an upright position.
Corners of re-entrant cuts to be rounded to ½" radius. Countersunk holes for flat head field bolts to conform to the head of bolts furnished by the Alameda Works (See J826 Contract CT1580-B). Samples to be furnished by the Alameda Works.
All Brackets shown in Sects. are to be riveted up in a fixture to assure squareness.
Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, and parts must be tightly clamped while welding. Welding shall be done in such a manner so as to prevent entering of any foreign substance during field sand blasting.
Shop to put shipping bolts in holes (X) and draw same up tight. Erector to remove in field.

MATERIAL:- All Structural Steel to be copper bearing.
SPECIFICATIONS:- Special by State of California, Dept of Public Works.
INSPECTION:- By Tohi N. Bailey.
RIVETS:- ⅞"
OPEN HOLES:- 15/16" Unless Noted.
PUNCHING:- All holes to be punched full size except holes marked RT. which are to be sub-punched & and reamed to size through a metal templet.
FINISH:- All sheared or flame cut edges and ends of material to have a neat appearance and where designated PIM, PEE, etc. Shop must sheer and grind, chip and grind or otherwise cut and finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a neat appearance.
SHOP PAINT:- None, except as outlined below, which shall be given one coat of Acid Resisting Liquid.
① All surfaces exposed to the elements not readily accessible for field sand blasting.
② Contact surfaces of parts bolted.
All painted surfaces must be thoroughly cleaned and scraped before paint is applied.
Bolted parts to be assembled after paint is dry and bolts drawn up tight.

Required List

9 - Perm. F.H. bolts ⅞" x 12" lg. } for SG1-2-3
9 - Washs. 2 x ½" thk.
6 - Perm. F.H. bolts ⅞" x 12" lg. } for SG4-5-6
6 - Washs. 2 x ½" thk.

Countersunk holes for flat head field bolts to conform to the head of bolts furnished by the Alameda Works. (Long Span Contract CT1580-B) Complies to be furnished by the Alameda Works

MATERIAL: All structural steel to be copper bearing.

SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By John M. Delag
RIVETS: ⅞" - 15/16" Unless Noted.
OPEN HOLES: 15/16" Unless Noted.
PUNCHING: All holes to be punched full size except those marked RT which are to be subpunched ¼" and reamed to size 1" a metal templat.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where designated F1E, F2E etc, shop must shear and grind, chip and grind or otherwise cut and finish so that members present a neat appearance and conform to dimensions given on dwgs. Ends of all assembled members must present a neat appearance.

G-s	B	do. × 1'-6⅛	
G-t	Pls.	14 × 7/16 × 1'-9⅜	

Countersunk holes for flat head (ctsk) bolts to conform to the head of bolts furnished by the Alameda Works (Dwg. 788 contract 17780-B). Samples to be furnished by the Alameda Works.

All material to be carbon steel.

All rivets shown thus ℄ are to be ctsk. and have a maximum height of ⅛". Where parts are tack welded contact surfaces must be thoroughly cleaned and scraped before assembly and parts must be tightly clamped while welding. Welding shall be done in such a manner so as to prevent entering of no foreign substance during field sand blasting.

SHOP PAINT: None, except as outlined below, which shall be given one coat of ACID RESISTING LIQUID.

① All surfaces exposed to the elements not readily accessible for field sand blasting.

② Contact surfaces of parts butted. All painted surfaces must be thoroughly cleaned and scraped before paint is applied. Bolted parts to be assembled after paint is dry and bolts drawn up tight. Shop to place erection marks on Left Hand end of members as detailed and in an upright position.

MATERIAL: All structural steel to be copper bearing.

SPECIFICATIONS: Specified by State of California, Department of Public Works.

INSPECTION: By John M. Bailey

RIVETS: ⅞"

OPEN HOLES: 1 1/16"

PUNCHING: All holes to be punched full size except those marked RT which are to be sub-punched ⅜ and reamed to size through a metal template. FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where designated F1E F2E etc. Shop must shear and grind, chip and grind or otherwise cut and finish so that members present a neat appearance and conform to dimensions given on dwgs. Ends of all assembled members must present a neat appearance.

All Material Carbon Steel

Notes - Rivets shown thus ○ through Central Knuckle V-Ie Plates are to be ctsk and have a maximum not more than the height of pattern on plate. All other rivets shown thus ⊙ are to be ctsk and have a maximum height of ⅛".
Shop to place Erection Marks on Left End of members as detailed and in an upright position.
All brackets shown in Sections A-A, B-B and C-C to be riveted up in a to have to assure squareness
Shop to put shipping tabs in holes ⓧ and draw same up tight. Erector to remove in field.
Where parts are tack welded, contact surfaces must be thoroughly cleaned and scraped before assembly, and parts must be tightly clamped while welding. Welding shall be done in such a manner so as to permit entering of no foreign substance during field sand blasting.
Corners of re-entrant cuts to be rounded to ½" Radius.
Countersunk holes for flat head field bolts to conform to the head of bolts furnished by the Alameda Works (Cong. 3826 contract CT 1520-B). Samples to be furnished by the Alameda Works.

MATERIAL - All Structural Steel to be copper bearing
SPECIFICATIONS - Special by State of California, Dept. of Public Works
INSPECTION - By John M. Baily
RIVETS - ⅞"ϕ
OPEN HOLES - ⅞"ϕ unless noted
PUNCHING - All holes to be punched full size except holes marked Ⓡ, which are to be sub-punched ¾" and reamed to size through a metal template.
FINISH - All sheared or flame cut edges and ends of material to have a good appearance, and where designated F.I.W. 125, etc. Shop must shear and grind, chip and grind or otherwise cut and finish so that members present a neat appearance and conform to dimensions given on drawing. Ends of all assembled members must present a NEAT appearance.
SHOP PAINT - None, except as outlined below, which shall be given one coat of "Acid Resisting Liquid"
① All surfaces, exposed to the elements not readily accessible for field sand blasting.
② Contact surfaces and parts "bolted"
All painted surfaces must be thoroughly cleaned and scraped before paint is applied.
Bolted parts to be assembled either point is dry and bolts drawn up tight

Shop Piece Mark	Spans Left Ends	Spans Right Ends	Spans Both Ends	Piece No.	Description	Mark	Remarks	Weight each Piece
REQUIRED BY SPANS					REQUIRED LIST			

Note "A"
Holes marked CRT to be countersunk (½) & reamed or drilled to size thru a metal template furnished by Bonsai Works of Mc Clintic-Marshall Corp.

Shop Note:
In setting reaming templates for end connections on stringers, shop must take extra precautions to maintain center to center distance of end holes, as noted on details.
Shop to paint all Erection Marks on left hand end of member as detailed and in Groups Rec'd'd.
All 24B74 Beams on this sheet are new sections.

MATERIAL: All structural steel to be copper bearing; Assembly ends for carbon steel prefaced with c; thus: cb, cb, etc.; for silicon steel with s; thus: sb, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: By Sam H Bailey
RIVETS: ⅞
OPEN HOLES: As Noted
PUNCHING: Holes in material ¾" thick or less to be subpunched ⅜" undersized to size. See note "A".
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/16" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None, except contact surfaces of parts not to be "Red Resisting Lead" after the contact surfaces have been thoroughly cleaned and except field parts shall be assembled after paint is dry and rolls drawn up tight.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc; for nickel steel with n, thus: na, nb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey - Chief Insp.
RIVETS: ⅞" ø
OPEN HOLES: 1/16" unless noted.
PUNCHING: Holes in material ⅝" thick or less subs for stringer splices, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled 3/16" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ½" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except 1 coat No-Oxide Filler Red for base and cap plates of Towers, of Bents, and of built up shapes and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of couplings, and to bolted surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith also to projecting portions of bolted platen (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. An ambiguous marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: cs, cb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey - chief Insp.
RIVETS: ⅞" ☐ V
OPEN HOLES: 1/16
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ¾" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ¾" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except 1 coat Pro-Dux Filler Red for base and end plates of Towers, of Deck, and of built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, finished surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

R4 - ⅝ 3" - Angle ccd to ccj for D27
R3 - ⅝ 2" - Plate + ccb added to D27
R2 - 2-D37A added ⅝ thk
R1 - 13" - ⅝ 1" - 3" - 3½
Date - Revision - Init.

APPROVED
Class B. Woodfill — Engineer of Design
Chas. E. Andrew — Bridge Engineer
C. H. Purcell — Chief Engineer
Date: 3-16-34

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with C, thus: ca, cb, etc.; for silicon steel with S, thus: sa, sb, etc.
SPECIFICATIONS: Specials by State of California, Department of Public Works.
INSPECTION: John M. Bailey - chief Insp.
RIVETS: ⅞" unless noted.
OPEN HOLES: 1/16" unless noted.
PUNCHING: Holes in material ⅝" thick or less, used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled 1/4" and reamed after assembly, or drilled from the solid, when supervised.
FINISH: All sheared or flame cut edges and ends of members to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with best steel die and paint.
SHOP PAINT: Three coats - 1 coat RED OXIDE
Fillers: Pack tie base and cap plates of Towers, at Bents, and at built up shoes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Date:

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.

SPECIFICATIONS: Special by State of California, Department of Public Works.

INSPECTION: John M. Bailey Chief Inspector

RIVETS:

OPEN HOLES: As Noted

PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, facing, and diaphragms may be punched full size. Holes in main material ¾" thick or less to be subpunched ¼" and reamed to size after assembly.

DRILLING: Holes in material over ¾" thick to be sub-drilled ¾" and reamed after assembly, or drilled from the solid, while assembled.

FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.

MATCH MARKING: All match marking to be made with hot steel stencil and paint.

SHOP PAINT: None except 1 coat Red Oxide Filler Red for base and cap plates of Towers, of Bents, and of built up shoes; and 1 coat "Acid Resisting Lloyds" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Doors, Hinges & Latches detailed & ordered on Sh. RJ56.

Shop Bills: R50-R61-R62
Adv. Bill: R34

MATERIAL: All structural steel to be copper bearing. Assembly marks for certain steel painted with a, thus: a3, a5, etc.; for silicon steel with s, thus: s3, s5, etc.
SPECIFICATIONS: Standard by State of California, Department of Public Works.
INSPECTION: John M. Bailey, Chief Inspector
RIVETS: ⅞ Driven Hot
OPEN HOLES: 1⅛" Unless Noted
PUNCHING: Holes in material ¾" thick or less used for stringer splices, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ¼" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marks to be made with hot steel stencil and paint.
SHOP PAINT: None except two coats Iron-Oxide Red for base and top plates of Types of Bents, and at built up shoes; and 1 coat "Acid Resisting Oil-Base" to milled ends of members, machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of bolted plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

Note:
This Drawing to be worked in conjunction with Dwg. R10 & R10A. Everything not given on this sheet to be made same as Dwg. R10 & R10A, except material prefixed "S" for silicon steel to be prefixed "C" for carbon steel.

Ladders detailed & ordered on Sh. RJ55.

Shop Bill: 4R110

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John H. Bayley - Chief Inspector
RIVETS: 1"
OPEN HOLES: 1⅛"
PUNCHING: Holes in material ⅝" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ⅛" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with hook steel stencils and paint.
SHOP PAINT: None except 1 coat No-Corode Finish Red for base and cap plates of Towers, at Seats, and of built up shapes and 1 coat "Acid Resisting Liquid" to inside ends of member, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to web material and are not fully accessible for sand blasting.

REQUIRED LIST

Sheet R14

Tot. Required 4 List 500

Date	Revision	Appd

APPROVED

Glenn B. Woodruff — Engineer of Design
Chas. E. Andrew — Design Engineer
C. H. Purcell — Chief Engineer
Date: 4-19-34

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: aa, ab, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION:
RIVETS:
OPEN HOLES:
PUNCHING: Holes in material ¾" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¾" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ⅝" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except 1 coat Red-Oxide Filler Part for base and cap plates of Towers, of Dents, and of built-up shoes; and 1 coat "Non-Rusting Liquid" to milled ends of members, to machined surfaces of couplings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to protecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

Notes:-
Diaphragms for Columns on this sheet, Ordered ~ detailed on sheet-RJ59.
Ladders for Columns on this sheet, Ordered ~ detailed on sheet-RJ55.
Doors, Latch Bars & Hinges for Columns on this sheet, Ordered ~ detailed on sheet-RJ56 & RJ510

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works
INSPECTION: John A Bailey - Chief Inspector
RIVETS: 7/8"
OPEN HOLES: 15/16" except as noted.
PUNCHING: Holes in material 5/8" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material 5/8" thick or less to be sub-punched 3/16" and reamed to size after assembly.
DRILLING: Holes in material over 5/8" thick to be sub-drilled 3/16" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: None except: 1 coat Red-Ox-Id Filler Red for base and cap plates of Towers, of Bents, and of built-up shoes; and 1 coat "Acid Resisting Liquid" * on milled ends of members, to machined surfaces of castings, and to inside surfaces of butted splice plates (or angles) and surfaces of main material in contact therewith, also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a "mod" ca, cb, etc.; for silicon steel with s, thus sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John A. Bailey - Chief Inspector
RIVETS: ⅞"ø
OPEN HOLES: As Noted.
PUNCHING: Holes in material ⅝" thick or less used for stringer lateral, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ⅝" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be made with "Lumber Crayon" stencils and paint.
SHOP PAINT: None except 1 coat Non-Corrosive Filler Red Base Iron Oxide applied at Towers, at Shops, and after erection at Towers, of Shops, and after erection at Towers, of "Acid Resisting Liquid" to inner faces of members, finished per "Specifications" to be applied to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: aa, ab, etc. for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M Bailey Chief Inspector
RIVETS: 7/8"
OPEN HOLES: 1 1/16"
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material 1" thick or less to be sub-punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be subdrilled 1/8" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/8" of metal.
MATCH MARKING: All match marking to be made with hot steel stencils and paint.
SHOP PAINT: None except 1 coat Red Oxide Filler Red for base and contact of Towers, of Bents, and of built up shapes; and 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main material in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not fully accessible for hand blasting.

MATERIAL: All structural steel to be open hearth.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey, Chief Inspector
RIVETS: 7/8"
OPEN HOLES: 1/16"
PUNCHING: Holes in material 3/4" thick or less used for stringer laterals, stay plates, lintels, and diaphragms may be punched full size. Holes in main material 3/4" thick or less to be so punched 1/4" and reamed to size after assembly.
DRILLING: Holes in material over 3/4" thick to be subdrilled 1/4" and reamed after assembly, or drilled from the solid, as directed.
FINISH: All sheared or flame cut edges and ends of material to have a neat, workmanlike finish where inspection are to be placed so as to remove at least 1/4" of metal.
MATCH MARKING: All material is to be match marked with paint stencils and paint.
SHIP PAINT: None except that No. 0 Red Lead to be applied to all surfaces in Tension or Bend, and of built up shapes, and to all faying surfaces. Each piece of material is to be painted with two coats of approved paint before leaving the shop.

MATCH MARKING: All match marking to be made with both steel stamps and paint.
SHOP PAINT: Non exposed faces of built up members, and all surfaces within closed cells to be painted with one coat of red lead paint. Exposed faces of built up members, and all other surfaces of main material, except those to be painted with red lead paint as noted above, to be painted with one coat of "Acid Resisting Primer" to which shall be added 1 lb. of Iron Oxide Pigment per gallon of primer. Contact surfaces of connection angles and all surfaces of main material in contact therewith, also to projecting portions of rivets, plates (or angles) within are also painted with red lead paint. Machined surfaces, and those to be welded, are painted with a rust inhibitive coating.
ERECTION: Erection marks to be painted on all main members and pieces before leaving the shop.
SHIPPING: Each piece to be plainly marked with the erection mark as shown on the shop bill. Bundles of small pieces to be tagged with a list of the erection marks contained therein.
WELDING: Welding will be permitted only as noted on the plans.

REQUIRED LIST

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: a2, a3, etc.; for high carbon steel with s, thus: s2, s3, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: Subject to Rejection by Inspector
RIVETS: ⅞ Unless Noted
OPEN HOLES: ⅛
PUNCHING: Holes in material ½" thick or less used for stringer laterals, stay plates, lacing, and shoe hinges may be punched full size. Holes in main material ⅝" thick or less, to be sub-punched ¾" and reamed to size after assembly.
DRILLING: Holes in material over ½" thick to be sub-drilled ⅞" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ½" of metal.
MATCH MARKING: All match marking to be made with both steel stamps and paint.
SHOP PAINT: Paint required by Standard Specifications for Steel for Bridges and Buildings of Department of Public Works, dated 1936, except that "Acids for Etching Liquors" to mixed acids of manufacturer's standard strength may be used. Surfaces of bolted splice plates for angles, and surfaces of main material in contact therewith, also to projecting portions of splice plates for angles, welds are shop painted to main material and are not fully accessible for sand blasting.

REQUIRED LIST

MATERIAL: All structural steel to be cooper basing. Assembly marks for carbon steel prefixed with c, thus: cc, cb, etc.; for alloy steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Kelley, Chief Inspector
RIVETS: ⅞" unless noted
OPEN HOLES: 1⅛"
PUNCHING: Holes in material ⅝" thick or less used for bridge laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¼" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ¼" and reamed after assembly, or drilled from the solid, when assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ¼" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: Paint except Turned Bolts and Faying Surfaces of Tension and Shear Joints and of Built up Members and Those "Acid Resisting Lloyds" to receive coats of Red Lead Paint to be applied to all surfaces of members, to machined surfaces of castings, and to inside surfaces of bolted rolled shapes (flanges) and surfaces of main material in contact therewith; also to projecting portions of rolled plates (or angles) which are shop painted to main material and are not fully accessible for paint blasting.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: cb, cb, etc.; for silicon steel with s, thus: sb, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey Chief Inspector
RIVETS: ¾ Unless Noted
OPEN HOLES: 1/16 ϕ
PUNCHING: Holes in material ⅝" thick or less used for stringer laterals, stay plates, lacing, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be sub-punched ¾" and reamed to size after assembly.
DRILLING: Holes in material over ⅝" thick to be sub-drilled ¾" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
MATCH MARKING: All match marking to be done with plain steel steadils and punch.
SHOP PAINT: None except: 1 coat No. 04 Red Primer Paint for base and cap plates of Towers, of Bents, and of built up chords and ∠'s. 1 coat "Acid Resisting Liquid" to milled ends of members, to machined surfaces of castings, and to inside surfaces of bolted splice plates (or angles) and surfaces of main members in contact therewith; also to projecting portions of splice plates (or angles) which are shop riveted to main material and are not subsequently accessible for sand blasting.

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with a, thus: a1, a2, etc.; for silicon steel with s, thus: s1, s2, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: John M. Bailey, C.E. Insptr.
RIVETS: ⅞" unless noted.
PLUG HOLES: ⅞" unless noted.
PUNCHING: Holes in material ⅝" thick or less used for stringer laterals, stay plates, lugs, and diaphragms may be punched full size. Holes in main material ⅝" thick or less to be full-punched 1/16" and reamed to size after assembly.
DRILLING: Holes in material over ½" thick to be subdrilled 1/16" and reamed after assembly, or drilled from the solid, while assembled.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least 1/16" of metal.
MATCH MARKING: All match marking to be made with both steel stencils and paint.
SHOP PAINT: Heavy coat of Iron Oxide Filler Red for Lace and cap plates of Tension, of Beams, and of built up shapes; and 1 coat "Acid Resisting Lac-id" to milled ends of members, to machined surfaces of castings, and to inside surfaces of batten splice plates (or angles), and surfaces of main material in contact inaccessible to projecting portions of splice plates (or angles) which are shop-riveted to main material and are not fully cleanable for paint-ing.

REQUIRED LIST

RUNG DETAIL

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, alum. ca, cb, etc.; for silicon steel with s, alums sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION: BY JOHN M. BAILEY
RIVETS: ⅞"Ø
OPEN HOLES: 13/16"Ø UNLESS NOTED
PUNCHING: ALL HOLES TO BE PUNCHED FULL SIZE
SEE DETAIL FOR PUNCHING RUNG HOLES
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/16" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance

SHOP PAINT: NONE EXCEPT THAT CONTACT SURFACES OF PARTS PERMANENTLY BOLTED SHALL BE GIVEN ONE COAT OF RED RESISTING LIQUID AFTER SUCH SURFACES HAVE BEEN THOROUGHLY CLEANED & SCRAPED. SAME PAINT IS TO BE ASSEMBLED WHILE PAINT IS WET & BOLTS PULLED UP TIGHT

REQUIRED LIST

MATERIAL { Carbon Steel.
All structural steel to be copper bearing. Assembly marks for detail material with as rolled edges, all marking for identification with paint, to be as directed.

SPECIFICATIONS: Special to Chapter of Contract. Department of Public Works.

INSPECTION: John H. Bailey, Chf. Insp.

RIVETS: —

OPEN HOLES: As noted.

PUNCHING: Punch to be as noted. Punch or drill holes in the most favorable position with respect to the grain of the material. Punch for permanent bolts and rivets shall be 1/16" smaller than the nominal diameter of the bolt.

BURRING: Burr to material over 1" thick on the punch side of the punched holes. Remove burrs on all edges.

FINISH: All exposed surfaces shall be free from loose mill scale, dirt, chips, grease and other foreign matter.

SHOP INSPECTION: Shop inspection will be made at the mill or shop where the material is fabricated.

SHOP PAINTING: Shop painting will be done after inspection and approval.

Shop Paint:- 1 Coat No. Oxide Filler Red applied to all parts.

Shop Bill:- R3000

MATERIAL: All structural steel to be copper bearing. Assembly marks for carbon steel prefixed with c, thus: ca, cb, etc.; for silicon steel with s, thus: sa, sb, etc.
SPECIFICATIONS: Special by State of California, Department of Public Works.
INSPECTION:
RIVETS: ⅞"ϕ
OPEN HOLES: 1⅛" ϕ Unless Noted
PUNCHING: Holes in material ½" thick or less used for stringer laterals, stay plates, facing and diaphragms may be punched full size. Holes in main material ½" thick or less to be sub-punched 1/16" and reamed to size after assembly. Also See Note "A"
DRILLING: Holes in material over ¾" thick to be sub-drilled 1/16" and reamed after assembly, or drilled from the solid.
FINISH: All sheared or flame cut edges and ends of material to have a neat appearance and where indicated are to be planed so as to remove at least ⅛" of metal.
EDGE DISTANCE: 1½ Unless Noted
SHOP PAINT: None.

MATERIAL: All structural steel to be copper bearing carbon steel.
SPECIFICATION: Special by State of California, Dept of Public Works
INSPECTION
RIVETS 3/4 ϕ Unless Noted
OPEN HOLES 13/16 ϕ Unless Noted
PUNCHING All holes to be punched full size except holes marked RT which are to be sub-punched 1/4" and reamed to size thru a metal template
FINISH All sheared or flame cut edges and ends of material to have a neat appearance, and where designated FIW FPE etc. shop must shear & grind, chip & grind or otherwise cut & finish so that members present a neat appearance and conform to dimensions given on drawings. Ends of all assembled members must present a neat appearance
SHOP PAINT None, except the following surfaces which shall be given one coat of "Acid Resisting Liquid."
(1) All surfaces exposed to the elements not readily accessible for field sandblasting
(2) Contact surfaces of parts bolted. Surfaces must be thoroughly cleaned and scraped before paint is applied.

NOTE
Rivets shown thus ⓘ thru Central Knobby Floor Plates are to be c'sk. and have a maximum height not more than the height of pattern on plate. All other rivets shown thus ⓘ are to be c'sk and have a maximum height of 1/8".
Shop to paint erection marks on Left Hand end of members as detailed and in an upright position
For Sections see sheet T603 1J
Brackets to be riveted while in a fixture to insure squareness
Where tack welding is called for, contact surfaces must be thoroughly cleaned and scraped before assembly. Parts to be tightly clamped and welded so that no foreign substance may enter during Field sandblasting

30-1

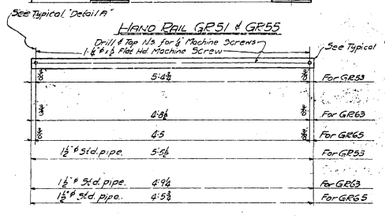
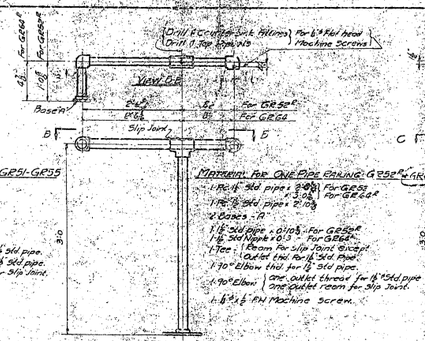
Material For One Pipe Railing GR51-GR55

- 1 Pc. 1½ Std pipe x 7'-7⅜" - For GR51
- 3 Pcs. 1½ Std. pipe x 2'-10⅛" - For GR55
- 2 Bases - "A"
- 1 - Pipe Cap thd for 1½ Std pipe.
- 2 - Tees { Ream for Slip Joint. Except outlet thd. for 1½ Std pipe.
- 1 - 90° Elbow { One outlet thd. for 1½ Std pipe. One outlet ream for Slip Joint. for Std. 1½ pipe
- 2 - 6" x 1/2" F.H. Machine Screws.



HAND RAIL GR51 & GR55

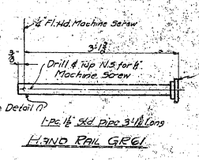
HAND RAIL GR53-GR63-GR65



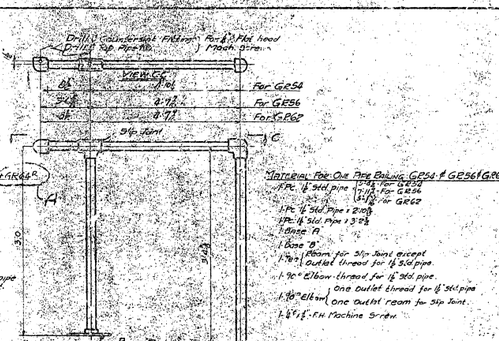
Material For One Pipe Railing: GR52 & GR62

- 1 Pc. 1½ Std pipe x 3'-8⅜" - For GR52
- 1 Pc. 1½ Std pipe x 2'-10⅛" - For GR62
- 2 Bases - "A"
- 1 - 1½ Std pipe x 0'-10⅜" - For GR52
- 1½ Std Nipple x 0'-3" - For GR62
- 1 Tee { Ream for Slip Joint Except Outlet thd. for 1½ Std Pipe.
- 1 - 90° Elbow thd. for 1½ Std pipe.
- 1 - 90° Elbow { One outlet thread for 1½ Std pipe. One outlet ream for Slip Joint.
- 1 - ½" x ½" F.H. Machine Screw.

HAND RAIL GR52 & GR62



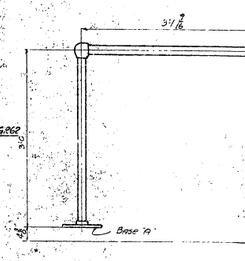
HAND RAIL GR61



Material For One Pipe Railing GR54 & GR56 & GR66

- 1 Pc. 1½ Std pipe { 7'-7⅜" - For GR54 / 6'-6⅜" - For GR56 / 2'-10⅛" - For GR66
- 1 Pc. 1½ Std Pipe x 2'-10⅛"
- 1 Pc. 1½ Std Pipe x 3'-8⅜"
- 1 Base "A"
- 1 Base "B"
- 1 Tee { Ream for Slip Joint, except outlet thread for 1½ Std pipe.
- 1 - 90° Elbow thread for 1½ Std pipe.
- 1 - 90° Elbow { One outlet thread for 1½ Std pipe. One outlet ream for Slip Joint.
- 1 - ½" x ½" F.H. Machine Screw.

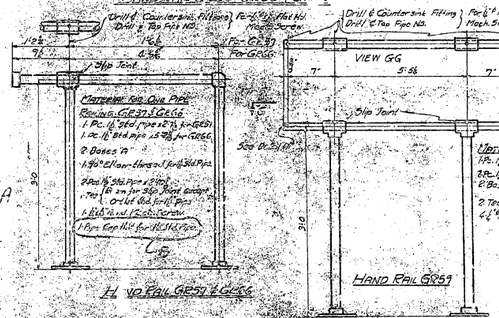
HAND RAIL GR54 GR56 & GR66



Material For One Pipe Railing GR58

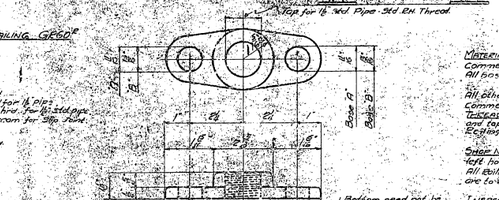
- 1 Pc. 1½ Std. Pipe x 2'-11⅞"
- 1 Pc. 1½ Std Pipe x 2'-10⅛"
- 1 Pc. 1½ Std. Pipe x 3'-8⅜"
- 1 Base - A "
- 1 Base - B "
- 2 - 90° Elbows - Thread for 1½ Std Pipe.

HAND RAIL GR58



Material For One Pipe Railing GR57 & GR67

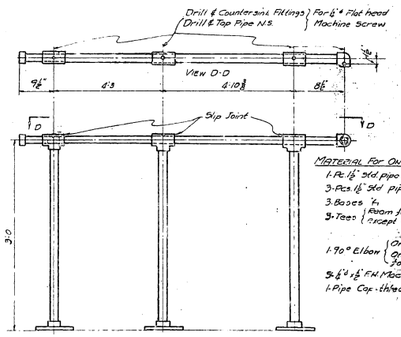
- 1 Pc. 1½ Std pipe x 2'-3½" for GR57
- 1 Pc. 1½ Std pipe x 5'-8⅜" for GR67
- 2 Bases "A"
- 1 - 90° Elbow - thread for 1½ Std Pipe
- 2 Pcs. 1½ Std Pipe x 2'-10⅛"
- 1 Tee { 1½ ø for Slip Joint except Outlet thd. for 1½ Std pipe
- 1 Pipe Cap thd. for 1½ Std Pipe.



Material For One Pipe Railing GR60[R]

- 1 Pc. 1½ Std Pipe x 8'-4½"
- 1 Pc. 1½ Std. pipe x 2'-10⅛"
- 1 Base "A"
- 1 Tee { Ream for Slip Joint Except Outlet thread for 1½ pipe
- 2 - 90° Elbows { One Outlet thrd. for 1½ Std pipe. One Outlet ream for Slip Joint.
- 1½" x ½" F.H. Machine Screw.

HAND RAIL GR60[R]



Material For One Pipe Railing GR67

- 1 Pc. 1½ Std. pipe x 10'-9⅜"
- 3 Pcs. 1½ Std pipe x 2'-10⅛"
- 3 Bases "A"
- 3 - Tees { Ream for Slip Joint Except Outlet thread for 1½ Std pipe
- 1 - 90° Elbow { One outlet thread 1½ Std. pipe. One Outlet ream, for Slip Joint for 1½ Std. Pipe.
- 3 - ½" x ½" F.H. Machine Screw.
- 1 - Pipe Cap - thread for 1½ Std. Pipe.

Gen. Notes.
Material - All material O.H. copper bearing medium carbon steel.
Specifications - Special by State of California Dep't of Public Works.
Inspection - John M. Bailey Chief Inspr.
Rivets - 7/8"
Open Holes - 1 1/16" unless noted.
Reaming - All holes to be subpunched 1/4" and reamed to size while parts are assembled. Field connections at column splices to be reamed while connecting column sections are assembled in the shop and pieces match marked. All match marking to be made with 3/8" steel stencils and white paint.
Burrs to be removed from all reamed holes. Holes in material used for diaphragms and ladder connections may be punched full size.
Finish - Sheared or flame cut edges and ends of all material marked (F) to be planed so as to remove at least 1/8" of metal. Edges of manholes to be smooth.
Shop Paint - None except as follows. The following surfaces to be given one coat of "Acid Resisting Liquid". Milled ends of column both ends. Inside surfaces of riveted & bolted splice material above the mill line. Surface in contact of bolted splice mat'l. below the mill line. Surface of main material in contact with bolted splice material.

Note to Shop: Web pl. pa must not project beyond backs of main ls.

GEN. NOTES

MATERIAL - All material O.H. copper bearing medium nerbon steel except cap plates (pe) which are T-2E in conformity with A.S.T.M. tentative spec. A140-32T with .25 to .40 carbon and not less than .20% copper contents.
SPECIFICATIONS - Special k. State of Calif. Dept. of Public Works.
INSPECTION - John M. Bailey Chief Insp.
RIVETS - ⅞" unless noted.
WASHERS - ⅞" unless noted.
REAMING - All holes in material ⅝" thick or less to be subpunched ⅜" and reamed to size while parts are assembled. Holes in material over ⅝" thick to be subdrilled ¼" and reamed to size or drilled full size while parts are assembled.
Field connections are to be reamed while connecting column sections are assembled in the shop and pieces match marked. All match marking to be done with ⅜" steel stencils and white paint.
Holes marked "R.T." are to be reamed thru a steel templet.
Burrs are to be removed from all reamed holes.
Holes in material used for diaphragms, ladder connections and minor details may be punched full size.
FINISH - Sheared or flame cut edges and ends of material marked (e) are to be planed "as to remove at least ¼" of metal. Edges of manholes are to be smooth.
SHOP PRINT - None except as follows.
Top and bottom surface of cap plates (pe) are to have one coat of No-OX-ID filler red paint.
The following surfaces to have one coat of "Red Rusting Liquid"
Milled ends of columns at splice
Shop Note:- All open spaces between lacing and column material, where fillers are not billed, to be closed by shop with fillers Tack weld loose fillers to lacing.

GEN. NOTES.
MATERIAL - All material O.H. copper bearing medium carbon steel.
SPECIFICATIONS - Specs. by Dept. of California Dept. of Public Works.
INSPECTION - John M. Deeley Chief Insp.
RIVETS - 1" ø
OPEN HOLES - 1⅛" ø unless noted
REAMING - All holes to be subpunched ¼" and reamed to size while parts are assembled. Field connections are to be reamed while connecting column sections are assembled in the shop and pieces match marked. All match marking to be done with ⅜" steel stencils and white paint. Burrs are to be removed from all reamed holes. Holes in material used for diaphrams and ladder connections may be punched full size.
FINISH - Sheared or flame cut edges and ends of all material marked (E) are to be planed so as to remove at least ⅛" of metal.
SHOP PAINT - None except as follows. The following surfaces to have one coat of "Acid Resisting Liquid" Milled ends of columns at both ends. Inside surfaces of riveted and bolted splice matl above the mill line. Contact surfaces of bolted splice matl below the mill line. Surfaces of main matl in contact with bolted splice matl.
Shop Notes:- All span spaces between lacing and column material, where fillers are not bolted, are to be closed by shop with fillers. Tack weld loose fillers to lacing.

REAMING- Holes in material ¾" thick or less to be subpunched ¼" and reamed to size while parts are assembled. Carbon steel ⅞" thick or less, used for lacing bars and stay plates, may be punched full size.

The chords of trusses shall be laid out in lengths of not less than 6 panels and the chord splices and plates P75, P76 & P77 on sheet 202, reamed and match marked while so assembled. Holes marked "R.T." to be reamed through a steel template. Burrs to be removed from all reamed holes. All match marking to be made with ½" steel stencil and white paint.

FINISH- Sheared or flame cut edges and ends of all material marked (E) to be planed so as to remove at least ½ of metal.

GENERAL NOTES-
Material- All material O.H Copper Bearing medium Carbon steel, except material marked (x) which is to be O.H. Copper Bearing Silicon steel.
Specifications- Special by State of California, Dept of Public Works.
Inspection- John M. Bailey- Chief Inspector.
Rivets- ⅞
Open Holes- 1⅛ Unless noted.
Reaming- Holes in material ⅝" thick or less to be subpunched ⅛ and reamed to size while parts are assembled.
Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish- CS material to be "Hot-Sawed" to length at the mill.
Shop Paint- None.

General Notes:-
Material:- All material O. H Copper bearing medium carbon steel, except material marked (X) which is to be O.H. Copper bearing silicon steel.
Specifications:- Special by State of California, Dept of Public Works.
Inspection:- John M. Bailey - Chief Inspector.
Rivets:- 1" diam.
Open Holes:- 1⅛ diam. unless noted.
Reaming:- Holes in material ⅞" thick or less to be subpunched ¼" and reamed to size while parts are assembled.
Carbon Steel ⅞" thick or less, used for lacing, stay plates & diaphragms may be punched full size.
When reaming field splices, the chords of trusses shall be laid out in lengths of not less than 6 panels and chord splices for P243 sizes thru Sh. No. P238 and Sh. A25 reamed and match-inscribed while re-assembled. Holes marked R.T. to be reamed thru a steel templet.
Burrs to be removed from all reamed holes. All match-marking to be made with ⅛" steel stencils and white paint.
Finish:- Sheared or flame cut edges and ends of chord marked (E) to be planed to remove at least ⅛" of metal.
Shop Paint:- See Sh. E1

GEN. Notes.

Dimensions given in sections AA-BB and CC are theoretical dimensions.

For setting of centering blocks see plan view.

Dimensions for locating centering blocks EM201 are given from column center lines to inside face of steel at top of base plate also the thickness of steel where double blocks are used.

Measurements are taken at the finished base of the column section while assembled in the shop.

Actual measurements are to be taken for each assembled tower column.

Centering blocks are to be set to the dimensions given and tack welded to the column base plate in the field.

Numbers thus (1)(2)(3) indicate order of placing column sections.

Blocks EM201 are to be furnished for complete bent E2 and used again for bent E3.

NOTE To Shop:- Rivets & holes not spaced to be not less than 3½"ø not more than 7" ctrs. Min. edge dist. 1⅛

GENERAL NOTES

MATERIAL:- All material to be O.H. copper bearing medium carbon steel except material marked (X) which is to be O.H. copper bearing Silicon Steel

SPECIFICATIONS:- Special by State of California Department of Public Works

INSPECTION:- John M. Bailey - Chief Inspector.

RIVETS - 1"ø

OPEN HOLES - 1⅛"ø unless noted

REAMING:- All holes to be subpunched ¼" and reamed to size while parts are assembled

Field connections to be reamed while connecting column sections are assembled in the shop and pieces match marked. All match marking to be done with ½" steel stencils and white paint.

Holes marked R.R. are to be reamed thru a steel templet

Burrs are to be removed from all reamed holes.

Holes in material used for diaphragms and ladder connections may be punched full size.

FINISH:- Sheared or flame cut edges and ends of all material marked (E), are to be planed so as to remove at least ⅛" of metal. Edges of manholes to be smooth.

SHOP PAINT:- None except as follows:-

The following surfaces to have one coat of "Red Rusting Liquid":-

Milled ends of columns bolt ends

Inside surfaces of splice material above mill line

Surfaces of splice material in contact above mill line

PAINT:- (Continued)

Surfaces in contact of bolt-head splice material below mill line

Surfaces of main material in contact with bolted splice material

Surfaces inaccessible for sand blasting on Brackets AE & CE

GEN. NOTES:

MATERIAL: All material O.H. copper bearing medium carbon steel except materials marked (C) which is S.M. copper bearing silicon steel rivet steel plates, bars & Rs which are to be used exclusively with A.S.T.M. Tentative Spec. A140-327 with .25 to .40 carbon and .020% min. copper content.

SPECIFICATIONS: Standard Specs. of Dept. of Public Works.

INSPECTION: John M. Finley, Chief Inspector.

RIVETS: To be countersunk.

OPEN HOLES: ⅞ø unless noted.

REAMING: All holes to be subpunched & reamed to size while parts are assembled except slots which may be drilled. All rivet & field connections to be reamed while connecting columns, bracing are assembled in the shop and bevel matchmarked. All matchmarking to be done with steel stencils and white paint.

Burrs are to be removed from all reamed holes.

Slots in material used for bridges and ladder connection may be punched full size.

FINISH: Sheared or flame cut edges and ends of all material marked "Fin" to be planed to receive at least ½" of metal. Edges of thickness are to be smooth.

SHOP PAINTING: Shop coat as follows:

The following surfaces to have one coat of Acid Resisting Liquid: Milling ends of columns, both webs, inside surfaces of riveted & bolted splice material above mill line. Contact surfaces of riveted & bolted splice material above mill line. Contact surfaces of bolted splice material below mill line. Surfaces of main material in contact with bolted splice plates. Top & bottom surfaces of Rs & BPE to have one coat of W.B.-2410 Filler no. paint.

Note to Erector

Anchorage to be erected complete about 20' high, and all rivets driven before lowering into position for driving the pins connecting anchorage to eye bars. After these pins have been driven, eye bars are to be stressed by jacking to obtain proper elevation of pin hole at top of anchorage El. +186.192. Elevations marked (Hold) are to be maintained.

Pinnacle Cafe — Feb. 27, 1934

REQUIRED		
4	Eye Bar Anchors	MAI

Gen. Notes:-
Material - All material to be medium O. H. Copper bearing steel.
Specifications - Special by State of California Dept. of Public Works.
Inspection - John W. Bailey, Chief Inspector.
Rivets 7/8" Dia.
Open Holes 1 1/16" Dia unless noted.
Reaming - All holes to be subpunched 3/4" and reamed to size.
Paint - Three coats pin holes to be coated with white lead and tallow
Finish - Sheared or flame cut edges and ends of material marked (E) are to be planed so as to remove at least 1/8" of material. Flame cut edges of slabs to be straight and smooth with a neat appearance.

Gen. Notes-
Material- All material to be O.H. Copper bearing Steel
(X) Denotes Silicon Steel (C) Denotes Carbon Steel
Specifications - Special by State of California Dept. of Public Works
Inspection- John M. Bailey, Chief Inspector
Rivets- 1⅛ Dia.
Open Holes- 1⅛ Dia. Unless Noted
Paint- None, except Pin holes to have one coat white lead and tallow. Finished surfaces of slabs and field contact surfaces to have one coat of Acid resisting liquid.
Reaming - All holes to be subpunched or subdrilled & and reamed to size, while parts are assembled in shop. Field connections are to be reamed, while connecting pieces are assembled in shop and pieces matched marked. Match marking to be done with ½ Steel stencil and white paint.
Material over ½ thick to be drilled. Burrs to be removed from all reamed holes.
Finish. - Sheared or flame cut edges of all material marked (C) are to be planed so as to remove at least ⅛ of metal. Flame cut edges of slabs to be straight and smooth. Edges of manholes to be smooth.

Gen. Notes–
Material– All material to be O.H. Copper bearing medium Carbon Steel except Cast Steel.
Specifications– Special by State of California Dept. of Public Works
Inspection– John M. Bailey, Chief Inspector
Open Holes– As noted
Paint– None, except finished surfaces, field contact surfaces and shims to have one coat of Acid resisting liquid.
Reaming– Shims to be punched full size. Material over ¼" thick to be drilled. Holes marked R.T. to be drilled to a steel templat. Burrs to be removed from all reamed holes.
Finish– Sheared or flame cut edges of all material marked (E) are to be planed so as to remove ¼" least ⅛ of metal. Flame cut edges of slabs to be straight and smooth.

General Notes

MATERIAL:- All material OH Copper bearing medium carbon steel except material marked (X) is OH Copper bearing silicon steel.

SPECIFICATIONS:- Special by State of California Department of Public Works

INSPECTION:- John N. Bailey Chief Inspector

RIVETS:- 7/8" ø Unless noted. (See Note)

OPEN HOLES:- 1 1/8" ø Unless noted.

REAMING:- Holes in carbon or silicon steel 3/4" thick or less to be subpunched 1/4" ø and reamed to size while parts are assembled except diaphram webs which may be punched full size. Holes marked RT to be reamed through a steel templet. Splices to be reamed assembled and pieces match marked. Burrs to be removed from all reamed holes. All match marking to be done with 3/8" steel stencils and white paint.

FINISH:- On all carbon steel marked "C" and on all silicon steel, the sheared or flame cut edges or ends are to be Finished to remove at least 1/4" of metal. Edges of manholes to be smooth.

PAINT:- None except acid resisting liquid for finished ends and splice plates. See Sh. E-11

Note: All Rivet Steel to be copper bearing. Shipping bolts detailed on sheet CM

GENERAL NOTES:-
Material: All material O.H. copper bearing medium carbon steel, except material marked (x) is O.H. copper bearing silicon steel, and all 1⅛" shop rivets are manganese steel. All rivet steel copper bearing
Specifications: Special by state of California Department of Public Works.
Inspection: John M. Bailey, chief inspector.
Rivets 1⅛"Ø unless noted.
Open Holes 1⅛" " "
Reaming: Holes in carbon or silicon steel ⅞" thick or less to be punched ¼" and reamed to size while parts are assembled, except diaphragm webs, which may be punched full size. Holes in silicon material over ⅞" thick to be subdrilled ⅞" and reamed to size while parts are assembled.
Holes marked R.T. to be reamed through a steel templet.
All chord splices to be reamed assembled and pieces match marked with not less than 6 panels assembled.
Burrs to be removed from all reamed holes.
All match marking to be done with ½" steel stencil and white paint.
Finish: On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.
Edges of manholes to be smooth.
Paint: None, except acid resisting liquid at milled ends and splices and Lat. Conn. B at L (See Sh. E21)

GENERAL NOTES.

Material—All material O.H. copper bearing medium carbon steel except material marked "I" is O.H. copper bearing silicon steel; material marked "N" is O.H. copper bearing nickel steel, and all 18" shop rivets are manganese steel.

Specifications—Special by State of California Department of Public Works.

Inspection—John M. Bailey, Chief Inspector.

Rivets—18" unless noted. (Copper Bearing.)

Open Holes—1 1/16" unless noted.

Reaming—Holes in carbon or silicon steel to be subpunched 1/4" and reamed to size while parts are assembled, except diaphragm webs which may be punched full size. All holes in nickel steel to be subdrilled 1/8" and reamed to size while parts are assembled.

Holes marked "RT" to be reamed through a steel templet.

All chord splices to be reamed assembled and pieces match marked with not less than 6 panels assembled.

Burrs to be removed from all reamed holes.

All match marking to be done with 3/8" steel stencils and white paint.

Finish—On all silicon and nickel steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal. Edges of manholes to be smooth.

Paint—None, except acid resisting liquid at milled ends and splices, and Lat Conn B ab & ae (See Sh. E21)

GENERAL NOTES:-

Material:- All material O.H. Copper Bearing medium carbon steel, except material marked (K) is O.H. Copper Bearing silicon steel; material marked (G) is O.H. Copper Bearing nickel steel, and all 1 1/2" ø Rivets are manganese copper bearing steel.
Specifications:- Special by State of California Department of Public Works.
Inspection:- John M. Bailey, chief inspector.
Rivets:- 1 1/2" ø unless noted, (See Note)
Open Holes:- 1 1/16" ø unless noted.
Reaming:- Holes in carbon or silicon steel 3/4" thick or less to be subpunched 1/4" and reamed to size while parts are assembled. Holes in carbon material over 3/4" thick and all holes in nickel steel to be subdrilled 1/4" and reamed to size while parts are assembled.
Holes marked R.T. to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish:- On all silicon steel and all nickel steel the sheared or flame cut edges or ends are to be chipped or finished to remove at least 1/8" of metal. Edges of main holes and hand holes to be smooth. Flame cut edges of slots to be straight and smooth.
Paint:- None except pin holes one coat white lead & tallow.

Manganese Shop Rivets detailed on sheet C-22a

Note:- All Rivet steel to be Copper Bearing.

SHOP NOTE:-

Shop to carefully remove all burrs around Pin Holes before assembling plates in order to avoid excessive packing.

GENERAL NOTES:

Material— All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel, and all 1¼" shop rivets are manganese steel. All other shop rivets are copper bearing carbon rivet steel.

Specifications— Special by State of California Department of Public Works.

Inspection— John M. Bailey, Chief Inspector.

Rivets— 1⅛" unless noted.

Open Holes— 1⅛" unless noted.

Reaming— All holes to be subpunched & reamed to size while parts are assembled, except diaphragm webs which may be punched full size. Holes marked "RT" are to be reamed through a steel templet. All chord splices to be reamed assembled and pieces match marked with not less than six panels assembled. Burrs to be removed from all reamed holes. All match marking to be done with steel stencils and white paint.

Finish— On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal. Edges of manholes to be smooth.

Paint— None, except acid resisting liquid at milled ends, splices and lateral connection L's as per detail (See sheet "CF 11"). Pin holes to have one coat of white lead and tallow.

GENERAL NOTES:
Material– All material OH copper bearing medium carbon steel
Specifications– Special by State of California Department of Public Works.
Inspection– John M. Bailey, Chief Inspector.
Pivots– 14" unless noted. (See note.)
Open Holes– 1 1/16" unless noted.
Reaming– All holes to be subpunched 1/4" and reamed to size while parts are assembled, except lacing, stay plates, and diaphragms which may be punched full size.
Holes marked "R.T." to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Finish– On all material marked "F" the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.
Paint– None, except pin holes one coat white lead & tallow.

Note– All rivet steel tabs copper bearing.

GENERAL NOTES:

Material— All material O.H copper bearing medium carbon steel except material marked (X) is O.H copper bearing silicon steel. All rivet steel to be copper bearing.
Specifications— Special by State of California Department of Public Works.
Inspection— John M. Bailey, Chief Inspector.
Rivets— 1" ⌀ unless noted.
Open Holes— 1 1/16" ⌀ unless noted.
Reaming— All holes to be subpunched 1/4" and reamed to size while parts are assembled except facing stay plates and diaphragm webs which may be punched full size. Holes marked R.T. to be reamed through a steel templet. Splices in web members to be reamed assembled and pieces match marked. Burrs to be removed from all reamed holes.
Marking— All match marking to be done with 1/2" steel stencils and white paint.
Finish— On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal. Edges of rivet holes to be smooth.
Paint— None except acid resisting liquid at millends, end pin holes to have one coat of White Lead & Tallow.

GENERAL NOTES

Material – All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivet steel to be copper bearing.

Specifications – Special by State of California Department of Public Works.

Inspection – John M. Bailey, Chief Inspector.

Rivets – 1⅛" ø unless noted.

Open Holes – 1⅛" ø unless noted.

Reaming – All holes subpunched & reamed to size while parts are assembled, except diaphragm webs, lacing and stay plates which may be punched full size.

Holes marked "R.T." to be reamed through a steel templet.

√ Splices in web members to be reamed assembled and pieces match marked.

Burrs to be removed from all reamed holes.

√ All match marking to be done with ⅛" steel stencils and white paint.

Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ½" of metal.

Edges of hand holes to be smooth.

Paint – None, except one coat of acid resisting liquid at milled ends and splices...and between O.S. legs of Le 6x6 (see sheet E21)

GENERAL NOTES:

Material– All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel.

Specifications– Special by State of California Department of Public Works.

Inspection– John M. Bailey, Chief Inspector.

Rivets– 1⅛" ϕ unless noted.

Open Holes– 1⅛" ϕ unless noted.

Reaming– All holes in carbon steel and holes in silicon steel ⅞" thick or less to be subpunched ⅞" and reamed to size while parts are assembled, except diaphragm webs which may be punched full size. Holes in silicon steel over ⅞" thick to be subdrilled ⅞" and reamed to size while parts are assembled.

Holes marked "RT" to be reamed through a steel templet.

Splices in web members to be reamed assembled and pieces match marked.

Burrs to be removed from all reamed holes.

All match marking to be done with ⅜" steel stencils and white paint.

Finish– On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.

Edges of manholes to be smooth.

Paint– None, except pin holes to have one coat White Lead & Tallow, and acid resisting liquid on milled end.

Assemble and ship with each MAI-LO^R, MAI-LO^L, MAI-LOA^R, MAI-LOA^L, 1-LLE, 1-LL37, 1-LL39 detailed on Sht.^R 66.

General Notes:

Material – All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivet steel to be copper bearing.
Specifications – Special by State of California Department of Public Works.
Inspection – John M. Bailey, Chief Inspector.
Rivets – 1" ϕ unless noted.
Open Holes – 13/16" ϕ unless noted.
Reaming – All holes to be subpunched 5/16" and reamed to size while parts are assembled, except lacing and stay plates which may be punched full size.
Holes marked "R.T." to be reamed to a steel templet.
Burrs to be removed from all reamed holes.
Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.
Paint – None

GENERAL NOTES:
Material — All material OH copper bearing medium carbon steel. All rivets to be copper bearing carbon rivet steel.
Specifications — Special by State of California Department of Public Works.
Inspection — John M. Bailey, Chief Inspector.
Rivets — 1" unless noted.
Open Holes — 1 1/8" unless noted.
Reaming — All holes to be subpunched 1/4" and reamed to size while parts are assembled, except lacing, stay plates and diaphragm webs which may be punched full size. Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish — On all material marked (E) the sheared or flame cut edges or ends are to be finished to remove at least 1/4" of metal.
Paint — Non-slip, except pin holes to have one coat white lead and tallow.

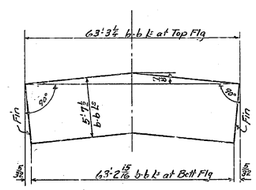
(M) Surfaces indicated by heavy lines to be given one coat acid resisting liquid



Camber and Fin Diag.

GENERAL NOTES:
Material – All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivet steel to be copper bearing.
Specifications – Special by State of California Department of Public Works.
Inspection – John M. Bailey, Chief Inspector
Rivets – ⅞"ø
Open Holes – 15/16"ø unless noted
Reaming – All holes to be subpunched ¼" and reamed to size while parts are assembled.
Holes marked "R.T." to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.
Paint – None except to: one coat of acid resisting liquid as shown in section (M) and on milled ends – B

Erectors Note: Holes "C" to be filled with rivets after use during erection.

Shop Note –
Work sheets 71-72-73-74 together.

GENERAL NOTES:

Material– All material O.H. copper bearing medium carbon steel except material marked (X) is O.H. copper bearing silicon steel, and all 1 1/4" shop rivets are manganese steel. All rivet steel to be copper bearing.
Specifications– Special by State of California Department of Public Works.
Inspection– John M. Bullen, Chief Inspector.
Rivets– 3/4" unless noted.
Open Holes– 1 1/8" unless noted.
Reaming– Holes to be subpunched 3/4" and reamed to size while parts are assembled
Holes marked "R.T." to be reamed to a steel templet
Burrs to be removed from all reamed holes.
Finish– On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.

Paint– None, except for one coat of acid resisting liquid as noted on sections "D", "E", "F", "G" (and on milled ends)

Note:—
The following material on each FB34 and FB35 to be charged to Cont. 41 K BE 09 giving G5103 credit for same:
2-ab77, 2-fm77

GENERAL NOTES:
Material— All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel
Specifications— Special by State of California Department of Public Works.
Inspection— John M. Bailey, Chief Inspector
Rivets— ⅞" unless noted. (See note)
Open Holes— 15/16" unless noted.
Reaming— All holes to be subpunched ⅜" and reamed to size while parts are assembled.
Holes marked "RT" to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Finish— On all silicon steel the sheared or flame cut edges and ends are to be finished to remove at least ⅛" of material.

Paint— None, except for one coat of acid resisting liquid as noted on sections 50, 55, 57 and on milled ends

Note— All rivet steel to be copper bearing.

GENERAL NOTES:
Material – All material OH copper bearing medium carbon steel. All rivet steel to be copper bearing.
Specifications – Special by State of California Department of Public Works.
Inspection – John M. Bailey, Chief Inspector.
Rivets – ⅞" ø
Open Holes – 1⅛" ø
Reaming – All holes to be subpunched 6" and reamed to size while parts are assembled, except lacing, stay plates and diaphragm webs which may be punched full size.
Holes marked "R.T." to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Finish – Edges of manholes and hand holes to be smooth.
Paint – None except one coat acid resisting liquid (between lateral cenak (Sheet Sh. E21))

2	"	HS102
1	Beams	B28
1	"	B27
1	"	B29
2	Tension Rc	P193
2	"	P194

General Notes:
Material – All material OH copper bearing medium carbon steel, except material marked (X) is OH copper bearing silicon steel. All rivets are copper bearing carbon rivet steel.
Specifications – Special by State of California Department of Public Works.
Inspection – John M Bailey, Chief Inspector.
Rivets – 8 ø
Oven Holes ⅛" ø unless noted.
Reaming – Holes in carbon or silicon steel ⅝" thick or less to be subpunched ⅜" and reamed to size while parts are assembled. Holes in carbon or silicon steel over ⅝" thick to be subdrilled ⅜" and reamed to size while parts are assembled. Holes marked "RT." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Paint – None, except for one coat of acid resisting liquid on milled ends.

GENERAL NOTES:-
Material-All material O.H. copper bearing medium carbon str. el. except material marked (c) which is O.H. copper bearing silicon steel. All rivet steel to be copper bearing.
Specifications- Special by State of California Department of Public Works.
Inspection- John M. Bailey, Chief Inspector.
Rivets-⅞" ø unless noted.
Open holes-13/16" unless noted.
Reaming- None, except holes in bottom flange and sole plates to be subpunched ¼ or subdrilled ¼ and reamed to size while parts are assembled. Burrs to be removed from all reamed holes.
Paint- None

NOTE:
Curved beams may overrun ½" at either or both ends.

Holes in silicon steel over 2" thick to be subdrilled ⅝" and reamed to size with parts assembled. Holes marked R.T. to be reamed through a steel templet.

Burrs to be removed from all reamed holes.

Finish: On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal. Edges of manholes to be smooth.

Paint: None, except acid resisting liquid at milled ends and splices (See Sheet E21).

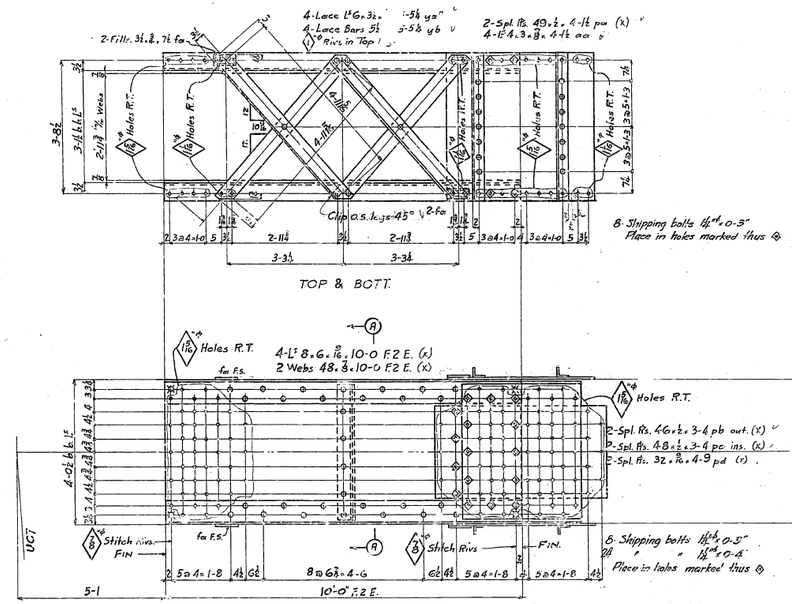
[B+C]

30-1



GENERAL NOTES:

Material: All material O.H. copper bearing medium carbon steel, except material marked (x) is copper bearing silicon steel. All rivets to be copper bearing Carbon rivet steel.
Specifications: Special by State of California Department of Public Works.

Inspection: John M. Bailey, Chief Inspector.

Rivets 1⅛" ø unless noted.

Open Holes as noted.

Reaming: Holes in carbon or silicon steel ⅞" thick or less to be subpunched ¼" and reamed to size while parts are assembled, except lacing, stay plates and diaphragm webs may be punched full size. Holes in silicon steel over ⅞" thick to be sub-drilled ½ and reamed to size with parts assembled. Holes marked R.T. to be reamed through a steel templet. Burrs to be removed from all reamed holes.

Finish: On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal. Edges of manholes to be smooth.

Paint: None, except acid resisting liquid at milled ends and splices (See sheet E 21).

GENERAL NOTES:
Material – All material O.H. copper bearing medium carbon steel, except material marked (D) is O.H. copper bearing silicon steel; material marked (N) is O.H. copper bearing nickel steel, and all 1/8" shop rivets are copper bearing manganese steel. All other rivets are copper bearing carbon rivet steel.
Specifications – Special by State of California Department of Public Works
Inspection – John M. Bailey, Chief Inspector.
Rivets – 7/8" unless noted.
Open Holes – 1 1/8" unless noted.
Reaming – All holes in carbon and silicon steel to be subpunched & and reamed to size while parts are assembled, except diaphragm webs which may be punched full size. All holes in nickel steel to be subdrilled & and reamed to size while parts are assembled. Holes marked "RT" to be reamed through steel templet.

Burrs to be removed from all reamed holes.

Finish – On all silicon and nickel steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal. Edges of manholes to be smooth.

Paint – Hong except pin holes to receive one coat of white lead and tallow, and acid resisting liquid between outstanding legs of all angles, aab and aac, aa and ab, ad, ap (See sheet CF21)

ASSEMBLY AND SHIPPING NOTE:-
Assemble and ship with each MO-UO2 & MO-UO1:-
1-LL10, 1-LL11 & 7-LL12 - detailed on sh. 239 (Wire LL10 for shipment)
Perm. Bolted.
Insert Bolts for LL10 in ends of ladder section.

GENERAL NOTES:-
Material:- All material is copper bearing medium carbon steel except material marked (N) is copper bearing nickel steel, and all 7/8" shop rivets are manganese steel. All rivet steel to be copper bearing.
Specifications:- special by State of California Department of Public Works.
Inspection:- John M. Bailey, Chief Inspector.
Rivets: 7/8" Unless noted.
Open Holes: As noted.
Reaming:- All holes in carbon steel to be subpunched 1/4" and reamed to size while parts are assembled, except diaphragm webs which may be punched full size. All holes in nickel steel to be subdrilled 3/4" and reamed to size while parts are assembled. Holes marked R.T. to be reamed through a steel template. Splice to be reamed with complete post LO-UO assembled and pieces match marked.
Burrs to be removed from all reamed holes.
All match marking to be done with 1/2" steel stencils and white paint.
Finish:- On all carbon steel marked E and all nickel steel the sheared or flame cut edges or ends are to be finished so as to remove at least 1/4 inch. Edges of man holes to be smooth.
Paint:- None, except one coat acid resisting liquid on milled ends and at splices. (See sh. E21)
Perm. Bolts for Ladders, Det. on Sh. CF 38.

Rev. 11-23-34 | Rev. 11-10-34 | Rev. 11-5-34

GENERAL NOTES:

Material—All material Oil Copper bearing medium carbon steel, except material marked (O) is O.H. copper bearing silicon steel. All rivets are to be copper bearing carbon rivet steel.

Specifications—Specials by State of California Department of Public Works.

Inspection—John M. Bailey, Chief Inspector.

Rivets—$\frac{7}{8}$" unless noted.

Open Holes—$1\frac{1}{16}$" unless noted.

Reaming—All holes in material $\frac{3}{4}$" thick or under to be subpunched $\frac{1}{4}$" and reamed to size while parts are assembled, except splice webs which may be punched full size. All holes in material over $\frac{3}{4}$" thick to be subdrilled $\frac{1}{4}$" and reamed to size while parts are assembled.

Holes marked "RT" to be reamed through a steel templet.

Splices to be reamed assembled and pieces match marked.

Burrs to be removed from all reamed holes.

All match marking to be done with $\frac{1}{2}$" steel stencils and white paint.

Finish—On all carbon steel marked "F" and on all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least $\frac{1}{8}$" of metal.

Edges of manholes to be smooth.

Paint—None, except one coat of white lead and tallow on pin holes and one coat of acid resisting liquid at splices (See Sheet E22)

GENERAL NOTES:

Material – All material OH, copper bearing medium carbon steel, except material marked (X) is OH copper bearing silicon steel. All rivets to be copper bearing carbon rivet steel.

Specifications – Special by State of California department of Public Works.

Inspection – John M. Bailey, Chief Inspector.

Rivets – $\frac{7}{8}$" unless noted.

Open Holes – $1\frac{1}{16}$" unless noted.

Reaming – All material subpunched $\frac{1}{4}$" and reamed to site when parts are assembled, except diaphragm webs which may be punched full size.

Holes marked "RT" to be reamed through a steel templet.

Splices in web members to be reamed assembled and pieces match marked.

All match marking to be done with $\frac{1}{4}$" steel stencil and white paint.

Burrs to be removed from all reamed holes.

Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least $\frac{1}{8}$" of metal.

Paint – None, except acid resisting liquid at splices and milled ends. Pin holes to have one coat of white lead and tallow.

Assemble and ship with each MC1-UC2R and MC1-UC2L 1-LL65, 1-LL66, 1-LL67, 1-LL68, and 1-LL69 Det on sheet 24F.

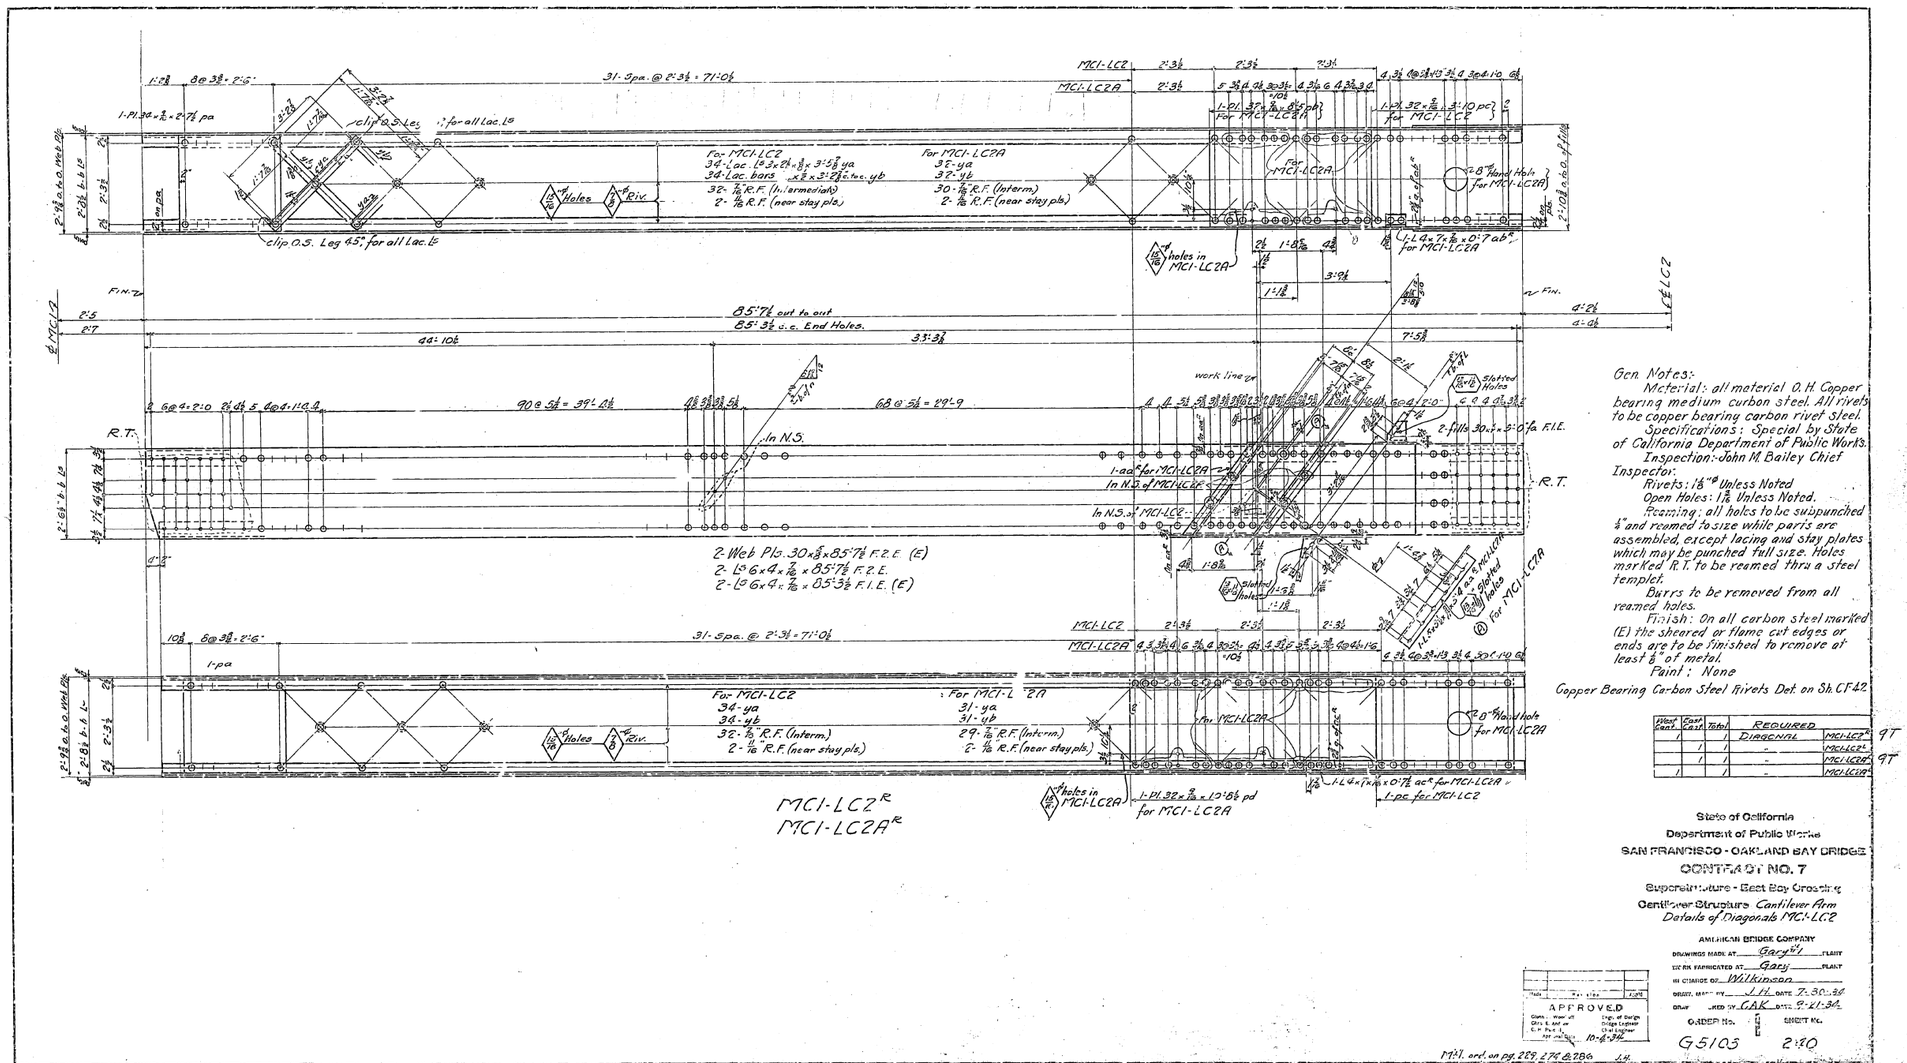
Mar. 10-15-35 [C]



Gen. Notes:

Material: all material O.H. Copper bearing medium carbon steel. All rivets to be copper bearing carbon rivet steel.

Specifications: Special by State of California Department of Public Works.

Inspection: John M. Bailey Chief Inspector.

Rivets: 1⅛" Unless Noted

Open Holes: 1⅛ Unless Noted.

Reaming: all holes to be subpunched ¼" and reamed to size while parts are assembled, except lacing and stay plates which may be punched full size. Holes marked R.T. to be reamed thru a steel templet.

Burrs to be removed from all reamed holes.

Finish: On all carbon steel marked (E) the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.

Paint: None

GENERAL NOTES:
Material- All material O.H. copper bearing medium carbon steel, except material marked (a) is O.H. copper bearing silicon steel. All rivets to be copper bearing carbon rivet steel.
Specifications- Special by State of California Department of Public Works
Inspection- John A. Bailey, Chief Inspector.
Rivets- ⅞" unless noted.
Open Holes- 1⅛" unless noted.
Reaming- All material subpunched & reamed to size while parts are assembled except facing and stay plates which may be punched full size.
Holes marked 'RT' to be reamed through a steel templet.
Splices in web members to be reamed assembled and piece-mark marked.
Burrs to be removed from all reamed holes.
All match marking to be done with ¾" steel stencils and white paint
Finish- On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ½" of metal.
Edges of hand holes to be smooth.
Paint- None, except acid resisting liquid on finished ends between 0.8 Leys at ak and Splice Pts. See Sh. E21

Rivets – ⅞" ϕ unless noted. (See note)
Open Holes – 15/16" ϕ unless noted.
Reaming – All holes to be subpunched ¼" and reamed to size while parts are assembled except holes in mat'l. over ¾" thick to be sub-drilled. Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.

Paint – None, except for one coat of acid resisting liquid as noted on sections (B), (n), & (P) & (R) and on milled ends.

Note – All rivet steel to be copper bearing. Copper bearing carbon steel rivets detailed on sheet CF8

GENERAL NOTES:
Material - All material in O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivets are copper bearing carbon rivet steel.
Specifications - Special by State of California Department of Public Works.
Inspection - John M. Bailey, Chief Inspector.
Rivets - 7/8" unless noted.
Open Holes - fa noted.
Reaming - All holes to be subpunched 3/4" and reamed to size while parts are assembled.
Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish - On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.
Paint - None.

Surfaces indicated in heavy lines to receive one coat of acid resisting liquid.

General Notes:
Material - All material O.H. copper bearing medium carbon steel.
All rivets are copper bearing carbon rivet steel.
Specifications - Special by State of California Department of Public Works.
Inspection - John M. Bailey, Chief Inspector.
Rivets - 8/8" unless noted.
Open holes - 25/64" unless noted.
Reaming - All holes tobe subpunched & reamed to size while parts are assembled.
Holes marked "R.T." to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Paint - None, except for one coat of acid resisting liquid as noted on sections (K), (L) & (M).

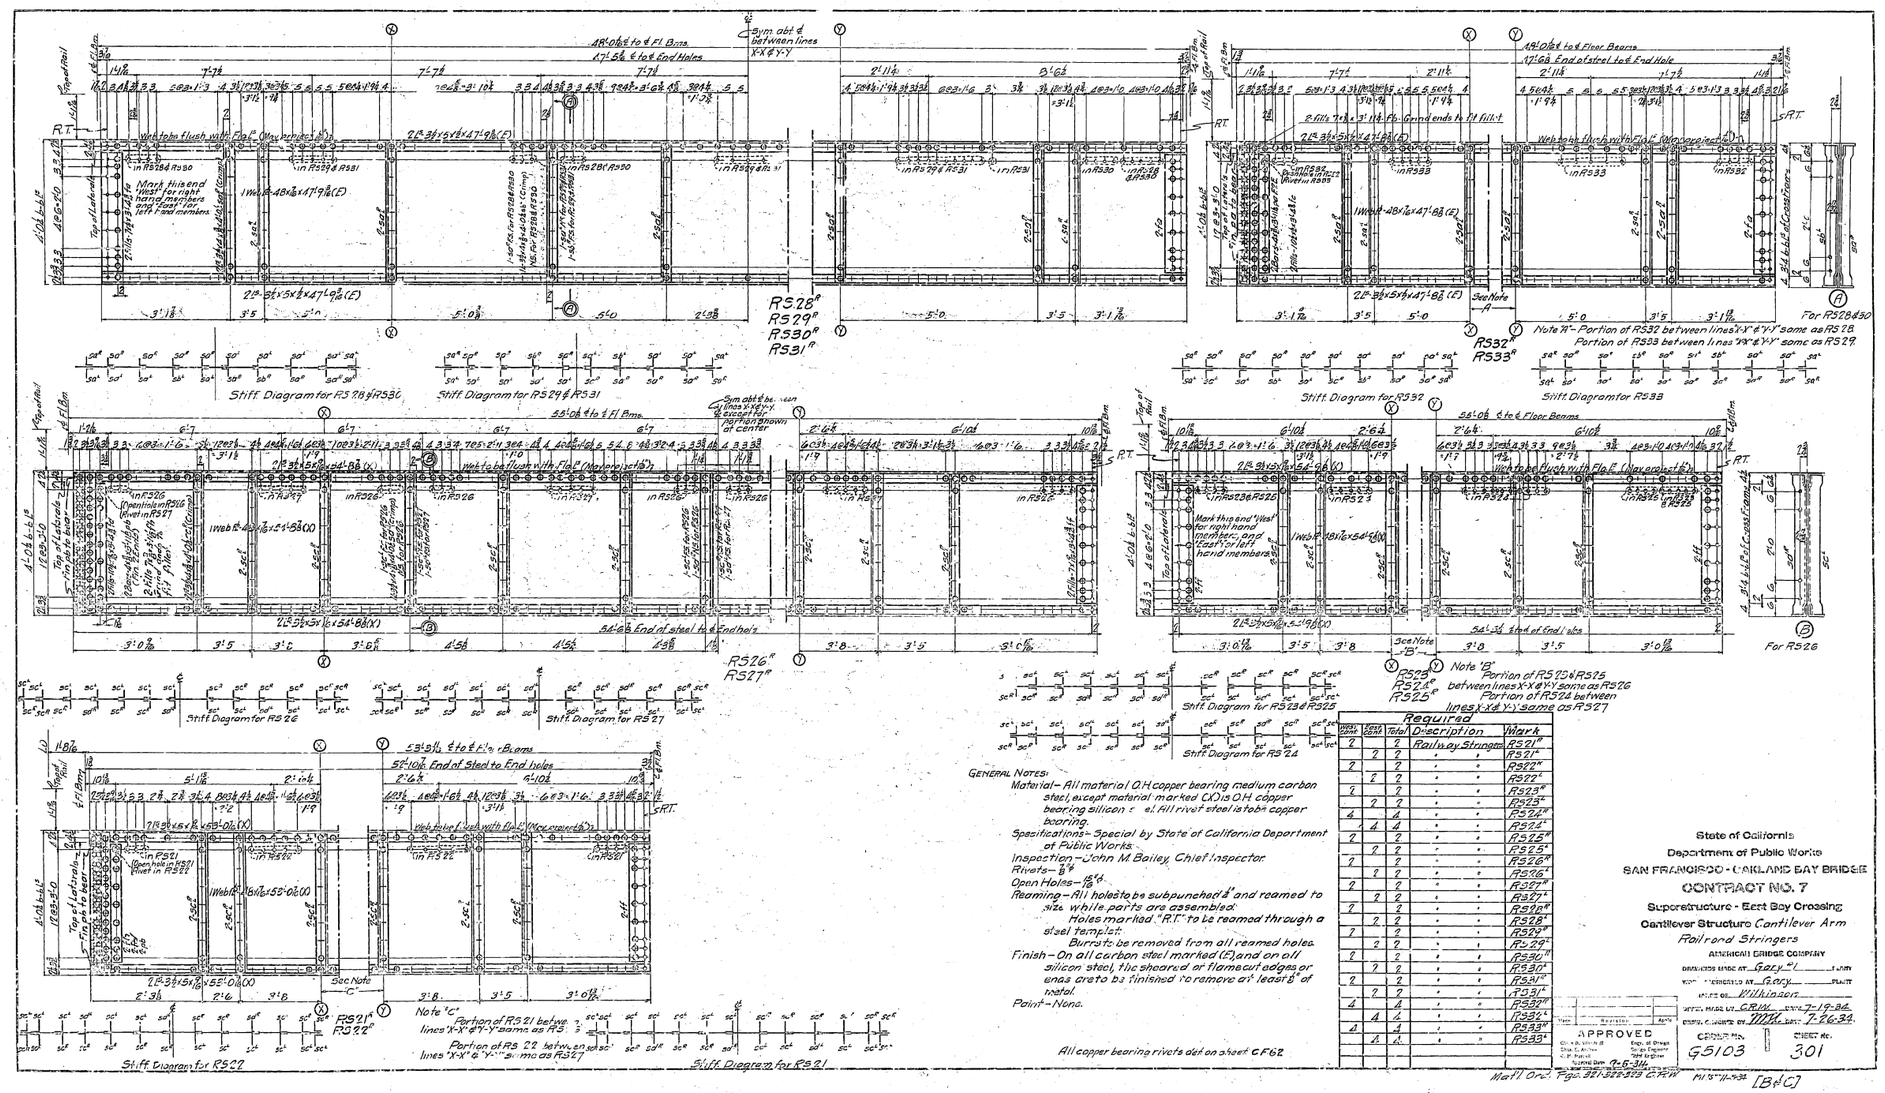
[B & C]



GENERAL NOTES:

Material – All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivet steel is tough copper bearing.

Specifications – Special by State of California Department of Public Works.

Inspection – John M. Bailey, Chief Inspector.

Rivets – ⅞"ø

Open Holes – 15/16"ø

Reaming – All holes to be subpunched ¾" and reamed to size while parts are assembled. Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.

Finish – On all carbon steel marked (F) and on all silicon steel, the sheared or flame cut edges or ends are to be finished to remove ½" at least of metal.

Paint – None.

GENERAL NOTES:

Material—All material OH copper bearing medium carbon steel except material marked (Y) is OH copper bearing silicon steel.
Specifications—Special by State of California Department of Public Works
Inspection—John M Bailey, Chief Inspector.
Rivets—7/8" ϕ (Copper bearing.)
Open Holes—13/16" ϕ Unless noted.
Reaming—All holes to be subpunched 1/4" and reamed to size while parts are assembled. Holes marked "R.T." to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish—On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.
Paint—None, except one coat acid resisting liquid on milled ends.

Test bars, representing bars too long for the testing machine, shall be selected from the full length bar material after the heads on each end have been formed and shall have the second head formed upon them after being cut to the proper length, which can be tested in a 35'-0" ch. Pins, maximum length for Testing Machine.

GENERAL NOTES:

Material: All material O.H. copper bearing medium carbon steel, except material marked (c) is copper bearing silicon steel. All rivets to be copper bearing carbon rivet steel.
Specifications: Special by State of California Department of Public Works.
Inspection: John M. Bailey, Chief Inspector.
Rivets 1⅛" unless noted.
Open Holes 1 1/16" " "
Reaming: Holes in carbon or silicon steel ⅝" thick or less to be subpunched ¼" and reamed to size while parts are assembled, except facing, stay plates and diaphragm webs may be punched full size. Holes in silicon steel over ⅝" thick to be subdrilled ⅜" and reamed to size with parts assembled. Holes marked R.T. to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish: On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal. Edges of manholes to be smooth.
Paint: None except acid resisting liquid at milled ends.

GENERAL Notes:-

Material:- All material O.H. copper bearing medium carbon steel, except material marked (N) is O.H copper bearing nickel steel.

All rivets to be copper bearing carbon rivet steel.

Specifications:- Special by State of California Department of Public Works.

Inspection:- John M. Bailey, Chief Inspector.

Rivets 1⅛" ø, unless noted.
Open Holes 1⅛, unless noted

Reaming:- All holes in nickel steel to be sub-drilled ⅞" and all holes in carbon steel ¾" thick or less to be subpunched ⅞" and reamed to size while parts are assembled, except diaphragm webs, which may be punched full size. Holes marked R.T. to be reamed thru a steel templet. Holes marked R.T.A. to be reamed thru a steel templet with chord splices assembled.

All chord splices to be reamed assembled with not less than 6 panels assembled and pieces match marked.

All match marking to be done with ⅜" steel stencils and white paint.

Burrs to be removed from all reamed holes.

Finish:- On all nickel steel thus shown to Plane cut edges or ends are to be finished to remove ol least ¼" of metal.

Paint:- None, except one coat of acid resisting liquid on milled ends of members and splices (See sh. E21).

GENERAL NOTES:

Material – All material O.H. copper bearing medium carbon steel, except material marked (X) is copper bearing silicon steel. All rivets are copper bearing carbon rivet steel.
Specifications – Special by State of California Department of Public Works.
Inspection – John M. Bailey, Chief Inspector.
Rivets – ⅞" ø unless noted.
Open Holes – 15/16" ø unless noted.
Reaming – All holes to be subpunched ¼" and reamed to size while parts are assembled, except lacing, stay plates, and diaphragm webs which may be punched full size. Holes marked "RT" to be reamed through a steel templet sized US2, to be revised while assembled with Top Chord and End Posts and pieces match marked. Burrs to be removed from all round holes.
Finish – On all silicon steel. The sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.
Edges of main holes to be smooth.
Paint – None, except one coat of acid resisting liquid on milled ends of members and splices. (See sheet E2)

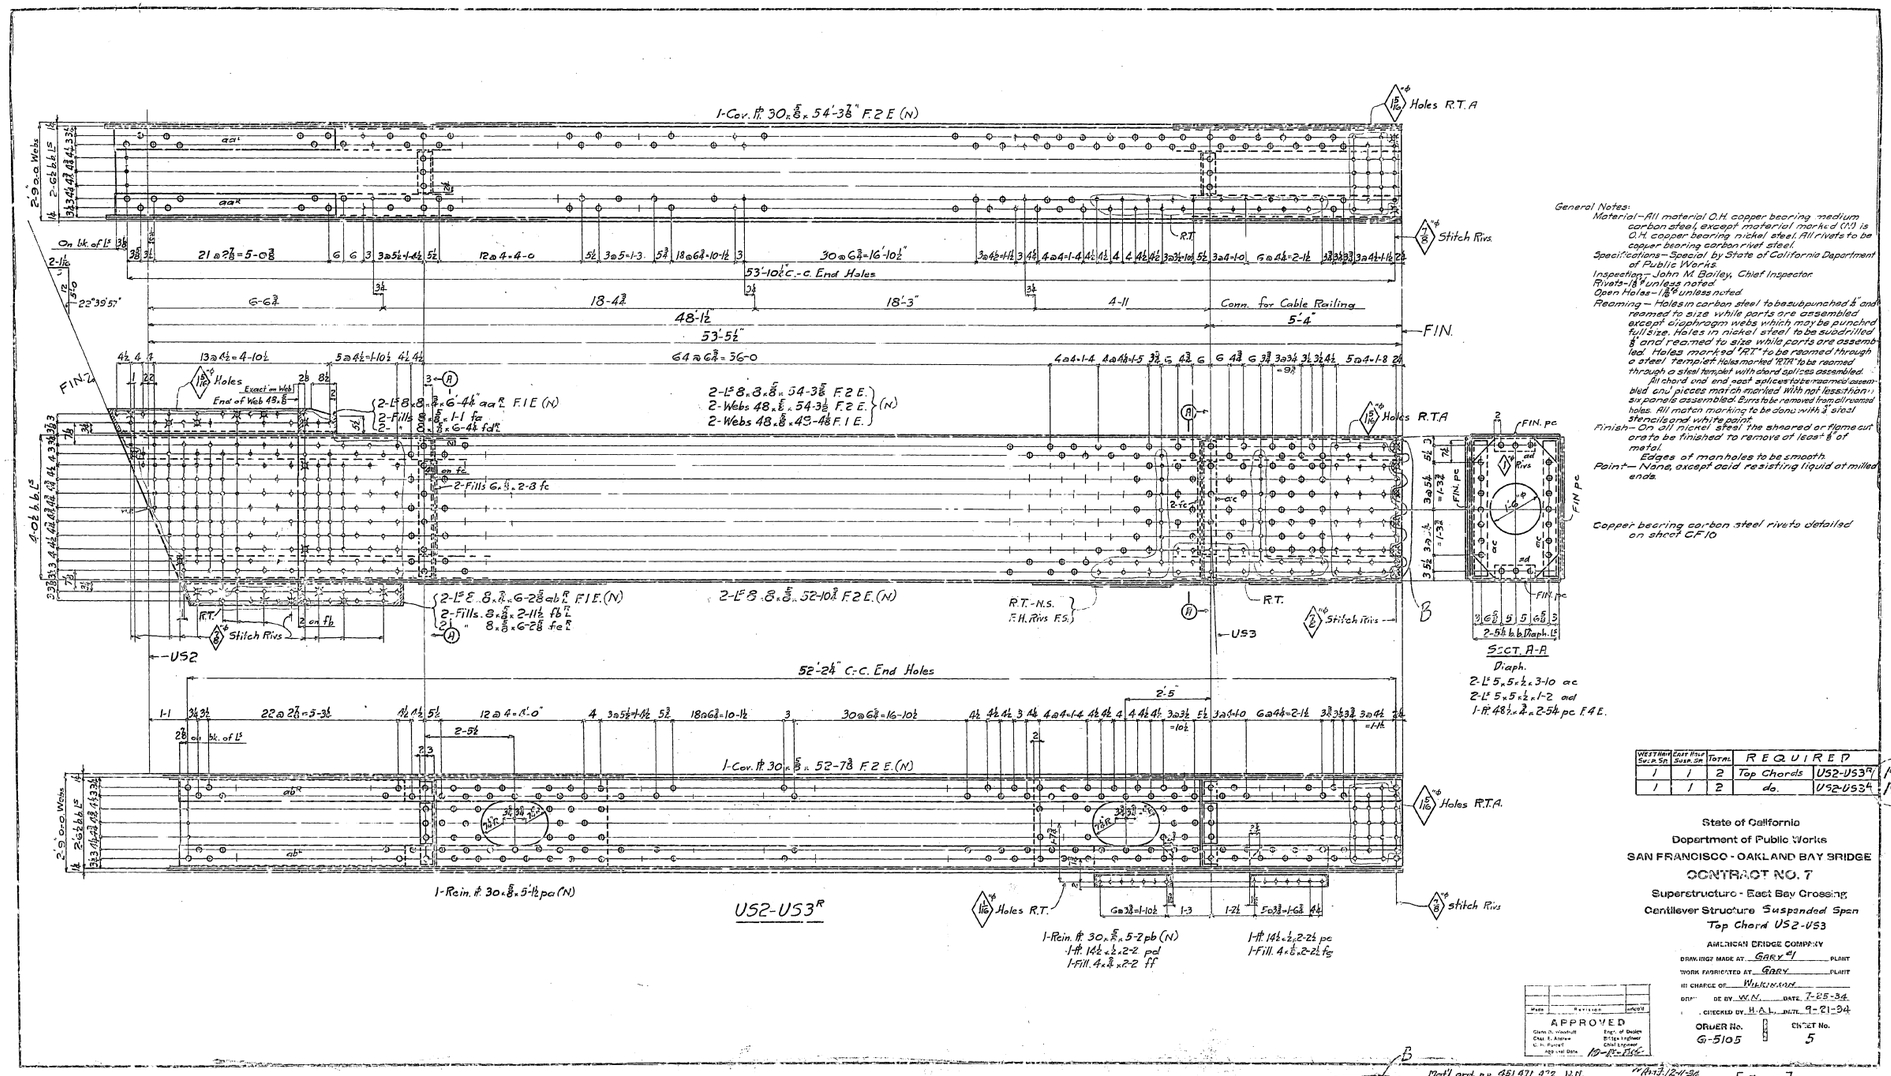
Mod'l and. p. Apr 7/12/11-34 [B & C]

30-1



General Notes:

Material—All material O.H. copper bearing medium carbon steel, except material marked (N) is O.H. copper bearing nickel steel. All rivets to be copper bearing carbon rivet steel.

Specifications—Special by State of California Department of Public Works.

Inspection—John M. Bailey, Chief Inspector.

Rivets—7/8" unless noted.

Open Holes—1 1/16" unless noted.

Reaming—Holes in carbon steel to be subpunched 4" and reamed to size while parts are assembled except diaphragm webs which may be punched full size. Holes in nickel steel to be subdrilled 3/4" and reamed to size while parts are assembled. Holes marked "RT" to be reamed through a steel templet. Holes marked "RTA" to be reamed through a steel templet with chord splices assembled.

All chord end and web splices to be reamed, assembled and pieces match marked. With not less than 4 panels assembled. Burrs to be removed from all reamed holes. All match marking to be done with 3/4" steel stencils and white paint.

Finish—On all nickel steel the sheared or flame cut ends to be finished to remove at least 1/8" of metal.

Edges of manholes to be smooth.

Paint—None, except acid resisting liquid at milled ends.

General Notes:

Material— All material O.H. copper bearing medium carbon steel, except material marked "N" is O.H. copper bearing nickel steel.
All rivets are copper bearing carbon rivet steel.

Specifications— Special by State of California Department of Public Works.

Inspection— John M. Bailey, Chief Inspector.

Rivets— ⅞" ø unless noted.

Open Holes— 1⅛" ø unless noted.

Reaming— All holes in carbon steel ⅝" thick or less to be subpunched ¼" and reamed to size while parts are assembled, except diaphragm webs and outstanding legs of ac and ad which may be punched full size. Holes in carbon steel over ⅝" thick and all holes in nickel steel to be subdrilled ⅜" and reamed to size while parts are assembled.
Holes marked "R.T." are to be reamed through a steel templet.
Splices in end post and top chord to be reamed assembled and pieces match marked.
Burrs to be removed from all reamed holes.
All match marking to be done with ⅜" steel stencils and white paint.

Finish— On all nickel steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal. Edges of manholes to be smooth.

Paint— None, except acid resisting liquid on milled ends and splice plates.
See sh. F21

Camber and Finishing Diagram

NOTE.-
Holes 'E' are to be filled with rivets before member is placed in permanent position.

NOTE:
The following material on each FB7, FB9 & FB11 take charged to Cont. 61 K 4835 giving G5105 credit for same: 2-sq. 5/16", 8 fpp St.
For each FB6, FB7, FB8, FB9, FB10, FB11, and FB12 charge 6 K 4855 with 364 lbs. excess splice material which has been added for erection purposes, giving G5105 credit for same.

GENERAL NOTES:
Material- All material O.H. copper bearing medium carbon steel, except material marked (X) is O.H. copper bearing silicon steel. All rivet steel to be copper bearing.
Specifications- Special by State of California Department of Public Works.
Inspection- John M. Bailey, Chief Inspector.
Rivets- 7/8" unless noted.
Open Holes- 15/16" unless noted.
Reaming- All holes to be subpunched 1/4" and reamed to size while parts are assembled, except material over 3/4" thick to be sub-drilled.
Holes marked RT. to be reamed through a steel templet.

Burrs to be removed from all reamed holes.
Finish- On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least 1/8" of metal.
Paint- None, except for one coat of acid resisting (paint as shown in sections 'm', 'n', 'p' & 'w' and on milled ends.

Sect. F-F

Heavy lines indicate surfaces to receive and coat of acid resisting liquid.

General Notes:
Material- All material O.H. copper bearing medium carbon steel, except material marked (a) is O.H. copper bearing silicon steel.
All rivets are copper-bearing carbon rivet steel.
Specifications- Special by State of California Department of Public Works.
Inspection- John M. Bailey, Chief Inspector.
Rivets- 1"ϕ unless noted.
Open Holes- 1⅛" unless noted.
Reaming- All holes to be subpunched ⅛" and reamed to size while parts are assembled.
Holes marked 'RT' to be reamed through a steel templet.
Burrs to be removed from all reamed holes.
Finish- On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.
Paint- None, except for one coat of acid resisting liquid between connection angles on P126 & P127, see section ⑫.

Approval Date 9-20-34

GENERAL NOTES:
Material – All material O.H. copper bearing medium carbon steel except material marked (X) is O.H. copper bearing silicon steel.
Specifications – Special by State of California Department of Public Works.
Inspection – John M. Bailey, Chief Inspector.
Rivets – ⅞" ℄ (Copper bearing).
Open Holes – 1⅛" ℄ Unl. Noted.
Reaming – All holes to be subpunched ¼" and reamed to size while parts are assembled. Holes marked "RT" to be reamed through a steel templet. Burrs to be removed from all reamed holes.
Finish – On all silicon steel the sheared or flame cut edges or ends are to be finished to remove at least ⅛" of metal.
Paint – None, except one coat acid resisting Nivoil on milled ends.

SHOP NOTES-

All rivets in floor plates to be countersunk-not chipped. All rivets in curb plates marked thus ◐ or ◑ to be countersunk-not chipped.
Maximum height ⅛. Walks to be built to exact lengths and must be straight.

GENERAL NOTES-

Material- All material O.H. Copper Bearing medium Carbon steel except curb plates which are to conform with A.S.T.M. Specifications A7-33 with not less than 0.20% Copper.

Specifications. Special by State of California, Dept of Public Works.

Inspection - John M. Bailey - Chief Inspector.

Rivets - ⅞" Ø Unless noted.

Open Holes - 1⅛" Unless noted.

Reaming - None.

Shop Paint - None.

Finish - All burrs and rough edges to be removed by grinding or chipping.

SHOP NOTE-

The fabricator can splice bent Curb Plates to meet shop convenience at approximate 12 foot lengths.

ERECTORS NOTE:-
Place gaskets between flanges at all field joints in pipe, in joints between pipe and gutters and between train outlets and curb plates. Use gasket DS230 between flgs. of 6" pipe, and 8" pipe and gutters, use gasket DS231 between flgs. of 8" pipe, and DS232 between DS223 and DS274, use gasket DS278 between train outlets and curb plates.

SHOP NOTE:- Shop joints to be of cont. weld, pipe being scarfed and all burrs removed after welding. All threads R.H. Shop to make allowances for welds and gaskets. For typical detail of welded joints, see sheet 504 A.B.

GENERAL NOTES:-
Material:- All pipe to be std. black copper bearing steel:- 6" ø pipe @ 19 #/ft, 8" ø pipe @ 24.7 #/ft, and 10" ø pipe @ 31.2 #/ft. Drain fasteners and all bolts to be O.H. copper bearing medium carbon steel. C.I. Flanges to be used on all field joints.
Specifications:- Special thy State of California Dept. of Public Works.
Inspection:- John M. Bailey, Chief Inspector.
Rivets:- ⅞" ø
Open Holes:- As noted.
Reaming:- None.
Paint:- None. Purch. Department to instruct pipe mill not to use paint as identification of copper bearing steel on this order.

SHOP NOTE-
Finger Bars must be straight.
Segments must be square, free from wind, and must not exceed dimensions given.
No allowance has been made for packing of bars. In case of overrun or underrun of sections when assembled, the shop may take care of the variation by varying the thickness of the 5×⅛"-0'8" spacer bars before welding. However, the change in thickness of any one spacer bar must not exceed ½" and if several such special bars are required in one section they shall be uniformly distributed thruout the length of the section.
The complete joint shall be assembled in the shop for checking the overall dimension., spacing of holes, and matching of finger bars.

GENERAL NOTES:
Material- All material is O.H. copper bearing medium carbon steel.
Specifications - Special by State of California Department of Public Works.
Inspection- John M. Bailey, Chief Inspector.

SHOP NOTES:-

Finger bars must be straight

Segments must be square, free from wind, and must not exceed dimensions given.

Holes must be drilled 90° to bottom of bevelled sole plates after assembly.

For assembly diagram see Sh. 530

No allowance has been made for packing of bars. In case of over run or under run of sections when assembled, the shop may take care of the variation by varying the thickness of the 5 x 1⅛ x 0'-8" spacer bars before welding. However, the change in thickness of any one spacer bar must not exceed ½", and if several such special bars are required in one section they shall be uniformly distributed thruout the length of the section.

The complete joint shall be assembled in the shop for checking the overall dimensions, spacing of holes, and matching of finger bars.
