1. Field air monitoring (under the supervision of a CIH) can be provided at a rate of $1,850.00 per day including all labor, travel, perdiem, equipment, materials, supplies, and lab costs. **For bidding purposes the Prime can multiply the daily air monitoring rate by the estimated number of days to establish a total.

A total of eight (8) soil samples will be collected before starting work and another eight (8) samples will be collected and analyzed within 36 hours after cleaning existing steel.
3. Training specified in the LCP can be conducted (by a CIH) at contractor location. The training can be conducted for a lump sum of $1,950.00.

Dear Scott -

Attached is the quote you requested. Referencing my previous work with the RMH and the fact that multi color staining is required in addition to the anti graffiti coating, I hope this comes in at a good number. Please do not hesitate to call or email me with any questions.

Kindest regards,

It has prepare and stain concrete and anti-graffiti work. The project is called the Troutdale Bridge Replacement project (Caltrans contract #04-4A0904) and is in Calistoga, CA. I have attached the bridge plans where you can see the limits of the texture on plan sheets 118-121 (19-21 in this pdf file). All of the texture on bridge and barriers gets painted along with the edge of deck on the bridge. I have attached the specials for the paint as well as the revised standard specials for section 59. I have attached the bid items here and I would refer you to bid items 115 and 116.

I have finished my take-off for these items of work and I believe they are over-running.

I am going to send another email with 2 more plan sheets regarding the staining as well as a picture of the bridge they mention in the specials they want the staining to resemble.

You may download the full plans and specials here at http://www.dot.ca.gov/hq/esc/oe/contract_awards_services.html .

Let me know if you have any further questions. I hope you had a good holiday.

Good to know - However I am a bit confused on the fact that it refrences stain application and then it switches to paint. Do they mean stain? Also given that it is three seperate applications, I may have to revisit the quote as I may not have alloted my self enough time.

No problem Dee Dee.

I also saw this in the specials: 59-7.02c:
"Apply the stain in at least 3 separate applications. The 1st and 2nd applications must be by air or airless sprayer. Additional methods of brushing, wiping, sponging, spattering etc. to achieve realistic shading, mottling and flecking are expected for natural rock finishes. **The paint shall be a light-stable, UV resistant, alkali-resistant, acrylic latex or acrylic latex copolymer emulsion, commercially manufactured for use as an exterior concrete coating. The paint shall conform to the provisions in Section 91-4.05, "Paint: Acrylic Emulsion, Exterior White and Light and Medium Tints," of the Standard Specifications.** Contractor must have proven experience and be able to demonstrate expertise in various methods for faux natural rock type staining including realistic application of colors as they naturally occur and are apparent from aging; such as staining from oxidation, rusting, organic staining from soil, and vegetation. Successful completion of no less than six projects comparable in scale and complexity is required for concrete staining on this project."

91-4.05 is attached

Dee Dee,

After looking into it further I found this website where it tells you the exact color or what it looks like. http://www.fed-std-595.com/FS-595-Paint-Spec.html . So when they say the color this is what they are referring to. As far as what they want from the stain this is what I found. You have to look at 59-7.01B(1) and 59-7.01B(2).

59-7.01B (1) says "The final color of the stained concrete must match color no. 33448, 30099, 34084, 36492 and 37038 of FED-STD-595, as shown. The final color of the UV resistant paint must match color no. 33245, 30215 and 30111 of FED-STD-595."

Specials of 59-7.01 b(2) says "Stain must:
1. Be a water-based silicate polymer reactive stain, a ready-to-use, penetrating, reactive staining
product that chemically combines with cured concrete to produce translucent color effects.
2. Contains reactive polymer stain that penetrates and color the concrete or shotcrete surfaces
3. Be a commercial quality product designed for exterior applications
4. Produce abrasion-resistant color deposits"

So, they do not give you a specific product but I think it is a matter of up to you whether it has the color, meets the above conditions in 59-7.01B (1) and 59-7.01 B (2) , meets the requirements in the table on plan sheet 10, and whether the anti-graffitti works with all of that. You might want to talk with a supplier to see what they typically use for Caltrans as I believe they might know more what they typically purchase.

Good Morning Karen/Stacy,

I wanted to see if you will be providing pricing for various material supplies on this Caltrans Project that bids 1/21. The project is called Troutdale Creek Bridge Replacement project and is Caltrans Contract #04-4a0904. A few things that we would like to get pricing for are bearing pads, form liner, lumber for soldier pile wall, and joint seal material or whatever else you think you can supply.

Bearing pads: We need 20 steel reinforced elastomeric pads that are 10" x10" x2" for the abutments. We also need 47 for the soldier pile wall. These have to be 16"x16"x1" plain or steel reinforced elastomeric bearing pads. In both the piling and concrete structures section they say that the bearing pads must comply with section 51-3 of Caltrans Standard spec.

Formliner: There is formliner on the abutments, wing walls/retaining walls, and concrete barrier. The texture is called ashlar stone texture. They have the chiseled capstone texture that goes on the top of the barrier as well. If you could provide a price for these that would be great.

Lumber: We need some 6x12 treated douglas fir, graded No.1 or better. The timber is to be full sawn. In section 57-2.01 B (3) it tells you "timber lagging must be preservative-treated timber."
As for the wood quantities we need:

434-6x12 pieces that are 7'3" long
31-6x12 pieces that are 5'5" long.
4-4x12 pieces that are 5'0" long.

Also, along with the wood we need:
- 654 18" x 5.5"x1/2" high density polyethylene shims.
-1308 1/8" diameter x 3.25" galvanized nails.
-1818 40 d galvanized spikes.
-40 7.75" x ½" lag screws with washers.

I can attach some extracted plans/specs if you want for the above materials but did not want to flood your email with attachments if you are already on this. Let me know if you have any questions.

Thanks,

Additional Good Faith Efforts

Ghilotti Bros., Inc. (GBI) has a long history of meeting or exceeding contract expectations in our projects for safety, schedule, budget and quality. But we regularly go beyond that when working towards the Departments overall goals and aspirations for utilization of DBE's by participating over and above a project specific requirement. While we routinely solicit vendors and subcontractors through our comprehensive and systematic outreach on a job by job basis, our companies 3rd generation Ownership, President Mike Ghilotti, serves on the Department's DBE Participation Committee, Task Group B, with Mark Leja and other Caltrans leadership and industry members to provide feedback and guidance to the Department regarding the construction marketplace and DBE participation. GBI regularly attends various Caltrans, county, city and agency outreach, networking, and pre-bid meetings to network with potential DBE's and explain the opportunities working with GBI can provide.

GBI has had the pleasure of working with Pendergast Consulting Group over the past five years on small and disadvantaged business participation programs for large and small construction projects, most notably the Doyle Drive reconstruction program in San Francisco. On that particular project, GBI teamed with Environova Consulting, a small local business headed by Basil Falcone, for Environmental Health and Safety Services.GBI fostered the relationship and has continued working with Environova well beyond San Francisco and the Doyle Drive program. Environova's mentored success with GBI's assistance now has them servicing large contractors including Hathaway Dinwiddie, Pankkow, and Swinerton.

Mr. Pendergast has shared with us the significant ways that GBI could work with numerous agencies such as Caltrans, the Golden Gate Business Administration, San Francisco Human Rights Commission, and San Francisco County Transportation Authority to name a few, introducing us to dozens of vendors that routinely go undocumented as outreach. We often "meet and greet' subcontractors by having them come into our office to see how we operate and meet our GFE Administrator and the Estimators as well as Company leaders.

GBI intends to continue to be an industry and Department resource for DBE vendor implementation. In the spirit of our past success with emerging businesses, we've recently engaged and offer the following firms as additional examples of our outreach efforts.

- Anvil Builders
- Azul Works
- D-Line Constructors
- Empire Engineering and Construction
- The Thier Group
