

Acknowledgements

The 2020 edition of the *Falsework Manual* was updated and modernized by a group of dedicated bridge engineers from the Structure Construction *Temporary Structures Technical Team*.

Thank you to Steve Harvey, P.E., Supervising Bridge Engineer, for his sponsorship and guidance of the *Temporary Structures Technical Team*, keeping the team on track to deliver the manual on time. His leadership proved invaluable in resolving disputes, clarifying technical topics, and leading Structure Construction and our industry partners during the process to update the manual. Thanks to Senior Bridge Engineers Jim Nicholls, P.E., Høgni Setberg, P.E., and Richard Yates, P.E. as the principal writers, editors, and reviewers of the updated manual. Thanks to Senior Bridge Engineer team members Andy Gill, P.E., Matt Harizal, P.E., and Kelvin Low, P.E. for their help in reviewing the chapters and keeping the team on track with updating the *Bridge Construction Memos* in accordance with the Quality Management System. Thanks to Structure Representatives and team members Roy Auer, P.E., Kari Forbes, S.E., Raman Guraya, P.E., Eric Urmeneta, P.E., and Justin Wood, P.E. for their invaluable input on current field practices, expertise in the use of the *National Design Specification for Wood*, manual edits and reviews, development of *Bridge Construction Memos* in accordance with the Quality Management System and much more. A special thanks to our industry partners on the *Falsework Advisory Team* who gave us input on the topics and who reviewed the manual as it was developed. The entire Temporary Structures Technical Team are to be applauded for their efforts.

Thanks to Cheryl Poulin, P.E., Marty Cook, and the Structures IQA branch for their review and editing to help maintain a professional and consistent presentation and for providing the tools and recommendations necessary to update this manual. Thanks to District 3 Resident Engineer, Aaron Chamberlin, P.E. for the cover photo taken with a drone.

The *Falsework Manual* has a long history with Structure Construction starting in the early 1970s with a training program developed by dedicated Bridge Engineers to get Structure Construction staff familiar with the design, review,

and construction of falsework in order to provide a consistent design and review framework statewide with the ultimate goal of falsework safety. This has been a successful effort through the years and all the engineers, managers, superintendents, foreman, industry partners, editors, and whoever else influenced this manual deserve the highest praise for their tireless efforts and experience in making this manual what it is today – a model and standard for California and the entire United States.

Signed,

RICHARD FOLEY
Deputy Division Chief
Structure Construction
