   Plan check fee and inspection fee are each: 7.5 percent for work under $50,000; $3,750 plus 4.5 percent for work between $50,001 and $500,000; and $24,000 plus 3.5 percent for work over $500,000. The hourly excavation permit inspection fee rate that is noted on Page 1 is not applicable for large projects.

   If the actual cost of inspection exceeds the inspection fee amount, the permittee shall pay the additional cost of inspection within 30 days of being invoiced by the City.

4. Joint-Build Projects

   a. The Encroachment Agreement between the City of Mountain View and a telecommunications company for the installation of network facilities within public right-of-way provides that the same company will cooperate in the planning, locating and constructing of its network facilities in utility joint trenches or common duct banks by directional boring methods with other similar utilities providers and to participate in cost sharing for the joint trench and ducts, when two or more telecommunications service providers are proposing network facilities in the same public right-of-way or when an underground project is being planned by City. See Paragraph 37, Participation With Other Utilities," of the Encroachment Agreement.

   b. While the installation of a fiber optics network system typically requires joint-build per the Encroachment Agreement, criteria for joint-build of fiber optics services to customers are not always clear. These guidelines, as depicted in the attached Exhibit 1, are intended to clarify the conditions that will trigger consideration for joint-build services.

   c. Joint-build will be required for the following conditions:

      - Fiber optics network system expansion (see Example A in Exhibit 1).
      - Major service serving more than one customer and containing more than one conduit (see Example B in Exhibit 1).
      - Single service exceeding 300' in length (see Example C in Exhibit 1).
      - Service running parallel to streets with heavy concentration of existing utilities (see Example D in Exhibit 1).
      - Single customer served by multiple telecommunications providers (see Example E in Exhibit 1).

5. Conceptual Route Approval

   a. Prior to performing detailed design work, submit a written request with an 8.5" by 11" map of the proposed route of the utility line to this office. Include the telecommunication company's name, contact name, address, and telephone number and fax number. The City will determine if the route is acceptable and will then send the proposed route to other utility companies to see if joint construction work is required. (The City will not allow subsequent conduits to be installed along the proposed route for a period up to five years.)

   b. The route should avoid residential areas, unless the lines will directly serve the residences.

   c. For lines passing through the City, the route should be located on arterial streets.

6. Alignment within the Street

   a. The proposed utility lines are to be a minimum 5' clearance from existing parallel water, sewer or storm lines.

   b. Utility lines should be installed as close to the edge of the right-of-way line as practicable. Where the area behind the curb is fully occupied, the utility lines should be installed in the pavement area as close to the curb as possible in order to help preserve the remaining right-of-way.

   c. Telecommunication lines are typically required to be 3' to 4' on centers from other underground telecommunication lines in order to help preserve space within the existing right-of-way.

   d. Telecommunication lines are to be installed parallel to the street centerline, where practicable, and shall not meander along the street. Street crossings shall be at right angles to the street.

7. Directional Bore Design and Construction

   a. Plan and Profile Sheets. Standard civil engineering plan / profile sheets are required for direction bores. The plan view is to be located on the top of the page and the profile below the plan view. All existing utilities must be shown on the plan and profile views.

   b. Alignment Review: Submit preliminary plans showing the existing surface and subsurface improvements in the plan view based on as-built plans and field reviews. Show all laterals and services in the street. Show the proposed horizontal and vertical alignment of the bore in plan and profile view.

   c. Excavation Pot Hole Permit. Obtain an excavation permit to pothole the underground lines and services along the approved alignment to verify location and depth. The entire route must be USA'ed. An air vacuum pothole excavator will be required.

   d. Profiles: Add the profiles to the directional bore plans based on the pothole excavation information. Verify the USA markings to what is shown on the plans for omissions. Submit directional bore plan and profiles to the City for review and approval. Profiles shall be drafted on the plans to scale under the direction of a civil engineer. All pothole excavation data, such as location, pipe diameter, type of pipe, depth of cover, and other relevant information shall be shown on the revised plans. Specify the boring entry angle (typically 8 to 20 degrees), exit angle, (typically 5 to 10 degrees), and maximum bending radius of the drill pipe (80' to 150' or more depending upon the diameter and wall thickness of the drill pipe) and bending radius of the pipe product on the plans.

   e. Vertical Clearance: Provide 3' minimum vertical clearance from all utilities. This ***also*** includes minor services, such as, water services, sewer laterals and gas services. For creek crossings and other deep crossings, provide a minimum of 5' clearance from utilities and structures.

   f. Minimum Cover: Minimum cover for directional boring shall be as follows:

Diameter	Minimum Cover
6" or less	4'
8" to 14"	6'
15" to 24"	10'
25" to 48"	15'

   g. Boring and Receiving Pits: Show the length, width, depth and location of the boring and receiving pits on the plan and profiles. The pits are to be located to minimize the construction impact to the adjacent properties. For example, the pits are not to be located in front of driveways, restaurants, bus

stops, fire hydrants, within street intersections, etc.

h. Conflicts with Trees: If trees are in the way of the directional bore, the utility line shall be deep bored underneath the tree roots rather than around the tree.

i. Excavation Permit to Bore: After the plans are approved, obtain an excavation permit to install the directional bore work.

j. Marking Drill Path: Before commencing construction, the entire drill path of the proposed bore shall be accurately surveyed and marked on the ground with traffic marking paint, or other approved method, and shall be approved by the City before commencing construction. The saw-cut line for the boring and receiving pits shall also be accurately marked on the ground.

k. Pilot Hole Accuracy: The pilot hole shall be drilled a minimum 5 percent horizontal and vertical accuracy based on the depth of the bore. For example, a 10' deep bore must be drilled within 0.5' of the horizontal alignment (drill path) and 0.5' of the vertical alignment. Pilot holes exceeding the 5 percent accuracy requirement shall be pulled back past the point of deviation and redrilled to comply with this accuracy requirement.

l. Location and Depth Markings: While boring, the location and depth of the bore must be accurately marked on the surface with traffic paint or other approved method.

m. Mud Fractures: In the event of a mud fracture or return loss (loss of circulation) occurs during pilot hole operations, the contractor shall cease progression of the drilling operations, notify the City, and assess damage to existing pipes and pavement.

8. Trench Design and Construction

a. For open trench construction, telecommunication lines are to have a minimum of 30" cover above the top of the conduits, at least 6" between the top of the conduits and the bottom of the street structural pavement section, and a maximum depth of 48".

b. For open trench construction, telecommunication lines are to have a minimum of 12" of vertical clearance from other utility lines and services. For shallow trenches, the proposed lines will typically need to go underneath the existing lines. The proposed lines shall not be installed within 6" below the street structural section.

c. A modified "T" trench cut design is required. See Standard Detail A-18 and standard construction notes on excavation, backfill and resurfacing.

d. Typical trench and pothole restoration details must be shown on the plans.

e. Control density fill (CDF) is typically required for use as backfill. The CDF specifications in Section 24-02.04 of the Standard Provisions specify a one- to two-sack cement mix. The use of CDF speeds up the work, minimizes the length of traffic disruptions, and does not require compaction tests.

f. The conduits must have a 2" minimum clearance from the sides and bottom of the trench in order to allow the CDF to flow to the bottom of the trench and around the conduits. The contractor must insert spacers on the sides and bottom of the trench. Conduit quad-ducts must have at least 1" spacing between other quad-ducts to allow CDF to flow around the quad-ducts.

g. The conduits must be secured to the bottom of the trench when CDF is used as backfill to prevent the floatation of the conduits in the CDF mix.

h. CDF cannot be used as temporary surfacing, as the CDF cannot hold up to vehicle traffic without spalling. Reduction of the thickness of the permanent AC is not allowed when CDF is used as aggregate base rock.

i. The typical sequence of trench and excavation work in the street includes: saw-cutting the existing AC pavement, excavating of the bottom portion (vertical portion) of the "T" trench, installing the conduits, backfilling the trench with CDF mixture up to the bottom of the existing AC, plating the trench, neatly installing AC around the edges of the plates, and opening up the travel lanes for the public.

   The CDF must be allowed to cure a minimum of 24 hours before the steel plates are removed. Within 48 hours, the steel plates must be removed and AC installed over the CDF backfill up to the finished grade. Cutback AC is not allowed as the lower portion of the AC will be used as permanent surfacing and as the Standard Provisions prohibit its use.

   The top 1.5" section of the AC (the top of the "T" trench) is removed by grinding. This includes the 1' wide band beyond the outside edge of the trench and manhole excavations, and the intervening pavement between the trench and lip of gutter (or edge of another trench) where the intervening pavement is 6' wide or less. A 1.5" thick AC overlay is then installed using an AC paving machine and steel rollers. Cutback AC is not allowed. If CDF is not used, the top of the "T" trench must be as thick as the existing AC pavement.

   If manholes are installed in the trench, the top of the manhole frame and cover must be installed 1.5" below the finished grade. The temporary AC is to be placed over the manholes to finished grade, temporarily covering the manholes. After the final pavement has been installed over the manholes, the manhole frames and covers are raised to grade.

9. Separate Excavation Permit to Install Cables

   For large projects, the excavation permit to install the conduits will not grant approval for the installation of any cables. A separate excavation permit must be obtained from the City to install cables within the underground conduits. Prior to obtaining a permit to install any cables, the lead utility company must complete all work to be performed under the initial excavation permit to install the conduits, including final restoration of the street and sidewalk. On joint build projects, the secondary utility companies will not be allowed to install cables until the restoration work is complete, except when the secondary utility company is only installing a service to a single site.

10. Vaults

    a. Vaults shall be placed in the sidewalk, street planter strip or public utility easements. Vaults shall not be placed in the street, unless they are converted to manhole with a circular frame and cover. Vaults shall not be placed within a driveway approach.

    b. Vaults shall be placed to minimize their impact on the adjacent property, such as placing the vault next to the side property line, or placing the vault away from main entrance features. For properties with small landscape areas or well-manicured landscaping, the vaults should be placed in the sidewalk to minimize their impact on the landscaping. Multiple vaults within a sidewalk area, fronting a single lot, will not be allowed.

    c. Very large vaults should be placed on private property (within a private easement) and not within the street or sidewalk area.

d. Vaults and bore pits are to be at least 15' from a street corner or end of curb return. Street corners or curb returns are heavily used during construction and maintenance, are highly visible areas and are often heavily congested with facilities.

e. Where the proposed vault conflicts with small diameter line, such as street light conduit lines, and where there is no other room behind the curb to install the vault, the small diameter lines are to be relocated around the proposed vault.

f. Where vaults are installed on an earthen or landscaped slope, the frame and cover shall be sloped to match the existing grade. Retaining walls shall not be installed in the slope.

g. Vaults shall be designed to withstand at least H20 vehicle loads.

h. A detail of the vault must be shown on the plans. Aggregate base rock is to be placed on the bottom of the vault to help drain the vault.

11. Manholes

a. Manholes shall not be allowed in the street, unless an exception is granted by the City. An exception will only be allowed if there is no room to place the manhole outside of the street pavement.

b. Manholes that are located in the street must have cast iron frames and covers.

c. Manholes that are located in sidewalks shall have a concrete polymer frame and cover that matches the color and texture of the sidewalk.

d. All manholes must be rated for a minimum H20 wheel load.

e. The utility company's name shall be permanently cast into or engraved on the covers.

f. A detail of the manhole must be shown on the plans. Aggregate base rock is to be placed on the bottom of the manhole to help drain the vault.

g. RPM extension rings are required on manholes as follows:

(1) Pavement areas: at least one 6" and one 3" RPM extension ring is required to facilitate leveling of the manhole frame and cover, and to lower the vault structure so that it is out of the pavement structural section. Additional 3" and/or 6" RPM extension rings shall be installed as necessary to keep the vault structure out of the pavement structural section and 6" below the pavement structural section.

(2) Sidewalk areas: at least one 6" RPM extension ring is required to facilitate leveling of the manhole frame and cover.

(3) Landscape areas: at least one 6" RPM extension rings is required.

T. Groundwater Monitoring Wells

In addition to an excavation permit, an encroachment agreement is required for any wells constructed within the public right-of-way. The applicant should make every effort to install the wells on private property rather than the City right-of-way. If the wells must be located in the street right-of-way, the wells are generally not permitted within the street pavement as the well boxes interfere with the City's street asphalt overlay program. Further, the City prefers the wells to be located outside of the sidewalk, if possible. It is strongly recommended that the City conceptually approve the location of the wells before the legal description of the encroachment area is prepared. Wells are to be placed at least 5' from

other utilities. The following items are required to prepare the encroachment agreement.

1. A determination of whether the City has an easement for street purposes or owns the right-of-way in fee in the area where wells are proposed to be installed.

2. If the City's street right-of-way is in the form of an easement where a new well is proposed to be installed, the applicant will need to obtain written permission from the adjacent property owner to install the well. According to the City Attorney's Office, a street easement does not give the City the right to permit installation of a well as a well is not considered to be typical street or utility usage.

3. The number of years the wells are anticipated to be in place. The life of the encroachment agreement can be specified to be 5, 10, 15 and 20 years.

4. Legal description of the encroachment area prepared by a registered land surveyor or civil engineer. For wells, a 10' by 10' square area is typically defined as the encroachment area.

5. Plat (8.5" by 11" drawing of the encroachment area prepared by a registered land surveyor or civil engineer). The plat is to include the street centerline, point of beginning of the legal description, bearings and distances, street curb and sidewalk if applicable.

6. Current deed or title report of the property that will be responsible for the well or property for which the wells are required. The legal description of the property in the deed or title report will be used in the encroachment agreement.

7. Statement as to who is the lead regulatory agency in charge of the groundwater investigations.

8. Statement as to who will own and maintain the wells. The well owner's legal name, identity (such as ABC, Inc., a California corporation) and address are required.

9. Well owner's insurance certificate and endorsement. (This is in addition to the contractor's insurance certificate required by the excavation permit.)

10. Encroachment permit fee.

11. Encroachment agreement which must be signed and notarized by the owner before the City can issue an excavation permit.

12. If the wells are located on City property, securities, such as bonds, are required.

The excavation permit requirements are indicated on Pages 1 and 2. The following is also required with the excavation permit application:

a. Well construction typical details.

b. Well construction permit from the Santa Clara Valley Water District.

U. <u>Groundwater Extraction Systems</u>

Groundwater extraction systems require an encroachment agreement in addition to an excavation permit. <u>The items needed to prepare an encroachment agreement are the same as those listed in the preceding section on monitoring wells, except that the following is also required</u>:

1. Cost estimate of the improvements within the street right-of-way.

2. For minor extraction systems, such as an extraction line that crosses a street, bonds or securities are not required. For major extraction systems, such as an extraction line that is located parallel to the street and for encroachments located on City property (not street right-of-way), the following three securities are required:

   a. Faithful performance bond equal to 100 percent of the cost of the work.

   b. Labor and materials bond equal to 100 percent of the cost of the work.

c. In lieu of a faithful performance bond and labor and materials bond, a single letter of credit or certificate of deposit equal to 150 percent of the cost of the work may be submitted.

d. Closure certificate of deposit equal to 100 percent of the cost to remove the extraction system. The cost to remove and / or abandon the extraction system shall not be less than 40 percent of the construction cost.

3. Plan check and inspection fees are based on a percentage of the work. These fees replace the hourly inspection fees noted in Section D on Page 15.

4. The plans for extraction systems with piping parallel to the street shall be drawn on 24" by 36" size sheets. After the City has approved and signed the plans, 10 copies and one Xerox Mylar copy of the originals are to be submitted prior to the approval of the excavation permit.

5. The owner of the extraction system will need to become a member of Underground Service Alert. The telephone number of the USA regional notification center is (800) 642-2444.

Insurance Requirements

August 27, 2001

City of Mountain View • Public Works Department • Land Development Engineering
Tele (650) 903-6311 • FAX (650) 903-6499 • www.ci.mtnview.ca.us

The following insurance requirements apply to permits and agreements used by Land Development Engineering of the Public Works Department. These insurance requirements do not apply to City contract construction projects, which have more stringent requirements. For excavation permits, the Permittee must provide the insurance. For agreements, the entity that signs the agreement must provide the insurance. Major construction projects require higher insurance coverage limits than the $1,000,000 noted above.

1. Workers' Compensation Insurance:

   APPLICANT shall obtain statutory Workers' Compensation insurance and Employer's Liability insurance in the amount of One Million Dollars ($1,000,000) per accident.

2. Commercial General Liability/Automobile Liability Insurance:

   APPLICANT shall obtain Commercial General Liability insurance, including operations, products and completed operations, and Automobile Liability insurance in the amount of One Million Dollars ($1,000,000) per occurrence. If a general aggregate limit is used, either the general aggregate limit shall apply separately to *this AGREEMENT/PERMIT* or the general aggregate limit shall be twice the required occurrence limit. *APPLICANT's* insurance coverage shall be written on an occurrence basis.

3. Acceptability of Insurers: Insurance is to be placed with insurers with a current *Best* rating of A: VII unless otherwise acceptable to CITY.

4. Verification of Coverage: Insurance, deductibles or self-insurance retentions shall be subject to CITY's approval. Original Certificates of Insurance with Endorsements shall be received and approved by CITY before work commences, and insurance must be in effect for the duration of *this AGREEMENT/PERMIT*. The absence of insurance or a reduction of stated limits shall cause all work on the project to cease. Any delays shall not increase costs to the CITY or increase the duration of the project.

5. Other Insurance Provisions

   a. The City of Mountain View, its officers, officials, employees and volunteers are to be covered as additional insured by Endorsement CG 20 10 10 93, for commercial general liability coverage.

   b. For any claims related to this project, *APPLICANT's* insurance coverage shall be primary.

   c. Each insurance policy required shall be endorsed that a thirty (30) day notice be given to CITY in the event of cancellation or modification to the stipulated insurance coverage.

   d. It shall be the responsibility of *APPLICANT* to ensure that all subcontractors comply with the same insurance requirements that are stated in this *AGREEMENT/PERMIT*.

Commercial General Liability Endorsement Example

August 27, 2001

POLICY NUMBER: GL00000000 COMMERCIAL GENERAL LIABILITY

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED -- OWNERS, LESSEES OR CONTRACTORS (FORM B)

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART.

SCHEDULE

Name of Person or Organization:

City of Mountain View
PO Box 7540
Mountain View, CA 94039-7540
Attn: Public Works Dept. - Land Development

(If no entry appears above, the information required to complete this endorsement will be shown in the Declaration as applicable to this endorsement.)

WHO IS AN INSURED (Section II) is amended to include as an insured the person or organization shown in the Schedule, but only with respect to liability arising out of your ongoing operations performed for that insured.

a. **The City of Mountain View, its officers, officials, employees and volunteers are to be covered as additional insureds.**

b. **For any claims related to this project, named insured's insurance coverage shall be primary.**

c. **Each insurance policy required shall be endorsed that a thirty (30) day notice be given to CITY in the event of cancellation or modification to the stipulated insurance coverage.**

GUIDELINES FOR JOINT–BUILD FIBER OPTICS SERVICES

CITY OF MOUNTAIN VIEW

Notice of Changes to New and Re-development Requirements for Permanent Storm Water Treatment Measures (C.3 Requirements)

Why are storm water treatment controls required?
The State of California's San Francisco Bay Regional Water Quality Control Board issued a storm water discharge permit to the City of Mountain View, the 13 other cities in Santa Clara County, the County of Santa Clara, and the Santa Clara Valley Water District. The permit includes a number of requirements that are intended to reduce storm water pollution discharging into San Francisco Bay, including requirements for new and re-development projects to install permanent treatment control measures. The new and re-development runoff treatment requirements are known as the "C.3 requirements."

Which projects are required to comply with the C.3 requirements?
Beginning *August 15, 2006*, projects that create or replace 10,000 square feet or more of impervious surface must comply with the C.3 requirements (previously required for projects adding or replacing 1 acre or more of impervious surface). Impervious surfaces include building roof, parking lot, driveway, walkway, plaza, patio, and courtyard areas. Complete the "Impervious Surface Calculation Worksheet" on the back of this Notice to determine the impervious surface for a project.

What storm water treatment control measures should be installed on projects?
Landscape areas can be effective locations for storm water infiltration and treatment. The first step to designing storm water treatment measures for a project site is to evaluate the proposed landscape areas, which can be incorporated into the site's drainage as storm water treatment measures. Examples of storm water treatment measures that can be installed in landscape areas include vegetated swales, and bioretention areas.

If sufficient landscape area is not available to adequately treat runoff from a site, manufactured storm water treatment devices may be installed. Please note that all storm water treatment measures be sized to treat a specified amount of runoff.

Are there exemptions from this requirement?
Projects may be exempt from the C.3 requirements if 1) the project is below the 10,000 square foot impervious surface threshold; 2) the project is one single family home that includes appropriate storm water control measures; 3) the project is interior remodeling, routine maintenance or repair, and any other reconstruction work within a public street or road right-of-way.

STANDARD CONDITIONS FOR EXCAVATION PERMITS
August 8, 2001

City of Mountain View • Public Works Department • Land Development Section
500 Castro Street • Post Office Box 7540 • Mountain View, California 94039-7540
Telephone (650) 903-6311 • FAX (650) 962-8503

ADMINISTRATION

A. **Start Work In 30 Days**: Permittee shall begin work within 30 days following the issuance of the excavation permit and shall diligently prosecute the work to completion.

B. **Permit Expiration**: All excavation permits shall expire one year from the date of issue.

C. **Documents at Job Site**: A copy of this excavation permit, attachments, conditions, plans and Standard Provisions shall be available at the job site at all times the Permittee is doing the work mentioned above.

D. **Parties Authorized to Work**: No party other than the named Permittee or Permittee's authorized agent is allowed to work under this permit.

E. **Acceptance of City Requirements**: Permittee understands and agrees to acceptance of the provisions and all attachments to this permit for any work to be performed under this agreement. This permit is issued with the understanding that it does not establish a precedent.

F. **Hold Harmless**: Permittee hereby agrees to and shall hold City, its elective and appointive boards, commissions, officers, agents and employees harmless from any liability for damage or claims for damage for personal injury, including death, as well as from claims for property damage which may arise from Permittee or Permittee's contractors', subcontractors', agents' or employees' operations under this permit, whether such operations be by Permittee or by any of Permittee's contractors, subcontractors, or by any one or more persons directly or indirectly employed by, or acting as agent for Permittee or any of Permittee's contractors or subcontractors. Permittee agrees to and shall pay City's costs of defense (or, at the sole option of City, shall defend with counsel approved by the City Attorney) and indemnify City and its elective and appointive boards, commissions, officers, agents and employees from any suits or actions at law or in equity rising out of the execution, adoption or implementation of this permit (exclusive of any such actions brought by Permittee), such indemnification to include all costs of defense, judgments and any awards of attorneys' fees.

G. **Insurance**: The insurance certificate and endorsement naming the City as additional insured that is required by the excavation permit or by a franchise or ancillary agreement shall be maintained in full force during the term of the excavation permit. Where work is being done pursuant to a franchise or encroachment agreement, the utility company and contractor must provide and maintain an insurance certificate and endorsement.

H. **Permit Revocation**: All excavation permits shall be revocable at any time by the Public Works Director upon written notification.

I. **Site Restoration Upon Termination of Permit**: Upon written notice of cancellation or revocation of the excavation permit for any cause whatsoever, Permittee shall restore City right-of-way and structures to their condition prior to the issuance of the permit unless indicated otherwise by City. Should Permittee neglect to restore the site or structures to a satisfactory condition, the City may perform such work or have work performed, and Permittee agrees to reimburse the City for all costs of the work performed.

J. **Additional Conditions**: City may require additional conditions for changes in work and field conditions.

K. **Stoppage of Work Due to Permit Violations**: Violations of the conditions and requirements of the excavation permit may result in the stoppage of work until the violation is resolved between the Permittee and the City.

L. **Responsibility for Damage**: The Permittee shall be responsible for all damage caused by the Permittee's operations, including work performed by Permittee's contractor and subcontractor. Any damage to public and private facilities

caused by or as a result of the Permittee's operations shall be replaced by the Permittee at Permittee's own expense, including payment for additional City inspections.

GENERAL

1. **Standard Provisions and Standard Specifications**: All work shall be in accordance with the August 1999 Standard Provisions of the City of Mountain View and the latest edition of the State of California Standard Specifications and Standard Plans.

2. **Maintenance of Site Documents**: The Contractor shall keep and make available a copy of the approved plans and City Standard Provisions at the job site at all times when work is in progress. The Standard Provisions may be purchased at the City of Mountain View, Public Works Department counter, 500 Castro Street, P.O. Box 7540, Mountain View, CA, 94039-7540, telephone (650) 903-6311, fax (650) 903-6499. The Standard Provisions, which include the Standard Details, costs ten dollars at the counter or fifteen dollars by mail, as amended.

3. **Private Development Specifications**: For private developments, the City does not review or recognize private development project specifications.

CONTROL OF WORK

4. **Changes to Plans**: The following applies to plans approved by the Public Works Department. Major changes in the approved plans must be approved by the Assistant Public Works Director on the original signed plans per Section 5-02 of the Standard Provisions. Each change is to be delineated by marking the changed area of the plan with a numbered triangle or other acceptable method. The engineer must date and initial each revision in the revision block. The engineer shall submit a cover letter explaining the requested change and two copies of the revised sheets. After the City approves and initials the revision block, the engineer shall submit one 24" by 36" Xerox Mylar set (4 mil) and three black line copies of the signed revised sheets to the City. For minor changes, the Contractor may "red line" the proposed minor change on the plan and submit them to the City for review and approval. The Contractor is responsible for coordinating the changes with the engineer who prepared the plans and shall keep approved changes at the job site when work is in progress. All changes shall be shown on the as-built plans submitted to the City at the end of the job. The City shall have the sole discretion to determine what is a minor change. Relocation of a manhole from the sidewalk to a landscaped area or into the street is considered a minor change that requires approval from the Public Works Operations Section.

5. **As-Built Plans**: The following applies to plans approved by the Public Works Department. The Contractor shall keep complete and accurate record drawings of all new work, utility pothole data and existing conditions that have changed or are different than shown on the originally approved plans. Upon completion of the work, the Contractor's record drawings shall be submitted to the City inspector for review and comment. The engineer shall make the necessary revisions to the original drawings to show all field changes. The engineer shall verify final grading and shall sign the grading certificate, if applicable, when satisfied that the grading is per approved plans. Each sheet of the plans shall be stamped "as-built" or "record drawing" and signed by the engineer. The revised originals shall be submitted to the City for review and approval. Prior to the acceptance of the work by the City, the engineer shall provide one 24" by 36" Xerox Mylar set (4 mil) of the approved "as-built" plans to the City. The electronic file of the approved as-built drawings in AutoCAD Release 14 format shall also be submitted to the City.

6. **Construction Safety Orders for Excavations**: The Contractor shall conform to the rules and regulations of the Construction Safety Orders of the State Division of Occupational Safety and Health pertaining to excavation and trenches per Section 5-03 of the Standard Provisions. For deep trenches, the Contractor shall submit a copy of their annual or single project permit for trench and excavations from the State Department of Industrial Relations Division of Occupational Safety and Health located at 2010 North First Street, Suite 401, San Jose, CA, 95131, telephone (408) 452-7288.

7. **Normal Working Hours**: Normal working hours is defined as the time from 7:30 a.m. to 4:00 p.m., Monday through Friday, excluding legal holidays. The Contractor shall not work on the project outside the normal working hours, unless prior approval is obtained from the City or when specifically required by the City. Work outside normal working hours will only be allowed if a City inspector is available. The Contractor shall pay the City for the cost of overtime for City inspection performed outside of normal working hours per Section 5-09 of the Standard Provisions.

8. **Coordination With Other Agencies**: The Contractor shall be responsible coordinating inspection performed by other governmental agencies, as prescribed in their permits and approvals.

9. **Airborne Dust**: At all times during construction and until final completion and acceptance of the work, the Contractor shall prevent the formation of an airborne dust nuisance in such a manner that it will contain dust particles to the immediate surface of the work per Section 5-10 of the Standard Provisions. The Contractor shall perform such treatment within 2 hours after notification by the City that an airborne nuisance exists.

10. **Maintenance of Equipment**: All equipment and plant shall be maintained in good order per Section 5-13 of the Standard Provisions. Substandard or unsuitable paving equipment will not be allowed.

11. **Final Inspection**: The City will not perform the final inspection until the Contractor completes all work and final cleanup of the site per Sections 4-05 and 5-14 of the Standard Provisions.

12. **Maintenance of Work Site**: The Contractor shall keep the street and work site clean and free from rubbish and debris per Section 5-15 of the Standard Provisions. This provision requires preventing spillage on haul routes, cleaning up spillage, sweeping all streets of mud, dirt and debris that are a result of the Contractor's work, and keeping the work site in a clean and neat appearance. Any spillage on haul routes shall be immediately removed and cleaned up.

13. **Cleaning Site Upon Notice From City**: Regarding Section 5-15 of the Standard Provisions, when ordered by the City, the Contractor shall clean up the work site within 24 hours after receiving notice.

14. **Residential Occupancy Release**: For residential developments, no residential units will be released for occupancy unless the improvements to be constructed to City standards and/or to be accepted for maintenance by the City, including water meters and sanitary sewer cleanouts, are substantially complete per the City of Mountain View Standard Provisions for Public Works construction. For phased developments, portions of the units may be released for occupancy, at the City's sole discretion, provided that all public and private improvements, conditions of approval, and building code requirements that are necessary to support the units to be released for occupancy have been completed as determined by the City. When all of the improvements are complete and/or ready for acceptance for maintenance by the City Council, the remaining units may be released for occupancy, provided that all other conditions of approval and building codes requirements have been met. The Public Works Director shall make the determination of what public improvements are substantially complete.

15. **Non-Residential Occupancy Release**: For commercial and office developments, no buildings will be released for occupancy until the off-site improvements to be constructed to City Public Works standards and/or accepted for maintenance by the City are complete and ready for acceptance.

16. **Acceptance of Work, Bond Reduction and Release**: For improvements that are installed by a developer with an improvement agreement, the improvement securities may, at the discretion of the City, be reduced up to 25% of their values upon acceptance of the improvement by the City Council in accordance with the improvement agreement. After acceptance of the improvements by the City, completion of the one-year maintenance and guarantee provisions (or longer if stipulated in the conditions and agreement), and completion of all other obligations and requirements, the remaining improvement securities shall be released by the City in accordance with the improvement agreement. See Section 4-06 of the Standard Provisions regarding the one-year maintenance and guaranty period relating to street and utility improvements.

CONTROL OF MATERIAL

17. **Compaction Tests**: The Contractor shall hire a testing laboratory, approved by the City, to perform compaction tests of aggregate base, aggregate sub-base and sub-grade to the satisfaction of the City. The test results shall be submitted to the City prior to any AC or PCC paving. AC paving shall be tested with a nuclear gage. The Contractor shall be responsible for the cost of all testing.

18. **Concrete Material Tags**: Plant material tags for Portland Concrete Cement shall be submitted to the City per Section 6-01 of the Standard Provisions.

LEGAL RELATIONS AND RESPONSIBILITY

19. **State and City Licenses**: All Contractors and subcontractors shall be licensed in accordance with the laws of the State of California and shall have and maintain a valid City Business license, per Section 7-01.c and 8-01 of the Standard Provisions.

20. **Compliance With Environmental Documents**: The Contractor shall comply with the provisions of all permits, licenses or other authorizations applicable to the work with respect to the Environmental Quality Act per Section 7-02 of the Standard Provisions.

21. **Public Convenience and Access**: All work shall be planned and carried out so that there will be the least possible inconvenience to the traveling public, and traffic shall not be unreasonably delayed per Section 7-04 of the Standard Provisions. Driveway access shall be maintained to each property at all times.

22. **Maintain Traffic Control Devices**: The Contractor shall install and maintain fences, barriers, lights and signs that are necessary to give adequate warning to the public at all times per Section 7-05 of the Standard Provisions.

23. **Remove Material and Equipment at End of Day**: No material or equipment shall be stored in the public right-of-way after "normal working hours". See Sections 5-15 and 7-05 of the Standard Provisions. At the end of each day's work and at other times when construction operations are suspended for any reason, the Contractor shall remove all equipment and other obstructions from the pubic right-of-way.

24. **Hazardous Materials and Waste**: All work shall be conducted in a manner which prevents the release of hazardous materials or hazardous waste to the soil or groundwater, and minimizes the discharge of hazardous materials, hazardous wastes, polluted water and sediments to the storm drain system per Section 7-08.01 of the Standard Provisions.

25. **Coordination with Other Contractors**: Where two or more contractors are working in the same area, each shall conduct their operations in such a manor as not to cause any unnecessary delay or hindrance to the other per Section 7-09 of the Standard Provisions. Where conflicts cannot be avoided, the City will determine which contractors have construction priority over the other contractors and the terms of such construction priority.

26. **Noise Working Hour Restrictions**: In order to limit disturbing noises, construction work shall occur only between the hours of 7:30 a.m. and 4:00 p.m., Monday through Friday, excluding holidays. Work outside of these hours is prohibited, unless the City grants an exception. Exceptions will be considered only when, in the opinion of the Public Works Director, construction during the above period would inconvenience the public and neighboring residents more than working at other hours. Exceptions will not be granted merely to expedite the construction work.

NOTIFICATION

27. **Dangerous Situations, Call 911**: If any damage occurs to an underground facility that results in the escape of any flammable, toxic or corrosive gas or liquid or endangers life, health, or property, the Contractor shall immediately notify the utility owner and call the 911 emergency telephone number to notify local public safety officials.

28. **Provide Superintendent Information Before Start of Work**: The Contractor shall provide the name and telephone number of the authorized representative (superintendent) of the work to the City in writing prior to the start of work per Section 5-07 of the Standard Provisions. Public Works Construction Section: Tele. (650) 903-6311 and Fax (650) 903-6499.

29. **Call Public Works Inspectors Prior to Start of Work:** Contractor shall notify the Public Works Director at least two working days prior to commencing work, resuming suspended work, or resuming work after three days of no work so that inspection can be arranged per Sections 5-09 and 10-01.01 of the Standard Provisions. Public Works Construction Section: Tele. (650) 903-6311 and Fax (650) 903-6499.

30. **Road Detours, Notify Emergency Communication Center**: Contractor shall leave an emergency phone number with the City emergency communications center at (650) 903-6395 and keep the center informed daily regarding detours per Sections 10-01.02 and 10-01.03 of the Standard Provisions.

31. **Contact USA**: Contractor shall contact USA (Underground Service Alert) at (800) 642-2444 at least two working days but not more than 14 days prior to commencing excavation work to verify existing underground utilities, per Section 5-11.02 of the Standard Provisions and Chapter 3.1, Division 5, Title 1 of the Government Code.

32. **Notify Utility Owners**: Contractor shall notify all public or private utility owners forty-eight hours prior to commencement of work adjacent to the utility per Sections 5-11.02 and 10-01 of the Standard Provisions.

33. **Notify Adjacent Properties**: Contractor shall notify the adjacent residences and business in writing describing the nature of the work, schedule of the work, when parking will be prohibited (if any), and who to call at the Contractor's office if they have questions about the work. The notice must be approved by the City prior to its distribution. The Contractor must distribute the notice to the adjacent residences and business at least 7 days prior to the start of the construction work. For large projects, the work area, parking prohibition requirements and schedule shall be divided up into smaller, more manageable areas. In the event the parking prohibition schedule changes after the notification, Contractor shall post a new notice of the revised schedule at least 48 hours in advance of construction. For work requested by the property owner, a notice to the property owner is not required.

34. **No Parking Sign Notification**: Upon posting temporary no parking signs on a street, Contractor shall notify the Emergency Communications Center at 650-903-6395 of streets that have been posted with no parking signs.

35. **Street Closure Notification**: In the event of a street closure and detour that is three or more consecutive days in duration and is caused by the Contractor's operations, the Contractor shall notify the U.S. Postal Services customer services manager at (650) 967-5721 twenty four hours prior to the street closure.

STREET IMPROVEMENTS

36. **Grading Notes**: The City shall be provided with grading notes showing cuts and fills for all improvements to be inspected by the City.

37. **Place Utilities Before Base Rock**: All underground utilities shall be completed before placing of base rock, unless the City grants an exception.

38. **5 Days to Replace Concrete Improvements**: All existing curbs, gutters, sidewalks and driveways that are to be reconstructed shall be replaced within 5 days after their removal, unless the City grants an exception. See Section 22-04 of the Standard Provisions.

39. **Pedestrian Access**: Where practicable as determined by the City, the Contractor shall maintain pedestrian access along walkways, including public sidewalks, at all times. Sidewalk closures must be approved in advance by the City's Public Works Inspector. Walkways shall be reopened at the end of each working day. Well-compacted base rock may be used as a temporary walking surface.

40. **Inspection of Concrete Forms**: The City must approve concrete forms, before the pouring of concrete per Section 22-06 of the Standard Provisions. Concrete poured prior to inspection is subject to rejection and removal.

41. **"S" and "W" Curb Markings**: During concrete placement, the Contractor shall mark face of curb with a letter "S" for sewer laterals and a letter "W" for water services per Section 22-09.01 of the Standard Provisions.

42. **AC Gutter Conforms**: New gutter requires a hairline AC sawcut along the edge of the pavement or a 1' wide AC pavement conform per Section 22-09.01, as directed by City Inspector.

43. **Sidewalk Replacement**: Sidewalks shall be replaced by sawcutting along score marks, then removing and replacing the entire width of the sidewalk over 3" aggregate base and installing No. 4 dowels (9" maximum length) at 3' on centers, per Section 22 of the Standard Provisions. The dowels are to be drilled 3" into the existing curb and remaining sidewalk and epoxied in place.

EXCAVATIONS

44. **Utility Inspection Requirement**: All City appurtenances must be inspected by the City prior to backfilling any trenches or pouring any concrete.

45. **Excavations**: At the end of the each work day, all excavations within the street and travel way shall be: (1) backfilled and paved with temporary paving such that the finished surface is flush with the existing pavement, (2) adequately covered with steel plate bridging, or (3) backfilled and paved with permanent paving. If steel plate bridging is used, the steel plate bridging must be removed within 48 hours after its installation. Control Density Fill shall not be use as temporary AC paving.

46. **"T" Trench Cut**: A "T" trench cut is required per Detail A-18 of the Standard Provisions. Street pavement removed shall be replaced in kind or with a minimum section of 2.5"AC on 12" AB, which ever is greater, with respect to the permanent paving.

47. **Pipe Bedding and Backfill**: Uniformly graded sand shall not be used for pipe bedding or excavation backfill, as this material will fail upon re-excavation. Pipe bedding material shall conform to select (initial) backfill material, and subsequent trench backfill material shall be Class 2 aggregate base per Sections 24-02.01 and 24-04.03 and Detail A-18 of the Standard Provisions.

48. **Control Density Fill**: Controlled Density Fill (Section 24-02.04 of the Standard Provisions) may be used as subsequent backfill material only when specifically approved by the City. Controlled Density Fill shall not be used as pipe bedding material, unless an exception is granted by the City.

49. **Steel Plate Bridging**: Steel plate used for trench bridging must have a nonskid surface with a minimum coefficient of friction of 0.35 and must extend a minimum of 12 inches beyond the edge of a trench. Steel plate bridging shall be installed to operate with minimum noise. Where more than one plate is used, the plates shall be butted flush to each other and attached together by welding or other method approved by the City. For longitudinal placement, the approach plate(s) and ending plate(s) shall be attached to the roadway by a minimum of two dowels predrilled into the corners of the plate and drilled 2 inches into the pavement. When steel plates are removed, the dowel holes in the pavement shall be backfilled with either graded fines of asphalt concrete mix, concrete slurry or equivalent slurry approved by the City. Steel plate bridging shall be steel plate designed for HS20-44 truck loading per Caltrans Bridge Design Specification Manual.

Trench Width	Minimum Steel Plate Thickness
1.0'	1/2"
1.5'	3/4"
2.0'	7/8"
3.0'	1"
4.0'	1-1/4"

The trench shall be adequately shored to support the bridging and traffic loads. Temporary paving with hot asphalt concrete shall be used to feather the edges of the plates. Fine graded asphalt concrete shall be compacted to form ramps with a maximum slope of 8.5 percent and with a minimum 12 inch taper to cover all edges of the steel plates. The Contractor shall maintain the steel plates, shoring and asphalt concrete ramps in good order. The steel plates bridging shall be removed within 48 hours after their installation.

50. **Replacement of AC Between Excavation and Edge of Pavement**: On arterial streets, collector streets, streets that have been resurfaced with AC within the last five years, or when required by City, the Contractor shall remove and replace all intervening AC paving for trenches and excavations located within 6 feet of the edge of the pavement. On minor streets, the Contractor shall remove and replace all intervening AC paving for trenches and excavations located within 3 feet of the edge of the pavement pursuant to Section 24.03.01 of the Standard Provisions.

51. **Replacement of AC Between Two Excavations**: Where trenches or excavations are adjacent to each other, the intervening pavement located between the edges of the "T" trench shall be replaced if the width of the intervening pavement is less than 6'.

52. **Vault Excavation and Backfill**: Vault excavations shall not be backfilled with sand. The distance between the vault and side of the excavation shall be sufficiently wide to allow proper compaction of the aggregate base backfill material. Compaction tests of the backfill material are required, particularly on large vaults, except when Control Density Fill material is approved and used as backfill material. Uneven paving around new manholes located within the street or sidewalk will not be accepted. The grade of the paving surface around the manholes shall be flat, matching the existing grade, and shall be no worse then the existing grade of the street or sidewalk before manhole was installed.

53. **Vault Lids and Frames**: All boxes and vaults placed in the sidewalk area shall have a concrete type of finish (polymer lids and frames are acceptable). Boxes and vaults located within driveways shall be traffic rated boxes and lids for at least H20 traffic loads.

54. **Vaults, Utility Relocation**: Where proposed vaults conflict with minor lines, such as a street light conduit, the conflicting conduit may, at the discretion of the City, need to be relocated in lieu of relocating the vault.

55. **AC Paving Machine**: For excavations within paved areas that are more than 8 feet wide, the AC surfacing shall be installed with an AC paving machine.

56. **Cover Requirements**: A minimum cover of 30" within travelways and 18" within sidewalk areas as measured from the top of pipe to ground surface is required for the proposed excavation within the right-of-way. Provide additional cover to place the utility below the pavement structural section.

57. **Pavement Striping Damage**: Pavement striping damaged as a result of the Contractor's operations shall be replaced in kind by the Contractor.

SIGNS

58. **Street Name Signs**: Street name signs shall be installed on all public and private streets per Standard Detail A-13 and Section 29 of the Standard Provisions. Public street name signs shall have 4-inch white reflective, type B letters on blue reflective background on a 6-inch tall, 0.080-inch thick aluminum plate. Private street name signs shall have 4-inch white reflective, type B letters on a green reflective background on a 0.080-inch thick aluminum plate. Private street name signs shall include the phrase "Private St". Private street names must be approved in advance by the City Traffic Engineer.

WATER FOR CONSTRUCTION

59. **Construction Water Permit**: A permit for the use of City water is required per Section 30-01 of the Standard Provisions. Permits, backflow prevention devices and meters are issued at the Municipal Operations Center at 231 North Whisman Road. Contact the meter shop at (650) 903-6329 for further information.

STORM DRAINS

60. **Storm Line Video Taping**: In addition to other requirements specified in Section 31 of the Standard Provisions, the Contractor shall video tape new storm drains per Sections 31-03.07 of the Standard Provisions. The video taping requirements also requires the video tape and log sheets to be submitted to and approved by the City prior to the installation of the final lift of AC paving. Approval of the tapes and log sheets does not relieve the Contractor of his obligation to repair defective work and materials.

SANITARY SEWERS

61. **PVC Sanitary Sewer Laterals**: All new sanitary sewer laterals shall be constructed of PVC in accordance with Section 32-02.02 of the Standard Provisions, unless the City authorizes the use of VCP.

62. **Testing, Cleaning and Video Taping Sewer Lines**: The Contractor shall complete all testing of sanitary sewer pipes per Section 32 of the Standard Provisions. This provision requires the Contractor to perform exfiltration and infiltration testing, flush and clean the lines, video tape the new sanitary sewer pipes prior to the installation of the final lift of AC paving per Section 32-03.10 of the Standard Provisions, and perform other requirements as well. The video taping requirements also requires the video tape and log sheets to be submitted to and approved by the City prior to the installation of the final lift of AC paving. Approval of the tapes and log sheets does not relieve the Contractor of his obligation to repair defective work and materials.

WATER MAINS AND SERVICES

63. **Water Interruptions and Notifications**: Service in existing water mains can be interrupted only upon authorization of the City per Sections 33-03 and 33-03.09 of the Standard Provisions. The Contractor shall schedule a valve closure at least two working days in advance with the City construction inspectors, at (650) 903-6311. These provisions require the Contractor to notify all affected users in writing at least forty-eight hours in advance of service interruption using printed forms provided by the City. Manipulation of water valves shall only be done by Water Division personnel.

64. **PVC Water Mains and Services**: All 4-inch (100 mm) through 12-inch (300 mm) water mains and services shall be constructed of PVC in accordance with Sections 33-02.02 and 34-02.03 of the Standard Provisions, unless the City authorizes the use of DIP.

65. **Water Fittings**: New fittings on DIP and PVC water and fire mains and services shall be fusion epoxy-coated in lieu of the cement interior lining required in Sections 33-02.03, 33-02.04 and 34-02.03 of the Standard Provisions.

66. **Meter Boxes**: One-inch water meter boxes shall be used for water meters that are smaller than one-inch. See Section 34-02.08 of the Standard Provisions.

STREET LIGHTS

67. **Non-galvanized Streetlight Poles**: Electrolier standards (type-15 street light poles) shall not be galvanized. See Section 35-02.03 of the Standard Provisions.

68. **Post Top Streetlight Paint Color**: Post top (Type B) streetlights in the downtown area shall painted semi-gloss black (Tresco Satin Aqualloy Black # 1156) or as required by City.

TREES

69. **Tree Removal Permit**: A tree removal permit is required before any street tree can be removed, and a heritage tree removal permit is required before any heritage tree can be removed. For development related tree removals, contact the Community Development Department at (650) 903-6306. For non-development related tree removals, contact the Community Services Department, Forestry and Roadway Landscape Division, at (650) 903-6273.

CATHODIC PROTECTION

70. **Cathodic Protection of New Services and Mains**: All new copper and DIP water services, DIP fire services and DIP water mains shall be cathodically protected per Section 38 of the Standard Provisions and Standard Details D-18 through D-38.

TRAFFIC SIGNALS

71. **Work Near Traffic Signal, Notification**: The contractor shall notify the City Traffic Engineer two working day prior to doing any work near signalized intersection that is maintained by the City to determine if the signal needs to be switched from automatic to manual mode. This also applies to non-excavation work where the contractor's equipment effects the operation of the detector loops.

72. **Traffic Signal Loop Replacement**: Traffic signal detector loops that are damaged as a result of the Contractor's operations shall be replaced with new detector loops in accordance with Caltrans Standard Specifications and Provisions. The detector loop replacement work shall be performed by a local qualified contractor with experience in the installation of detector loops. (Peek Signal Maintenance Inc., St. Francis Electric, Mike Brown Electric or other City approved contractor.) Prior to the start of construction, the Contractor shall make arrangements with one or more of the above traffic signal contractors to replace the damaged detector loops.

73. **Traffic Signal Loop Replacement Within 72 Hours**: All damaged traffic signal detection loops shall be replaced within 72 hours of their damage, unless the City grants an exception. This requires permanent paving of trenches to be installed prior to replacement of the detector loops.

BUS STOPS

74. **Bus Stop Operations**: The Contractor's work shall not interfere with the operations of existing bus stops, unless the City and Valley Transportation Agency grant an exception. In order for an exception to be granted by the City, the Contractor must apply for the bus stop closure well in advance of the closure and show good cause at to why the closure of the bus stop is necessary. The Contractor may be required to construct a temporary bus stop or install appropriate detour signs.

GARBAGE COLLECTION ROUTES

75. **Garbage Route Operations**: For any work on or adjacent to garbage and recycling collection routes, the Contractor shall allow garbage trucks to safely pass through the Contractor's site at all times, unless an exception is granted by the City.

UNDERGROUND CONDUITS-TELECOMMUNICATIONS, ETC.

76. **Utility Company Name Required on Lids or Covers**: All utility company vaults and manholes must have the utility company's name on the lid or cover.

77. **As-built Depths and Location**: The actual depth and horizontal offsets of new utility conduits shall be shown on the as-built plans at intervals of 20 feet or less. All final profiles with existing pipe and depth information shall be shown on the "as-built" drawings. All pot-hole excavation location and data shall be shown on the as-built plans.

78. **One-Half Foot Placement Accuracy**: All conduits installed by trenching, directional boring and micro tunneling methods shall be installed within one-half foot of the horizontal alignment shown on the plans, unless the City approves an exception.

79. **Conduit Locator or Tracer Wire**: A tracer cable, wire or shielded cable shall be installed with conduits for fiber optic lines, and other similar non-traceable conduits, in such a manor that the exact location of the conduits can be determined by the utility owner using field locating equipment. For joint trench utility work, each company must have their own tracer cable, wire or shielded cable, so that each company can locate their own conduits. For plastic gas and ground water extraction system pipes, a tracer tape may be used in lieu of a tracer cable or wire, as a tracer cable or wire cannot be inserted in these types of pipe.

80. **Vault Surface Finishing and Traffic Rating**: All boxes and vaults placed in the sidewalk area shall have a concrete type of finish (polymer lids and frames are acceptable). Boxes and vaults located within driveways shall be traffic rated boxes and lids for at least H20 traffic loads.

81. **Replacement of Sidewalk Between Vaults**: Where large vaults or manholes are installed within an existing sidewalk and the distance between the vaults or manholes is less than 20 feet on center, all of the existing sidewalk located between the vaults or manholes shall be replaced.

MONITORING AND EXTRACTION WELLS

82. **SCVWD Requirements**: All well work shall comply with the Santa Clara Valley Water District's "Standards for the Construction and Destruction of Wells and other Deep Excavations in Santa Clara Valley."

83. **Well Clearance from Utilities**: Wells are to be located a minimum distance of 5' from all service laterals, mains and manholes.

84. **Removal of Drilling Wastes**: All drilling fluid and waste material shall be removed from the site and disposed of in a legal manner.

85. **Submittal of Reports**: A copy of all reports sent to the governing regulatory agency, such as the State Regional Water Quality Control Board or Santa Clara Valley Water District, for the subject exploratory borings, monitoring wells and extraction wells shall be sent to the Public Works Department.

SOIL BORINGS

86. **Removal of Boring Wastes**: All boring waste material shall be removed from the site and disposed of in a legal manner.

87. **Boring Sealing Requirements**: Exploratory borings shall be destroyed in accordance with the Santa Clara Valley Water District's Well Destruction Standards. All borings 45' deep or deeper require a permit from the Santa Clara Valley Water District.

88. **Borings Backfilled Within 24 Hours**: All exploratory borings, regardless of depth, must be backfilled within 24 hours of the completion of testing activities.

89. **Boring Sealing Mix Requirements**: All exploratory borings, regardless of depth, must be backfilled with acceptable sealing materials. Acceptable sealing materials include: (1) a 27-sack neat cement (27 sacks of cement per cubic yard for dry mix), where the neat cement mixture is composed of one bag of Portland cement to five to seven gallons of clean water and where up to 5 percent bentonite clay can be added to the cement mixture; (2) a 10-sack cement/sand slurry (10.4 sacks of cement per cubic yard for dry mix), where the cement/sand mixture is composed of not more than

two parts sand and one part of Portland cement to five to seven gallons of clean water; and (3) 20 percent, high solids bentonite slurry. The solid-form bentonite (pellets/chips) is not an acceptable sealing material in Santa Clara County.

90. **Boring Sealing, Use of Tremie Pipe**: Sealing materials must be placed using a Tremie pipe in borings greater than 30' in depth or in borings that contain water. If a driven probe boring is being destroyed, the probe tubing can be used as a Tremie pipe.

91. **Small Diameter Boring, Pavement Restoration**: For small diameter holes (3" and smaller) drilled within the AC pavement, the holes shall be backfilled with a cement grout mixture and capped with a 3" thick AC cold patch (cut-back asphalt) and leveled to match the existing surface.

SITE RESTORATION

92. **Minimize Damage to Landscape**: Existing landscape within the area of work shall be carefully removed and replaced with minimal damage.

93. **Site Restoration**: The Contractor shall return the private yards, sidewalks, planters, irrigation systems, and any other facilities, public or private, disturbed by the work to the same or better condition that existed prior to commencement of the work. The Contractor shall make a reasonable effort to restore each private yard disturbed by the work within one week after the work is completed on the same yard except where the City's inspector agrees that for construction reasons, the 1 week requirement may be extended.

111 Grand Ave.
Oakland, CA 94612-3717

Subject: Water Quality Certification for the State Route 101 Auxiliary Lanes Project, State Route 85 to Embarcadero Road, Cities of Palo Alto and Mountain View, Santa Clara County

Department Project No.: EA 04-4A3301

Dear Mr. Mai:

We have reviewed and hereby issue water quality certification to the California Department of Transportation (Department) for the State Route 101 (SR 101) Auxiliary Lanes Project, State Route 85 to Embarcadero Road (Project). The Department has received Nationwide Permit No. 14, *Linear Transportation Projects* (File Number SPN·2007·00885 S), authorization from the U.S. Army Corps of Engineers (Corps), pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344). As such, the Department has applied to the Water Board for a Clean Water Act Section 401 water quality certification that the Project will not violate State water quality standards.

Project: The Department is proposing to construct north and southbound auxiliary lanes on SR 101 adjacent the existing outside lanes between Shoreline Boulevard and Oregon Expressway, except southbound between San Antonio and Old Middlefield Roads.

Permanente, Adobe, and Matadero Creeks all cross through the Project area. All three creeks are concrete-lined within the Project limits. Permanente Creek passes beneath SR 101 through a 12 foot by 12 foot concrete box culvert which will be extended by 20 feet on the northbound side of the roadway to accommodate widening. The existing parapet and wing-walls will be re-built at the end of the extended culvert. Because the existing culvert is offset from the channel at its outlet, the channel will need to be realigned at the end of the new culvert to match the alignment

of the existing creek channel. Permanente Creek will not be permanently impacted as a result of SR 101 widening on the southbound side.

There are existing frontage roads approximately 14 feet from the north and southbound lanes of SR 101 where it crosses Adobe and Matadero Creeks. SR 101 will be widened on both sides of the highway, resulting in closure of the existing gap at these locations. The Matadero Creek bridge widening work will involve replacement of the existing center support pier wall foundation and two bridge abutments. Placement of the piles, abutments, and foundation will be placed in the footprint of the existing structures and result in zero net fill to Matadero Creek. Widening over Adobe Creek will not require fill of the Creek.

Jurisdictional Wetlands and Waters Impacts: Project implementation will result in permanent impacts to Adobe Creek (22 linear feet, 0.033 acres) and Matadero Creek (23 linear feet, 0.045 acres) via shading from roadway widening over the creeks. The existing Permanente Creek box culvert will be extended approximately 20 linear feet downstream, new wingwalls will be built, and a portion of the channel will be realigned, resulting in 55 linear feet (0.045 acres) of permanent fill to Permanente Creek. Cumulative permanent impacts to jurisdictional waters from Project implementation are 100 linear feet (0.12 acres).

Project implementation will result in approximately 1,194 linear feet of (0.86 acres) temporary impacts due to diversion of creek flows around the work areas and dewatering of the creek channels.

Project implementation would result in approximately 18.3 acres of added and reworked impervious area. Stormwater runoff from impervious areas may contain hydrocarbons, metals, volatile organic compounds, trash, and sediment at levels that may significantly impact jurisdictional waters if left untreated.

Hydromodification impacts: Project implementation will not result in hydromodification impacts because the receiving waters are tidally influenced and/or hardened channels.

Jurisdictional Wetlands and Waters Mitigation: To mitigate for the permanent fill of approximately 100 linear feet (0.12 acres) of jurisdictional waters, the Department shall create a 0.14 acre seasonal wetland, 0.26 acres of oak woodland habitat restoration, and provide 1.0 acres of invasive plant control along the south side of Matadero Creek at the northwest corner of Interstate 280 and Page Mill Road, on land owned by the Department, in the town of Los Altos Hills. A biofiltration swale shall be constructed to treat stormwater from approximately 1.9 acres of impervious area before being diverted to the new seasonal wetland. Implementation of these mitigation activities shall occur prior to any permanent impacts to Matadero, Adobe, and Permanente Creeks.

Roadway Pollutant Mitigation: As mitigation for increased pollutant loads associated with impervious areas, the Department shall provide treatment of stormwater runoff from

approximately 18.9 acres of impervious area using 1 compost-amended biofiltration strip and 5 bioretention swales.

The following biofiltration strip and swales will mitigate water quality impacts resulting from Project implementation:

BMP	Northbound/ Southbound	From Post Mile	To Post Mile	Treated Impervious Area (acres)
Swale	northbound	51.90	51.92	2.20
Swale	northbound	50.35	50.36	6.64
Strip	northbound	50.16	50.30	1.26
Swale	northbound	49.57	49.61	3.93
Swale	southbound	49.53	49.55	3.45
Swale	southbound	48.93	48.96	1.42
				total: 18.9

California Wetlands Portal. It has been determined through regional, state, and national studies that tracking of mitigation/restoration projects must be improved to better assess the performance of these projects, following monitoring periods that last several years. In addition, to effectively carry out the State's No Net Loss Policy for wetlands, the State needs to closely track wetland losses, gains, and mitigation/restoration project success. Therefore, we require that the Department use the California Wetlands Standard Form to provide Project information related to impacts and mitigation/restoration measures (see Condition No. 9) of this Certification). An electronic copy of the form and instructions can be downloaded at: http://www.waterboards.ca.gov/sanfranciscobay/certs.shtml

Project information concerning impacts and mitigation/restoration will be made available at the web link: http://www.californiawetlands.net

CEQA Compliance: The Project was evaluated pursuant to the requirements of the California Environmental Quality Act (CEQA) in a Mitigated Negative Declaration. The Department filed a Notice of Determination on July 29, 2009, that the Project would not have a significant effect on the environment.

Certification: I hereby issue an order certifying that any discharge from the referenced project will comply with the applicable provisions of sections 301 (Effluent Limitations), 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards) of the Clean Water Act, and with other applicable requirements of State law. This discharge is also regulated under State Water Resources Control Board Order No. 2003 - 0017 – DWQ, "General Waste Discharge Requirements for Dredge and Fill Discharges That Have Received

State Water Quality Certification" which requires compliance with all conditions of this Water Quality Certification. The following conditions are associated with this certification:

1. The Department shall adhere to the Standard conditions imposed by Nationwide Permit No. 14, issued to the Department by the Corps;

2. The Project shall be constructed in conformance with the Project Description described in this certification and certification application materials. Any change in the Project may require modification to the certification and shall be reported to the Water Board;

3. The Department shall install one compost-amended biofiltration strip and five biofiltration swales to treat stormwater contaminants from no less than 18.9 acres of impervious area. Swale and strips shall be installed by the completion of Project construction and be consistent with the information summarized above in "Roadway Pollutant Mitigation, and in Attachment A, *Bioretention Swale Cross Sections*;

4. Not later than thirty days prior to Project construction, the Department shall submit biofiltration soil mix specifications that will be used in all proposed swales. Project construction shall not commence until the soil specifications have been found acceptable by Water Board staff;

5. Construction within Adobe, Matadero, and Permanente Creeks shall not occur prior to April 15, 2012. Off-site mitigation at the Matadero Creek/Page Mill Road site shall be fully implemented by October 1, 2011. Failure to meet this deadline may result in a requirement for additional mitigation;

6. The Department shall submit a Final Mitigation and Monitoring Plan (MMP) for I-280/Matadero Creek mitigation activities. The MMP shall be found acceptable to Water Board staff before Project construction may commence. The MMP shall include:
    a. Soil specifications and design details for the proposed biofiltration swale;
    b. An invasive species plant control plan to control invasive plan species within a 1.0-acre area over a five year period;
    c. A detailed plan for creation of a 0.14-acre seasonal wetland;
    d. A planting plan for restoration of 0.26-acres of oak riparian habitat;
    e. A minimum 5-year monitoring plan that included success criteria for wetland creation and restoration of oak riparian habitat;
    f. A schedule for submittal to the Water Board of an as-built report, to be submitted no later than 60 days from mitigation implementation. The as-built report shall include photo-documentation of mitigation installation as well as documentation of photo-monitoring locations to be used for subsequent monitoring events;
    g. A schedule for submittal of Years 1, 3, and 5 annual reports; and
    h. A mitigation construction schedule.

7. No element of the off-site mitigation shall be considered successful until two full growing seasons have passed since the provision of supplemental irrigation ceased;

8. The off-site mitigation shall not be considered to satisfy the conditions of this certification until final mitigation success reports have been submitted to the Water Board and found acceptable by the Executive Officer;

9. The Department is required to use the California Wetlands Form to provide project information describing impacts and mitigation/restoration measures no later than June 30, 2011. An electronic copy of the form can be downloaded at: http://www.waterboards.ca.gov/sanfranciscobay/certs.shtml. The completed California Wetlands Form shall be submitted electronically to habitatdata@waterboards.ca.gov or shall be submitted as a hard copy to both: 1) The Water Board, 1515 Clay St., Suite 1400, Oakland, CA 94612, to the attention of California Wetlands Portal; and 2) San Francisco Estuary Institute, 7770 Pardee Lane, Oakland, CA 94621-1424, to the attention of Mike May.

10. Mitigation monitoring reports shall be submitted by November 15 of each year either by uploading them to the California Wetlands Portal website at http://www.californiawetlands.net/tracker/ba/list, via email, or via mail (see the address on the letterhead). To upload the reports, go to the above link, click on your project, click on Files & Links, and follow the steps. If the Department chooses to upload the Annual Report to the California Wetlands Portal, then the Department shall notify the Water Board project manager that the report has been uploaded;

11. Work within Adobe, Matadero, and Permanente Creeks shall only take place between April 15 and October 15. Diversion systems shall be removed within 48 hours once work in that creek is completed. Temporary fill of the creek channel within dewatered portions of the creek channel is prohibited without authorization from Water Board staff;

12. Erosion control measures shall be utilized throughout all phases of construction where sediment runoff from disturbed areas threatens to enter waters of the State, regardless of date. At no time shall silt-laden runoff be allowed to enter waters of the State;

13. Except as expressly allowed in this certification, no equipment shall be operated in areas of flowing or standing water; no fueling, cleaning or maintenance of vehicles or equipment shall take place within jurisdictional waters or within any areas where an accidental discharge to waters of the State may occur;

14. Except as expressly allowed in this Certification, the discharge, or creation of the potential for discharge, to waters of the State of any construction wastes and/or soil materials

including cement, fresh concrete, or washings thereof, silts, clay, sand, oil or petroleum products and other organic materials to waters of the State is prohibited;

15. This certification does not allow for the take, or incidental take, of any special status species. The Department shall use the appropriate protocols, as approved by the California Department of Fish and Game and the U.S. Fish and Wildlife Service, to ensure that Project activities do not impact the Beneficial Use of the Preservation of Rare and Endangered Species;

16. The Department shall maintain a copy of this water quality certification at the Project site so as to be available at all times to site operating personnel. It is the responsibility of the Department to assure that all personnel (employees, contractors, and subcontractors) are adequately informed and trained regarding the conditions of this certification;

17. This certification action is subject to modification or revocation upon administrative or judicial review, including review and amendment pursuant to Section 13330 of the California Water Code (CWC) and Section 3867 of Title 23 of the California Code of Regulations(23 CCR);

18. This certification action does not apply to any discharge from any activity involving a hydroelectric facility requiring a Federal Energy Regulatory Commission (FERC) license or an amendment to a FERC license, unless the pertinent certification application was filed pursuant to California Code of Regulations (CCR) Title 23, Subsection 3855(b) and that application specifically identified that a FERC license or amendment to a FERC license for a hydroelectric facility was being sought; and,

19. Certification is conditioned upon total payment of the full fee required in State regulations (23 CCR Section 3833). Water Board staff received full payment of $1286.00 on January 31, 2011.

We anticipate your cooperation in implementing these conditions. However, please be advised that any violation of water quality certification conditions is a violation of State law and subject to administrative civil liability pursuant to California Water Code (CWC) section 13350. Failure to respond, inadequate response, late response, or failure to meet any condition of this certification may subject you to civil liability imposed by the Water Board to a maximum of $5,000 per day per violation or $10 for each gallon of waste discharged in violation of this certification.

Conditions 4, 6, 9, and 10 are requirements for information or reports. Any requirement for a report made as a condition to this action is a formal requirement pursuant to CWC section 13267, and failure or refusal to provide, or falsification of such required report is subject to civil liability as described in CWC section 13268.

We anticipate no further action on this request. Should new information come to our attention that indicates a water quality problem with this project, the Water Board may issue Waste Discharge Requirements pursuant to 23 CCR Section 3857.

If you have any question, please contact Brendan Thompson at (510) 622-2506, or via e-mail to BThompson@waterboards.ca.gov.

Sincerely,

Bruce H. Wolfe

U.S. Route 101 Auxiliary Lanes Project (SR 85 to Embarcadero Road)
Pre-Construction Notification: Nationwide Permit #14: Linear Transportation Projects

Name, address, & telephone number(s) of prospective permittee

California Department of Transportation (Caltrans)
Attn: Mr. Kevin Melanephy
111 Grand Avenue
Oakland, CA 94612

P.O. Box 23660
Oakland, CA 94623-0660
(510) 622-8729

Location of proposed project

The project is located on US 101 between Embarcadero Rd. and the State Route 85 interchange, a distance of approximately 3.2 miles in the cities of Mountain View and Palo Alto in northwest Santa Clara County. The latitude is between 37.449° and 37.408° North and between longitude 121.122° and 121.070° West or T6S R2W on the *Mountain View* U.S.G.S. 7.5 Minute Quadrangle at elevations ranging between 4 to 40 feet above mean sea level.

Project Purpose and Need

The section of US 101 that is the subject for the proposed project currently experiences significant traffic congestion which is forecasted to grow with increased traffic demands. Additionally vehicle collision statistics on US 101 indicate relatively high collision rates (Kimley-Horn and Associates 2006). Caltrans proposes to improve traffic operations by constructing auxiliary lanes used for entering and exiting the freeway on both sides of US 101 between Shoreline Boulevard exit in Mountain View and the Oregon Expressway exit in Palo Alto. The auxiliary lanes will improve traffic operations on the freeway by allowing more room for traffic entering and exiting the freeway and allowing traffic that enters the freeway at one interchange to exit at the next interchange without impacting the main through lanes of the freeway.

Environmental Setting

The proposed project area comprises approximately 139 acres of mainly developed areas including frontage roads, landscaped cloverleaf interchanges, structures, lots and drainage ditches that lie within the Caltrans right of way and small portions of three private parcels. Adjacent land uses include commercial and residential buildings such as gas stations, retail stores, office and retail complexes, markets and city parks. The study area is also bisected by three different creeks, which include (from north to south) Matadero Creek, Adobe Creek, and Permanente Creek. All the creeks are channelized in concrete within the project area. The three creek systems change dramatically a short distance downstream of the project area from artificially channelized systems to watercourses that are much less altered and are influenced by the tidal regime of the bay. The topography along US 101 in the project area can be described as relatively flat, with the elevation ranging from approximately 20 feet at the south end of the project near Permanente Creek to approximately 5 feet near the Oregon Expressway.

Project Description

The project will construct an auxiliary lane on US 101 in each direction between Shoreline Boulevard and Oregon Expressway. The exception will be between San Antonio Road and

Rengstorff Avenue in the southbound direction, where no auxiliary lane is proposed because it would cause weaving conflicts with traffic entering the freeway from Charleston Road.

The new auxiliary lanes will be constructed adjacent to the existing outside lanes. At most locations there is sufficient room within the existing Caltrans right of way to accommodate the construction of the auxiliary lanes. The auxiliary lanes will require the widening of the existing U.S. 101 crossings over three creeks; Permanente Creek, Adobe Creek and Matadero Creek.

Permanente Creek crosses 101 approximately 2,200 feet south of Rengstorff Avenue interchange. The creek originates in the Santa Cruz Mountains and passes through Cupertino, Los Altos Hills, Los Altos, and Mountain; and eventually discharges into Mountain View slough which outfalls into San Francisco Bay. For the stream crossing at Permanente Creek the existing structure is a 12 foot by 12 foot reinforced concrete box culvert that is 216 feet long with a concrete channel on both upstream and downstream sections of the culvert. To accommodate the widening of US 101 and the auxiliary lanes for the proposed project the concrete box culvert will be extended by 20 feet on the northbound side of the freeway. The construction work will require diversion of the creek and work within the concrete channel creek bed. The existing parapet, wing walls and channel will be removed and a new headwall, wing walls and channel will be constructed at the end of the extended culvert. No extension of the culvert is required at the southbound section of the Permanente Creek crossing, for the widening of the highway.

Adobe Creek crosses US 101 approximately 1,800 feet north of the San Antonio Road interchange. The creek originates in the Palo Alto hills, flows through Palo Alto in a large rectangular concrete channel and discharges into Charleston slough which eventually outfalls to San Francisco Bay. A short distance from the US 101 crossing and just upstream of the West Bayshore Rd. bridge the tributary of Baron Creek confluences Adobe Creek. Adobe Creek is a paved concrete engineered channel at the US 101 crossing. The existing US 101 stream crossing at Adobe Creek is a single span bridge built in 1960 and widened in 1989. The bridge consists of precast girders with a concrete deck topped off with a layer of asphalt. About 14 feet on either side of the 101 bridge are bridges for the frontage roads that use abutments that were constructed continuously between the 101 bridge and the frontage road bridges. The proposed project will widen the existing highway structure on the outside of US 101 to close the gaps between the existing bridge and the bridges of the frontage roads on either side. The proposed construction work will be completed from the concrete deck and access to the creek bed will not be necessary.

Matadero Creek crosses U.S. 101 approximately 3,200 feet south of the Oregon Expressway interchange. The creek originates in the Town of Los Altos and in the Palo Alto hills. The creek flows through Palo Alto in a U-shaped concrete channel and discharges into the Palo Alto flood basin, which eventually outfalls to San Francisco bay. At the US 101 crossing Matadero Creek is a concrete paved trapezoidal engineered channel. The existing Matadero Creek Bridge consists of an existing two span structure. Abutments and the middle pier wall were constructed continuously for the 101 bridge and the two frontage road bridges (East Bayshore Rd. and West Bayshore Road) on either side. Currently there is approximately 14 feet between the decks of the US 101 bridge and the two frontage road bridge decks on either side. The proposed project would widen the existing highway bridge structures on the outside of US 101 to close the gaps between the 101 bridge structure and the frontage roads. Additionally the center support pier wall and the abutments will be evaluated for adequacy. Depending on the results of structural analysis, the wall foundation or the wall itself may need to be strengthened or replaced. Work on the wall foundation would necessitate diversion of the creek or surrounding the pier wall with a cofferdam. The top of the pier wall also needs to be modified to provide support for the new precast deck units. This construction work will require access in the creek bed.

Proposed Schedule of Work.
Construction is scheduled to occur between June 2011 and August 2013.

Impacts to Wetlands and Other Waters of the U.S.
There are no identified jurisdictional wetlands in the project study area and waters of the U.S. features are limited to four creeks that include Matadero Creek, Adobe Creek, Baron Creek and Permanente Creek. The aquatic and wetland habitat of the streams are of low quality because the creeks are channelized in concrete for the sections of the creeks that traverse the study area. The US 101 freeway has stream crossings at Matadero Creek, Adobe Creek and Permanente Creek. Baron Creek confluences with Adobe Creek on the west side of US 101 on the other side of the Bayshore Road bridge in the study area. Neither Adobe Creek nor Baron Creek are proposed to be impacted by dredge or fill material from the project as all the construction work is expected to occur from the concrete deck at the Adobe Creek stream crossing. All temporary staging areas will be in upland areas or existing developed areas. Instream work at Permanente Creek and Matadero Creek is proposed to occur during the drier summer months when the volume of flow in the creeks will be reduced.

Permanent Impacts at the Matadero Creek crossing include the extension of the center pier wall used to support the deck of the proposed bridge that will span the gaps between the existing US 101 freeway bridge and the Bayshore Road bridges. Construction of the center support pier, including the footings and piles will permanently impact approximately 0.004 acre of Waters of the U.S. 21 cubic yards of reinforced concrete will be used to construct the piles, footings and pier wall. To perform construction work at the Matadero Creek stream crossing access to the streambed will be necessary. This will necessitate diversion and dewatering of the creek and temporary impacts to Matadero Creek. Approximately 0.363 acre of the stream will be temporarily impacted by the project.

Temporary diversion of Matadero Creek during construction work will be achieved by the use of a cofferdam constructed with stacked sandbags to direct the flow of the creek to a 42 inch diameter plastic pipe that begins 200 feet upstream of the W. Bayshore Road Bridge and extends 15 feet downstream of the bike bridge. A second cofferdam will be constructed on the downstream side of the bridge. The temporary drainage design accounts for the tidal influence of San Francisco Bay and the potential for the flow to change to directions.

The extension of the Permanente Creek culvert on the northbound side of the existing culvert will permanently impact approximately 0.018 acre of Waters of the U.S. in Permanente Creek. The extended box culvert will require 34 cubic yards of concrete fill into Permanente Creek. The wing walls will require approximately 75 cubic yards of concrete fill, 9 cubic yards for the concrete channel and 31 cubic yards of fill material. Temporary diversion of the creek and construction work within the creek will temporarily impact approximately 0.019 acre of Waters of the U.S. in Permanente Creek.

Similarly to Matadero Creek, the temporary diversion of Permanente Creek will be achieved by use of cofferdams and plastic piping to redirect the flow of the stream. However, the creek will be diverted in two discrete locations, at both ends of the Permanente Creek culvert. A sand bag cofferdam or berm will be constructed on the upstream side and downstream side of each temporary diversion section. Water flowing from upstream runoff or from downstream tidal fluctuations will be diverted to the plastic piping. The plastic pipe will be approximately 18 inches in diameter.

A total of 0.404 acre of impacts to waters of the U.S. are currently proposed by the project. This includes 0.382 acre of temporary impacts and 0.022 acre of permanent impacts.

Permits
This project qualifies for authorization under the U.S. Army Corps of Engineers Nationwide Permits #14 for linear transportation projects. Also, a 401 Clean Water Certification permit must be obtained from the Regional Water Quality Control Board and streambed alteration agreement (1602) from the California Department of Fish and Game.

Special Status Species
Reconnaissance level surveys were conducted by qualified biologists for special status plant and animal species and their habitats within the project area. No special status plant or wildlife species were discovered at the site during the surveys. In addition habitat for the special status plant species that are known to occur in the area was not found at the project site based on an assessment of habitats, elevations and soil types. The highly disturbed nature of the project area would preclude the establishment of special status plant species.

Protocol level surveys for burrowing owls were conducted in August and September of 2007 and detected no burrowing owls. Due to small number of burrows and the heavy disturbance at the site the owls are presumed to be absent from the site. No federally endangered or threatened species or habitat for endangered or threatened species was discovered at the site during reconnaissance surveys. Two special status bird species, the Alameda song sparrow (*Melospiza melodia pusillila*) and the San Francisco common yellowthroat (*Geothlypis trichas sinuosa*) could potentially nest at the site and use it regularly. Both species are known to nest in salt and brackish marshes and yellowthroats may use freshwater marshes. The habitats near the Adobe Creek and Permanente bridges are currently inadequate for yellowthroats and lack the emergent vegetation needed for nesting. No yellowthroats were discovered during reconnaissance surveys of the project site. Song sparrows were observed during the 2008 breeding season immediately to the northeast of the Matadero bridge however due to the difficulty in distinguishing Alameda song sparrows from other song sparrows in the region it was impossible to tell if the observed birds were Alameda song sparrows. The project would impact a very small amount of potential nesting habitat for these species in a highly disturbed environment and therefore impacts to these species are not substantial. No special status wildlife species were discovered during the surveys and habitat was not present at the site for special status wildlife species.

Steelhead or other anadromous fish are blocked from migrating into the project area by a trash rack at the tidal gate to Mayfield Slough that is located downstream of Adobe and Matadero Creeks. Although historically the creeks may have been habitat for steelhead, recent sampling indicates that no steelhead are present. The National Marine Fisheries Service and the Department of Fish and Game consider steelhead and other anadromous salmonids as absent from Matadero, Adobe and Permanente Creeks.

Direct and Indirect Environmental Impacts
Most of the potential impacts to wildlife and plant species could occur in the construction phase of the project. Since no new access roads are needed, the project will not increase access to the site. Activities that could directly affect species include:

Stream Crossings. There are three stream crossings for Highway 101 in the project area, which include Matadero Creek, Adobe Creek and Permanente Creek. No construction work will occur within the channel of Adobe Creek. Construction work in the stream channels for Matadero Creek and Permanente Creek will be conducted when streams are at their driest

during the summer months to the greatest extent feasible in order to reduce the likelihood of sediment mobilization from storm events. Work areas near drainages will be protected through installation of construction fencing backed by silt fencing. Physical barriers including "Environmentally Sensitive Area" (ESA) fencing will be used to designate those areas outside of the construction impact area to protect sensitive areas.

Wildlife Movement. Construction activities may temporarily interfere with the movement of terrestrial species across the project area. Large, mobile species can readily move around the site through undisturbed lands adjacent to the project corridor. Highly motile species such as birds are not limited by the relatively minor topographical changes associated with construction. Ground dwelling species, such as amphibians, mammals and reptiles, will be most affected by construction activities, with respect to disruption of movement corridors.

Construction Noise and Other Human Disturbance. Depending on the location, long term future peak hour noise levels will remain unchanged from existing levels or will increase one to two decibels. The projected noise levels will however exceed the FHWA's noise abatement criteria at some areas and therefore noise abatement measures were considered including the construction and extension of sound walls. Proposed sound walls would abate noise near Greer Park and 4 residences just south of Rengstorff Avenue.

The operation of vehicles and equipment during construction will cause additional noise. The highest noise levels will occur during the operation of pile driving and demolition equipment. Noise is likely to cause a temporary annoyance for residences along Route 101. Impacts of the noise will be minimized by staging construction equipment and performing night time work away from residences, performing pile driving and demolition activities during the day time and by ensuring that construction vehicles are equipped with intake and exhaust mufflers in good condition.

Sedimentation. There is a potential for increased sedimentation from erosion caused by grading activities and other causes during and following the construction period. Storm water runoff has the potential to transport sediment to nearby streams and storm drains if storm water BMPs are not properly implemented. The project will also result in a small increase in the impervious area and thus may contribute to higher runoff velocities that may increase sedimentation. Stormwater BMPs will be designed to dissipate this increased energy and reduce the capacity of the storm water runoff to carry increased sediment loads. Construction activities are planned for the dry summer months when storms are less likely to occur.

Corps Authority Information

Section 10 Conditions: The waterways within the project area lack sufficient consistency of flow to be considered navigable and are not considered Traditional Navigable Waters (TNW) as it applies to Section 10 of the Rivers and Harbors Act.

Section 404 only Conditions: There are waters of the U.S. within the project area that include water below the ordinary high water mark in areas containing bed and banks. The waters of the U.S. are permanently and temporarily impacted by the project in some areas.

How project complies with the General Terms of Nationwide Permit #14 (Linear Transportation Projects)

1) **Navigation**: There are no navigable waters in the project area.

2) **Proper Maintenance**: Caltrans is responsible for maintaining and repairing the roadway.
3) **Erosion and Siltation Controls**: Typical measures to control erosion and siltation include the application of soil stabilizers such as hydroseeding, netting, erosion control mats, biofiltration strips and rock slope protection. During construction, other erosion control procedures will be used such as mulch on all disturbed areas, fiber rolls along slopes, silt fences at the boundaries of the construction site, stabilized construction entrances and exits equipped with tire washing capability, and check dams placed strategically to reduce flow velocity and to filter flows in defined drainage-ways.
4) **Aquatic Life Movements**: For the stream crossing at Matadero Creek and Permanente Creek there will be some work within the creek beds and diversion of the flows may be necessary. Work will occur during the drier summer months when stream flows are expected to be at lower levels. The creeks do not provide habitat for anadromous fish. Measures will be implemented to minimize impacts to aquatic life during the construction and movement of aquatic life is expected to be only minimally affected.
5) **Equipment**: Equipment access within the bed and banks of the creeks may be necessary for the Matadero Creek and Permanente Creek stream crossings. Both Matadero Creek and Permanente Creek are concrete lined channels and therefore equipment access and construction in these areas is not expected to have permanent impacts to the bed and banks of the streams. Efforts to minimize the amount of sediment, equipment fuels and liquids and other pollutants to the stream will be implemented. Existing vegetation and environmentally sensitive areas will be marked off with fencing and avoided to the greatest extent feasible.
6) **Regional and Case-by-Case Conditions**: None applicable.
7) **Wild and Scenic Rivers:** There are no Wild and Scenic Rivers or tributaries to Wild and Scenic Rivers within the project area.
8) **Tribal Rights:** Not Applicable.
9) **Water Quality Certification:** A 401 permit or waiver will be obtained before construction.
10) **Coastal Zone Management:** The San Francisco Bay Development and Conservation Commission (BCDC) reviewed the project and determined that the project is not in a coastal management zone or zone within their jurisdiction.
11) **Endangered Species:** Please see the list of federally listed species in Table 2. Based on searches in Rarefind (CNDDB database searches) for the Mountain View quadrangle and eight surrounding quadrangles and plant and wildlife surveys of the proposed project area, the project is not expected to substantially impact any special status or endangered wildlife or plant species.
12) **Historic Properties:** JRP Historical Consulting, LLC conducted a background and resource specific archival research of buildings and properties in the project area and established that no historic properties have been identified.
13) **Notification:** This Pre-Construction Notification for Nationwide Permit #14 is hereby submitted to the U.S. Army Corps of Engineers and fulfills this Notification general condition.
14) **Compliance Certification:** A signed certification will be provided to the U.S. Army Corps of Engineers upon completion of the work, if requested.
15) **Multiple Use of Nationwide Permits:** Not applicable.
16) **Water Supply Intakes:** The project will not discharge material within the proximity of a public water supply intake.

17) **Shellfish:** No project activity will occur in areas of concentrated shellfish production.
18) **Suitable Material:** No project discharge, dredge, or fill material will consist of unsuitable material.
19) **Mitigation:** Temporary and permanent impacts to aquatic habitats within Matadero, Adobe and Permanente Creeks will be avoided to the maximum extent possible by limiting the access area to the minimum necessary to perform the proposed work. All construction work within the banks of the creeks will occur during the dry season (April 15-October 15). Standard BMP's will be implemented including standard erosion control and slope stabilization measures, measures to prevent construction materials from being placed in areas where they could be washed by rainfall into waters of the U.S. and measures to ensure machinery is refueled at least 60 feet from any aquatic habitat.
20) **Spawning Areas:** The waterways within the project area are not accessible for anadromous fish due to obstructions downstream of the project site and thus the project is unlikely to affect spawning areas.
21) **Obstruction of High Flows:** The proposed construction for the project will occur during the summer dry season when flows are minimal. The completed bridges will not create an impoundment of water nor otherwise obstruct high water flows.
22) **Waterfowl Breeding Areas:** This project will comply with the Migratory Bird Act. It is not anticipated that discharges will occur in breeding areas for migratory waterfowl.
23) **Removal of Temporary Fills:** Not applicable.

How project complies with the terms of Nationwide Permit #14 (Linear Transportation Projects)

NWP #14 (Linear Transportation Projects)

This project includes the widening of an existing highway (linear transportation project), to ease traffic conditions. Mechanized land clearing will be kept to the minimum possible and preconstruction contours will be maintained to the greatest extent possible. Approximately 0.022 acre (270 cubic yards) of permanent fill and 0.382 acre (____ cubic yards) of temporary fill of U.S. Waters is anticipated for the project.

Special Conditions
An integral part of the project development and planning has been avoidance and/or minimization of potential impacts to sensitive species and habitats. Therefore, where feasible, the project footprint and access areas avoid sensitive habitat.

The following measures will be applied across the entire right-of-way to avoid and/or minimize any impacts to sensitive species and their habitat.

Avoidance and Minimization Measures for Plant Species
To avoid and minimize the potential effects of the project to plant species within the study area the clearing of vegetation for the project will be confined to the minimal area needed to conduct the construction activities. No special status plants were identified in the project area and thus no special status plants are expected to be impacted by the project.

General Avoidance and Minimization Measures for Wildlife
To avoid and minimize the potential effects of the project to migratory bird species that are protected in the Migratory Bird and Treaty Act (MBTA) and the California Fish and Game code the following conservation measures will be implemented:

- Vegetation that will be impacted by the project will be removed during the nonbreeding season (i.e., September 1st to February 14th), if feasible, to help preclude nesting. If it is not feasible to schedule vegetation removal during the nonbreeding season, then pre-construction surveys for nesting birds will be conducted by a qualified ornithologist to ensure that no nests will be disturbed during project implementation. This survey will be conducted no more than seven days prior to the initiation of construction activities. During this survey, the ornithologist will inspect all trees, shrubs, and other potential nesting habitats in and immediately adjacent to the impact areas for nests. If an active nest is found sufficiently close to work areas to be disturbed by these activities, the ornithologist, in consultation with CDFG, will determine the extent of a buffer zone to be established around the nest, typically 250 feet for raptors and 50 feet for other birds.

- At the Adobe Creek and Matadero Creek bridges, to avoid impacts to nesting swallows and black phoebes, old nests should be removed prior to February 15th, or after February 15th if a qualified ornithologist determines that the nests are not active. Maintaining bridges free from nesting birds may require the placement of netting or other structures over the underside of the bridges to prevent swallows and other birds from accessing suitable nesting substrate. Alternatively, nest starts may be removed on a regular basis (e.g., every other day) to prevent active nests from becoming established.

Roosting bat habitat is present on the Matadero Creek Bridge and the Adobe Creek Bridge. Bat roosting surveys were conducted by H. T. Harvey and Associate ecologists on August 22, 2007, November 8, 2007 and June 17, 2008. Matadero Creek Bridge contains roosting habitat for wintering Yuma myotis and Mexican free tailed bats. Because of the number of individuals using this roosting site, the relative rarity of this type of roost site in the landscape, and the presence of a least three species of bats makes the Matadero Creek bridge a regionally important roost site. Proposed conservation measures to avoid and minimize impacts to roosting bats include:

- If pile driving, jack hammering on the bridge abutments, intense lighting under the bridge or near the roost cavities, or other extreme disturbances will occur, the bats will be evicted from the roost during the non-breeding season preceding these extreme

disturbances. A qualified bat biologist will exclude the roosting bats using one-way doors fixed to roost entrances. Eviction of bats will occur at night, so that bats will have less potential for predation compared to daytime roost abandonment. Eviction will occur between September 1st and March 31st, outside the maternity season, but will not occur during long periods of inclement or cold weather (as determined by the bat biologist) when prey are not available or bats are in torpor. The one-way doors used to evict the bats will be inspected periodically and maintained from the time of installation through the completion of the extreme disturbance to ensure that they are functioning properly. The exclusion devices will be removed following the conclusion of the extreme disturbance, as determined by the bat biologist.

- To avoid the long-term abandonment of the colony and minimize the loss of evicted individuals, an appropriate bat condominium, as defined by a bat biologist, will be placed in a suitable, conspicuous location (e.g., the edge of a marsh or other open area) between 500 and 1,000 feet from the existing roost. The bat condominium will be installed one year before the commencement of construction (under both the extreme or minimal disturbance scenarios) and at least six months before bats are excluded from the existing roost (under the extreme disturbance scenario). The existing roost and the bat condominium will be visually checked by a qualified bat biologist within five days prior to exclusion to ascertain whether bats have occupied the condominium in advance of construction. The bridge roost and the condominium would also be checked visually at least once during the maternity season for up to three years after the completion of construction. Monitoring will cease prior to Year-3 if it is determined that one structure or the other has been occupied by bats during the maternity season.

- If construction can occur without extreme disturbances, the colony will not be excluded, since the exclusion could have more of an adverse effect on the bat colony than maintaining the bats' access to the colony and subjecting them to some increase in disturbance during construction. To inform the impact assessment of, and the development of impact minimization measures for, similar projects in the future, some minimal information on the increase in disturbance to which bats are subjected during construction and on the bats' response to that disturbance will be collected. A qualified biologist will determine the status of the colony (i.e., whether it is active, and the approximate numbers of bats) by a visual inspection of the bridge within five days prior to the initiation of construction. Baseline data on the vibration and sound levels at the bridge site will also be collected for a minimum of two days within five days of construction commencement. Following this pre-construction, baseline monitoring, the colony will then be monitored every night during construction using acoustic surveying methods, such as Anabat equipment, to determine the status of the colony (i.e., to determine if the colony abandons the roost). The majority of this construction monitoring will be done remotely with acoustic surveying equipment and will not require a surveyor to be present every night during construction. Monitoring equipment will also be used to sample construction-related increases in noise and vibration. Project implementation will not have to be modified based on the findings of this monitoring, even if the bats abandon the roost. However, these data will allow for a determination of whether or not the bats remained at the bridge during construction and/or changed their activity patterns in relation to varying levels of noise and vibration.

Project Mitigation Information

The impacts of the project to waters of the U.S. at Matadero Creek and Permanente Creek are minor due to the avoidance and minimization measures described above, the existing concrete channelization and the temporary nature of the impacts of the construction work. If

compensatory mitigation is required for the small area of waters of the U.S. impacted by the project then the compensation will include the purchase of mitigation credits at an offsite USFWS approved mitigation bank and will be mitigated at a 1:1 ratio.

Stormwater Best Management Practices (BMPs)

Treatment BMPs

Added and reworked impervious areas for this project are greater then 1 acre and therefore permanent treatment BMPs were considered for the purpose of avoiding and minimizing erosion, sedimentation and degradation to water quality that may occur over the long term. Biofiltration strips and biofiltration swales were selected as the most effective and feasible options and will be constructed at many locations throughout the project. Treatment BMPs are described in more detail in the Stormwater Data Report.

Construction BMPs

The project involves moving more then 1 acre of soil and thus a Stormwater Pollution Prevention Plan (SWPPP) will be prepared and would identify stormwater BMPs to reduce water quality impacts during construction. The following measures will be implemented for avoiding and minimizing impacts of the project to water quality.

For soil stabilization at the site, temporary covers would be placed over temporary stockpiles of disturbed soil, and temporary hydraulic mulch would be placed on any exposed disturbed soils that may susceptible from erosion from runoff or wind. For sediment control, temporary silt fences and fiber rolls will be used to minimize sediment transport to drainage inlets, drainage ditches or other receiving water bodies.

No debris, soil, silt, sand, bark, slash, sawdust, cement, concrete, washings, petroleum products or other organic or earthen material shall be allowed to enter into or placed where it may be washed by rainfall or runoff into any waterways.

Special or sensitive sites (e.g., riparian corridors and drainages) identified as places where construction equipment is not allowed, will be clearly marked on site before any construction or surface-disturbing activities begin. Construction personnel will be trained to recognize these markers and understand the equipment movement restrictions involved. Ecologically sensitive area (ESA) fencing will be maintained until final cleanup and restoration is completed, after which it will be removed.

Exiting site vegetation will be preserved to the extent feasible. Clearing and grubbing would be limited to the strip areas between the freeway and local streets or properties. Active paved construction areas will be swept and washed as needed.

Table 1: Potential for Federally Threatened and Endangered Species to Occur in the Project Area.

Common Name	Scientific Name	Status	General Habitat Description	Habitat/ Species Present/ Absent	Rationale
Federal or State Endangered or Threatened Species					
Robust Spineflower	*Chorizanthe robusta var. robusta*	FE	Very sandy or gravelly maritime chaparral, cismontane woodland openings, coastal dunes and scrub	A	No suitably dry, well-drained, coarse, loose, mineral soils in area; determined to be absent.
Contra Costa Goldfields	*Lasthenia conjugens*	FE	Mesic, often alkaline cismontane woodland, playas, valley and foothill grassland, vernal pools	A	Species presumed extirpated from Santa Clara County, all marginally suitable habitat within BSA highly invaded and disturbed; determined to be absent.
California Seablite	*Suaeda californica*	FE	Marshes and swamps with coastal salt influences	A	All known populations in San Francisco Bay now extirpated, all areas within BSA with estuarine influence are highly disturbed, have scouring flows and sediment control; determined to be absent.
Vernal Pool Fairy Shrimp	*Branchinecta lynchi*	FT	Various vernal pool habitats: small, clear, sandstone rock pools to large, turbid, alkaline, grassland valley floor pools.	A	No suitable habitat present; determined to be absent.
Bay Checkerspot Butterfly	*Euphydryas editha bayensis*	FT	Serpentine grasslands in the San Francisco Bay Area where primary larval host plant (*Plantago erecta*) is present in high densities.	A	No suitable habitat present; determined to be absent.
Green Sturgeon	*Acipenser medirostris*	FT	Spawn in lower reaches of large rivers with swift currents and large cobble	A	No suitable habitat present; determined to be absent.
Tidewater Goby	*Eucyclogobius newberryi*	FE	Coastal lagoons, estuaries, and marshes with relatively low salinities	HP/SA	Extirpated from South San Francisco Bay; determined to be absent.
Delta Smelt	*Hypomesus transpacificus*	FT	Shallow, tidal water in Sacramento/San Joaquin River Delta	A	Outside known range; determined to be absent.

Common Name	Scientific Name	Status	General Habitat Description	Habitat/ Species Present/ Absent	Rationale
Steelhead (Central California Coastal DPS)	*Oncorhynchus mykiss*	FT	Cool streams that reach the ocean and that have shallow partially shaded, pools, riffles, and runs.	HP/SA	Tide gates prevent access to Matadero and Adobe Creeks; unsuitable conditions for spawning in these and Permanent Creek; determined to be absent from all creeks in BSA (Leidy 2005; Schane 2007).
Steelhead (Central Valley DPS)	*Oncorhynchus mykiss*	FT	Cool streams that reach the ocean and that have shallow partially shaded, pools, riffles, and runs. Sacramento and San Joaquin River tributaries, excludes San Francisco Bay and tributaries.	A	Outside of known range; determined to be absent.
Coho Salmon (Central CA coast ESU)	*Oncorhynchus kisutch*	FE	Cool streams that reach the ocean and that have shallow partially shaded, pools, riffles, and runs. San Francisco Bay tributaries.	HP/SA	Tide gates prevent access to Matadero and Adobe Creeks; determined to be absent from all creeks in BSA (Leidy 2005; Schane 2007).
Spring-run Chinook Salmon (Central Valley ESU)	*Oncorhynchus tshawytscha*	FT	Cool streams that reach the ocean and that have shallow partially shaded, pools, riffles, and runs. Sacramento River tributaries.	A	Outside of known range; determined to be absent.
Winter-run Chinook Salmon (Sacramento River ESU)	*Oncorhynchus tshawytscha*	FE	Cool streams that reach the ocean and that have shallow partially shaded, pools, riffles, and runs. Sacramento River tributaries.	A	Outside of known range; determined to be absent.
Alameda Whipsnake	*Masticophis lateralis euryxanthus*	FT	South-facing slopes and ravines; mosaic habitat of shrubs, oaks and grasslands	A	No suitable habitat present; determined to be absent.
San Francisco Garter Snake	*Thamnophis sirtalis tetrataenia*	FE, FP	Forages in quiet pools and adjacent lands primarily in San Mateo County.	A	Outside of known range; determined to be absent.
California Red-legged Frog	*Rana draytonii*	FT	Streams, freshwater pools and ponds with overhanging vegetation.	A	No suitable habitat present; extirpated from project vicinity due to urbanization; determined to be absent.
California Tiger Salamander	*Ambystoma californiense*	FT	Vernal or temporary pools in annual grasslands or open woodlands.	A	No suitable habitat present; determined to be absent.
California Least Tern	*Sterna antillarum browni*	FE	Breeds on bare or sparsely vegetated, flat substrates.	A	No suitable habitat present; determined to be absent.

Common Name	Scientific Name	Status	General Habitat Description	Habitat/ Species Present/ Absent	Rationale
Western Snowy Plover	*Charadrius alexandrinus nivosus*	FT	Sandy beaches, salt pond levees, shores of large alkali lakes.	A	No suitable habitat present; determined to be absent.
California Brown Pelican	*Pelecanus occidentalis californicus*	FE	Breed on islands without mammalian predators	A	No suitable habitat present; determined to be absent.
California Clapper Rail	*Rallus longirostris obsoletus*	FE	Salt-water and brackish marshes with tidal influence with associated pickleweed.	A	No suitable habitat present; determined to be absent.
Marbled Murrelet	*Brachyramphus marmoratus*	FT	Nests in old-growth forests, forages in coastal waters.	A	Outside known range. No suitable habitat present; determined to be absent.
Salt Marsh Harvest Mouse	*Reithrodontomys raviventris*	FE	Marshes with pickleweed or other salt-tolerant plants. Adjoining grasslands during high winter tides.	A	No suitable habitat present; determined to be absent.
San Joaquin Kit Fox	*Vulpes macrotis mutica*	FE	Annual grasslands or grassy open stages with scattered shrubbery vegetation	A	Outside known range; determined to be absent.

FE = Endangered Species per the Endangered Species Act
FT = Threatened Species per the Endangered Species Act
A = Absent
HP = Habitat Present
SA = Species Absent

DEPARTMENT OF THE ARMY
SAN FRANCISCO DISTRICT, U.S. ARMY CORPS OF ENGINEERS
1455 MARKET STREET
SAN FRANCISCO, CALIFORNIA 94103-1398

REPLY TO

DEC 29 2009

Regulatory Division

SUBJECT: File Number SPN-2007-00885 S

Ms. Christina Jaworski
Santa Clara Valley Transportation Authority
3331 North First Street
San Jose, California 95134-1927

Dear Ms. Jaworski:

This letter is written in response to your November 8, 2007, request to confirm the extent of Corps of Engineers jurisdiction in an approximately 139.4-acre study area for the Highway 101 Auxiliary Lanes Project from Embarcadero Road to State Route 85 near the City of Palo Alto, in Santa Clara County, California.

Enclosed is a map, dated October 2009, showing the extent and location of Corps of Engineers jurisdiction. We have based this jurisdictional delineation on the current conditions on the site as verified during a site visit performed by our staff on September 30, 2009. There are approximately 0.90 acres of waters of the U.S. in the study area, including Adobe Creek, Matadero Creek, and Permanente Creek. A change in those conditions may also change the extent of our jurisdiction. This jurisdictional delineation will expire in five years from the date of this letter. However, if there has been a change in circumstances that affects the extent of Corps jurisdiction, a revision may be completed before that date.

You are advised that the Corps has established an Administrative Appeal Process, as described in 33 C.F.R. Part 331 (65 Fed. Reg. 16,486; March 28, 2000), and outlined in the enclosed flowchart and "Notification of Administrative Appeal Options, Process, and Request for Appeal" form (NAO-RFA). If you do not intend to accept the approved jurisdictional determination, you may elect to provide new information to the District Engineer for reconsideration or submit a completed NAO-RFA form to the Division Engineer to initiate the appeal process. You will relinquish all rights to appeal, unless the Corps receives new information or a completed NAO-RFA form within sixty (60) days of the date of the NAO-RFA.

Should you have any questions regarding this matter, please call Andrea Meier of our Regulatory Division at 415-503-6798 or email her at andrea.j.meier@usace.army.mil. Please address all correspondence to the Regulatory Division and refer to the File Number at the head of this letter. If you would like to provide comments on our permit review process, please complete the Customer Survey Form available online at http://per2.nwp.usace.army.mil/survey.html.

Sincerely,

Jane M. Hicks
Chief, Regulatory Division

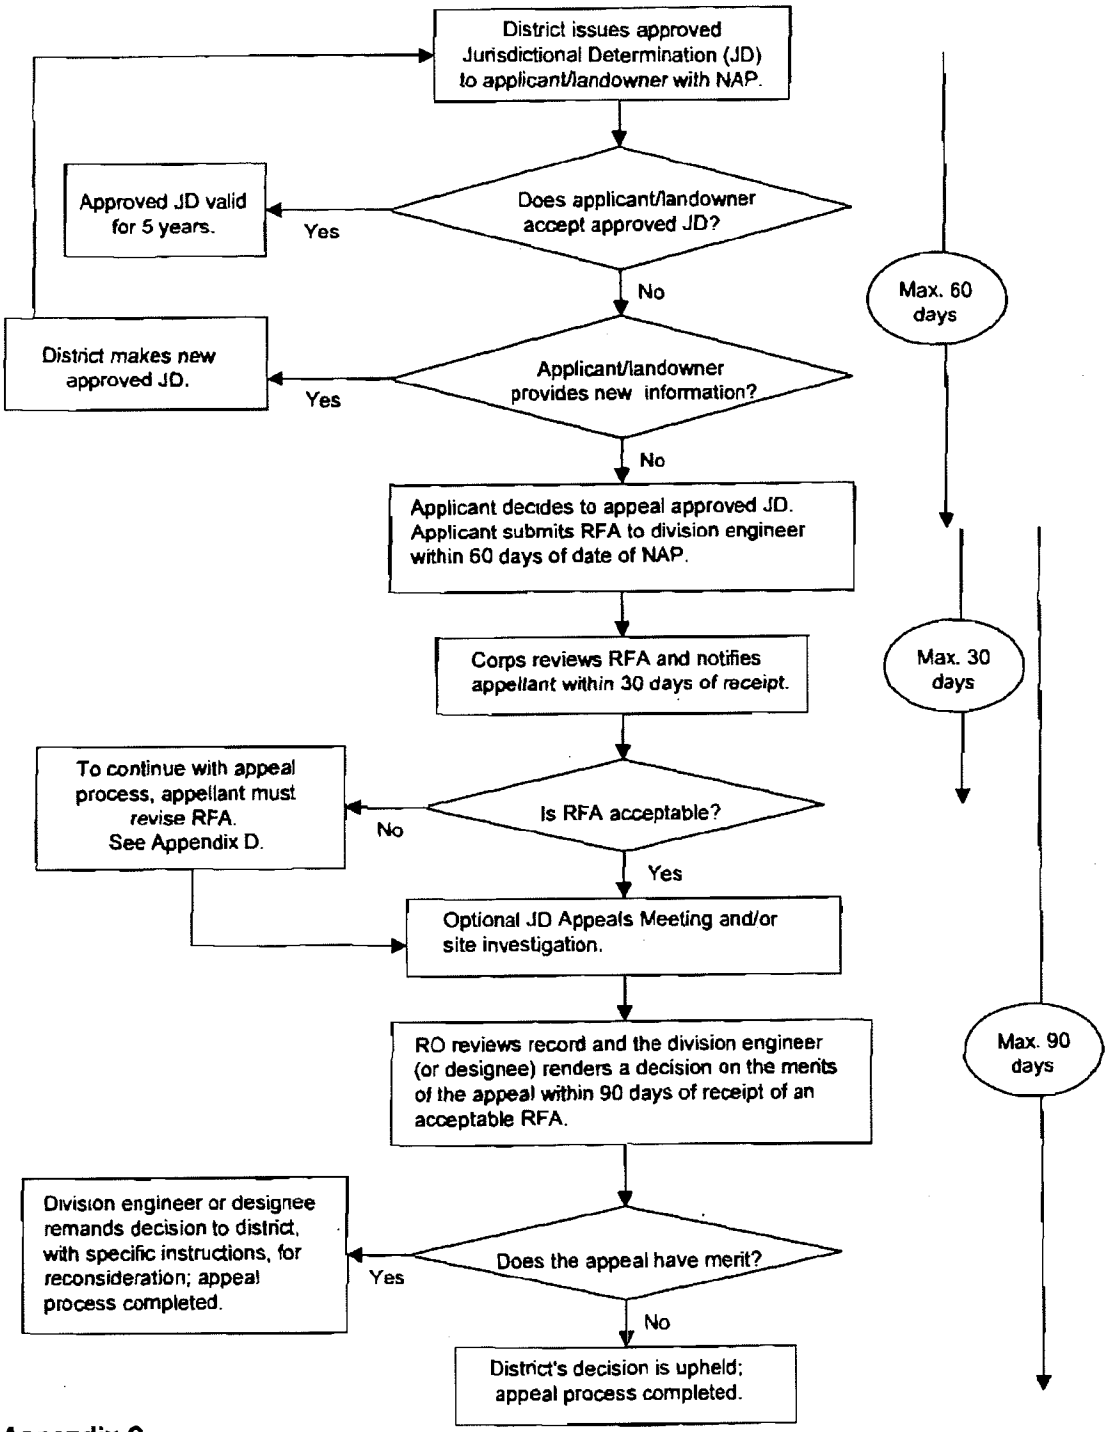
Administrative Appeal Process for Approved Jurisdictional Determinations



Appendix C

Applicant: California Department of Transportation	File Number: SPN-2007-00885 S	Date: Dec 14, 2009
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	FINAL PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
X	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps Regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the initial proffered permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this Notice and return the Notice to the DISTRICT Engineer. Your objections must be received by the DISTRICT Engineer within 60 days of the date of this Notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your Notice, the DISTRICT Engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the DISTRICT Engineer will send you a final proffered permit for your reconsideration, as indicated in Section B below.

B: FINAL PROFFERED PERMIT: You may accept or decline/appeal the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the final proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the form to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

D: APPROVED JURISDICTIONAL DETERMINATION (JD): You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this Notice means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION Engineer within 60 days of the date of this Notice. JD appeals based on NEW information must be submitted to the DISTRICT Engineer within 60 days of the date of this Notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION (JD): You do not need to respond to the Corps regarding the preliminary JD. The preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps District for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT, FINAL PROFFERED PERMIT, PERMIT DENIAL, or JURISDICTIONAL DETERMINATION

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this Notice to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record; the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the Review Officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, San Francisco Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Andrea Meier, Project Manager Tel.: (415) 503-6798 Fax: (415) 503-6690	If you only have questions regarding the appeal process you may also contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, South Pacific Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Cameron Johnson, Chief, South Section Tel.: (415) 503-6790 Fax: (415) 503-6693

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

	FINAL PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
X	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps Regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit doeument and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the initial proffered permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this Notice and return the Notice to the DISTRICT Engineer. Your objections must be received by the DISTRICT Engineer within 60 days of the date of this Notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your Notice, the DISTRICT Engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the DISTRICT Engineer will send you a final proffered permit for your reconsideration, as indicated in Section B below.

B: FINAL PROFFERED PERMIT: You may accept or decline/appeal the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the final proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the form to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

D: APPROVED JURISDICTIONAL DETERMINATION (JD): You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this Notice means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION Engineer within 60 days of the date of this Notice. JD appeals based on NEW information must be submitted to the DISTRICT Engineer within 60 days of the date of this Notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION (JD): You do not need to respond to the Corps regarding the preliminary JD. The preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps District for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT, FINAL PROFFERED PERMIT, PERMIT DENIAL, or JURISDICTIONAL DETERMINATION

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this Notice to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record; the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the Review Officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, San Francisco Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Andrea Meier, Project Manager Tel.: (415) 503-6798 Fax: (415) 503-6690	If you only have questions regarding the appeal process you may also contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, South Pacific Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Cameron Johnson, Chief, South Section Tel.: (415) 503-6790 Fax: (415) 503-6693

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

Subject: Notification of Lake or Streambed Alteration No. 1600-2010-0373-R3
U.S. Highway 101 Auxiliary Lanes Project (State Route 85 to Embarcadero Road) impacting Matadero, Adobe, Barron, and Permanente Creeks, tributary to San Francisco Bay

Dear Mr. Mai:

The Department had until February 7, 2011 to submit a draft Lake or Streambed Alteration Agreement ("Agreement") to you or inform you that an Agreement is not required. The Department did not meet that date. As a result, by law, you may now complete the project described in your notification without an Agreement.

Please note that pursuant to Fish and Game Code section 1602(a)(4)(D), if you proceed with this project, it must be the same as described and conducted in the same manner as specified in the notification and any modifications to that notification received by the Department in writing prior to February 7, 2011. This includes completing the project within the proposed term and seasonal work period and implementing all avoidance and mitigation measures to protect fish and wildlife resources specified in the notification. If the term proposed in your notification has expired, you will need to re-notify the Department before you may begin your project. Beginning or completing a project that differs in any way from the one described in the notification may constitute a violation of Fish and Game Code section 1602.

Also note that while you are entitled to complete the project without an Agreement, you are still responsible for complying with other applicable local, state, and federal laws. These include, but are not limited to, the state and federal Endangered Species Acts and Fish and Game Code sections 5650 (water pollution) and 5901 (fish passage).

Finally, if you decide to proceed with your project without an Agreement, you must have a copy of this letter and your notification with all attachments available at all times at the work site. If you have any questions regarding this matter, please contact Dave Johnston, Environmental Scientist, at (831) 464-6870 or djohnston@dfg.ca.gov.

Sincerely,

Liam Davis
Habitat Conservation Supervisor
Bay Delta Region

4. PROJECT NAME AND AGREEMENT TERM

A. Project Name	U.S. Highway 101 Auxiliary Lanes Project (State Route 85 to Embarcadero Road)			
B. Agreement Term Requested	☑ Regular (*5 years or less*) ☐ Long-term (*greater than 5 years*)			
C. Project Term		D. Seasonal Work Period		E. Number of Work Days
Beginning (*year*)	Ending (*year*)	Start Date (*month/day*)	End Date (*month/day*)	
2011	2013	04/16	10/14	905.00

5. AGREEMENT TYPE

Check the applicable box. If box B, C, D, or E is checked, complete the specified attachment.

A.	☑ Standard *(Most construction projects, excluding the categories listed below)*	
B.	☐ Gravel/Sand/Rock Extraction (*Attachment A*)	*Mine I.D. Number:* _____
C.	☐ Timber Harvesting (*Attachment B*)	THP *Number:* _____
D.	☐ Water Diversion/Extraction/Impoundment (*Attachment C*)	*SWRCB Number:* _____
E.	☐ Routine Maintenance (*Attachment D*)	
F.	☐ DFG Fisheries Restoration Grant Program (FRGP)	*FRGP Contract Number:* _____
G.	☐ Master	
H.	☐ Master Timber Harvesting	

6. FEES

Please see the current fee schedule to determine the appropriate notification fee. Itemize each project's estimated cost and corresponding fee. ***Note: The Department may not process this notification until the correct fee has been received.***

	A. Project	B. Project Cost	C. Project Fee
1	U.S. 101 Auxiliary Lanes Project (SR 85 to Embarcadero Road)	$3,900,000.00	$4,000.00
2			
3			
4			
5			
		D. Base Fee *(if applicable)*	
		E. TOTAL FEE ENCLOSED	$4,000.00

7. PRIOR NOTIFICATION OR ORDER

A. Has a notification previously been submitted to, or a Lake or Streambed Alteration Agreement previously been issued by, the Department for the project described in this notification?

☐ Yes (*Provide the information below*) ☑ No

Applicant: _____ Notification Number: _____ Date: _____

B. Is this notification being submitted in response to an order, notice, or other directive ("order") by a court or administrative agency (including the Department)?

☑ No ☐ Yes (*Enclose a copy of the order, notice, or other directive. If the directive is not in writing, identify the person who directed the applicant to submit this notification and the agency he or she represents, and describe the circumstances relating to the order.*)

☐ *Continued on additional page(s)*

8. PROJECT LOCATION

A. Address or description of project location.

(Include a map that marks the location of the project with a reference to the nearest city or town, and provide driving directions from a major road or highway)

The project is located on U.S. 101 between Embarcadero Rd. and the State Route 85 interchange, a distance of approximately 3.2 miles in the cities of Mountain View and Palo Alto in northwest Santa Clara County. The latitude is between 37.449˚ and 37.408˚ North and between longitude 121.122˚ and 121.070˚ West or T6S R2W on the Mountain View U.S.G.S. 7.5 Minute Quadrangle at elevations ranging between 4 to 40 feet above mean sea level. Project Location map provided.

For directions from Napa, take Highway 29 south towards Vallejo. Merge onto Highway 37 via the ramp to I-80 West towards San Francisco. After crossing the San Francisco Bay Bridge merge on to southbound U.S. 101. Travel approximately 30 miles on U.S. 101 until you reach the project site that begins at the junction of U.S. 101 and Embarcadero Road.

☐ *Continued on additional page(s)*

B. River, stream, or lake affected by the project.	Matadero Creek, Adobe Creek and Permanente Creek
C. What water body is the river, stream, or lake tributary to?	San Francisco Bay
D. Is the river or stream segment affected by the project listed in the state or federal Wild and Scenic Rivers Acts?	☐ Yes ☑ No ☐ Unknown

10. PROJECT DESCRIPTION

A. Describe the project in detail. Photographs of the project location and immediate surrounding area should be included.

- Include any structures (e.g., rip-rap, culverts, or channel clearing) that will be placed, built, or completed in or near the stream, river, or lake.
- Specify the type and volume of materials that will be used.
- If water will be diverted or drafted, specify the purpose or use.

Enclose diagrams, drawings, plans, and/or maps that provide all of the following: site specific construction details; the dimensions of each structure and/or extent of each activity in the bed, channel, bank or floodplain; an overview of the entire project area (i.e., "bird's-eye view") showing the location of each structure and/or activity, significant area features, and where the equipment/machinery will enter and exit the project area.

The project will construct an auxiliary lane on U.S. highway 101 in each direction between Shoreline Boulevard and Oregon Expressway. The exception will be between San Antonio Road and Rengstorff Avenue in the southbound direction, where no auxiliary lane is proposed because it would cause weaving conflicts with traffic entering the freeway from Charleston Road.

The new auxiliary lanes will be constructed adjacent to the existing outside lanes. At most locations there is sufficient room within the existing Caltrans right of way to accommodate the construction of the auxiliary lanes. The auxiliary lanes will require the widening of the existing U.S. 101 crossings over three creeks; Permanente Creek, Adobe Creek and Matadero Creek.

For the stream crossing at Permanente Creek the existing structure is a 12 foot by 12 foot reinforced concrete box culvert that is 216 feet long with a concrete channel on both upstream and downstream sections of the culvert.. To accommodate the widening of US 101 and the auxiliary lanes for the proposed project the concrete box culvert will be extended by 20 feet on the northbound side of the 101 freeway. The construction work will require diversion of the creek and work within the creek bed. The existing parapet, wing walls and channel will be removed and a new headwall, wing walls and channel will be constructed at the end of the extended culvert. No extension of the culvert is required at the southbound section of the Permanente Creek crossing, for the widening of the highway.

At Adobe Creek the existing stream crossing is a single span bridge built in 1960 and widened in 1989. The bridge consists of precast girders with a concrete deck topped off with a layer of asphalt. About 14 feet on either side of the 101 bridge are bridges for the frontage roads that use abutments that were constructed continuously between the 101 bridge and the frontage road bridges. The proposed project will widen the existing highway structure on the outside of US 101 to close the gaps between the existing bridge and the bridges of the frontage roads on either side. The proposed construction work will be completed from the concrete deck and access to the creek bed will not be necessary.

☑ *Continued on additional page(s)*

B. Specify the equipment and machinery that will be used to complete the project.

Excavators, Loaders, graders, compactors, rubber tired backhoes, sweepers, center line painting machine, dump trucks, crane

☐ *Continued on additional page(s)*

C. Will water be present during the proposed work period (specified in box 4.D) in the stream, river, or lake (specified in box 8.B).	☑ Yes ☐ No (*Skip to box 11*)
D. Will the proposed project require work in the wetted portion of the channel?	☑ Yes (*Enclose a plan to divert water around work site*) ☐ No

11. PROJECT IMPACTS

A. Describe impacts to the bed, channel, and bank of the river, stream, or lake, and the associated riparian habitat. Specify the dimensions of the modifications in length (linear feet) and area (square feet or acres) and the type and volume of material (cubic yards) that will be moved, displaced, or otherwise disturbed, if applicable.

The impacts of the project to Matadero Creek, Adobe Creek and Permanente Creek are provided in the attachment.

☑ *Continued on additional page(s)*

B. Will the project affect any vegetation? ☑ Yes (*Complete the tables below*) ☐ No

Vegetation Type	Temporary Impact	Permanent Impact
Landscape Area Vegetation	Linear feet: _____ Total area: _____	Linear feet: _____ Total area: 10.29 acres
	Linear feet: _____ Total area: _____	Linear feet: _____ Total area: _____

Tree Species	Number of Trees to be Removed	Trunk Diameter (range)
Please see attachment		

☑ *Continued on additional page(s)*

C. Are any special status animal or plant species, or habitat that could support such species, known to be present on or near the project site?

☑ Yes *(List each species and/or describe the habitat below)* ☐ No ☐ Unknown

☑ *Continued on additional page(s)*

D. Identify the source(s) of information that supports a "yes" or "no" answer above in Box 11.C.

U.S. Highway 101 Auxiliary Lanes Project (SR 85 to Embarcadero Road) Initial Study/Mitigated Negative Declaration

☑ *Continued on additional page(s)*

E. Has a biological study been completed for the project site?

☑ Yes (*Enclose the biological study*) ☐ No

Note: A biological assessment or study may be required to evaluate potential project impacts on biological resources.

F. Has a hydrological study been completed for the project or project site?

☑ Yes (*Enclose the hydrological study*) ☐ No

Note: A hydrological study or other information on site hydraulics (e.g., flows, channel characteristics, and/or flood recurrence intervals) may be required to evaluate potential project impacts on hydrology.

12. MEASURES TO PROTECT FISH, WILDIFE, AND PLANT RESOURCES

A. Describe the techniques that will be used to prevent sediment from entering watercourses during and after construction.

Please see attached supplemental information packet.

☑ *Continued on additional page(s)*

B. Describe project avoidance and/or minimization measures to protect fish, wildlife, and plant resources.

General avoidance and minimization measures will be implemented as part of construction activities to minimize and avoid impacts to sensitive species and habitat, as well as common biological resources. Please see the attached supplement for these general conservation measures.

☑ *Continued on additional page(s)*

C. Describe any project mitigation and/or compensation measures to protect fish, wildlife, and plant resources.

The conservation measures described for Box 12B above are proposed for avoidance, minimization and mitigation of impacts to fish and wildlife species. No additional mitigation or compensation is proposed for fish and wildlife species. As specified in Box 11C, no special status species are expected to be significantly impacted by the proposed project.

☐ *Continued on additional page(s)*

13. PERMITS

List any local, state, and federal permits required for the project and check the corresponding box(es). Enclose a copy of each permit that has been issued.

A.	401 Clean Water Certification with San Francisco RWQCB	☑ Applied	☐ Issued
B.	404 Pre-construction Notification for NWP 14 with USACE	☑ Applied	☐ Issued
C.		☐ Applied	☐ Issued

D. Unknown whether ☐ local, ☐ state, or ☐ federal permit is needed for the project. (*Check each box that applies*)

☐ *Continued on additional page(s)*

14. ENVIRONMENTAL REVIEW

A. Has a draft or final document been prepared for the project pursuant to the California Environmental Quality Act (CEQA), National Environmental Protection Act (NEPA), California Endangered Species Act (CESA) and/or federal Endangered Species Act (ESA)?

☑ Yes (*Check the box for each CEQA, NEPA, CESA, and ESA document that has been prepared and enclose a copy of each*)

☐ No (*Check the box for each CEQA, NEPA, CESA, and ESA document listed below that will be or is being prepared*)

☐ Notice of Exemption	☑ Mitigated Negative Declaration	☐ NEPA document (*type*): _____
☑ Initial Study	☐ Environmental Impact Report	☐ CESA document (*type*): _____
☐ Negative Declaration	☑ Notice of Determination *(Enclose)*	☐ ESA document (*type*): _____
☐ THP/ NTMP	☐ Mitigation, Monitoring, Reporting Plan	

B. State Clearinghouse Number (*if applicable*)	2009022092		
C. Has a CEQA lead agency been determined?	☑ Yes (*Complete boxes D, E, and F*)	☐ No (*Skip to box 14.G*)	
D. CEQA Lead Agency	Caltrans District 4		
E. Contact Person	Jared Goldfine	F. Telephone Number	(510) 286-6203

G. If the project described in this notification is part of a larger project or plan, briefly describe that larger project or plan.

☐ *Continued on additional page(s)*

H. Has an environmental filing fee (Fish and Game Code section 711.4) been paid?

☑ Yes (*Enclose proof of payment*) ☐ No (*Briefly explain below the reason a filing fee has not been paid)*

Note: If a filing fee is required, the Department may not finalize a Lake or Streambed Alteration Agreement until the filing fee is paid.

15. SITE INSPECTION

Check one box only.

☑ In the event the Department determines that a site inspection is necessary, I hereby authorize a Department representative to enter the property where the project described in this notification will take place at any reasonable time, and hereby certify that I am authorized to grant the Department such entry.

☐ I request the Department to first contact (*insert name*) _____ at (*insert telephone number*) _____ to schedule a date and time to enter the property where the project described in this notification will take place. I understand that this may delay the Department's determination as to whether a Lake or Streambed Alteration Agreement is required and/or the Department's issuance of a draft agreement pursuant to this notification.

16. DIGITAL FORMAT

Is any of the information included as part of the notification available in digital format (i.e., CD, DVD, etc.)?

☑ Yes (Please enclose the information via digital media with the completed notification form)

☐ No

17. SIGNATURE

I hereby certify that to the best of my knowledge the information in this notification is true and correct and that I am authorized to sign this notification as, or on behalf of, the applicant. I understand that if any information in this notification is found to be untrue or incorrect, the Department may suspend processing this notification or suspend or revoke any draft or final Lake or Streambed Alteration Agreement issued pursuant to this notification. I understand also that if any information in this notification is found to be untrue or incorrect and the project described in this notification has already begun, I and/or the applicant may be subject to civil or criminal prosecution. I understand that this notification applies only to the project(s) described herein and that I and/or the applicant may be subject to civil or criminal prosecution for undertaking any project not described herein unless the Department has been separately notified of that project in accordance with Fish and Game Code section 1602 or 1611.

Signature of Applicant or Applicant's Authorized Representative

Kevin Melanephy - Caltrans District 4

Print Name

Box 10A

The stream crossing at Matadero Creek consists of an existing two span structure. Abutments and the middle pier wall were constructed continuously for the 101 bridge and the two frontage road bridges (East Bayshore Rd. and West Bayshore Road) on either side. Currently there is approximately 14 feet between the decks of the US 101 bridge and the two frontage road bridge decks on either side. The proposed project would widen the existing highway bridge structures on the outside of US 101 to close the gaps between the 101 bridge structure and the frontage roads. Additionally the center support pier wall and the abutments will be evaluated for adequacy. Depending on the results of structural analysis, the wall foundation or the wall itself may need to be strengthened or replaced. Work on the wall foundation would necessitate diversion of the creek or surrounding the pier wall with a cofferdam. The top of the pier wall also needs to be modified to provide support for the new precast deck units. This construction work will require access in the creek bed.

Box 11A

Matadero Creek crosses U.S. 101 approximately 3,200 feet south of the Oregon Expressway interchange. The creek originates in the Town of Los Altos and in the Palo Alto hills. The creek flows through Palo Alto in a U-shaped concrete channel and discharges into the Palo Alto flood basin, which eventually outfalls to San Francisco bay. At the US 101 crossing Matadero Creek is a concrete paved trapezoidal engineered channel. Permanent Impacts at the Matadero Creek crossing include the extension of the center pier wall used to support the deck of the proposed bridge that will span the gaps between the existing US 101 freeway bridge and the Bayshore Road bridges. Construction of the center support pier will permanently impact approximately 0.004 acre of Waters of the U.S. To perform construction work at the Matadero Creek stream crossing access to the streambed will be necessary. This will necessitate diversion and dewatering of the creek and temporary impacts to Matadero Creek. Approximately 0.363 acre of the stream will be temporarily impacted by the project.

Temporary diversion of Matadero Creek during construction work will be achieved by the use of a cofferdam constructed with stacked sandbags to direct the flow of the creek to a 42 inch diameter plastic pipe that begins 200 feet upstream of the W. Bayshore Road bridge and extends 15 feet downstream of the bike bridge. A second cofferdam will be constructed on the downstream side of the bridge. The temporary drainage design accounts for the tidal influence of San Francisco Bay and the potential for the flow to change to directions.

Adobe Creek crosses US 101 approximately 1,800 feet north of the San Antonio Road interchange. The creek originates in the Palo Alto hills, flows through Palo Alto in a large rectangular concrete channel and discharges into Charleston slough which eventually outfalls to San Francisco Bay. A short distance from the US 101 crossing and just upstream of the West Bayshore Rd. bridge the tributary of Baron Creek confluences Adobe Creek. Adobe Creek is a paved concrete trapezoidal engineered channel at the US 101 crossing.

Neither Adobe Creek or Baron Creek are proposed to be impacted by dredge or fill material from the project as all the construction work is expected to occur from the concrete deck at the Adobe Creek stream crossing.

Permanente Creek crosses 101 approximately 2,200 feet south of Rengstorff Avenue interchange. The creek originates in the Santa Cruz mountains and passes through Cupertino, Los Altos Hills, Los Altos, and Mountain; and eventually discharges into Mountain View slough which outfalls into San Francisco Bay. For the stream crossing at Permanente Creek the existing structure is a 12 foot by 12 foot reinforced concrete box culvert that is 216 feet long with a concrete channel on both upstream and downstream sections of the culvert. To accommodate the widening of US 101 and the auxiliary lanes for the proposed project the concrete box culvert will be extended by 20 feet in the northbound direction. The construction work will require diversion of the creek and work within the concrete channel creek bed. The existing parapet and wing walls will be removed and a new headwall, wing walls and channel will be constructed at the end of the extended culvert. The extension of the Permanente Creek culvert on the northbound side of the existing culvert will permanently impact approximately 0.018 acres of Waters of the U.S. in Permanente Creek. The extended box culvert will require 34 cubic yards of concrete fill into Permanente Creek. The wing walls will require approximately 75 cubic yards of concrete fill, 9 cubic yards for the concrete channel and 31 cubic yards of fill material. Temporary diversion of the creek and construction work within the creek will temporarily impact approximately 0.019 acre of Waters of the U.S. in Permanente Creek.

Similarly to Matadero Creek, the temporary diversion of Permanente Creek will be achieved by use of cofferdams and plastic piping to redirect the flow of the stream. However, the creek will be diverted in two discrete locations, at both ends of the Permanente Creek culvert. A sand bag cofferdam or berm will be constructed on the upstream side and downstream side of each temporary diversion section. Water flowing from upstream runoff or from downstream tidal fluctuations will be diverted to the plastic piping. The plastic pipe will be approximately 18 inches in diameter.

Box 11C

Reconnaissance level surveys were conducted by qualified biologists for special status plant and animal species and their habitats within the project area. No special status plant or wildlife species were discovered at the site during the surveys. In addition habitat for the special status plant species that are known to occur in the area was not found at the project site based on an assessment of habitats, elevations and soil types. The highly disturbed nature of the project area would preclude the establishment of special status plant species.

However, two special status bird species, the Alameda song sparrow (*Melospiza melodia pusillila*) and the San Francisco common yellowthroat (*Geothlypis trichas sinuosa*) could potentially nest at the site and use it regularly. Both species are considered species of special concern by CDFG and are known to nest in salt and brackish marshes. Yellowthroats may also use freshwater marshes. The habitats near the Adobe Creek and

Permanente bridges are currently inadequate for yellowthroats and lack the emergent vegetation needed for nesting. No yellowthroats were discovered during reconnaissance surveys of the project site. Song sparrows were observed during the 2008 breeding season immediately to the northeast of the Matadero bridge however due to the difficulty in distinguishing Alameda song sparrows from other song sparrows in the region it was impossible to tell if the observed birds were Alameda song sparrows. The project would impact a very small amount of potential nesting habitat for these species in a highly disturbed environment and therefore impacts to these species are not substantial.

Box 12A

The proposed project will result in a small increase in the impervious area (~ 10 acres) and thus may contribute to higher runoff velocities that may increase sedimentation. Adobe Creek and Matadero Creek are concrete lined and Permanente Creek crosses U.S. 101 in a concrete lined culvert. Therefore it is anticipated that channel erosion, gullying and scour of these channels would not be created by an increase in runoff. There is a potential for increased sedimentation from erosion caused by grading activities and other causes during and following the construction period. Storm water runoff has the potential to transport sediment to nearby streams and storm drains if storm water BMPs are not properly implemented. Stormwater BMPs will be designed to dissipate this increased energy and reduce the capacity of the storm water runoff to carry increased sediment loads. Construction activities are planned for the dry summer months when storms are less likely to occur.

Treatment BMPs

Added and reworked impervious areas for this project are greater then 1 acre and therefore permanent treatment BMPs were considered for the purpose of avoiding and minimizing erosion, sedimentation and degradation to water quality that may occur over the long term. Biofiltration strips and biofiltration swales were selected as the most effective and feasible options and will be constructed at many locations throughout the project. Treatment BMPs are described in more detail in the Stormwater Data Report.

Construction BMPs

The project involves moving more then 1 acre of soil and thus a Stormwater Pollution Prevention Plan (SWPPP) will be prepared and would identify stormwater BMPs to reduce water quality impacts during construction. The following measures will be implemented for avoiding and minimizing impacts of the project to water quality.

For soil stabilization at the site, temporary covers would be placed over temporary stockpiles of disturbed soil, and temporary hydraulic mulch would be placed on any exposed disturbed soils that may susceptible from erosion from runoff or wind. For sediment control, temporary silt fences and fiber rolls will be used to minimize sediment transport to drainage inlets, drainage ditches or other receiving water bodies.

No debris, soil, silt, sand, bark, slash, sawdust, cement, concrete, washings, petroleum products or other organic or earthen material shall be allowed to enter into or placed where it may be washed by rainfall or runoff into any waterways.

Special or sensitive sites (e.g., riparian corridors and drainages) identified as places where construction equipment is not allowed, will be clearly marked on site before any construction or surface-disturbing activities begin. Construction personnel will be trained to recognize these markers and understand the equipment movement restrictions involved. Ecologically sensitive area (ESA) fencing will be maintained until final cleanup and restoration is completed, after which it will be removed.

Exiting site vegetation will be preserved to the extent feasible. Clearing and grubbing would be limited to the strip areas between the freeway and local streets or properties. Active paved construction areas will be swept and washed as needed.

Box 12B

To avoid and minimize the potential effects of the project to migratory bird species that are protected in the Migratory Bird and Treaty Act (MBTA) and the California Fish and Game code the following conservation measures will be implemented:

- Vegetation that will be impacted by the project will be removed during the nonbreeding season (i.e., September 1st to February 14th), if feasible, to help preclude nesting. If it is not feasible to schedule vegetation removal during the nonbreeding season, then pre-construction surveys for nesting birds will be conducted by a qualified ornithologist to ensure that no nests will be disturbed during project implementation. This survey will be conducted no more than seven days prior to the initiation of construction activities. During this survey, the ornithologist will inspect all trees, shrubs, and other potential nesting habitats in and immediately adjacent to the impact areas for nests. If an active nest is found sufficiently close to work areas to be disturbed by these activities, the ornithologist, in consultation with CDFG, will determine the extent of a buffer zone to be established around the nest, typically 250 feet for raptors and 50 feet for other birds.

- At the Adobe Creek and Matadero Creek bridges, to avoid impacts to nesting swallows and black phoebes, old nests should be removed prior to February 15th, or after February 15th if a qualified ornithologist determines that the nests are not active. Maintaining bridges free from nesting birds may require the placement of netting or other structures over the underside of the bridges to prevent swallows and other birds from accessing suitable nesting substrate. Alternatively, nest starts may be removed on a regular basis (e.g., every other day) to prevent active nests from becoming established.

Roosting bat habitat is present on the Matadero Creek Bridge and the Adobe Creek Bridge. Bat roosting surveys were conducted by H. T. Harvey and Associate ecologists on August 22, 2007, November 8, 2007 and June 17, 2008. Matadero Creek Bridge

contains roosting habitat for wintering Yuma myotis and Mexican free tailed bats. Because of the number of individuals using this roosting site, the relative rarity of this type of roost site in the landscape, and the presence of a least three species of bats makes the Matadero Creek bridge a regionally important roost site. Proposed conservation measures to avoid and minimize impacts to roosting bats include:

- If pile driving, jack hammering on the bridge abutments, intense lighting under the bridge or near the roost cavities, or other extreme disturbances will occur, the bats will be evicted from the roost during the non-breeding season preceding these extreme disturbances. A qualified bat biologist will exclude the roosting bats using one-way doors fixed to roost entrances. Eviction of bats will occur at night, so that bats will have less potential for predation compared to daytime roost abandonment. Eviction will occur between September 1st and March 31st, outside the maternity season, but will not occur during long periods of inclement or cold weather (as determined by the bat biologist) when prey are not available or bats are in torpor. The one-way doors used to evict the bats will be inspected periodically and maintained from the time of installation through the completion of the extreme disturbance to ensure that they are functioning properly. The exclusion devices will be removed following the conclusion of the extreme disturbance, as determined by the bat biologist.

- To avoid the long-term abandonment of the colony and minimize the loss of evicted individuals, an appropriate bat condominium, as defined by a bat biologist, will be placed in a suitable, conspicuous location (e.g., the edge of a marsh or other open area) between 500 and 1,000 feet from the existing roost. The bat condominium will be installed one year before the commencement of construction (under both the extreme or minimal disturbance scenarios) and at least six months before bats are excluded from the existing roost (under the extreme disturbance scenario). The existing roost and the bat condominium will be visually checked by a qualified bat biologist within five days prior to exclusion to ascertain whether bats have occupied the condominium in advance of construction. The bridge roost and the condominium would also be checked visually at least once during the maternity season for up to three years after the completion of construction. Monitoring will cease prior to Year-3 if it is determined that one structure or the other has been occupied by bats during the maternity season.

- If construction can occur without extreme disturbances, the colony will not be excluded, since the exclusion could have more of an adverse effect on the bat colony than maintaining the bats' access to the colony and subjecting them to some increase in disturbance during construction. To inform the impact assessment of, and the development of impact minimization measures for, similar projects in the future, some minimal information on the increase in disturbance to which bats are subjected during construction and on the bats' response to that disturbance will be collected. A qualified biologist will determine the status of the colony (i.e., whether it is active, and the approximate numbers of bats) by a visual inspection of the bridge within five days prior to the initiation of construction. Baseline data on the vibration and sound levels at the bridge site will also be collected for a minimum of two days within five days of construction commencement. Following this pre-construction, baseline monitoring, the colony will then be monitored every night during construction using acoustic surveying methods, such as Anabat equipment, to determine the status of the colony (i.e., to

determine if the colony abandons the roost). The majority of this construction monitoring will be done remotely with acoustic surveying equipment and will not require a surveyor to be present every night during construction. Monitoring equipment will also be used to sample construction-related increases in noise and vibration. Project implementation will not have to be modified based on the findings of this monitoring, even if the bats abandon the roost. However, these data will allow for a determination of whether or not the bats remained at the bridge during construction and/or changed their activity patterns in relation to varying levels of noise and vibration.

REPLY TO

DEC 29 2009

Regulatory Division

SUBJECT: File Number SPN-2007-00885 S

Ms. Christina Jaworski
Santa Clara Valley Transportation Authority
3331 North First Street
San Jose, California 95134-1927

Dear Ms. Jaworski:

This letter is written in response to your November 8, 2007, request to confirm the extent of Corps of Engineers jurisdiction in an approximately 139.4-acre study area for the Highway 101 Auxiliary Lanes Project from Embarcadero Road to State Route 85 near the City of Palo Alto, in Santa Clara County, California.

Enclosed is a map, dated October 2009, showing the extent and location of Corps of Engineers jurisdiction. We have based this jurisdictional delineation on the current conditions on the site as verified during a site visit performed by our staff on September 30, 2009. There are approximately 0.90 acres of waters of the U.S. in the study area, including Adobe Creek, Matadero Creek, and Permanente Creek. A change in those conditions may also change the extent of our jurisdiction. This jurisdictional delineation will expire in five years from the date of this letter. However, if there has been a change in circumstances that affects the extent of Corps jurisdiction, a revision may be completed before that date.

You are advised that the Corps has established an Administrative Appeal Process, as described in 33 C.F.R. Part 331 (65 Fed. Reg. 16,486; March 28, 2000), and outlined in the enclosed flowchart and "Notification of Administrative Appeal Options, Process, and Request for Appeal" form (NAO-RFA). If you do not intend to accept the approved jurisdictional determination, you may elect to provide new information to the District Engineer for reconsideration or submit a completed NAO-RFA form to the Division Engineer to initiate the appeal process. You will relinquish all rights to appeal, unless the Corps receives new information or a completed NAO-RFA form within sixty (60) days of the date of the NAO-RFA.

Should you have any questions regarding this matter, please call Andrea Meier of our Regulatory Division at 415-503-6798 or email her at andrea.j.meier@usace.army.mil. Please address all correspondence to the Regulatory Division and refer to the File Number at the head of this letter. If you would like to provide comments on our permit review process, please complete the Customer Survey Form available online at http://per2.nwp.usace.army.mil/survey.html.

Sincerely,

Jane M. Hicks
Chief, Regulatory Division

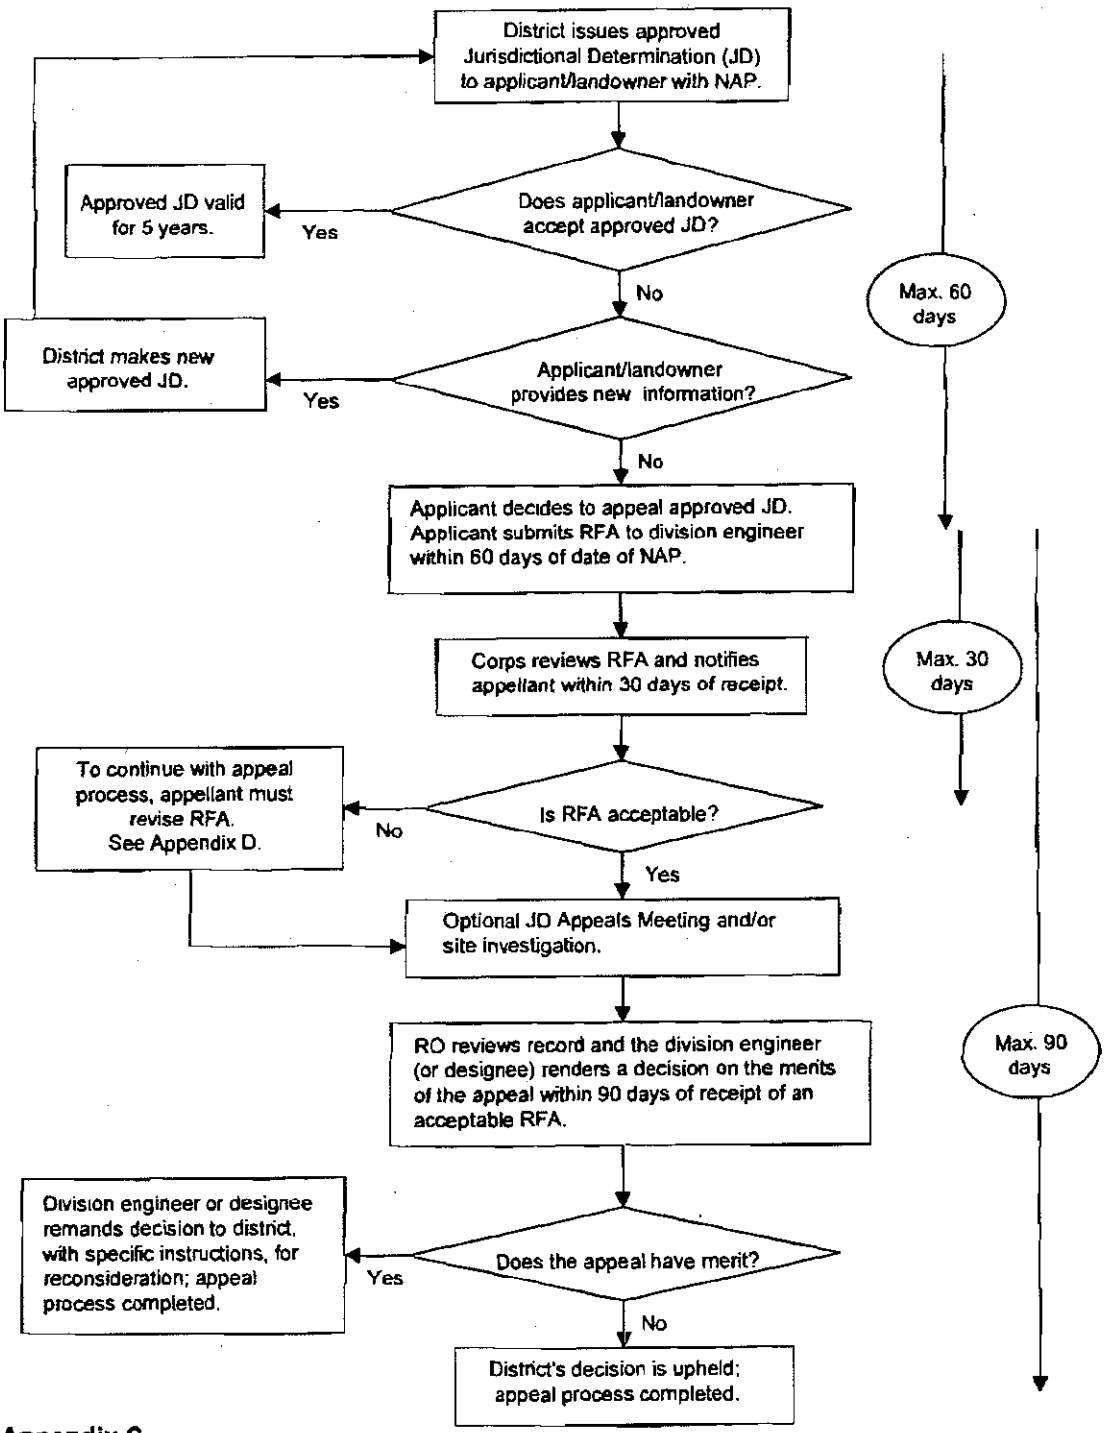
Administrative Appeal Process for Approved Jurisdictional Determinations



Appendix C

Applicant: California Department of Transportation	File Number: SPN-2007-00885 S	Date: Dec 14, 2009
Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A
	FINAL PROFFERED PERMIT (Standard Permit or Letter of permission)	B
	PERMIT DENIAL	C
X	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps Regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the initial proffered permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this Notice and return the Notice to the DISTRICT Engineer. Your objections must be received by the DISTRICT Engineer within 60 days of the date of this Notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your Notice, the DISTRICT Engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the DISTRICT Engineer will send you a final proffered permit for your reconsideration, as indicated in Section B below.

B: FINAL PROFFERED PERMIT: You may accept or decline/appeal the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the final proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the form to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

D: APPROVED JURISDICTIONAL DETERMINATION (JD): You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this Notice means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION Engineer within 60 days of the date of this Notice. JD appeals based on NEW information must be submitted to the DISTRICT Engineer within 60 days of the date of this Notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION (JD): You do not need to respond to the Corps regarding the preliminary JD. The preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps District for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT, A FINAL PROFFERED PERMIT, PERMIT DENIAL, or JURISDICTIONAL DETERMINATION

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this Notice to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record; the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the Review Officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, San Francisco Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Andrea Meier, Project Manager Tel.: (415) 503-6798 Fax: (415) 503-6690	If you only have questions regarding the appeal process you may also contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, South Pacific Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Cameron Johnson, Chief, South Section Tel.: (415) 503-6790 Fax: (415) 503-6693

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps Regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the initial proffered permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this Notice and return the Notice to the DISTRICT Engineer. Your objections must be received by the DISTRICT Engineer within 60 days of the date of this Notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your Notice, the DISTRICT Engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the DISTRICT Engineer will send you a final proffered permit for your reconsideration, as indicated in Section B below.

B: FINAL PROFFERED PERMIT: You may accept or decline/appeal the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the final proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the form to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

D: APPROVED JURISDICTIONAL DETERMINATION (JD): You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this Notice means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION Engineer within 60 days of the date of this Notice. JD appeals based on NEW information must be submitted to the DISTRICT Engineer within 60 days of the date of this Notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION (JD): You do not need to respond to the Corps regarding the preliminary JD. The preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps District for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT, FINAL PROFFERED PERMIT, PERMIT DENIAL, or JURISDICTIONAL DETERMINATION

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this Notice to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record; the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the Review Officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, San Francisco Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Andrea Meier, Project Manager Tel.: (415) 503-6798 Fax: (415) 503-6690	If you only have questions regarding the appeal process you may also contact the DISTRICT ENGINEER: U.S. Army Corps of Engineers, South Pacific Division 1455 Market Street, San Francisco, CA 94103-1398 Attn: Cameron Johnson, Chief, South Section Tel.: (415) 503-6790 Fax: (415) 503-6693

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

TRANSPORTATION MANAGEMENT PLAN

US 101 Auxiliary Lanes Project, in Santa Clara County, between State Route 85 and Embarcadero Road Interchanges

1. PROJECT DESCRIPTION

The project proposes to construct auxiliary lanes, extend existing second High Occupancy Vehicle (HOV) lanes, and undertake associated ramp improvements including ramp widening and installing/activating ramp metering in both directions of U.S. Route 101 (US 101) in Santa Clara County between the State Route 85 (SR 85) interchange in the City of Mountain View and the Embarcadero Road interchange in the City of Palo Alto.

The purpose of the project is to relieve existing and future traffic congestion at freeway on-ramp and off-ramp connections, improve safety along the US 101 corridor, provide for improved local access over this segment of the US 101 corridor. Auxiliary lanes would improve traffic operations on the freeway by providing more acceleration and deceleration length for traffic entering and exiting the freeway at each interchange to merge and by allowing local traffic that is only going from one interchange to the next to use the freeway without impacting the main through lanes. Installation/activation of ramp metering at freeway on-ramps will meter traffic entering the mainline during peak periods. The extension of the existing second HOV lane leading to and from the SR 85 interchange in each direction of US 101 is projected to reduce the queue lengths that occur during peak periods. The project construction date is estimated to start in June 2011 and estimated to end in August 2013. The estimated construction cost for the project is $64.83 million.

The project proposes the following:

- Construction of auxiliary lanes at the following locations:
    - ⇨ Northbound US 101 eliminate the number 5 lane drop near Shoreline Boulevard on-ramp and extend lane to the Rengstorff Avenue loop off-ramp.
    - ⇨ Northbound US 101 between the Rengstorff Avenue on-ramp to the San Antonio Road off-ramp.
    - ⇨ Northbound US 101 between San Antonio Road on-ramp to the Oregon Expressway off-ramp.
    - ⇨ Southbound US 101 from the Oregon Expressway on-ramp to the San Antonio Road diagonal off-ramp.

- Extend the existing second HOV lane in each direction of US 101. In the northbound direction of US 101, the existing HOV lane drop from two to one HOV lanes in the vicinity of the Shoreline Boulevard Interchange. This HOV lane drop would be eliminated and the second HOV lane would continue north until being dropped between the Oregon Expressway and San Antonio interchanges. In the southbound direction of US 101, the second HOV lane would be extended so that it will begin

between the Oregon Expressway and San Antonio Road interchanges and will continue south to connect to the two existing HOV lanes in the vicinity of the Shoreline Boulevard Interchange.

- Ramp improvements at the following locations:
  - ⇨ Realign the existing three lane on-ramp from the Shoreline Boulevard Interchange to northbound US 101. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign the existing single lane off-ramp from northbound US 101 to eastbound Amphitheatre Parkway.
  - ⇨ Realign and widen the existing single lane on-ramp from Rengstorff Avenue to northbound US 101 to install/implement ramp metering with two mixed flow lanes at ramp meter.
  - ⇨ Realign the existing single lane off-ramp from northbound US 101 to San Antonio Road.
  - ⇨ Merge the loop on-ramp and diagonal on-ramp from San Antonio Road together prior to the merge with northbound US 101. Install/Implement ramp metering at the merge of the two on-ramps.
  - ⇨ Realign and widen the existing two lane on-ramp from Oregon Expressway to southbound US 101 to add a second mixed-flow lane. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign southbound San Antonio off-ramps.
  - ⇨ Realign the existing two lane on-ramp from Rengstorff Avenue to southbound US 101. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign the existing two lane on-ramp from Old Middlefield Way to southbound US 101.
  - ⇨ Realign SB Shoreline off-ramp.

- No work is proposed at the southbound Embarcadero Road diagonal on-ramp or the southbound Embarcadero loop ramps.

- Overlay of existing northbound and southbound US 101 pavement.

Construction for widening of US 101, on/off-ramps improvements and associated improvements will require temporary lane closures along US 101 and surface streets, except at the on-ramp from westbound Shoreline Boulevard to US 101 northbound and on-ramp from Embarcadero Road to US 101 southbound. Other construction work will be completed, by shifting the traffic to temporary striping along US 101. The project is proposed to be constructed in six stages. The staging sequence has been developed in a way that impacts are minimized to the traffic. The proposed construction staging and traffic handling is summarized in Stage Construction Plans (SC-1 through SC-25).

Construction for widening of US 101, on/off-ramps improvements and associated improvements will require long-term closures at the following locations:

1. On-Ramp from Westbound Shoreline Boulevard to US 101 Northbound – Under Stage 1 one lane is required to be closed at the off-ramp. Under existing conditions, three lanes exist on the on-ramp.
2. On-Ramp from Embarcadero Road to US 101 Southbound – Under Stage 3, this ramp will need to be closed over the weekend (from Friday night to Monday morning) to construct the proposed drainage improvements at the ramp.

Construction activities can create significant additional traffic delay and safety concerns on already congested highways during construction. With increase in traffic demand planning work activities and balancing traffic demand with highway capacity becomes more critical during construction or maintenance. In order to prevent unreasonable traffic delays resulting from planned work, Transportation Management Plans (TMPs) must be carefully developed and implemented in order to maintain acceptable levels of service and safety during all work activities on the state highway system.

A TMP is a method for minimizing activity-related traffic delay and accidents by the effective application of traditional traffic handling practices and an innovative combination of public and motorist information, demand management, incident management, system management, construction strategies, alternate routes and other strategies. TMP share the common goal of congestion relief during the project period by managing traffic flow and balancing traffic demand with highway capacity through the project area, or by using the entire corridor. All Capital projects require individual TMPs and are required for high-impact projects.

Department Deputy Directive 60 (DD-60) titled Transportation Management Plans requires TMPs and contingency plans for all state highway activities. The Department minimizes motorist delays when implementing projects or performing other activities on the state highway system. This is accomplished without compromising public or worker safety, or the quality of the work being performed. TMPs, including contingency plans, are required for all construction, maintenance, encroachment permit, planned emergency restoration, locally or specially-funded, or other activities on the state highway system. As per the department guidelines major lane closures are those that are expected to result in significant traffic impacts despite the implementation of TMPs. Significant traffic impact is 30 minutes above normal recurring traffic delay on the existing facility or the delay threshold set by the District Traffic Manager (DTM), whichever is less. Contingency Plans address specific actions that will be taken to restore or minimize effects on traffic when congestion or delays exceed original estimates due to unforeseen events such as work-zone accidents, higher than predicted traffic demand, or delayed lane closures.

A list of potential TMP strategies are as follows:

1. Public Information
2. Motorist Information
3. Incident Management
4. Construction Strategies

5. Demand Management
6. Alternate Route Strategies
7. Other Strategies

2. TRANSPORTATION MANAGEMENT PLAN SUMMARY

The Transportation Management Plan (TMP) is a specialized program tailored to prevent and mitigate the impacts of a construction project by applying a variety of techniques including *Motorist Information, Incident Management, Construction Strategies, and Public Information Strategies*. The major objectives of the TMP are to maintain efficient and safe movement of vehicles through the construction zone; and to provide intensive public awareness of potential impacts on the US 101 and local roadways.

The TMP proposes a program of public information, motorist information, and an incident detection and response. The public information program will consist of media notification, telephone hotline, press release, and traveler information system (Internet). The motorist information program will notify drivers of freeway closures and detours using changeable message signs. The incident detection and response program will initiate a roving tow truck patrol that will alert the California Highway Patrol to accidents under the Construction Zone Enhanced Enforcement Program (COZEEP).

TABLE 1 - Roles and Responsibilities / Cost Estimate

	Transportation Management Measure	Responsible Agency	Action Required	Cost	Comments
1	Supplementary FSP	Resident Engineer, CHP, Caltrans, MTC, VTA	Increase FSP coverage during shoulder and lane closures	$325 K	Need cooperative agreements between Caltrans and MTC and between VTA and Caltrans to include expansion of the FSP and include funding provisions. FSP during non peak hours is at an estimated rate of $65/hr.
2	COZEEP	CHP, VTA, Caltrans, Cities of Palo Alto, Mountain View and Resident Engineer	Increase CHP presence during lane closures	$585 K	Included in PS&E
3	Ground Mounted Signs	Contractor	Provide warning information to motorists.	$130 K	Included in PS&E
4	Changeable Message Signs	Contractor	Install portable CMSs announcing delays, detours, and upcoming construction. Message content and deployment supervised by RE.	$780 K	Included in PS&E
5	Staging & Detours	Contractor	Establish detour routes, signing, and truck routes.	$3,250 K	Included in PS&E
6	Press releases	Caltrans, VTA	Provide project and construction information through media.	65 K	Included in PS&E
7	Telephone Hotline	Caltrans, VTA	Provide construction information to public by TRAVINFO operated by Caltrans PIO and VTA Telephone Hotline for the Project.	--	No additional cost if included under communication strategy for proposed project
8	Traveler Information System	Caltrans	Provide real time traffic information on Caltrans' website.	--	No additional cost if included under communication strategy for proposed project
9	VTA Community Outreach	VTA	Provide up to date project information on VTA's website.	--	No additional cost if included under communication strategy for proposed project
10	Late Reopening Damage	RE, Contractor	RE to charge damage from the contractor for late lane closure pick up.	15 K	Charges per SSP 12-220
Total				**$5,150K**	

Note: FSP = Freeway Service Patrol
VTA = Santa Clara County Valley Transportation Authority
SSP = Special Standard Provisions
MTC = Metropolitan Transportation Commission

Freeway lanes, on/off-ramps, and local roadways closures will be performed in accordance with lane closure charts that will be included in the special provisions. The approval process for the lane closure charts will involve all affected state and local agencies including Caltrans, City of Palo Alto and Mountain View. Impacts resulting from long-term closures (if any) will be evaluated and documented in the report at later date. Impacts of long-term closures and mitigation measures to offset any negative impacts will be documented.

Temporary pavement delineation will be used to shift traffic during stage construction on US 101, on/off-ramps and local roadways. Temporary signs, placement of temporary concrete barrier, and temporary crash cushions will be provided for public and contractor safety (refer to traffic handling plans and construction plans included in the contract plans)

Construction of the proposed project is to be undertaken in six main stages. Proposed construction staging plans (SC-1 through SC-25) are attached in **Appendix A** for information purposes only. Traffic Handling and Construction Area Sign Plans for information purposes only are attached in **Appendix A**.

Freeway lane, ramps, and surface streets closures will be performed in accordance with lane closure charts developed for the contract documents. Preliminary lane closure charts with 24-hour traffic count data are provided in **Appendix B** for information purposes only. Temporary signs, placement of temporary concrete barrier, and temporary crash cushions will be provided for public and contractor safety.

The Transportation Management Plan (TMP) is a specialized program tailored to prevent and mitigate the impacts of a construction project by applying a variety of techniques including *Motorist Information, Incident Management, Construction Strategies, and Public Information Strategies*. The major objectives of the TMP are to maintain efficient and safe movement of vehicles through the construction zone; and to provide intensive public awareness of potential impacts due to construction along US 101 and in the vicinity of the project.

3. TRANSPORTATION MANAGEMENT PLAN

3.1 Public Information

3.1.1 Telephone Hotlines

Through a recorded message, the hotline will provide information about detours, closures and other construction related information. At a minimum, hot line recordings will include a brief description of on going or imminent construction activity, hours of impact and detours.

Telephone information hotline messages should be prepared announcing the following events:

- Start of construction
- Full or partial intersection closures
- Lane closures
- City street closures

3.1.2 Traveler Information System (Internet)

The message provided via telephone hotlines will be posted on Caltrans and TravInfo web site, in addition to real time traffic information.

3.1.3 VTA Community Outreach

Provide up to date project information on the VTA's website and via Telephone Hotline.

3.1.4 Press Release

Project and construction information will be released to the press through Caltrans Public Information Office.

3.2 Motorist Information Strategies

The motorist information system is intended to provide advance notice regarding potential delays and/or available or lane and intersection approach closures during construction throughout the project. The strategies include two measures: Changeable Message Signs (CMS), and Stationary Mounted Signs.

3.2.1 Changeable Message Signs (CMS)

The function of Changeable Message Signs (CMS) is to alert drivers to changing travel conditions in the construction zone such as congestion and to improve their opportunity to change routes or adjust travel plans. CMS's can also be used to announce upcoming lane or street closures. Messages should conform to Caltrans guidelines. For example, CMS use should be limited to real-time conditions such as an ongoing lane closure. For advance notice of lane and street closures and other events, it is recommended that a standard sign package be used. The Project Construction Manager (CM) is responsible for monitoring message content and CMS deployment. At least one portable CMS should be utilized for every lane and/or street closure.

3.2.2 Stationary Mounted Signs

Stationary mounted construction and warning signs provide information about immediate road hazards to motorists. The signs may be used to notify motorists

about access closures (especially permanent) and changes along the corridor. Construction may provide input regarding numbers of signs needed.

3.3 Incident Management

The incident detection and response system include the Freeway Service Patrol (FSP) and Construction Zone Enhanced Enforcement Program (COZEEP).

3.3.1 Construction Zone Enhanced Enforcement Program

The Construction Zone Enhanced Enforcement Program (COZEEP) program involves the presence of the California Highway Patrol (CHP) in the construction zone, provides enforcement of speed restriction, and for a faster incident response.

It is recommended that a COZEEP program be established for the entire construction period. During lane closures, CHP officers would be used to initiate the traffic break and provide traffic control. Enhanced enforcement would most likely be used during lane closures but could be invoked at other times at the discretion of the Resident Engineer (RE). The RE would prepare a contract change order for each event requiring COZEEP. The total COZEEP cost, for the project is estimated to be approximately $585,000 based on approximate cost of $2000/8 Hour Shift/Unit.

3.3.2 Freeway Service Patrol

An essential element of the TMP is the continuous delivery of the FSP program beyond the existing peak-hour FSP service hours throughout the project limits. Prior to any Supplemental FSP coverage Caltrans needs to supplement its agreement with the MTC to include expansion of the FSP. The agreement between MTC and Caltrans will be included in the cooperative agreement for construction and include funding provisions. Once the co-op agreements have been executed and FSP funding has been secured, the Caltrans FSP supervisor Ken Wong (at 510-286-5917) can begin arranging the supplementary FSP contracts with MTC. Ken Wong must be requested for FSP at least one month prior to required supplemental FSP date.

The State Routes and Freeways affected by construction are currently patrolled by a FSP operated by private tow truck operators under the auspices of Caltrans, the California Highway Patrol, and the Metropolitan Transportation Commission's Service Authority for Freeways and Expressways (SAFE) during the following times:

Weekdays	AM Shift	6:00 AM to 9:00 AM
	PM Shift	3:00 PM to 7:00 PM

Roadway segments affected by construction, supplementary FSP coverage (i.e. additional tow truck patrols) during morning and afternoon commute hours could reduce tow truck response times and reduce delay associated with stalls and

accidents.

Prior to the implementation of any supplementary FSP coverage Caltrans needs to supplement its agreement with the MTC to include expansion of the FSP. The agreement between MTC and Caltrans will be included in the cooperative agreement for construction and include funding provisions. Once the cooperative agreements have been executed and FSP funding has been secured, the Caltrans FSP Supervisor can begin arranging supplementary tow contracts with the MTC.

3.4 Traffic Management Plan Strategies

This section describes possible TMP strategies to mitigate construction-related traffic delays. The TMP strategies are of a general nature and mitigate the overall level of congestion.

Traffic management strategies that require action by the construction contractor are described briefly in the TMP and presented in detail in the special provisions. Traffic management strategies that are to be implemented by VTA appear only in the TMP and are not included in the contract Technical Specifications.

3.4.1 Construction Strategies

Construction strategies are implemented for projects regardless of whether a TMP is prepared. One of the primary considerations in planning and staging construction projects is to minimize the impact of the construction activity on traffic circulation. The manner in which construction is staged is the first strategy employed to minimize disruption to traffic through the construction zone and of adjacent neighborhoods. One of the key features of stage construction is scheduling work to minimize impacts to traffic, and another is the provision of alternate routes. These are accomplished by scheduling all work requiring lane closures to off-peak times, typically in the late night and early morning hours and by providing clearly marked detours whenever highway lanes or side streets are closed. Lane requirement charts and liquidated damage clauses for late lane closure pick ups by the contractor beyond the hours specified in the approved lane closure charts are included in the contract Special Provisions for this project.

Most of the construction activity will be done behind temporary concrete barriers so lane closures and traffic control will be kept to a minimum. Temporary pavement delineation will be maintained to facilitate continuous traffic flow through the construction zone.

3.4.2 Traffic Handling and Stage Construction

Temporary pavement delineation will be used to shift traffic on US 101, on/off-ramps and local roadways. Temporary signs, placement of temporary concrete barriers (Temporary K-Rails), and temporary crash cushions will be provided for

public and contractor safety (refer to Stage Construction and Traffic Handling Plan SC-1 through SC-25) attached in **Appendix A**. Traffic Handling Plans and Construction Area Sign Plans are attached in **Appendix A** for information purposes only.

Traffic control plans, including details, to provide safe traffic operations during temporary closures of one or two lanes on the freeway mainline and/or ramp closures are included in Appendix A (refer to Traffic Handling Plans and Construction Area Sign Plans).

Construction of the proposed project is to be undertaken in six main primary stages summarized as below:

Stage 1 – Traffic

1. Maintain number of lanes on freeway using 11 foot lanes minimum.
2. Shift southbound Embarcadero Road on-ramp traffic away from ramp nose during night time construction.

Stage 1 - Construction

1. Construct southbound Route 101 widening between "C" 49+22 and "C" 119+83 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
2. Construct southbound and northbound Matadero Creek Bridge widening.
3. Construct a portion of southbound Embarcadero Road on-ramp between "ESN" 45+00 and "ESN" 49+22.
4. Construct temporary pavement for the southbound Oregon Expressway on-ramp "D1" line.
5. Construct northbound Route 101 widening between "C" 55+80 and "C" 113+93 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut. Construct a portion of the northbound San Antonio Road Loop on-ramp between "SANN-L" 113+93 and "SANN-L" 120+70.
6. Remove curb and gutter and repave the temporary shoulder and gore for the northbound Oregon Expressway off-ramp "D3" line during night time closure.
7. Construct a portion of northbound Embarcadero Road off-ramp between "ENF" 45+10 and "ENF" 46+00.
8. Construct temporary pavement for the northbound Oregon Expressway off-ramp "D3" line.
9. Construct temporary pavement for the northbound Embarcadero Road off-ramp "D2" line.
10. Construct temporary pavement for the northbound San Antonio Road on-ramp "D7" line.

11. Construct southbound Route 101 widening between "C" 122+56 and "C" 126+76 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
12. Construct a portion of the southbound San Antonio Road Loop off-ramp between "SASF-L" 129+25 and "SASF-L" 133+90.
13. Construct temporary pavement for the southbound San Antonio Road loop off-ramp "D4" line
14. Construct southbound Route 101 widening between "C" 130+28 and "C" 162+65 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
15. Construct a portion of the northbound San Antonio Road loop on-ramp between "SANN-L" 123+12 and "SANN-L" 126+86.
16. Construct temporary pavement for the southbound San Antonio Road off-ramp "D8" line.
17. Construct southbound and northbound Adobe Creek Bridge Widening.
18. Construct temporary pavement for the northbound San Antonio Road Loop on-ramp "D6" line.
19. Construct a portion of the northbound San Antonio Road on-ramp between "SANN" 123+12 and "SANN" 126+41.
20. Remove concrete median island along Rengstorff Avenue southbound on-ramp between "RSN" 165+48 and "RSN" 168+03. Place temporary crash cushion after median island removal as shown on sheet TH-13 during night time closure.
21. Construct temporary pavement for the northbound San Antonio Avenue off-ramp "D5" line.
22. Construct temporary pavement for the northbound Amphitheatre Parkway on-ramp "D10" line.
23. Construct northbound Route 101 widening between "C" 172+35 and "C" 180+58 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
24. Construct northbound Route 101 widening between "C" 163+50 and "C" 169+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
25. Construct temporary pavement for the southbound Rengstorff Avenue on-ramp "D9" line.
26. Construct southbound Route 101 widening between "C" 166+90 and "C" 172+61 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
27. Construct a portion of the northbound Amphitheatre Parkway off-ramp between "ANF" 161+90 and "ANF" 172+36.
28. Construct a portion of the northbound Shoreline Boulevard on-ramp between "SHNN" 199+25 and "SHNN" 205+08.

Stage 2 – Traffic

1. Shift mainline traffic and maintain number of lanes on freeway using 11 foot lanes minimum.
2. Shift northbound Oregon Expressway off-ramp "ONF" line traffic onto newly constructed temporary ramp "D3" line.
3. Shift northbound Embarcadero Road off-ramp traffic onto newly constructed temporary ramp "D2" line.
4. Shift southbound Oregon Expressway on-ramp "OSN" line traffic onto newly constructed temporary ramp "D1" line.
5. Shift northbound San Antonio Road Diagonal on-ramp "SANN" line traffic onto newly constructed temporary ramp "D7" line.
6. Shift southbound San Antonio Loop off-ramp "SASF-L" line traffic onto newly constructed temporary ramp "D4" line.
7. Shift southbound San Antonio Road off-ramp "SASF" line traffic onto newly constructed temporary ramp "D8" line.
8. Shift northbound San Antonio Road Loop on-ramp "SANN-L" line traffic onto newly constructed temporary ramp "D6" line.
9. Shift northbound Amphitheatre Parkway off-ramp "ANF" line traffic to newly constructed pavement.
10. Shift northbound Amphitheatre on-ramp traffic onto newly constructed temporary ramp "D10" line.
11. Shift southbound Rengstorff Avenue on-ramp "RSN" line traffic to newly constructed temporary ramp on the "D9" line.
12. Shift northbound San Antonio Road off-ramp "SANF" line traffic to newly constructed temporary ramp on the "D5" line.
13. See Sheet TH-26 and TH-27 for temporary Striping on Bayshore Parkway.
14. Shift onramp traffic onto three 12 foot lanes.

Stage 2 - Construction

1. Construct the northbound Oregon Expressway off-ramp between "ONF" 43+73 and "ONF" 47+24.
2. Construct a portion of the northbound Embarcadero Road off-ramp between "ENF" 47+24 and "ENF" 55+80.
3. Construct a portion of the southbound Oregon Expressway on-ramp between "OSN" 38+52 and "OSN" 44+15.
4. Construct a portion of the southbound Embarcadero Road on-ramp between "ESN" 44+15 and "ESN" 46+35.
5. Construct HMA overlay for the southbound San Antonio Road Loop off-ramp between "SASF-L" 133+00 and "SASF-L" 133+78 during night time closure at the start of Stage 2.
6. Construct the northbound San Antonio Road Diagonal on-ramp between "SANN" 121+80 and "SANN" 126+80.

7. Construct a portion of the northbound San Antonio Road Loop on-ramp between "SANN-L" 120+70 and "SANN-L" 121+80.
8. Construct southbound Route 101 widening between "C" 119+83 and "C" 120+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
9. Construct remaining portion of the southbound San Antonio Road off-ramp between "SASF" 120+00 and "SASF" 127+74.
10. Construct remaining portion of the southbound San Antonio Road Loop off-ramp between "SASF-L" 129+25 and "SASF-L" 133+78.
11. Construct southbound Route 101 widening between "C" 126+75 and "C" 129+25 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
12. Construct a portion of northbound San Antonio Road Loop on-ramp between "SANN-L" 124+50 and "SANN-L" 129+70.
13. Remove AC Dike on the northbound San Antonio Road Loop on-ramp between "SANN-L" 129+70 and "SANN-L" 130+45.
14. Construct HMA overlay at the existing northbound Amphitheatre Parkway off-ramp between "ANF" 167+10 and "ANF" 168+30 during night closure at the start of Stage 2.
15. Remove curb along Bayshore Pkwy between "BYPW" 36+11 and "BYPW" 54+98 and construct NB Route 101 widening between "C" 140+44 and "C" 152+89 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
16. Construct a portion of the northbound San Antonio Road off-ramp between "SANF" 133+80 and "SANF" 140+44.
17. Construct a portion of the northbound Amphitheatre Parkway on-ramp between "ANN" 152+89 and "ANN" 161+70.
18. Construct a portion of the southbound Rengstorff Avenue on-ramp between "RSN" 166+50 and "RSN" 174+97
19. Construct southbound Route 101 widening between "C" 174+97 and "C" 202+18 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
20. Construct northbound Route 101 widening between "C" 167+26 and "C" 173+16 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
21. Construct temporary pavement for the northbound San Antonio Road off-ramp "D12" line.
22. Construct remaining portion of the northbound Amphitheatre Parkway off-ramp between "ANF" 167+56 and "ANF" 172+36.
23. Construct northbound Route 101 widening between "C" 180+58 and "C" 193+14 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
24. Construct a portion of the southbound Old Middlefield Way on-ramp between "OMSN" 202+12 and "OMSN" 204+15.

25. Construct temporary pavement for the southbound Old Middlefield Way on-ramp "D13" line.
26. Construct HMA overlay for the northbound Shoreline Boulevard on-ramp between "SHNN" 200+10 and "SHNN" 205+07 using consecutive night time closures.
27. Construct the northbound Permanente Creek box culvert extension and wing walls.
28. Construct a portion of the northbound Shoreline Boulevard onramp between "SHNN" 193+14 and "SHNN 195+03.
29. Construct southbound Route 101 widening between STA "C" 212+49 and "C" 215+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
30. Construct temporary pavement for southbound Shoreline Boulevard off-ramp "D14" line.
31. Construct a portion of the southbound Shoreline Boulevard off-ramp between "SHSF" 212+38 and "SHSF" 217+45.

Stage 3 – Traffic

1. Shift northbound Embarcadero Road off-ramp "ENF" line traffic and northbound Oregon Expressway off-ramp "ONF" line traffic onto newly constructed pavement.
2. Shift southbound Oregon Expressway on-ramp "OSN" line traffic onto newly constructed pavement.
3. Shift northbound San Antonio Road Diagonal on-ramp "SANN" line traffic onto newly constructed pavement.
4. Shift northbound San Antonio Road Loop on-ramp "SANN-L" traffic onto newly constructed pavement only after the removal of the portion of temporary ramp "D7" line previously overlayed over the northbound San Antonio Road on-ramp "SANN-L" line.
5. Shift southbound San Antonio Road off-ramp "SASF" line traffic onto newly constructed pavement.
6. Shift southbound San Antonio Road Loop off-ramp "SASF-L" line traffic onto newly constructed pavement.
7. Open newly constructed pavement to southbound mainline traffic.
8. Shift northbound San Antonio Road off-ramp "SANF" line traffic onto newly constructed pavement and temporary ramp "D12" line.
9. Shift northbound Amphitheatre Parkway on-ramp "ANN" line traffic onto newly constructed pavement.
10. Shift southbound Rengstorff Avenue on-ramp "RSN" line traffic onto newly constructed pavement.
11. Shift northbound Amphitheatre Parkway off-ramp "ANF" line traffic onto newly constructed pavement.
12. Open newly constructed Auxiliary lane to northbound Route 101 mainline traffic.

13. See sheet PD-10 and PD-11 for final striping on Bayshore Parkway.
14. Shift southbound Shoreline Boulevard off-ramp "SHSF" line traffic onto newly built temporary ramp "D14" line.
15. Shift traffic onto newly constructed pavement.
16. Shift southbound Old Middlefield Way on-ramp "OMSN" line traffic onto newly constructed temporary ramp "D13" line.

Stage 3 – Construction

1. Construct HMA overlay for the northbound Embarcadero Road off-ramp "ENF" line during night time closure at the start of Stage 3.
2. Construct remaining portion of southbound Oregon Expressway on-ramp between "OSN" 36+45 and "OSN" 43+00.
3. Remove curb and gutter and construct drainage system No. 4 along southbound Embarcadero Road on-ramp "ESN" line during weekend closure. Construct HMA overlay during night time closure.
4. Remove the temporary pavement along the southbound Oregon Expressway on-ramp "OSN" line. Remove and construct MBGR along Oregon Expressway Overcrossing.
5. Construct gore and constrast surface treatment northbound Route 101 between "C" 45+09 and "C" 56+36.
6. Construct remaining portion of the northbound Embarcadero Road off-ramp between "ENF" 45+08 and "ENF" 55+80.
7. Remove portion of temporary ramp "D7" line previously overlayed over the northbound San Antonio Road on-ramp "SANN-L" line during night time closure at the start of Stage 3.
8. Construct remaining portion of the northbound San Antonio Road loop on-ramp between "SANN-L" 115+70 and "SANN-L" 129+75.
9. Construct northbound Route 101 widening between "C" 115+70 and "C" 140+50 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
10. Remove temporary pavement along the southbound San Antonio Road Loop off-ramp "SASF-L" line and construct constrast surface treatment.
11. Remove temporary pavement along the southbound San Antonio Road off-ramp "SASF" line and construct constrast surface treatment.
12. Remove temporary pavement along the northbound San Antonio Road loop on-ramp "SANN-L" line.
13. Remove temporary pavement along the northbound San Antonio Road off-ramp "SANF" line.
14. Construct temporary pavement for the southbound Rengstorff Avenue off-ramp "D" 11 line.
15. Remove existing pavement along the northbound Amphitheatre Parkway off-ramp "ANF" line and construct remaining portion of ramp .

16. Construct northbound Route 101 widening between "C" 152+19 and "C" 161+87 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
17. Construct remaining portion of the northbound Amphitheatre Parkway on-ramp between "ANN" 152+11 and "ANN" 161+70.
18. Construct a portion of the northbound San Antonio Road off-ramp between "SANF" 133+79 and "SANF" 140+44.
19. Remove temporary pavement along the northbound Amphitheatre on-ramp "ANN" line.
20. Construct a portion of the southbound Shoreline Boulevard off-ramp between "SHSF" 211+51 and "SHSF" 217+45.
21. Construct HMA overlay for the northbound Shoreline Boulevard on-ramp between "SHNN" 195+03 and "SHNN" 200+10 using consecutive night time closures.
22. Construct remaining portion of the northbound Shoreline Boulevard on-ramp between "SHNN" 193+14 and "SHNN" 199+25.
23. Construct northbound Route 101 widening between "C" 193+14 and "C" 208+85 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
24. Construct remaining portion of the southbound Old Middlefield Way on-ramp between "OMSN" 198+00 and "OMSN" 204+14.
25. Construct southbound Route 101 widening between "C" 204+14 and "C" 211+51 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.

Stage 3A – Traffic

1. Shift southbound Rengstorff Avenue off-ramp "RSF" line traffic onto temporary pavement along "D11" line.

Stage 3A – Construction

1. Construct southbound Route 101 widening between "C" 163+12 and "C" 166+36 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
2. Construct remaining portion of the southbound Charleston Road on-amp between "CSN" 161+82 and "CSN" 163+12.
3. Construct a portion of southbound Rengstorff Avenue off0ramp between "RSF" 166+36 and "RSF" 170+53.

Stage 4 – Traffic

1. Shift mainline traffic and maintain number of lanes on freeway and ramps using 11 foot lanes minimum.

2. Shift northbound Embarcadero Road "ENF" line traffic onto newly constructed pavement.
3. Shift northbound San Antonio Road Loop on-ramp "SANN-L" traffic onto newly constructed pavement.
4. Shift northbound San Antonio Road off-ramp "SANF" line traffic onto newly constructed pavement.
5. Shift northbound Amphitheatre Parkway on-ramp "ANN" line traffic onto newly constructed pavement.
6. Shift southbound Rengstorff Avenue off-ramp "RSF" line traffic onto newly constructed pavement.
7. Shift southbound Old Middlefield Way on-ramp "OMSN" line traffic onto newly constructed pavement.
8. Shift southbound mainline traffic onto newly constructed pavement.
9. Shift southbound Shoreline Boulevard off-ramp "SHSF" line traffic onto newly constructed pavement.

Stage 4 – Construction

1. Construct permanent freeway median between "C" 39+90 and "C" 215+00.
2. Remove temporary pavement from the northbound Oregon Expressway off-ramp "ONF" line and construct remaining permanent portion.
3. Remove temporary pavement from the northbound San Antonio Road on-ramp "SANN" line and construct remaining portion of permanent ramp.
4. Remove temporary pavement from the northbound San Antonio Road off-ramp "SANF" line.
5. Construct remaining portion of the southbound Rengstorff Avenue on-ramp between "RSN" 166+50 and "RSN" 169+85. Remove k-rail, place HMA-A overlay to the finish grade and restripe pavement to three 12' lanes during night time closure prior to opening traffic to public.
6. Construct remaining portion of the southbound Rengstorff Avenue off-ramp between "RSF" 166+36 and "RSF" 170+53, remove k-rail, place HMA-A overlay to the finish grade and restripe pavement to three 12' lanes during night time closure prior to opening traffic to public.
7. Construct concrete median island between "RSN" and "RSF" line.
8. Remove temporary pavement along Rengstorff southbound on and off-ramp,
9. Remove temporary pavement from the southbound Shoreline Boulevard off-ramp "SHSF" line and construct remaining portion of the permanent ramp.
10. Remove temporary pavement from the southbound Old Middlefield Way on-ramp "OMSN" line and construct remaining portion of the permanent ramp.

Stage 5 – Traffic

1. Maintain traffic using previous stage striping.

Stage 5 – Construction

1. Cold plane and construct HMA-A cross slope correction for northbound Route 101 between "C" 51+62 and "C" 211+24 through lane closures.
2. Construct HMA-A cross slope correction for southbound Route 101 between "C" 47+28 and "C" 215+00 through lane closures.

Stage 6 – Traffic

1. Shift all traffic to final striping.

Stage 6 – Construction

1. Place RHMA-G overlay for northbound Route 101 between "C" 51+62 and "C" 211+24 through lane closures.
2. Place RHMA-G overlay for southbound Route 101 between "C" 47+28 and "C" 215+00 through lane closures.

3.4.3 Traffic Detours

Proposed traffic detours during temporary closures of the on/off-ramps in the vicinity of the project are illustrated on Construction Area Sign Plans attached in **Appendix A.** Proposed detours and ramp closure charts have been developed for the project taking into consideration the capacity of each on/off-ramps where the traffic is proposed to be detoured. The proposed detours have been conformed with the local jurisdiction and finalized in this submittal for the project. Additional traffic analysis in consultation with Caltrans and local jurisdiction as needed will be conducted and submitted if necessary at the next submittal to ensure that the detour traffic will not have any significant impacts during construction on the detoured routes.

3.4.4 Contractor Contingency Plan

The contractor will be required to submit a contingency plan for reopening closures to public traffic, at least one week prior to freeway/ramps closure, or any critical operation identified by the Resident Engineer. The traffic control plan shall contain a detailed contingency plan to ensure opening of the roadway by the designated time. During construction activities requiring roadway closures, the contractor shall provide appropriate personnel to monitor activities and make decisions regarding activation of contingency plans. As soon as it becomes evident during any construction activity that it will not be possible to complete that activity and remove the closure at the designated time, that activity shall be halted and postponed until a later date.

The contingency plan shall identify key operational decision points with a timeline listing the expected completion time of each critical path activity. Clearly defined trigger points shall be identified with each critical path activity to establish when the

contingency plan will be activated. The plan will list and describe any and all standby equipment and secondary material suppliers, to be available to complete the operations in the event of equipment failure, unexpected loss of material, or unexpected uselessness of material.

A decision tree with clearly defined lines of communication and authority shall be provided in the contingency plan by the contractor. The names, telephone numbers and pager numbers of the Contractor's Project Manager, Local Authority's Resident Engineer, Caltrans Permit and/or Construction Inspector, District 4 Traffic Management Center, CHP Area Commander, Emergency Services, and other applicable personnel shall be provided. Appropriate communication equipment will be provided and procedures established to communicate between each other during the entire construction period, especially whenever emergency events happen.

3.4.5 Emergency Detour Plan

In coordination with Caltrans and local jurisdiction, emergency service routes within the project area will be identified as field conditions require and as per the Contractor. Typically, emergency detour routes serve hospitals, fire/police stations, emergency shelters, command centers and other facilities that provide essential services in times of emergencies, either natural or man-made. Emergency response agencies will be notified in advance prior to any change in traffic control that can affect the agency. Any planned closures or interruptions on designated emergency service routes will be notified and coordinated with appropriate emergency service providers by the Contractor.

3.4.6 Emergency Notification Plan

The Contractor will be required to submit an emergency notification plan one month before the start of construction activities for the project. The emergency notification plan shall identify the persons to be contacted in case of emergency. The plan should provide the name, contact numbers, and their responsibilities. The plan should also identify the telephone contacts of the potential organizations and contacts in the event of an emergency. Upon notification of the occurrence of an emergency situation requiring response, the involved organizations will implement their respective emergency plan and procedures.

APPENDIX A
STAGE CONSTRUCTION, TRAFFIC HANDLING AND CONSTRUCTION AREA SIGNS PLANS

LEGEND

- CONSTRUCTION THIS STAGE
- TEMPORARY PAVEMENT
- REMOVE PAVEMENT
- (X) CONSTRUCTION ITEM NUMBER
- [X] TRAFFIC ITEM NUMBER

STAGE 1 CONSTRUCTION

1. CONSTRUCT SB ROUTE 101 WIDENING BETWEEN "C" 49+22 AND "C" 119+83 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING PCC ELEVATION.
2. CONSTRUCT SB & NB MATADERO CREEK BRIDGE WIDENING.
3. CONSTRUCT A PORTION OF THE SB EMBARCADERO Rd ON-RAMP BETWEEN "ESN" 45+00 AND "ESN" 49+22.
4. CONSTRUCT TEMPORARY PAVEMENT FOR THE SB OREGON Exp ON-RAMP "D1" LINE.
5. CONSTRUCT NB ROUTE 101 WIDENING BETWEEN "C" 55+80 AND "C" 113+93 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING ELEVATION AT SAWCUT. CONSTRUCT A PORTION OF THE NB SAN ANTONIO Rd LOOP ON-RAMP BETWEEN "SANN-L" 113+93 AND "SANN-L" 120+70.
6. REMOVE CURB AND GUTTER AND REPAVE THE TEMPORARY SHOULDER AND GORE FOR THE NB OREGON Exp OFF-RAMP "D3" LINE DURING NIGHT TIME CLOSURE.
7. CONSTRUCT A PORTION OF THE NB EMBARCADERO Rd OFF-RAMP BETWEEN "ENF" 45+10 AND "ENF" 46+00.
8. CONSTRUCT TEMPORARY PAVEMENT FOR THE NB OREGON Exp OFF-RAMP "D3" LINE.
9. CONSTRUCT TEMPORARY PAVEMENT FOR THE NB EMBARCADERO Rd OFF-RAMP "D2" LINE.

STAGE 1 TRAFFIC

[1] MAINTAIN NUMBER OF LANES ON FREEWAY USING 11' LANES MINIMUM.

[2] SHIFT SB EMBARCADERO Rd ON-RAMP TRAFFIC AWAY FROM RAMP NOSE DURING NIGHT TIME CONSTRUCTION.

NOTES:

1. STAGE CONSTRUCTION PLANS SHOW WORK REQUIRING TRAFFIC HANDLING. WORK NOT REQUIRING TRAFFIC HANDLING MAY NOT BE SHOWN AND CAN BE COMPLETED IN ANY ORDER.
2. CONTRACTOR SHALL MINIMIZE DISRUPTING ACCESS TO DRIVEWAYS DURING ALL CONSTRUCTION STAGES.
3. CONSTRUCTION ACTIVITIES DENOTED AS "FIRST ORDER OF WORK" SHALL BE COMPLETED PRIOR TO OPENING THE ROADWAY TO TRAFFIC.
4. THE CONTRACTOR SHALL MINIMIZE CLOSING OF ANY BIKE LANES DURING CONSTRUCTION. IF CLOSURES ARE REQUIRED, "SHARE THE ROAD" SIGN SHALL BE POSTED.
5. ALL TEMPORARY RAILING (TYPE K) PLACED AT LOCATIONS OF ELEVATION DIFFERENCE MORE THAN 0.15' BETWEEN ADJACENT PAVEMENTS AND/OR LESS THAN 1.0' FROM ETW SHALL BE DOWELED IN AS PER STANDARD PLANS.
6. AT EXISTING GORES WITH CURBS, REMOVE CURBS AND PLACE FULL DEPTH HMA PRIOR TO PLACING TEMPORARY RAILING (TYPE K) AND CRASH CUSHIONS.
7. FOR THE ENTIRE PROPOSED AND EXISTING FREEWAY WIDTH, FINAL HMA LIFTS TO BE PLACED IN STAGE 5, WHILE RHMA OVERLAY TO BE PLACED IN STAGE 6.
8. FOR TEMPORARY DRAINAGE WORK DURING CONSTRUCTION, SEE SHEETS D-18 TO D-24 AND DD-26 TO DD-29.
9. FOR ELECTRICAL WORK DURING CONSTRUCTION, SEE SHEETS E-62 TO E-135.
10. INSTALL MBGR ALONG MAINLINE TO FINAL ELEVATION.
11. FOR ALLOWABLE CLOSURE HOURS FOR THE ADOBE CREEK PEDESTRIAN UNDERCROSSING SEE "MAINTAINING TRAFFIC" OF THE PROJECT SPECIAL PROVISIONS.

TMP CHECKLIST

DISTRICT 4
TRANSPORTATION MANAGEMENT PLAN CHECKLIST

**** This checklist is to be signed and a copy be included in the Resident Engineer file ****

District / EA: 04-4A3301 **Co.-Rte-PM:** 04-SCL-101-48.7/52.0

Project Engineer: Caroline Pineda (Caltrans)/ Nayan Amin (URS Corp.) **Description:** US 101 Auxiliary Lanes Project in Santa Clara County

Date Prepared: 01/31/11 **Construction Cost:** $64.83 million **Working Days:** 380

Check each box and reference your attachments to the item(s) number(s) shown on the list.

	Required	Not required	Not Applicable	COMMENTS
1.0 Public Information				
1.1 Public Awareness Campaign	X			$65,000
1.2 Other Strategies		X		
2.0 Motorist Information Strategies				
2.1 Changeable Message Signs	X			$780,000 in BEES
2.2 Construction Area Signs	X			$130,000 in BEES
2.3 Highway Advisory Radio (fixed and mobile)		X		
2.4 Planned Lane Closure Web Site	X			Construction to provide info to TMC/DTM
2.5 Caltrans Highway Information Network (CHIN)	X			Construction to provide info to TMC
3.0 Incident Management				
3.1 COZEEP	X			$585,000 in BEES
3.2 Freeway Service Patrol	X			$325,000 in BEES
4.0 Traffic Management Strategies				
4.1 Lane/Ramp Closures Charts	X			245 Days of lane/ramp closure
4.1.1 Constructability Review	X			
4.1.2 Detour through local street	X			Detour plans are provided
4.2 Total Facility Closure		X		
4.3 Coordination with adjacent construction	X			Contract # 04-243-235614, Project # 26244001 (SCVWD Project) & City of Mountain View Project. Details are provided below *.
4.4 Contingency Plan				
4.4.1 Contractor Cont. Plan	X			Construction to provide upon engineer's request
4.4.2 Emergency Detour Plan	X			Construction/Contractor to provide
4.4.3 Emergency Notification Plan	X			Construction/Contractor to provide
4.5 SSP 12-220 and Others	X			101 Mainline:Damage Clause Recommendation 1st half hour $7,329/10 minutes 2nd half hour $10,993/10 minutes 2nd hour $14,657/10 minutes
4.6 A+B Bidding Provisions	X			RUC = $5,310
4.7 Other Strategies: One way traffic control (flagger/signal)		X		
5.0 Anticipate Delays				
5.1 Lane Closure Review Committee (for anticipated delays over 15 minutes)		X		
5.2 Planned freeway closures		X		

5.3 Minimal delay anticipated - no further action required — [X] yes [ ] no If no, explain additional measures on attached sheet.

5.4 For detailed discussion, see TMP report — [X] yes [ ] no

* SM 0.0 North of Embarcadero Road Overcrossing - Widening to provide auxiliary lanes in the NB and SB directions.
SCL 48.9 Adjacent to Permanente Creek - Construction of Permanente Creek Pedestrian Overcrossing.
SCL 48.9 Permanente Creek - Construction of Flood Wall along Permanente Creek

25	120159			Temporary Traffic Stripe (Paint)	LF	588,000	$ 0.40	$ 235,200
26	120165			Channelizer (Surface Mounted)	EA	37	$ 35.00	$ 1,295
27	120300			Temporary Pavement Marker	EA	11,000	$ 4.00	$ 44,000
28	121161			Temporary Terminal Section (Type K)	EA	8	$ 1,100.00	$ 8,800
29	128650			Portable Changeable Message Sign	LS	1	$ 780,000.00	$ 780,000
30	129000			Temporary Railing (Type K)	LF	125,000	$ 9.00	$ 1,125,000
31	129100			Temporary Crash Cushion Module	EA	870	$ 175.00	$ 152,250
32	129101A			Temporary Crash Cushion (Type ABSORB 350)	EA	11	$ 4,000.00	$ 44,000
33	129150			Temporary Traffic Screen	LF	35,400	$ 5.00	$ 177,000
34	148005			Noise Monitoring	LS	1	$ 1,500.00	$ 1,500
35	150206			Abandon Culvert	EA	5	$ 1,000.00	$ 5,000
36	150604			Remove Wood Fence	LF	590	$ 8.00	$ 4,720
37	150608			Remove Chain Link Fence	LF	19,600	$ 3.00	$ 58,800
38	150662			Remove Metal Beam Guard Railing	LF	2,420	$ 8.00	$ 19,360
39	150667A			Remove Double Thrie Beam Barrier	LF	4,560	$ 6.00	$ 27,360
40	150668			Remove Flared End Section	EA	6	$ 225.00	$ 1,350
41	150713			Remove Pavement Marking	SQFT	2,020	$ 3.00	$ 6,060
42	150714			Remove Thermoplastic Traffic Stripe	LF	153,000	$ 0.40	$ 61,200
43	150722			Remove Pavement Marker	EA	18,300	$ 1.00	$ 18,300
44	150742			Remove Roadside Sign	EA	120	$ 100.00	$ 12,000

Item	Item Code	(F)	(B)	Item Description	Unit	Estimated Quantity	Unit Price	Total Cost
45	150760			Remove Sign Structure	EA	17	$ 10,000.00	$ 170,000
46	150805			Remove Culvert	LF	3,130	$ 22.00	$ 68,860
47	150806A			Modify Reclaimed Water Line at East Bridge at Matadero Creek	LS	1	$ 28,000.00	$ 28,000
48	150820			Remove Inlet	EA	32	$ 700.00	$ 22,400
49	150821			Remove Headwall	EA	19	$ 930.00	$ 17,670
50	150825A			Remove Automatic Drainage Gate	EA	1	$ 800.00	$ 800
51	150826			Remove Manhole	EA	2	$ 1,800.00	$ 3,600
52	150846			Remove Concrete Pavement	SQYD	1,770	$ 10.00	$ 17,700
53	152402A			Relocate CAV (Recycled Water)	EA	3	$ 5,000.00	$ 15,000
54	152403A			Relocate Blowoff Valve (Recycled Water)	EA	1	$ 5,000.00	$ 5,000
55	152404A			Relocate Locator Station (Recycled Water)	EA	1	$ 5,000.00	$ 5,000
56	152405A			Remove Gas Line	LF	20	$ 50.00	$ 1,000
57	152390A			Relocate Sign on Overhead	EA	1	$ 2,000.00	$ 2,000
58	152430			Adjust Inlet	EA	28	$ 1,500.00	$ 42,000
59	152438			Adjust Frame and Cover to Grade	EA	1	$ 950.00	$ 950
60	152601A			Clean Drainage Facility	LS	1	$ 30,000.00	$ 30,000
61	152750			Replace Sign Panel	EA	1	$ 5,000.00	$ 5,000
62	153103			Cold Plane Asphalt Concrete Pavement	SQYD	120,000	$ 2.00	$ 240,000
63	153210			Remove Concrete	CY	180	$ 120.00	$ 21,600
64	153214			Remove Concrete Curb	LF	12,200	$ 10.00	$ 122,000

Prepared by:

URS Corporation
100 W. San Fernando Street, Suite 200
San Jose, CA 95113

Project Description

The project proposes to construct auxiliary lanes, extend existing second High Occupancy Vehicle (HOV) lanes, and undertake associated ramp improvements including ramp widening and installing/activating ramp metering in both directions of U.S. Route 101 (US 101) in Santa Clara County between the State Route 85 (SR 85) interchange in the City of Mountain View and the Embarcadero Road interchange in the City of Palo Alto.

The purpose of the project is to relieve existing and future traffic congestion at freeway on-ramp and off-ramp connections, improve safety along the US 101 corridor, provide for improved local access over this segment of the US 101 corridor. Auxiliary lanes would improve traffic operations on the freeway by providing more acceleration and deceleration length for traffic entering and exiting the freeway at each interchange to merge and by allowing local traffic that is only going from one interchange to the next to use the freeway without impacting the main through lanes. Installation/activation of ramp metering at freeway on-ramps will meter traffic entering the mainline during peak periods. The extension of the existing second HOV lane leading to and from the SR 85 interchange in each direction of US 101 is projected to reduce the queue lengths that occur during peak periods. The project construction date is estimated to start in June 2011 and estimated to end in August 2013. The estimated construction cost for the project is $69.3 million.

The majority of the project improvements would be constructed within existing State right-of-way. Some minor right-of-way acquisitions will be needed at some locations as well as temporary construction easements. The proposed project has been assigned the Project Development Processing Category 4B since it does not require substantial new right-of-way for roadway purposes and does not substantially increase traffic capacity.

The project sponsor/requestor is the Santa Clara Valley Transportation Authority (VTA). Funding for project development, engineering, right-of-way, environmental documentation, construction and construction support for the project will be from a combination of Corridor Mobility Improvement Account (CMIA) Program funds and VTA Local Program Reserve funds. There is no federal funding for this project.

US 101 is a north-south freeway that begins south of Los Angeles and extends northward, through San Jose and San Francisco, to Oregon. Within the project limits, the freeway segment has full access control. Land uses in the project limits include commercial and industrial uses to the east of the freeway and residential, commercial and industrial uses to the west. US 101 typically has three mixed-flow lanes and one HOV lane in each direction within the project study area. In the Northbound direction, US 101 has an average daily traffic (ADT) volume of 155,000 between Shoreline Boulevard and Rengstorff Avenue, 157,000 between Rengstorff and San Antonio Road, and 161,000 between San Antonio Road and Embarcadero Road. In the Southbound direction, US 101 has an average daily traffic (ADT) volume of 74,500 between Shoreline Boulevard and Rengstorff Avenue, 57,000 between Rengstorff and San

Antonio Road, and 70,000 between San Antonio Road and Embarcadero Road, according to the 2000 and 2007 Traffic Volumes on the California State Highway System available from the Caltrans website,.

Need for Project

The purpose of this project is to relieve existing and future traffic congestion at freeway on-ramp and off-ramp connections, improve safety along the US 101 corridor and provide improved local access over this segment of the US 101 corridor. The congestion relief improvements are needed for current and future traffic needs. The addition of auxiliary lanes, extending the second HOV lanes and associated ramp improvements including ramp widening and installing/activating ramp metering will provide operational benefits to the freeway and the local transportation system. The added auxiliary lanes will provide more room for traffic entering and exiting the freeway facility at each interchange to merge and allow local traffic that is only going from one interchange to the next to use the freeway without impacting the mainline through traffic. Congestion has been identified as the primary cause of accidents in the project area, many of which are rear end type collisions. The project improvements are expected to result in a measurable reduction in congestion related injury accidents.

Main objectives of the projects are summarized below:

- Reduce existing traffic congestion
- Encourage the increased use of HOV lanes through expansion of existing HOV system
- Reduce local streets traffic during off peak periods for US 101 when ramps are not metered
- Reduce the number of congestion related accidents

Several of the interchanges within the project limits are closely spaced along the US 101 corridor and lack existing auxiliary lanes. During peak periods, the existing US 101 corridor within the project limits experiences bottlenecks between several of the existing interchanges that generates significant queuing upstream of the bottleneck location that impacts mainline and ramp operations. The current bottlenecks occur in the mixed flow lanes as well as the HOV lanes. Ramp metering equipment has been installed on some but not all of the freeway on-ramps within the project limits resulting in additional congestion on the freeway where on-ramp traffic is not metered.

The project proposes the following improvements:

- Construction of auxiliary lanes at the following locations:
    - ⇨ Northbound US 101 eliminate the number 5 lane drop near Shoreline Boulevard on-ramp and extend lane to the Rengstorff Avenue loop off-ramp.
    - ⇨ Northbound US 101 between the Rengstorff Avenue on-ramp to the San Antonio Road off-ramp.

- ⇨ Northbound US 101 between San Antonio Road on-ramp to the Oregon Expressway off-ramp.
- ⇨ Southbound US 101 from the Oregon Expressway on-ramp to the San Antonio Road diagonal off-ramp.

- Extend the existing second HOV lane in each direction of US 101. In the northbound direction of US 101, the existing HOV lanes drop from two HOV lanes to one HOV lane in the vicinity of the Shoreline Boulevard Interchange. This HOV lane drop would be eliminated and the second HOV lane would continue north until being dropped between the Oregon Expressway and San Antonio interchanges. In the southbound direction of US 101, the second HOV lane would be extended so that it will begin between the Oregon Expressway and San Antonio Road interchanges and will continue south to connect to the two existing HOV lanes in the vicinity of the Shoreline Boulevard Interchange.

- Ramp improvements at the following locations:
  - ⇨ Realign the existing three lane on-ramp from the Shoreline Boulevard Interchange to northbound US 101. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign the existing single lane off-ramp from northbound US 101 to eastbound Amphitheatre Parkway.
  - ⇨ Realign and widen the existing single lane on-ramp from Rengstorff Avenue to northbound US 101 to install/implement ramp metering with two mixed flow lanes at ramp meter.
  - ⇨ Realign the existing single lane off-ramp from northbound US 101 to San Antonio Road.
  - ⇨ Merge the loop on-ramp and diagonal on-ramp from San Antonio Road together prior to the merge with northbound US 101. Install/Implement ramp metering at the merge of the two on-ramps.
  - ⇨ Realign and widen the existing two lane on-ramp from Oregon Expressway to southbound US 101 to add a second mixed-flow lane. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign southbound San Antonio off-ramps.
  - ⇨ Realign the existing two lane on-ramp from Rengstorff Avenue to southbound US 101. Maintain HOV preferential lane and ramp metering.
  - ⇨ Realign the existing two lane on-ramp from Old Middlefield Way to southbound US 101.
  - ⇨ Realign SB Shoreline off-ramp.

- No work is proposed at the southbound Embarcadero Road diagonal on-ramp or the southbound Embarcadero loop ramps.

- Overlay of existing northbound and southbound US 101 pavement.

Construction for widening of US 101, on/off-ramps improvements and associated improvements will require temporary lane closures along US 101 and surface streets, except at the on-ramp from westbound Shoreline Boulevard to US 101 northbound and on-ramp from Embarcadero Road to US 101 southbound.. Other construction work will be completed, by shifting the traffic to temporary striping along US 101. The project is proposed to be constructed in six stages. The staging sequence has been developed in a way that impacts are minimized to the traffic. The proposed construction staging and traffic handling is summarized in Stage Construction Plans (SC-1 through SC-24).

Construction for widening of US 101, on/off-ramps improvements and associated improvements will require long-term closures at the following locations:

1. On-Ramp from Westbound Shoreline Boulevard to US 101 Northbound – Under Stage 1 one lane is required to be closed at the off-ramp. Under existing conditions, three lanes exist on the on-ramp.
2. On-Ramp from Embarcadero Road to US 101 Southbound – Under Stage 3, this ramp will need to be closed over the weekend (from Friday night to Monday morning) to construct the proposed drainage improvements at the ramp.

Temporary barriers systems such as K-rail will be used to close off the construction zones along the roadway. In order to install the temporary barriers and associated work including the removal and installation of pavement delineation will require temporary lane closures within the project limits.

Traffic Flow Characteristic and Development of Design Volumes

This section summarizes the methods and assumptions used to develop the lane closure charts and damage calculations associated with temporary lane closures within the vicinity of the project. Temporary lane closures in this document refer to the lane closures required to perform the construction of the project.

In order to determine the hourly volumes along the roadway, 24-hour traffic volumes were collected from Caltrans by URS Corporation. The data provided was collected in 2000 and 2007. Average hourly volumes for weekdays were developed based on the data collected. Growth factor of 1 percent per year was applied to Year 2000 and 2007 to project the ADT and hourly volumes for Year 2013 (Construction Year) Conditions.

Design Volumes

Based on 24-hour Traffic Volumes collected from Year 2000 and 2007, the maximum average daily volume in the northbound direction is approximately 161,000 vehicles per day (vpd), and approximately 70,000 vpd in the southbound direction. This data was used to derive the hourly volumes for typical Monday through Friday and Saturday through Sunday operations along US

101 through the project area. Projected Year 2013, 24-hour traffic volumes along the freeway mainline and ramps are included in **Appendix A**.

Capacity Threshold Assumptions

It should be noted that the following capacities were used to determine the freeway mainline and ramp lane closures for each direction of travel:

- For hourly volumes of less than 1,500 vehicles per hour (vph), one travel lane is required to be open;
- No lane closures along the freeway mainline are permitted for hourly volumes higher than 1,500 vph per lane;
- For one lane on-ramps, no ramp closures are permitted for hourly volumes higher than 1,200 vph; and
- For one lane off-ramps, no ramp closures for hourly volumes higher than 600 vph.

For each proposed partial or full closure, hourly demand volumes were compared to hourly capacities to determine if and for which specific hours of the day the closure can occur. Adjustments were made to avoid lane closures or openings of one to two hour periods, which would not provide practical working conditions.

Minimum Lane Requirements

The hourly volumes along US 101 and on/off-ramps are estimated based on the assumptions described in the earlier section. The hourly volumes were used to complete the freeway mainline and on/off-ramps closure analysis. For each freeway mainline and on/off-ramps closure, the following data is provided in **Appendices B** and **C**:

- Freeway mainline temporary lane closure charts with allowed hours of work indicated and projected traffic volumes;
- Temporary ramp closure charts with allowed hours of work indicated and projected traffic volumes;
- Temporary highway and street closure charts with allowed hours of work indicated; and
- Temporary full highway and street closure charts with allowed hours of work indicated.

Construction of the proposed project is to be undertaken in six main stages summarized as follows. Stage construction plans (SC-1 through SC-24) are attached in **Appendix D** for information purposes only.

Stage 1 – Traffic

1. Maintain number of lanes on freeway using 11 foot lanes minimum.

2. Shift southbound Embarcadero Road on-ramp traffic away from ramp nose during night time construction.

Stage 1 - Construction

1. Construct southbound Route 101 widening between "C" 49+22 and "C" 119+83 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
2. Construct southbound and northbound Matadero Creek Bridge widening.
3. Construct a portion of southbound Embarcadero Road on-ramp between "ESN" 45+00 and "ESN" 49+22.
4. Construct temporary pavement for the southbound Oregon Expressway on-ramp "D1" line.
5. Construct northbound Route 101 widening between "C" 55+80 and "C" 113+93 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut. Construct a portion of the northbound San Antonio Road Loop on-ramp between "SANN-L" 113+93 and "SANN-L" 120+70.
6. Remove curb and gutter and repave the temporary shoulder and gore for the northbound Oregon Expressway off-ramp "D3" line during night time closure.
7. Construct a portion of northbound Embarcadero Road off-ramp between "ENF" 45+10 and "ENF" 46+00.
8. Construct temporary pavement for the northbound Oregon Expressway off-ramp "D3" line.
9. Construct temporary pavement for the northbound Embarcadero Road off-ramp "D2" line.
10. Construct temporary pavement for the northbound San Antonio Road on-ramp "D7" line.
11. Construct southbound Route 101 widening between "C" 122+56 and "C" 126+76 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
12. Construct a portion of the southbound San Antonio Road Loop off-ramp between "SASF-L" 129+25 and "SASF-L" 133+90.
13. Construct temporary pavement for the southbound San Antonio Road loop off-ramp "D4" line
14. Construct southbound Route 101 widening between "C" 130+28 and "C" 161+95 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
15. Construct a portion of the northbound San Antonio Road on-ramp between "SANN-L" 123+12 and "SANN-L" 126+86.
16. Construct temporary pavement for the southbound San Antonio Road off-ramp "D8" line.
17. Construct southbound and northbound Adobe Creek Bridge Widening.

18. Construct temporary pavement for the northbound San Antonio Road Loop on-ramp "D6" line.
19. Construct a portion of the northbound San Antonio Road Loop on-ramp between "SANN" 123+12 and "SANN" 126+41.
20. Remove concrete median island along Rengstorff Avenue southbound on-ramp between "RSN" 165+90 and "RSN" 166+50.
21. Construct temporary pavement for the northbound San Antonio Avenue off-ramp "D5" line.
22. Construct temporary pavement for the northbound Amphitheatre Parkway on-ramp "D10" line.
23. Construct northbound Route 101 widening between "C" 172+35 and "C" 193+14 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
24. Construct temporary pavement for the southbound Rengstorff Avenue off-ramp "D11" line.
25. Construct northbound Route 101 widening between "C" 163+50 and "C" 169+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
26. Construct temporary pavement for the southbound Rengstorff Avenue on-ramp "D9" line.
27. Construct southbound Route 101 widening between "C" 166+90 and "C" 172+61 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
28. Construct a portion of the southbound Rengstorff Avenue on-ramp between "RSN" 169+60 and "RSN" 172+61.
29. Construct a portion of the northbound Amphitheatre Parkway off-ramp between "ANF" 161+90 and "ANF" 172+36. Place contaminated soil underneath proposed structural section.
30. Construct the northbound Permanente Creek box culvert extension and wingwalls.
31. Construct a portion of the northbound Shoreline Boulevard on-ramp between "SHNN" 193+14 and 195+03.
32. Construct a portion of the northbound Shoreline Boulevard on-ramp between "SHNN" 199+25 and "SHNN" 205+08.

Stage 2 – Traffic

1. Maintain number of lanes on freeway using 11 foot lanes.
2. Shift northbound Oregon Expressway off-ramp "ONF" line traffic onto newly constructed temporary ramp "D3" line.
3. Shift northbound Embarcadero Road off-ramp traffic onto newly constructed temporary ramp "D2" line.
4. Shift southbound Oregon Expressway on-ramp "OSN" line traffic onto newly constructed temporary ramp "D1" line.

5. Shift northbound San Antonio Road Diagonal on-ramp "SANN" line traffic onto newly constructed temporary ramp "D7" line.
6. Shift southbound San Antonio Loop off-ramp "SASF-L" line traffic onto newly constructed temporary ramp "D4" line.
7. Shift southbound San Antonio Road off-ramp "SASF" line traffic onto newly constructed temporary ramp "D8" line.
8. Shift northbound San Antonio Road Loop on-ramp "SANN-L" line traffic onto newly constructed temporary ramp "D6" line.
9. Shift northbound Amphitheatre Parkway off-ramp "ANF" line traffic to newly constructed pavement.
10. Shift northbound Amphitheatre on-ramp traffic onto newly constructed temporary ramp "D10" line.
11. Shift southbound Rengstorff Avenue on-ramp "RSN" line traffic to newly constructed temporary ramp on the "D9" line.
12. Open newly constructed auxiliary lane to northbound Route 101 mainline traffic.
13. Shift northbound San Antonio Road off-ramp "SANF" line traffic to newly constructed temporary ramp on the "D5" line.
14. Shift on-ramp traffic onto three 12 foot lanes.
15. Shift traffic onto newly constructed pavement.

Stage 2 - Construction

1. Construct the northbound Oregon Expressway off-ramp between "ONF" 43+73 and "ONF" 47+24.
2. Construct a portion of the northbound Embarcadero Road off-ramp between "ENF" 47+24 and "ENF" 55+80.
3. Construct a portion of the southbound Oregon Expressway on-ramp between "OSN" 38+52 and "OSN" 44+15.
4. Construct a portion of the southbound Embarcadero Road on-ramp between "ESN" 44+15 and "ESN" 46+35.
5. Construct HMA overlay for the southbound San Antonio Road Loop off-ramp between "SASF-L" 133+00 and "SASF-L" 133+80 during night time closure at the start of Stage 2.
6. Construct the northbound San Antonio Road Diagonal on-ramp between "SANN" 121+80 and "SANN" 126+80.
7. Construct a portion of the northbound San Antonio Road Loop on-ramp between "SANN-L" 120+70 and "SANN-L" 121+80.
8. Construct southbound Route 101 widening between "C" 119+83 and "C" 120+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
9. Construct remaining portion of the southbound San Antonio Road off-ramp between "SASF" 120+00 and "SASF" 127+74.

10. Construct remaining portion of the southbound San Antonio Road Loop off-ramp between "SASF-L" 129+23 and "SASF-L" 127+80.
11. Construct southbound Route 101 widening between "C" 126+75 and "C" 129+25 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
12. Construct a portion of northbound San Antonio Road Loop on-ramp between "SANN-L" 124+50 and "SANN-L" 129+70.
13. Remove AC Dike on the northbound San Antonio Loop on-ramp between "SANN-L" 129+70 and "SANN-L" 130+45.
14. Construct HMA overlay at the existing northbound Amphitheatre Parkway off-ramp between "ANF" 167+10 and "ANF" 168+30 during night closure at the start of Stage 2.
15. Construct a portion of the northbound San Antonio Road off-ramp between "SANF" 133+80 and "SANF" 140+44.
16. Construct northbound Route 101 widening between "C" 140+44 and "C" 152+89 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
17. Construct a portion of the northbound Amphitheatre Parkway on-ramp between "ANN" 152+89 and "ANN" 161+70.
18. Construct a portion of the southbound Rengstorff Avenue on-ramp between "RSN" 166+50 and "RSN" 174+97 with exception of placing the MBGR.
19. Construct southbound Route 101 widening between "C" 174+97 and "C" 202+12 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
20. Construct northbound Route 101 widening between Sta. "C" 167+26 and "C" 173+16 with exception placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
21. Construct temporary pavement for the northbound San Antonio Road off-ramp "D12" line.
22. Construct remaining portion of the northbound Amphitheatre Parkway off-ramp between "ANF" 167+56 and "ANF" 172+36.
23. Construct a portion of the southbound Old Middlefield Way on-ramp between "OMSN" 202+12 and "OMSN" 204+15.
24. Construct temporary pavement for the southbound Old Middlefield Way on-ramp "D13" line.
25. Construct HMA overlay for the northbound Shoreline Boulevard on-ramp "SHNN" line using consecutive night time closures.
26. Construct remaining portion of the northbound Shoreline Boulevard on-ramp between "SHNN" 193+14 and "SHNN" 199+25.
27. Construct northbound Route 101 widening between "C" 193+14 and "C" 208+85 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.

28. Construct southbound Route 101 widening between "C" 212+49 and "C" 215+00 with exception of placing 0.15' RHMA-G and matching HMA-A with existing PCC elevation.
29. Construct temporary pavement for southbound Shoreline Boulevard off-ramp "D14" line.
30. Construct a portion of the southbound Shoreline Boulevard off-ramp between "SHSF" 212+48 and "SHSF" 217+45.

Stage 3 – Traffic

1. Shift northbound Embarcadero Road off-ramp "ENF" line traffic and northbound Oregon Expressway off-ramp "ONF" line traffic onto newly constructed pavement.
2. Shift southbound Oregon Expressway on-ramp "OSN" line traffic onto newly constructed pavement.
3. Shift northbound San Antonio Road Diagonal on-ramp "SANN" line traffic onto newly constructed pavement.
4. Shift northbound San Antonio Road Loop on-ramp "SANN-L" traffic onto newly constructed pavement only after the removal of the portion of temporary ramp "D7" line previously overlayed over the northbound San Antonio Road on-ramp "SANN-L" line.
5. Shift southbound San Antonio Road off-ramp "SASF" line traffic onto newly constructed pavement.
6. Shift southbound San Antonio Road Loop off-ramp "SASF-L" line traffic onto newly constructed pavement.
7. Open newly constructed pavement to southbound mainline traffic.
8. Shift northbound San Antonio Road off-ramp "SANF" line traffic onto newly constructed pavement and temporary ramp "D12" line.
9. Shift northbound Amphitheatre Parkway on-ramp "ANN" line traffic onto newly constructed pavement.
10. Shift southbound Rengstorff Avenue off-ramp "RSF" line traffic onto temporary pavement along "D11" line.
11. Shift southbound Rengstorff Avenue on-ramp "RSN" line traffic onto newly constructed pavement.
12. Shift northbound Amphitheatre Parkway off-ramp "ANF" line traffic onto newly constructed pavement.
13. Open newly constructed auxiliary lane to northbound Route 101 mainline traffic.
14. Shift southbound Old Middlefield Way on-ramp "OMSN" line traffic onto newly constructed temporary ramp "D13" line.
15. Shift southbound Shoreline Boulevard off-ramp "SHSF" line traffic onto newly built temporary ramp "D14" line.

Stage 3 – Construction

1. Construct HMA overlay for the northbound Embarcadero Road off-ramp "ENF" line during night time closure at the start of Stage 3.
2. Construct remaining portion of southbound Oregon Expressway on-ramp between "OSN" 36+45 and "OSN" 43+00.
3. Remove curb and gutter and construct drainage system No. 4 along southbound Embarcadero Road on-ramp "ESN" line during weekend closure. Construct HMA overlay during night time closure.
4. Remove the temporary pavement along the southbound Oregon Expressway on-ramp "OSN" line. Remove and construct MBGR along Oregon Expressway Over Crossing.
5. Construct gore and constrast surface treatment northbound Route 101 between "C" 45+09 and "C" 56+36.
6. Construct remaining portion of the northbound Embarcadero Road off-ramp between "ENF" 45+08 and "ENF" 55+80.
7. Remove portion of temporary ramp "D7" line previously overlayed over the northbound San Antonio Road on-ramp "SANN-L" line during night time closure at the start of Stage 3.
8. Construct remaining portion of the northbound San Antonio Road loop on-ramp between "SANN-L" 115+70 and "SANN-L" 129+75.
9. Construct northbound Route 101 widening between "C" 115+70 and "C" 140+50 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
10. Remove temporary pavement along the southbound San Antonio Road Loop off-ramp "SASF-L" line and construct constrast surface treatment.
11. Remove temporary pavement along the southbound San Antonio Road off-ramp "SASF" line and construct constrast surface treatment.
12. Remove temporary pavement along the northbound San Antonio Road loop on-ramp "SANN-L" line.
13. Remove temporary pavement along the northbound San Antonio Road off-ramp "SANF" line.
14. Construct remaining portion of the southbound Rengstorff Avenue on-ramp between "RSN" 166+50 and "RSN" 169+85.
15. Construct remaining portion of the southbound Rengstorff Avenue off-ramp between "RSF" 166+36 and "RSF" 170+53.
16. Construct southbound Route 101 widening between "C" 163+12 and "C" 166+36 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
17. Construct ramp, gore, nose, and HMA overlay for the southbound Charleston Road on-ramp "CSN" line during consecutive night time closures.
18. Construct remaining portion of the southbound Charleston Road on-ramp between "CSN" 161+82 and "CSN" 163+12.

19. Remove temporary pavement along the southbound Rengstorff Avenue on-ramp "RSN" line.
20. Remove existing pavement along the northbound Amphitheatre Parkway off-ramp "ANF" line and construct remaining portion of ramp.
21. Construct northbound Route 101 widening between "C" 152+19 and "C" 161+87 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.
22. Construct remaining portion of the northbound Amphitheatre Parkway on-ramp between "ANN" 152+11 and "ANN" 161+70.
23. Construct a portion of the northbound San Antonio Road off-ramp between "SANF" 133+79 and "SANF" 140+44.
24. Remove temporary pavement along the northbound Amphitheatre on-ramp "ANN" line.
25. Construct a portion of the southbound Shoreline Boulevard off-ramp between "SHSF" 211+51 and "SHSF" 217+45.
26. Construct HMA overlay for the northbound Shoreline Boulevard on-ramp between "SHNN" 193+14 and "SHNN" 200+00 using consecutive night time closures.
27. Construct remaining portion of the southbound Old Middlefield Way on-ramp between "OMSN" 198+00 and "OMSN" 204+14.
28. Construct southbound Route 101 widening between "C" 204+14 and "C" 211+51 with exception of placing 0.15' RHMA-G and matching HMA-A with existing elevation at sawcut.

Stage 4 – Traffic

1. Maintain number of lanes on freeway and ramps using 11 foot lanes minimum.
2. Shift northbound Embarcadero Road "ENF" line traffic onto newly constructed pavement.
3. Shift northbound San Antonio Road Loop on-ramp "SANN-L" traffic onto newly constructed pavement.
4. Shift northbound San Antonio Road off-ramp "SANF" line traffic onto newly constructed pavement.
5. Shift northbound Amphitheatre Parkway on-ramp "ANN" line traffic onto newly constructed pavement.
6. Shift southbound Rengstorff Avenue off-ramp "RSF" line traffic onto newly constructed pavement.
7. Shift southbound Rengstorff Avenue on-ramp "RSN" line traffic onto newly constructed pavement using three 12 foot lanes.
8. Shift southbound Old Middlefield Way on-ramp "OMSN" line traffic onto newly constructed pavement.
9. Shift southbound mainline traffic onto newly constructed pavement.

10. Shift southbound Shoreline Boulevard off-ramp "SHSF" line traffic onto newly constructed pavement.

Stage 4 – Construction

1. Construct permanent freeway median between "C" 39+90 and "C" 215+00.
2. Remove temporary pavement from the northbound Oregon Expressway off-ramp "ONF" line and construct remaining permanent portion.
3. Remove temporary pavement from the northbound San Antonio Road on-ramp "SANN" line and construct remaining portion of permanent ramp.
4. Construct HMA overlay for the southbound Rengstorff Avenue off-ramp between "RSF" 166+52 and "RSF" 167+00 and between "RSF" 169+00 and "RSF" 170+53 using night time closures at the start of Stage 4.
5. Remove temporary pavement from the southbound Rengstorff Avenue off-ramp "RSF" line and construct concrete median between "RSN" and "RSF" line during night time closure.
6. Remove temporary pavement from the northbound San Antonio Road off-ramp "SANF" line.
7. Remove temporary pavement from the southbound Shoreline Boulevard off-ramp "SHSF" line and construct remaining portion of the permanent ramp.
8. Remove temporary pavement from the southbound Old Middlefield Way on-ramp "OMSN" line and construct remaining portion of the permanent ramp.

Stage 5 – Traffic

1. Maintain all traffic using previous stage striping.

Stage 5 – Construction

1. Cold plane and construct HMA cross slope correction for northbound Route 101 between "C" 51+62 and "C" 211+24 through daily lane closures.
2. Construct HMA cross slope correction for southbound Route 101 between "C" 47+28 and "C" 215+00 through daily lane closures.

Stage 6 – Traffic

1. Shift all traffic to final striping.

Stage 6 – Construction

1. Place RHMA overlay for northbound Route 101 between "C" 51+62 and "C" 211+24 through daily lane closures.
2. Place RHMA overlay for southbound Route 101 between "C" 47+28 and "C" 215+00 through daily lane closures.

Temporary Traffic Control Devices

Traffic control during construction is proposed to be provided with temporary traffic control devices. There are two types of temporary traffic control devices:

Channelizing Devices: Cones, barricades and similar elements, and shorter lengths of portable barriers that may be used in one configuration for relatively short period of time; and

Portable Barriers: Conventional temporary barriers used generally for extended work areas, generally set in one place over a series of weeks.

It is assumed that channelizing devices will be used for temporary lane closures and portable barriers will be used for the closure of lane/shoulder for extended periods.

Damage Calculations for Late Lane Closure Pick-up

Based on the lane closure charts, liquidated damages for late lane closure pick-up were calculated. For liquidated damages analysis, the roadway segment between San Antonio Road and Embarcadero Road in the northbound direction was calculated. This section of the freeway in the northbound direction controls the determination of damages for late lane closure pick-up with a $14,657 delay cost per 10 minutes damage assessment.

The roadway segment between San Antonio Road and Embarcadero Road in the southbound direction was calculated. This section of the freeway in the southbound direction controls the determination of damages for late lane closure pick-up with a $3,526 delay cost per 10 minutes damage assessment. The detailed analyses for liquidated damages for late lane closure pick-up are attached in **Appendix E**.

Road User Delay Calculations for Temporary Lane Closures

Road user delay calculations for temporary lane closures for the following conditions as required by Caltrans were calculated:

- Condition 1: Monday, Tuesday, Wednesday, Thursday and Friday
- Condition 2: Saturday and Sunday

Detailed road user delay cost for temporary lane closures is attached in **Appendix F**. The road user delay cost for temporary lane closures is calculated to be approximately $2,800 for weekdays and $2,525 for weekends.

Appendix A
Traffic Volumes

Appendix B
Freeway Lane Closure Charts

Chart No. 1
Freeway/Expressway Lane Requirements

County: Santa Clara	Route/Direction: Highway 101/Northbound	PM: 48.5/52.3

Closure Limits: Highway 101, between Shoreline Boulevard/Middlefield Road (48.5) and Oregon Expressway/Embarcadero Road (52.3)

FROM HOUR TO HOUR	24	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
Mondays through Thursdays	1	1	1	1	1																				2
Fridays	1	1	1	1	1																				3
Saturdays	2	2	1	1	1	1	2	2																	3
Sundays	2	2	1	1	1	1	2	2																	3

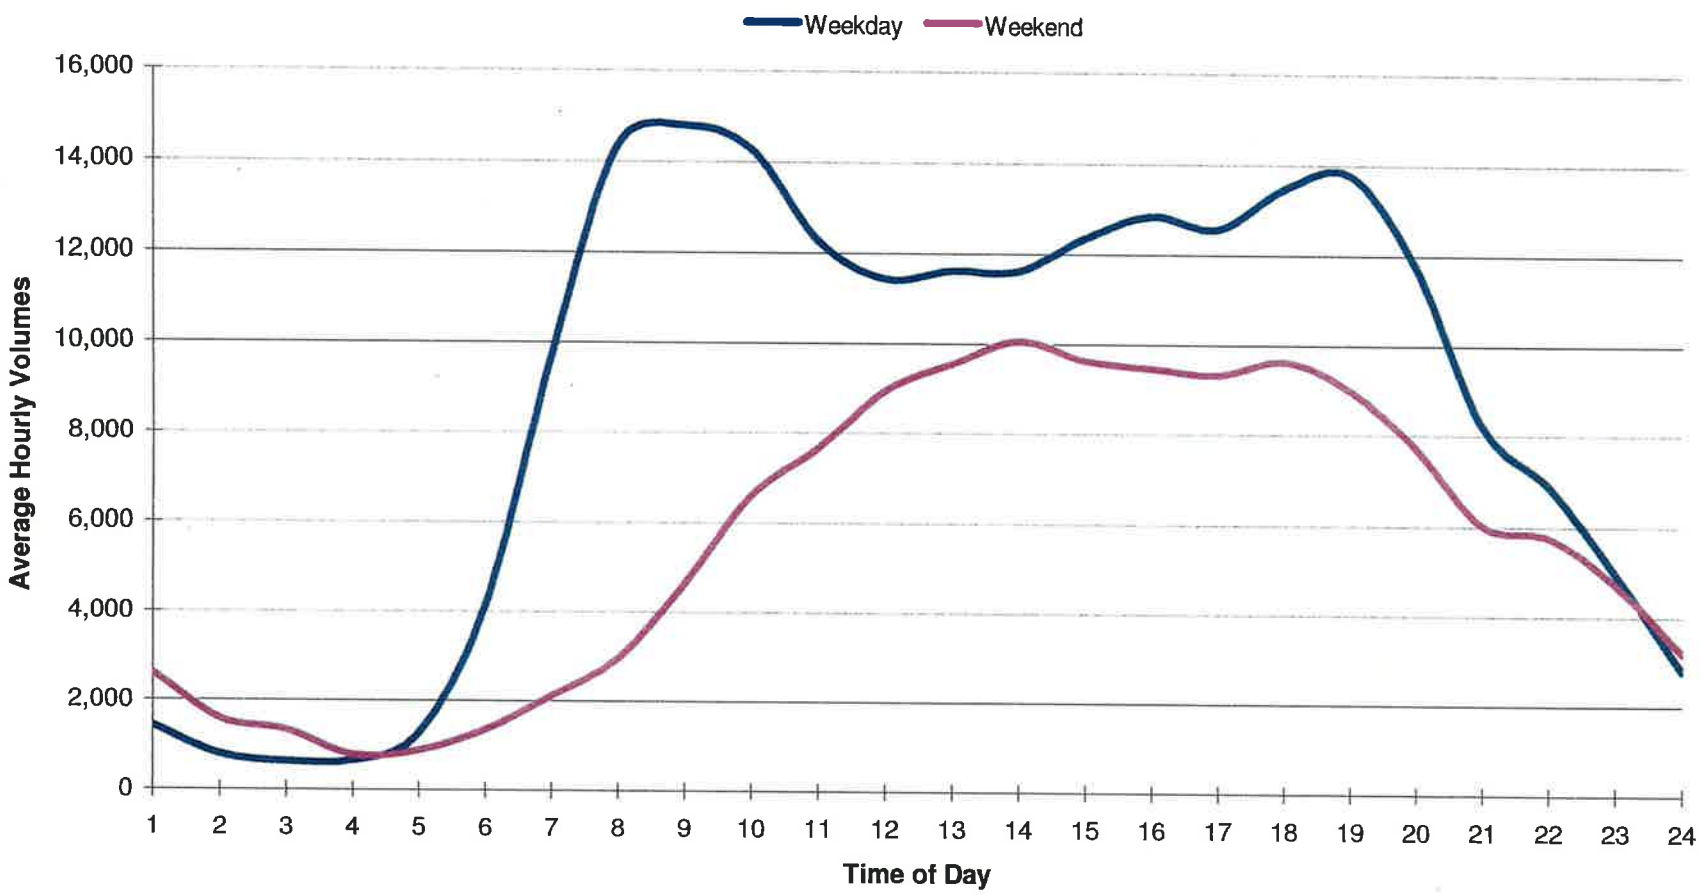
Legend:

1	Provide at least one through freeway lane open in direction of travel
2	Provide at least two adjacent through freeway lanes open in direction of travel
3	Provide at least three adjacent through freeway lanes open in direction of travel
4	Provide at least four adjacent through freeway lanes open in direction of travel
	Work permitted within project right of way where shoulder or lane closure is not required.

REMARKS:

1. Number of lanes to be open in direction of travel, are based on existing demand. It is assumed that one lane is required to be open in direction of travel for a demand of 1,500 vehicles per hour.
2. This lane closure chart shall only be used for construction work on Highway 101, between Shoreline Boulevard/Middlefield Road (48.5) and Oregon Expressway/Embarcadero Road (52.3).

101 Northbound
Mainline between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road



Note: Hourly Volumes are Projected Year 2013 volumes based on data provided by CALTRANS

Chart No. 2
Freeway/Expressway Lane Requirements

County: Santa Clara	Route/Direction: Highway 101/Southbound	PM: 48.7/52.3

Closure Limits: Highway 101, between Shoreline Boulevard/Middlefield Road (48.7) and Oregon Expressway/Embarcadero Road (52.3)

FROM HOUR TO HOUR	24	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Fridays	1	1	1	1	1																		3	2	
Saturdays	1	1	1	1	1	1	1	2														2	2	2	
Sundays	1	1	1	1	1	1	1	2														2	2	2	

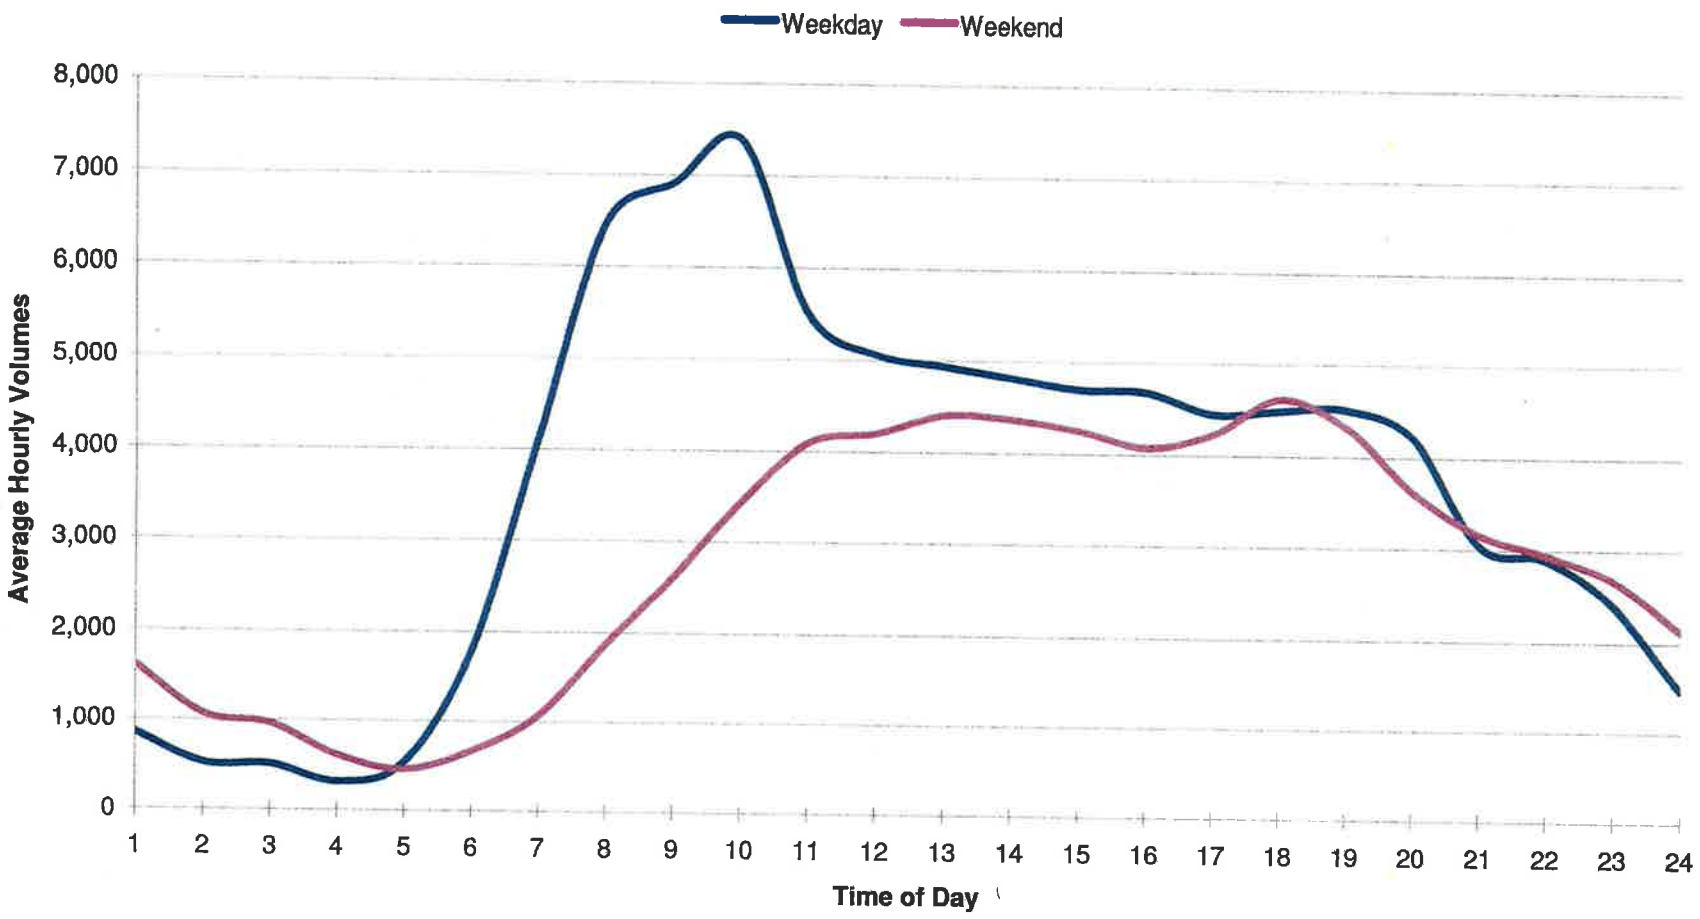
Legend:

1	Provide at least one through freeway lane open in direction of travel
2	Provide at least two adjacent through freeway lanes open in direction of travel
3	Provide at least three adjacent through freeway lanes open in direction of travel
	Work permitted within project right of way where shoulder or lane closure is not required.

REMARKS:

1. Number of lanes to be open in direction of travel, are based on existing demand. It is assumed that one lane is required to be open in direction of travel for a demand of 1,500 vehicles per hour.
2. This lane closure chart shall only be used for construction work on Highway 101, between Shoreline Boulevard/Middlefield Road (48.7) and Oregon Expressway/Embarcadero Road (52.4).

101 Southbound
Mainline between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road



Note: Hourly Volumes are Projected Year 2013 volumes based on data provided by CALTRANS

CONSTRUCTION THIS STAGE

TEMPORARY PAVEMENT

REMOVE PAVEMENT

(X) CONSTRUCTION ITEM NUMBER

[X] TRAFFIC ITEM NUMBER

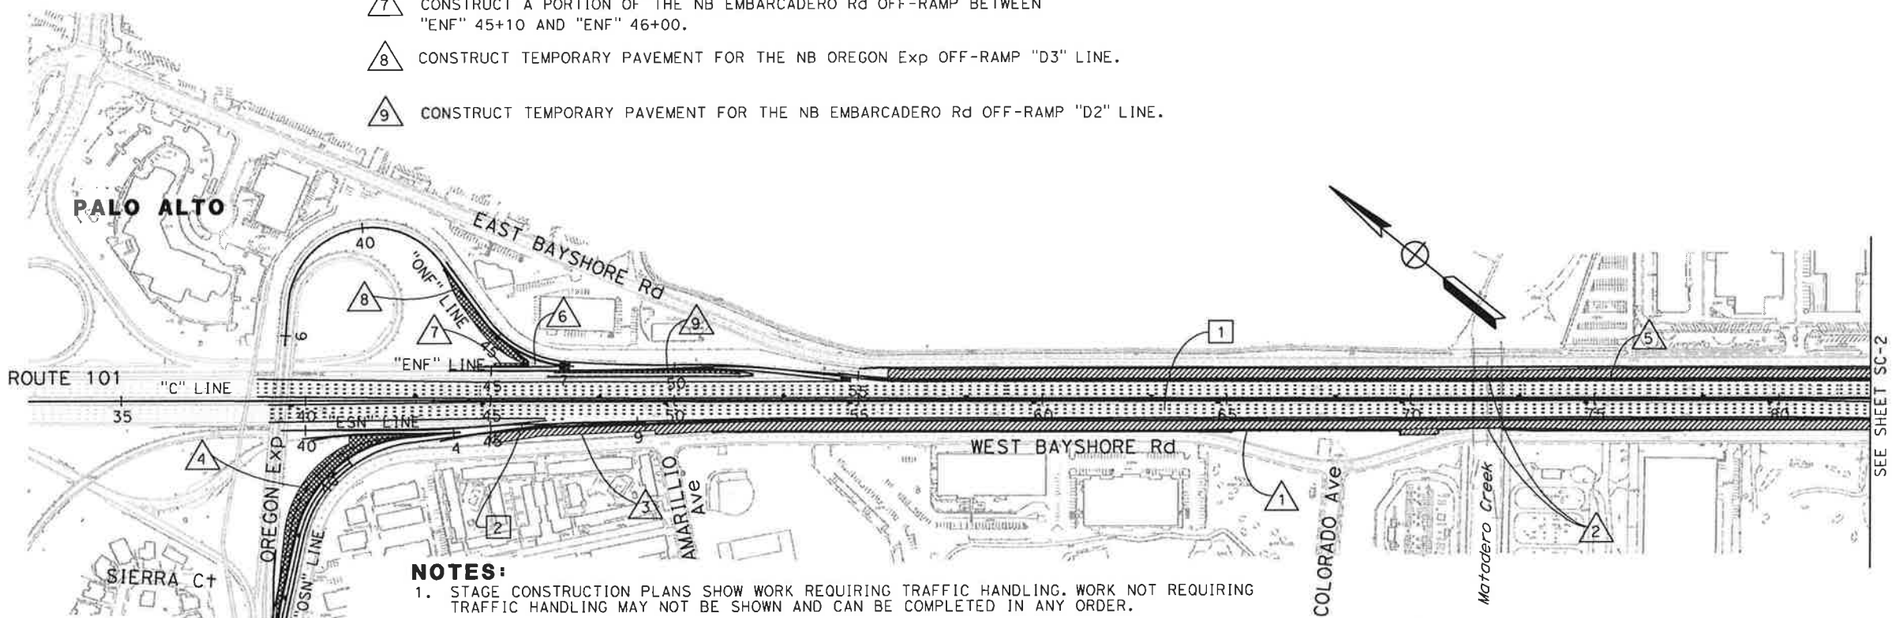
STAGE 1 CONSTRUCTION

1. CONSTRUCT SB ROUTE 101 WIDENING BETWEEN "C" 49+22 AND "C" 119+83 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING PCC ELEVATION.
2. CONSTRUCT SB & NB MATADERO CREEK BRIDGE WIDENING.
3. CONSTRUCT A PORTION OF THE SB EMBARCADERO Rd ON-RAMP BETWEEN "ESN" 45+00 AND "ESN" 49+22.
4. CONSTRUCT TEMPORARY PAVEMENT FOR THE SB OREGON Exp ON-RAMP "D1" LINE.
5. CONSTRUCT NB ROUTE 101 WIDENING BETWEEN "C" 55+80 AND "C" 113+93 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING ELEVATION AT SAWCUT. CONSTRUCT A PORTION OF THE NB SAN ANTONIO Rd LOOP ON-RAMP BETWEEN "SANN-L" 113+93 AND "SANN-L" 120+70.
6. REMOVE CURB AND GUTTER AND REPAVE THE TEMPORARY SHOULDER AND GORE FOR THE NB OREGON Exp OFF-RAMP "D3" LINE DURING NIGHT TIME CLOSURE.
7. CONSTRUCT A PORTION OF THE NB EMBARCADERO Rd OFF-RAMP BETWEEN "ENF" 45+10 AND "ENF" 46+00.
8. CONSTRUCT TEMPORARY PAVEMENT FOR THE NB OREGON Exp OFF-RAMP "D3" LINE.
9. CONSTRUCT TEMPORARY PAVEMENT FOR THE NB EMBARCADERO Rd OFF-RAMP "D2" LINE.

STAGE 1 TRAFFIC

[1] MAINTAIN NUMBER OF LANES ON FREEWAY USING 11' LANES MINIMUM.

[2] SHIFT SB EMBARCADERO Rd ON-RAMP TRAFFIC AWAY FROM RAMP NOSE DURING NIGHT TIME CONSTRUCTION.



NOTES:

1. STAGE CONSTRUCTION PLANS SHOW WORK REQUIRING TRAFFIC HANDLING. WORK NOT REQUIRING TRAFFIC HANDLING MAY NOT BE SHOWN AND CAN BE COMPLETED IN ANY ORDER.
2. CONTRACTOR SHALL MINIMIZE DISRUPTING ACCESS TO DRIVEWAYS DURING ALL CONSTRUCTION STAGES.
3. CONSTRUCTION ACTIVITIES DENOTED AS "FIRST ORDER OF WORK" SHALL BE COMPLETED PRIOR TO OPENING THE ROADWAY TO TRAFFIC.
4. THE CONTRACTOR SHALL MINIMIZE CLOSING OF ANY BIKE LANES DURING CONSTRUCTION. IF CLOSURES ARE REQUIRED, "SHARE THE ROAD" SIGN SHALL BE POSTED.
5. ALL TEMPORARY RAILING (TYPE K) AT LOCATIONS OF ELEVATION DIFFERENCE MORE THAN 0.15' AND/OR LESS THAN 1.0' FROM ETW SHALL BE DOWELED IN AS PER STANDARD PLANS.
6. AT EXISTING GORES WITH CURBS, REMOVE CURBS AND PLACE FULL DEPTH HMA PRIOR TO PLACING TEMPORARY RAILING (TYPE K) AND CRASH CUSHIONS.
7. FOR THE ENTIRE PROPOSED AND EXISTING FREEWAY WIDTH, FINAL HMA LIFTS TO BE PLACED IN STAGE 5, WHILE RHMA OVERLAY TO BE PLACED IN STAGE 6.
8. FOR DRAINAGE WORK DURING CONSTRUCTION, SEE SHEETS D-18 TO D-24 AND DD-26 TO DD-29.
9. FOR ELECTRICAL WORK DURING CONSTRUCTION, SEE SHEETS E-62 TO E-135.
10. INSTALL MBGR ALONG MAINLINE TO FINAL ELEVATION.
11. FOR ALLOWABLE CLOSURE HOURS FOR THE ADOBE CREEK PEDESTRIAN UNDERCROSSING SEE "MAINTAINING TRAFFIC" OF THE PROJECT SPECIAL PROVISIONS.

14 CONSTRUCT REMAINING PORTION OF THE SB RENGSTORFF Ave ON-RAMP BETWEEN "RSN" 166+50 AND "RSN" 169+85.

15 CONSTRUCT REMAINING PORTION OF THE SB RENGSTORFF Ave OFF-RAMP BETWEEN "RSF" 166+36 AND "RSF" 170+53.

16 CONSTRUCT SB ROUTE 101 WIDENING BETWEEN "C" 163+12 AND "C" 166+36 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING ELEVATION AT SAWCUT.

17 CONSTRUCT RAMP, GORE, NOSE, AND HMA OVERLAY FOR THE SB CHARLESTON Rd ON-RAMP "CSN" LINE DURING CONSECUTIVE NIGHT TIME CLOSURES.

18 CONSTRUCT REMAINING PORTION OF THE SB CHARLESTON Rd ON-RAMP BETWEEN "CSN" 161+82 AND "CSN" 163+12.

19 REMOVE TEMPORARY PAVEMENT ALONG THE SB RENGSTORFF Ave ON-RAMP "RSN" LINE.

20 REMOVE EXISTING PAVEMENT ALONG THE NB AMPHITHEATRE Pkwy OFF-RAMP "ANF" LINE AND CONSTRUCT REMAINING PORTION OF RAMP.

21 CONSTRUCT NB ROUTE 101 WIDENING BETWEEN "C" 152+19 AND "C" 161+87 WITH EXCEPTION OF PLACING 0.15' RHMA-G AND MATCHING HMA-A WITH EXISTING ELEVATION AT SAWCUT.

22 CONSTRUCT REMAINING PORTION OF THE NB AMPHITHEATRE Pkwy ON-RAMP BETWEEN "ANN" 152+11 AND "ANN" 161+70.

23 CONSTRUCT A PORTION OF THE NB SAN ANTONIO Rd OFF-RAMP BETWEEN "SANF" 133+79 AND "SANF" 140+44.

24 REMOVE TEMPORARY PAVEMENT ALONG THE NB AMPHITHEATRE ON-RAMP "ANN" LINE.

STAGE 3 TRAFFIC

7 OPEN NEWLY CONSTRUCTED PAVEMENT TO SB MAINLINE TRAFFIC.

8 SHIFT NB SAN ANTONIO Rd OFF-RAMP "SANF" LINE TRAFFIC ONTO NEWLY CONSTRUCTED PAVEMENT AND TEMPORARY RAMP "D12" LINE.

9 SHIFT NB AMPHITHEATRE Pkwy ON-RAMP "ANN" LINE TRAFFIC ONTO NEWLY CONSTRUCTED PAVEMENT.

10 SHIFT SB RENGSTORFF Ave OFF-RAMP "RSF" LINE TRAFFIC ONTO TEMPORARY PAVEMENT ALONG "D11" LINE.

11 SHIFT SB RENGSTORFF Ave ON-RAMP "RSN" LINE TRAFFIC ONTO NEWLY CONSTRUCTED PAVEMENT.

12 SHIFT NB AMPHITHEATER PKWY OFF-RAMP "ANF" LINE TRAFFIC ONTO NEWLY CONSTRUCTED PAVEMENT.

13 OPENLY NEWLY CONSTRUCTED AUXILIARY LANE TO NB ROUTE 101 MAINLINE TRAFFIC.

Summary of Road User Delay Cost Calculations for the 101 Auxiliary Project in Santa Clara County

Mile Post		Direction	Segment	Purpose	Speed Reduction	Queue Delay	Detour Delay in Minutes	Distance	Travel Time @ 65mph (Hours)	Travel Time at Reduced Speed (Hours)	Difference in Travel Time		Road User Delay Cost per Day		Road User Delay Cost for the Construction Period		Total
											Hours	Minutes	Weekdays	Weekends	Weekdays	Weekends	
48.7	52.0	Northbound	between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road	Traffic slowing down due to construction activities, approximately 245 days	10	0	0	3.30	0.05	0.06	0.01	0.55	$ 1,513	$ 3,284	$ 697	$ 605	$ 1,301
51.9	48.7	Southbound	between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road	Traffic slowing down due to construction activities, approximately 245 days	10	0	0	3.20	0.05	0.06	0.01	0.54	$ 773	$ 1,875	$ 356	$ 345	$ 702
48.7	52.0	Northbound	between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road	Traffic slowing down due to temporary lane closures (Temporary K-Rail, Striping, Overlay and Miscellaneous) for approximately 245 days	15	0	0	3.30	0.05	0.07	0.02	0.91	$ 2,496	$ 5,418	$ 1,149	$ 998	$ 2,147
51.9	48.7	Southbound	between Shoreline Boulevard/Middlefield Road and Oregon Expressway/Embarcadero Road	Traffic slowing down due to temporary lane closures (Temporary K-Rail, Striping, Overlay and Miscellaneous) for approximately 245 days	15	0	0	3.20	0.05	0.06	0.01	0.89	$ 1,276	$ 3,093	$ 588	$ 570	$ 1,157
Total Calculated Road User Delay Cost															**$ 2,789.70**	**$ 2,518.23**	**$ 5,307.93**

Notes		
	1.	Construction Period is approximately 13 months (380 Days)
	2.	It is projected that the speed along the freeway mainline will be reduced by 10 miles per hour when construction activites are in progress within the Construction Area
	3.	It is assumed that 90 percent of the total traffic demand during the lane closure implementation is automobiles and 10 percent is heavy vehicles
	4.	Travel time cost for automobile is assumed to be $ 0.19 per minute and $ 0.46 per minute for trucks

Disclaimer

A "Disclaimer" is required specifying that the information provided in the Storm Water Information Handout is just a guideline and is to be used for information purposes only and should not be considered a sole source document to adhere to the requirements of the new National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP), Number CAS000002, adopted on September 2, 2009. The contractor is required to provide water quality monitoring, sampling and implement best management practices (BMPs) based on standard industry operations, field conditions and conditions encountered based on the contractor's means and methods. The information in this handout is not to be construed in any way as a waiver of the provisions in the CGP. Bidders and contractors are cautioned to make independent investigations and examinations as they deem necessary to satisfy the conditions encountered in performance of work, with respect to the following: sampling and monitoring locations, distribution of watershed areas for sizing of BMPs, and selection of BMPs in order to conform to the requirement of the contract documents and the CGP.

1 OVERVIEW

1.1 Intent of this Document

The objectives of this Water Quality Information Handout are: to summarize general water quality information of the Project; to summarize updated requirements per the new Construction General Permit (CGP), which became effective as of July 1, 2010; to provide general guidelines for contractors to bid on the project; to aid in developing the Storm Water Pollution Prevention Plan (SWPPP) of the project; and to highlight information necessary to file Project Registration Documents (PRDs) to the State Water Resources Control Board via the Stormwater Multi Application Reporting and Tracking System (SMARTS) and file the Notice of Intent at the start of construction.

1.2 Summary of New Requirements

The "National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities" (NPDES Number CAS000002), or CGP, regulates discharges from construction activities within the Project area.

The CGP is based on a risk level (RL) permitting approach. The RL is calculated by 1) project sediment risk and 2) receiving water risk. See the risk assessment calculations in Section 0 of this document for details.

A risk assessment was done for the **US 101 Auxiliary Lanes Project (EA 04-4A3301)**, and the Project was determined to be **RL 2.**

RL 2 projects will be subject to monitoring and sampling requirements, plus Numeric Action Levels (NALs) for pH and turbidity. All projects will have to upload storm water data into SMARTS, such as Notices of Intent (NOIs), SWPPPs, annual reports, and monitoring data.

2 GENERAL PROJECT INFORMATION

2.1 Location

The Project is located on U.S. 101 in the cities of Mountain View and Palo Alto, Santa Clara County, California. The Project limits extend from State Route (SR) 85 in the south to Embarcadero Road in the north, a distance of approximately 3.2 miles (mi).

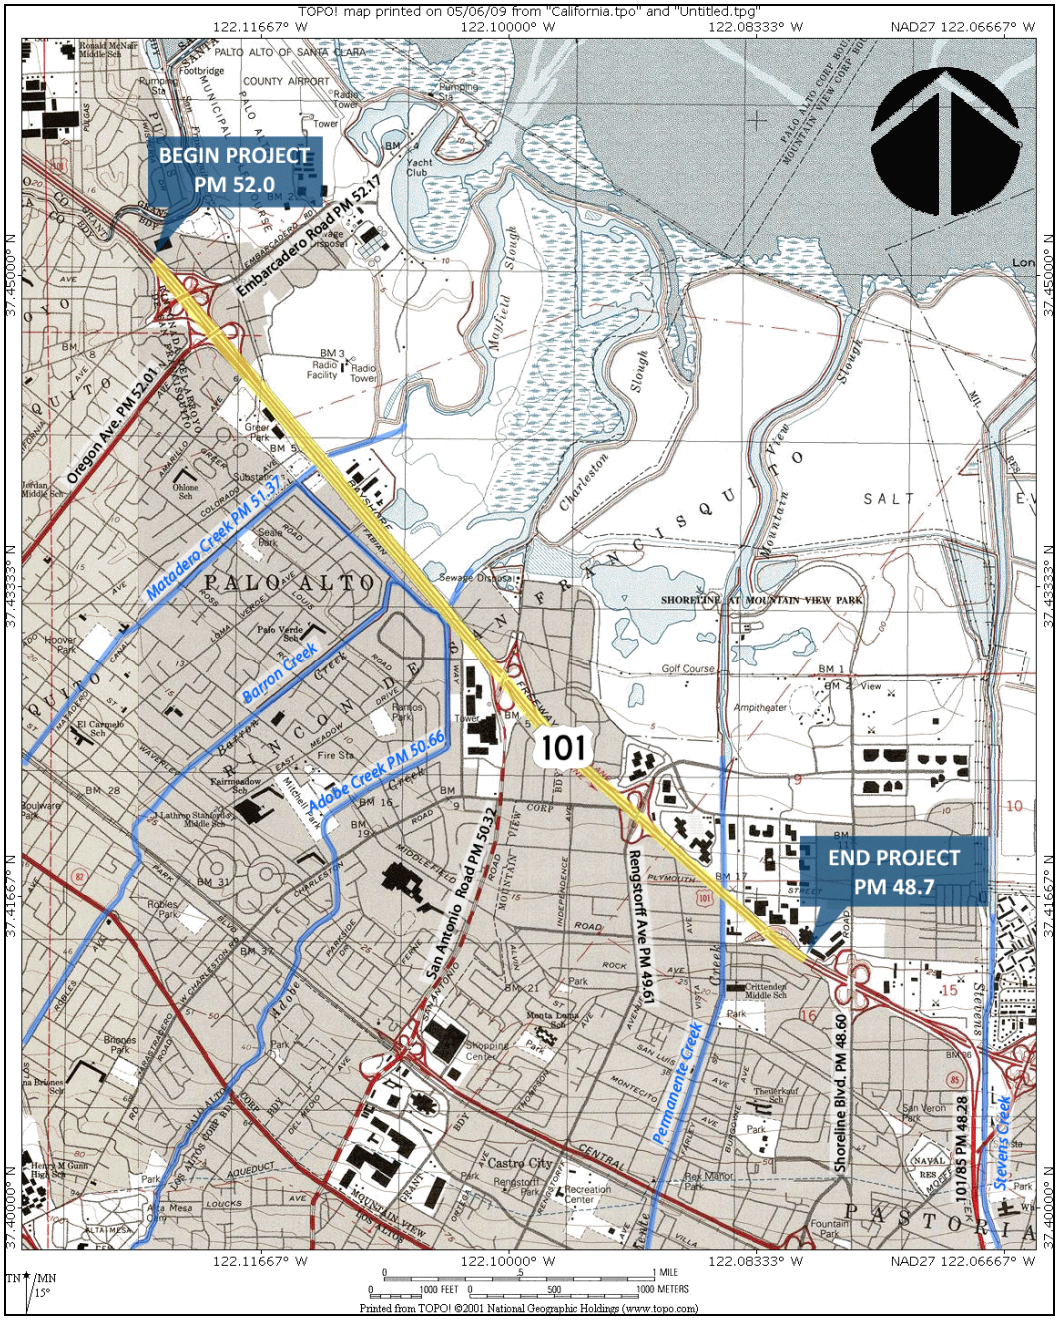

Figure 1. Project Vicinity Map

Source: USGS

2.2 Major Engineering Features

The Project will construct auxiliary lanes in the northbound direction of U.S. 101 between Shoreline Boulevard and Oregon Expressway. In the southbound direction, an auxiliary lane will be constructed between Oregon Expressway and San Antonio Road. The auxiliary lanes will require the widening of the existing U.S. 101 crossings over Permanente Creek, Adobe Creek, and Matadero Creek.

2.3 Receiving Water Bodies

The Project is within the jurisdiction of the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB). The Project is located within the Palo Alto Hydrologic Area, Sub-Area 205.5. The Project area discharges directly to multiple wetlands and the following water bodies crossings:

Table 1. Receiving Water Bodies Locations

Receiving Water Body	Receiving Water Body or Wetland Location	
	Station	PM
Matadero Creek	72+00	51.37
Adobe Creek	109+80	50.66
Permanente Creek	187+50	49.19

The ultimate receiving water body for the Project is the San Francisco Bay; the SFBRWQCB refers to this area as San Francisco Bay South. The distance from the Project to San Francisco Bay South varies from approximately 2.5 mi north at the U.S. 101/SR 85 interchange to approximately 1 mi northeast at the U.S. 101/Embarcadero Road interchange.

Beneficial uses for the Project water bodies include:

- Matadero Creek
  - Existing Beneficial Uses: Cold Freshwater Habitat (COLD), Fish Migration (MIGR), Fish Spawning (SPWN), Warm Freshwater Habitat (WARM), Wildlife Habitat (WILD), Water Contact Recreation (REC-1), and Non Contact Recreation (REC-2)

- Permanente Creek
  - Existing Beneficial Uses: COLD, SPWN, WILD, REC-1, and REC-2

- San Francisco Bay South in Santa Clara County
  - Existing Beneficial Uses: Industrial Service Supply (IND), Sport Fishing (COMM), Shellfish Harvesting (SHELL) Estuarine Habitat (EST), MIGR, Ocean, Commercial, and, Preservation of Rare and Endangered Species (RARE), Wildlife Habitat (WILD), REC-1, REC-2 and Navigation (NAV) Potential Beneficial Uses: SPWN

The *2006 CWA Section 303(d) List of Water Quality Limited Segments,* (United States Environmental Protection Agency [EPA], Approval Date: June 28, 2007), lists Matadero Creek, Permanente Creek, and San Francisco Bay South as impaired water bodies.

Table 2. 303(d) List Summary

Receiving Water Body	303(d) Listed Pollutant	Potential Source	TMDL Completion Date
Matadero Creek	Diazinon	Urban Runoff/Storm Sewers	2007
Permanente Creek	Diazinon	Urban Runoff/Storm Sewers	2007
San Francisco Bay South	Chlordane	Nonpoint Source	2008
	DDT	Nonpoint Source	2008
	Dieldrin	Nonpoint Source	2008
	Dioxin Compounds	Atmospheric Deposition	2019
	Exotic Species	Ballast Water	2019
	Furan Compounds	Atmospheric Deposition	2019
	Mercury	Atmospheric Deposition, Industrial Point Sources, Municipal Point Sources, Natural Sources, Nonpoint Sources, Resource Extraction	2006
	PCBs	Unknown Nonpoint Source	2006
	PCBs (dioxin like)	Unknown Nonpoint Source	2019
	Selenium	Agriculture, Domestic use of ground water	2019

2.4 Climate and Rainfall

A National Oceanic and Atmospheric Administration (NOAA) weather station located in Palo Alto, approximately 2 miles northwest of the Project site, was used to obtain precipitation data (Figure 2).

Rainy days per year (assumed equal to precipitation 0.10 inches or greater): 36.1 days

Qualifying rain events per year (precipitation 0.5 inches or greater): 9.7 days

2.5 Soils and Geology

The *Geotechnical Design and Materials Report* summarizes the subsurface conditions based on borings taken throughout the Project. The geotechnical report states that, "Alluvium was encountered in all of the borings either beginning at the ground surface or underlying the road base fill material," (URS, 2010). The fill was determined to consist of locally derived clay and sand with gravel, and the alluvium consists of complexly interbedded lean and fat clay, clayey, silty sand and well graded sand with silt.

2.6 Hazardous Waste

Soil sampling for the presence of ADL was conducted throughout the Project. The findings of these sampling activities are presented in the *Site Investigation Report*. The report concludes that soils containing ADL would be encountered within the Project limits. Department of Toxic Substances Control (DTSC) Variance would be followed for reuse of soil containing ADL. Details of the locations of ADL reuse are shown on in the Contract Plans.

The *Initial Site Assessment* (ISA) (Baseline, 2008) noted areas with the potential to be contaminated by volatile organic compounds (VOCs) and recommended that detailed soil and groundwater studies be performed. Sampling was conducted throughout the Project area, and the results of the sampling are presented in the *Site Investigation Report* (URS, 2010). Based on the samples collected, the VOCs at the sampling locations were determined to be either below detectable levels or below levels of concern.

2.7 Existing (Pre-Construction) Control Practices

There are no existing treatment BMPs within the Project limits.

3 CONSTRUCTION GENERAL PERMIT

To minimize the potential effects of construction runoff on the quality of the receiving water bodies, any construction activity affecting one acre or more must obtain coverage under the CGP. Permit applicants are required to prepare a SWPPP and implement BMPs to reduce construction effects on receiving water quality.

3.1 Risk Assessment

The CGP requirements include a risk assessment to determine the Project's impact risk to receiving water bodies. The risk assessment uses measurements of the Project's potential sediment risk and the sensitivity of the receiving water bodies to sediment to determine the RL of the Project. This Project has a **Low Site Sediment Risk Factor** (Table 5) and a **High Receiving Water Risk Factor** (Figure 5); the combined risk is **Level 2** (Figure 6). The risk factors are detailed in the following sections.

3.1.1 Sediment Risk

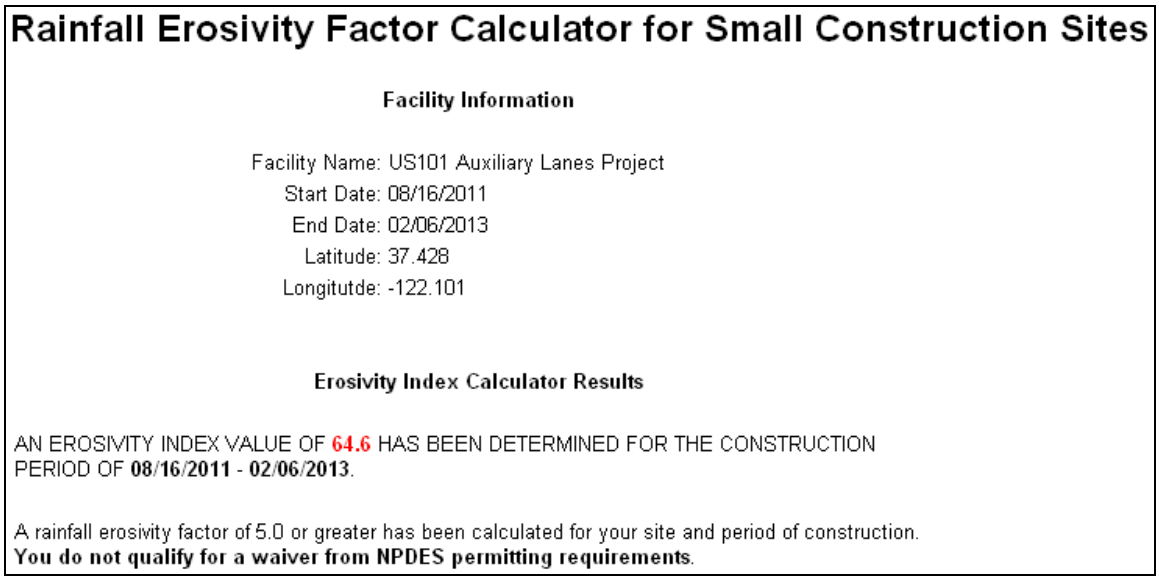
The sediment risk is based on the following equation from the adopted NPDES permit "Fact Sheet" (Section J.1.a pg. 28):

Equation 1. Sediment Risk Equation
A = (R)(K)(LS)(C)(P)

Where:

R = Runoff erosivity factor
K = Soil erodibility factor
LS = Length-slope
C = Cover
P = Management operations and support practices
A = Rate of sheet and rill erosion (tons/acre)

The rainfall runoff erosivity factor (R) was determined from the United States Environmental Protection Agency (EPA) "Rainfall Erosivity Factor Calculator for Small Construction Sites." The erosivity index value for the Project was determined to be **64.6** using the following inputs shown in Figure 3.



Rainfall Erosivity Factor Calculator for Small Construction Sites

Facility Information

Facility Name: US101 Auxiliary Lanes Project
Start Date: 08/16/2011
End Date: 02/06/2013
Latitude: 37.428
Longitutde: -122.101

Erosivity Index Calculator Results

AN EROSIVITY INDEX VALUE OF **64.6** HAS BEEN DETERMINED FOR THE CONSTRUCTION PERIOD OF **08/16/2011 - 02/06/2013**.

A rainfall erosivity factor of 5.0 or greater has been calculated for your site and period of construction.
You do not qualify for a waiver from NPDES permitting requirements.

Figure 3. Rainfall Erosivity Factor (R)

The soil erodibility factor (K) was determined from the United States Department of Agriculture Natural Resources Conservation Services "Web Soil Survey." A weighted average of the soil erodibility factor by area was used; this value is **0.17**. See Figure 4 for the map of soils within the Project site and Table 3 for the K factors for the soils.

Table 3. Soil Erodibility Factor (K) of the Project Site

K Factor, Rock Free— Summary by Map Unit — Santa Clara Area, California, Western Part				
Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
101	Urban land, 0 to 2 percent slopes, basins		2.4	0.8%
120	Aquic Xerorthents, bay mud subtratum, 0 to 2 percent slopes	.17	0.2	0.1%
145	Urbanland-Hangerone complex, 0 to 2 percent slopes, drained		130.1	43.4%
150	Urbanland-Embarcadero complex, 0 to 2 percent slopes, drained		84.3	28.1%
157	Novato clay, 0 to 1 percent slopes, protected	.17	13.0	4.3%
165	Urbanland-Campbell complex, 0 to 2 percent slopes, protected		64.3	21.4%
169	Urbanland-Elder complex, 0 to 2 percent slopes, protected		0.0	0.0%
W	Water		5.8	1.9%
Totals for Area of Interest			**300.1**	**100.0%**

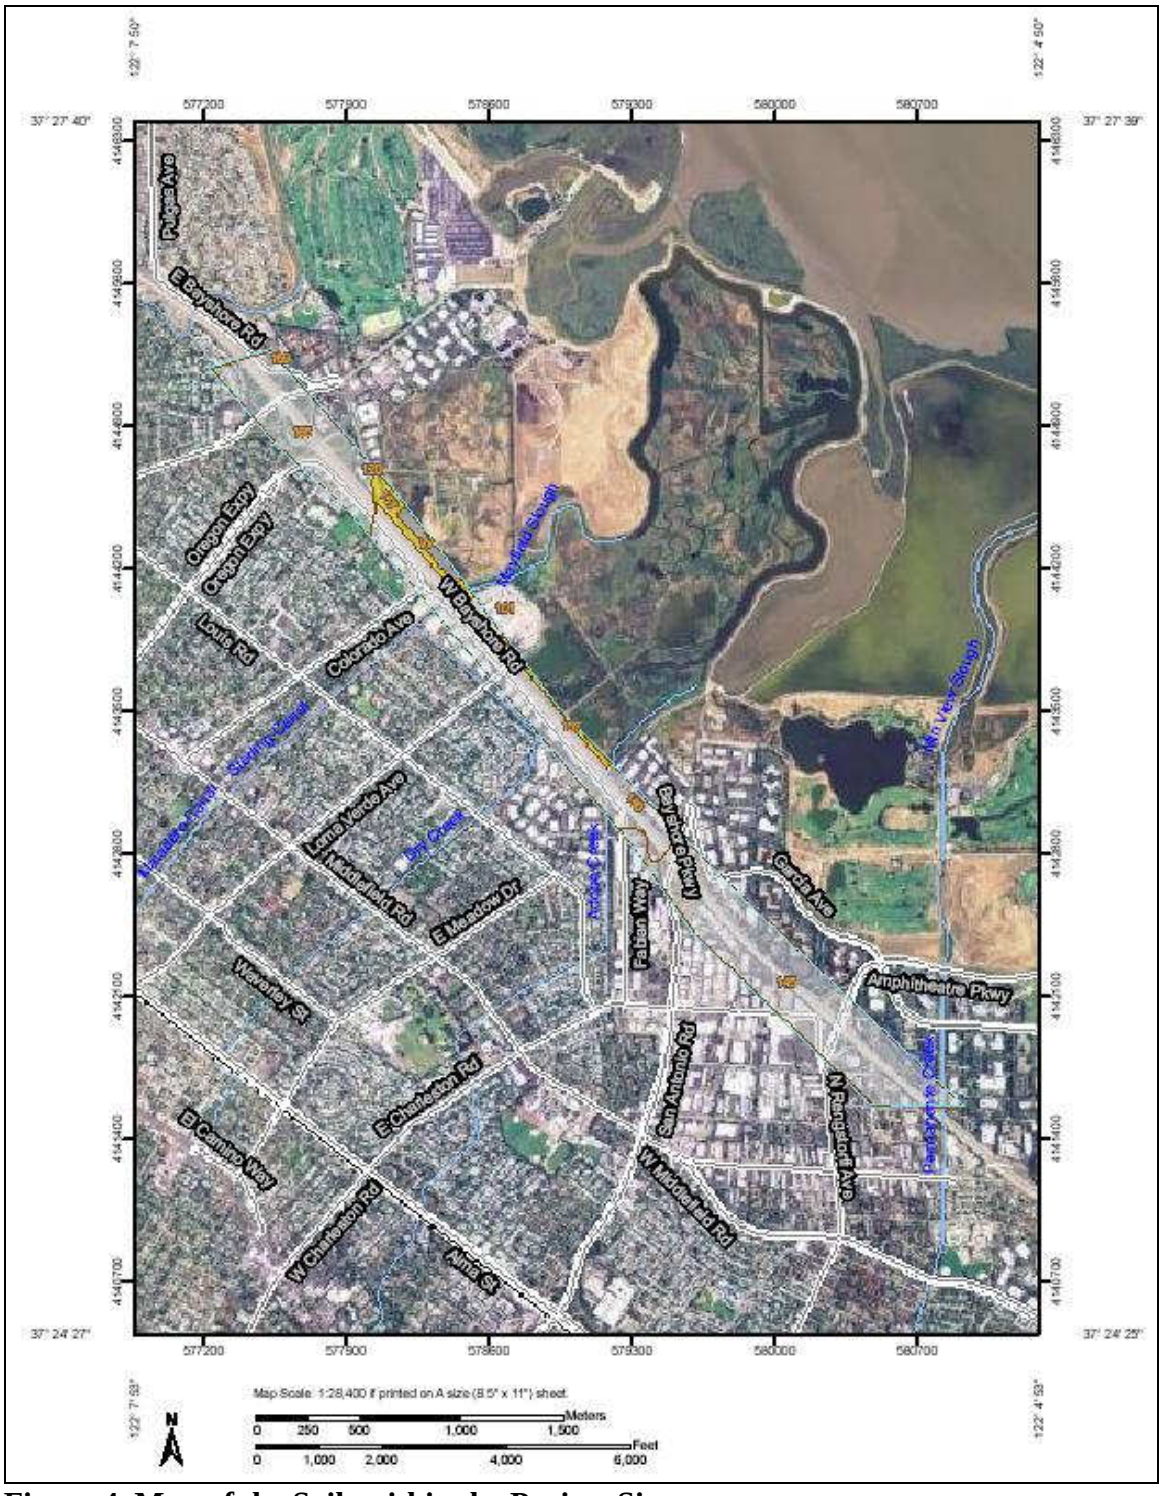


Figure 4. Map of the Soils within the Project Site

The length-slope factor (LS) was determined by examining the original grade delineated on the Typical Cross Sections included in the Contract Project Plans. Based on these cross sections, the average existing slope was estimated to be 3.67% for an average length of 80.06ft. Based on these values, an LS value of **0.46** was interpolated. See Table 4.

Table 4. Length Slope Factor (LS)

	Average Watershed Slope (%)										
Sheet Flow Length (ft)	**0.2**	**0.5**	**1.0**	**2.0**	**3.0**	**4.0**	**5.0**	**6.0**	**8.0**	**10.0**	**12.0**

LS Factors for Construction Sites. *Table from Renard et. al., 1997.*

The cover factor (C) and management operations and support practices (P) are given values of 1.0 by the adopted NPDES permit to simulate bare ground conditions.

Based on these factors, the rate of sheet and rill erosion (A) is **5.05** tons per acre. Because this value is less than 15 tons per acre, the Project is classified as having a low sediment risk. Table 5 shows the Sediment Risk Assessment.

Table 5. Sediment Risk Assessment

	A	B	C
1	**Sediment Risk Factor Worksheet**		**Entry**
2	**A) R Factor**		
3	Analyses of data indicated that when factors other than rainfall are held constant, soil loss is directly proportional to a rainfall factor composed of total storm kinetic energy (E) times the maximum 30-min intensity (I30) (Wischmeier and Smith, 1958). The numerical value of R is the average annual sum of EI30 for storm events during a rainfall record of at least 22 years. "Isoerodent" maps were developed based on R values calculated for more than 1000 locations in the Western U.S. Refer to the link below to determine the R factor for the project site.		
4	http://cfpub.epa.gov/npdes/stormwater/LEW/lewCalculator.cfm		
5	**R Factor Value**		64.6
6	**B) K Factor (weighted average, by area, for all site soils)**		
7	The soil-erodibility factor K represents: (1) susceptibility of soil or surface material to erosion, (2) transportability of the sediment, and (3) the amount and rate of runoff given a particular rainfall input, as measured under a standard condition. Fine-textured soils that are high in clay have low K values (about 0.05 to 0.15) because the particles are resistant to detachment. Coarse-textured soils, such as sandy soils, also have low K values (about 0.05 to 0.2) because of high infiltration resulting in low runoff even though these particles are easily detached. Medium-textured soils, such as a silt loam, have moderate K values (about 0.25 to 0.45) because they are moderately susceptible to particle detachment and they produce runoff at moderate rates. Soils having a high silt content are especially susceptible to erosion and have high K values, which can exceed 0.45 and can be as large as 0.65. Silt-size particles are easily detached and tend to crust, producing high rates and large volumes of runoff. Use Site-specific data must be submitted.		
8	Site-specific K factor guidance		
9	**K Factor Value**		0.17
10	**C) LS Factor (weighted average, by area, for all slopes)**		
11	The effect of topography on erosion is accounted for by the LS factor, which combines the effects of a hillslope-length factor, L, and a hillslope-gradient factor, S. Generally speaking, as hillslope length and/or hillslope gradient increase, soil loss increases. As hillslope length increases, total soil loss and soil loss per unit area increase due to the progressive accumulation of runoff in the downslope direction. As the hillslope gradient increases, the velocity and erosivity of runoff increases. Use the LS table located in separate tab of this spreadsheet to determine LS factors. Estimate the weighted LS for the site prior to construction.		
12	LS Table		
13	**LS Factor Value**		0.46
14			
15	**Watershed Erosion Estimate (=RxKxLS) in tons/acre**		5.05
16	**Site Sediment Risk Factor**		**Low**
17	Low Sediment Risk: < 15 tons/acre		
18	Medium Sediment Risk: >=15 and <75 tons/acre		
19	High Sediment Risk: >= 75 tons/acre		
20			

3.1.2 Receiving Water Body Risk

The receiving water risk is classified as high because Matadero Creek has the beneficial uses of SPWN, COLD and MIGR (Figure 5). The high receiving water risk for the entire Project area is confirmed through the use of a GIS map prepared by Caltrans.

Receiving Water (RW) Risk Factor Worksheet	**Entry**	**Score**
A. Watershed Characteristics	**yes/no**	
A.1. Does the disturbed area discharge (either directly or indirectly) to a **303(d)-listed waterbody impaired by sediment**? For help with impaired waterbodies please check the attached worksheet or visit the link below:	**Yes**	**High**
2006 Approved Sediment-impared WBs Worksheet		
http://www.waterboards.ca.gov/water_issues/programs/tmdl/303d_lists2006_epa.shtml		
OR		
A.2. Does the disturbed area discharge to a waterbody with designated beneficial uses of SPAWN & COLD & MIGRATORY?		
http://www.ice.ucdavis.edu/geowbs/asp/wbquse.asp		

Figure 5. Receiving Water Risk Assessment

With a low sediment risk and a high receiving water body risk, the combined RL is Level 2, as shown in Figure 6.

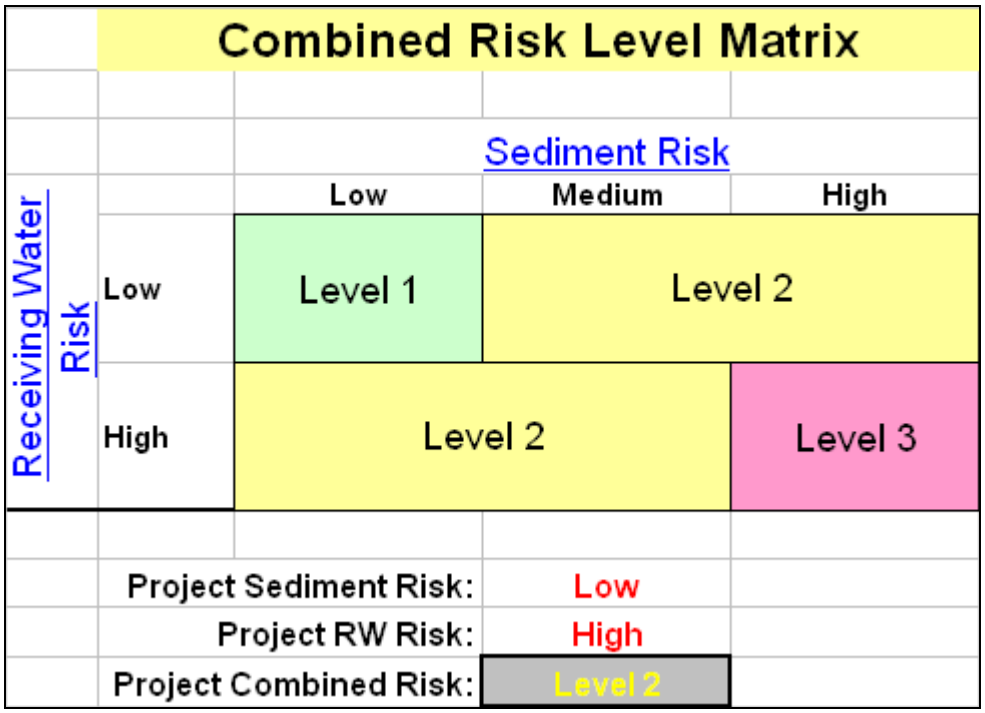

Figure 6. Combined Risk Level Assessment

3.2 Notice of Termination (NOT)

The CGP provides both revised and new requirements for completion and approval of the NOT. The NOT requirements are presented in Section II.D of the new CGP permit "Order." These requirements include demonstrating through photos, computational proof or other "custom methods," such as results of testing and analysis, that the terms of the NOT have been satisfied.

While these methods of demonstrating compliance are at the option of the contractor, should the RWQCB determine that the visual photos do not adequately show compliance, further computational efforts may be required. This computational proof is obtained through the use of the Revised Universal Soil Loss Equation 2 (RUSLE2) program.

3.3 Caltrans Forms

The following forms have been developed by the Division of Construction as of 09/2010:

- CEM-2030 "Stormwater Site Inspection Report"
  - Visual inspection monitoring form
- CEM-2034 "Stormwater Best Management Status Report"
  - Identifies BMP types and quantities to be installed on a weekly basis
- CEM-2035 "Stormwater Site Inspection Report Corrective Actions Summary"
  - Describes actions taken for existing BMP failures
- CEM-2045 "Rain Event Action Plan-Highway Construction Phase"
  - REAP to be used during active work phase
- CEM-2046 "Rain Event Action Plan-Plant Establishment Phase"
  - REAP to be used during plant establishment phase
- CEM-2047 "Rain Event Action Plan-Innactive Project"
  - REAP to be used for inactive work phase
- CEM-2090 "Notice of Completion of Construction"
  - Describes efforts to show compliance with NOT requirements

4 RUN-ON DISCHARGES

Run-on discharges are off-site storm water flows that can potentially run onto the site. The calculations are based on a rainfall intensity for a 2-year, 24-hour event per the PPDG. The calculations use the watershed delineations provided in the off-site watershed plans, which are shown on the attached Appendix C. These discharge calculations are used to design storm water BMPs during construction.

The rainfall model most often used in highway drainage is a constant-intensity storm of a given duration and probability of occurrence. The intensity of this storm was assumed because of the short construction schedule (6/2011 to 8/2013). The rainfall intensity for a 2-year, 24-hour event is 0.08 in/hour.

The runoff coefficient is 0.60 because the offsite watershed is unpaved.

5 PROJECT REGISTRATION DOCUMENTS

To obtain permit coverage under the CGP, all dischargers must electronically file PRDs, NOTs, changes of information, sampling and monitoring information, annual reporting, and other compliance documents required by this CGP through the SWRCB's SMARTS. The contractor will have to coordinate these submittals with Caltrans within the timeframe allotted in the contract special provisions and as specified in the permit. SMARTS is found under the following website:

https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.jsp

PRDs include the following information:

1. Notice of Intent (NOI)
2. Site Map(s) Includes:
    a. The project's surrounding area (vicinity)
    b. Site layout
    c. Construction site boundaries
    d. Drainage areas
    e. Discharge locations
    f. Sampling locations
    g. Areas of soil disturbance (temporary or permanent)
    h. Active areas of soil disturbance (cut or fill)
    i. Locations of all runoff BMPs
    j. Locations of all erosion control BMPs
    k. Locations of all sediment control BMPs
    l. ATS location (if applicable)
    m. Locations of sensitive habitats, watercourses, or other features which are not to be disturbed
    n. Locations of all post-construction BMPs
    o. Locations of storage areas for waste, vehicles, service, loading/unloading of materials, access (entrance/exits) points to construction site, fueling and water storage, water transfer for dust control and compaction practices

3. SWPPPs

4. Risk Assessment

a. The Standard Risk Assessment includes utilization of the following:
    i. Receiving water Risk Assessment interactive map
    ii. EPA Rainfall Erosivity Factor Calculator Website
    iii. Sediment Risk interactive map
    iv. Sediment sensitive water bodies list

b. The Site-Specific Risk Assessment includes the completion of the hand calculated R value Risk Calculator

5.1 General Information Included

The following is a list of information included in this Storm Water Information Handout that can be used for the PRDs:

- Vicinity Map
- Risk Assessment

5.2 Storm Water Pollution Prevention Plan

The contractor for the Project is required to prepare a Storm Water Pollution Prevention Plan (SWPPP) because the Project involves disturbing more than 1 ac of soil. The SWPPP must include the following information:

- Active areas of cut and fill
- Areas of soil disturbance (temporary and permanent)
- Locations of storage areas for waste, vehicles, access, etc.
- Locations of all runoff BMPs
- Locations of all erosion control BMPs
- Locations of all sediment control BMPs

The SWPPP should be submitted with the PRDs and will be forthcoming from the Contractor.

5.3 Notice of Intent (NOI)

The NOI must be submitted once the contractor submits the SWPPP. This document is included in Appendix A.

5.4 Site Maps

Registration requirements can be met by the inclusion of the following plans, which can be found in the appendices.

- Sampling Plan (Appendix B)
  - Discharge Locations (Subject to changes by the Contractor and approved by the Engineer)
  - Sampling locations (Subject to changes by the Contractor and approved by the Engineer)
- Watershed Maps (Appendix C)

Appendix A Notice of Intent (NOI)

VI. REGULATORY STATUS

A. Has a local agency approved a required erosion/sediment control plan? ☐ YES ☐ NO

Does the erosion/sediment control plan address construction activities such as infrastructure and structures? ☐ YES ☐ NO

Name of local agency: California Department of Transportation Phone: _____

B. Is this project or any part thereof, subject to conditions imposed under a CWA Section 404 permit of 401 Water Quality Certification? ☒ YES ☐ No

If yes, provide details: 401 Certification issued by SFBRWQCB; 404 Permit issued by USACOE

VII. RECEIVING WATER INFORMATION

A. Does the storm water runoff from the construction site discharge to (Check all that apply):

1. ☐ **Indirectly to waters of the U.S.**
2. ☐ **Storm drain system - Enter owner's name:** _____
3. ☒ **Directly to waters of U.S. (e.g. , river, lake, creek, stream, bay, ocean, etc.)**

B. Name of receiving water: (river, lake, creek, stream, bay, ocean): Matadero, Adobe and Permanente Creeks; SF Bay South

VIII. IMPLEMENTATION OF NPDES PERMIT REQUIREMENTS

A. STORM WATER POLLUTION PREVENTION PLAN (SWPPP) (check one)

☐ A SWPPP has been prepared for this facility and is available for review: Date Prepared: ____/____/____ Date Amended: ____/____/____

☒ A SWPPP will be prepared and ready for review by (enter date): ____/____/____

☐ A tentative schedule has been included in the SWPPP for activities such as grading, street construction, home construction, etc.

B. MONITORING PROGRAM

☒ A monitoring and maintenance schedule has been developed that includes inspection of the construction BMPs before anticipated storm events and after actual storm events and is available for review.

If checked above: A qualified person has been assigned responsibility for pre-storm and post-storm BMP inspections to identify effectiveness and necessary repairs or design changes. ☐ YES ☐ NO

Name: _____ Phone: _____

C. PERMIT COMPLIANCE RESPONSIBILITY

A qualified person has been assigned responsibility to ensure full compliance with the Permit, and to implement all elements of the Storm Water Pollution Prevention Plan including:

1. Preparing an annual compliance evaluation. ☐ YES ☐ NO

Name: _____ Phone: _____

2. Eliminating all unauthorized discharges. ☐ YES ☐ NO

IX. VICINITY MAP AND FEE (must show site location in relation to nearest named streets, intersections, etc.)

Have you included a vicinity map with this submittal? ☒ YES ☐ NO

Have you included payment of the annual fee with this submittal? ☐ YES ☐ NO

X. CERTIFICATIONS

"I certify under penalty of law that this document and all attachments were prepared under my direction and supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment. In addition, I certify that I have read the entire General Permit, including all attachments, and agree to comply with and be bound by all of the provisions, requirements, and prohibitions of the permit, including the development and implementation of a Storm Water Pollution Prevention Plan and a Monitoring Program Plan will be complied with."
