Foreward

This July 1999 edition of the California Department of Transportation Standard Plans is the third edition of the Department's Standard Plans based on metric values using the International System of Units (SI).

Symbols for (SI) metric units used in this July 1999 edition of the Standard Plans are shown on the included Standard Plan A10A, "Abbreviations."

The July 1999 edition of the California Department of Transportation Standard Specifications supports the July 1999 edition of the Standard Plans.

Caltrans Metric

TABLE OF CONTENTS

PLAN TITLE	PLAN NO.	PAGE
GENERAL ROAD WORK (Miscellaneous)		
ABBREVIATIONS	A10A	1
SYMBOLS	A10B	2
PAVEMENT MARKERS AND TRAFFIC LINES, TYPICAL DETAILS	A20A	3
PAVEMENT MARKERS AND TRAFFIC LINES, TYPICAL DETAILS	A20B	4
PAVEMENT MARKERS AND TRAFFIC LINES, TYPICAL DETAILS	A20C	5
PAVEMENT MARKERS AND TRAFFIC LINES, TYPICAL DETAILS	A20D	6
PAVEMENT MARKINGS - ARROWS	A24A	7
PAVEMENT MARKINGS - ARROWS	A24B	8
PAVEMENT MARKINGS - SYMBOLS AND NUMERALS	A24C	9
PAVEMENT MARKINGS - WORDS	A24D	10
PAVEMENT MARKINGS - WORDS AND CROSSWALKS	A24E	11
PORTLAND CEMENT CONCRETE PAVEMENT (UNDOWELED TRANSVERSE JOINTS)	A35A	12
PORTLAND CEMENT CONCRETE PAVEMENT (DOWELED TRANSVERSE JOINTS)	A35B	13
PORTLAND CEMENT CONCRETE PAVEMENT JOINT AND END ANCHOR DETAILS	A35C	14
RUMBLE STRIP DETAILS	A40	15
EXCAVATION AND BACKFILL - MISCELLANEOUS DETAILS	A62A	16
LIMITS OF PAYMENT FOR EXCAVATION AND BACKFILL - BRIDGE SURCHARGE AND WALL	A62B	17
LIMITS OF PAYMENT FOR EXCAVATION AND BACKFILL - BRIDGE	A62C	18
EXCAVATION AND BACKFILL - CONCRETE PIPE CULVERTS	A62D	19
EXCAVATION AND BACKFILL - CONCRETE PIPE CULVERTS	A62DA	20
EXCAVATION AND BACKFILL - CAST-IN-PLACE REINFORCED CONCRETE BOX AND ARCH CULVERTS	A62E	21
EXCAVATION AND BACKFILL - METAL AND PLASTIC CULVERTS	A62F	22
OBJECT MARKERS	A73A	23
MARKERS	A73B	24
DELINEATORS, CHANNELIZERS AND BARRICADES	A73C	25
SURVEY MONUMENTS	A74	26
CONCRETE HEADLIGHT GLARE SCREEN	A75D	27
CONCRETE BARRIER TYPE 60	A76A	28
CONCRETE BARRIER TYPE 60	A76B	29
CONCRETE BARRIER TYPE 60E	A76C	30
CONCRETE BARRIER TYPE 60G	A76D	31
CONCRETE BARRIER TYPE 60G	A76E	32
CONCRETE BARRIER TYPE 60GE	A76F	33
CONCRETE BARRIER TYPE 60S	A76G	34
CONCRETE BARRIER TYPE 60S	A76H	35
CONCRETE BARRIER TYPE 60SE	A76I	36
METAL BEAM GUARD RAILING – TYPICAL WOOD POST WITH WOOD BLOCK	A77A	37
METAL BEAM GUARD RAILING – TYPICAL STEL POST WITH WOOD BLOCK	A77AA	38
METAL BEAM GUARD RAILING - STANDARD HARDWARE	A77B	39
METAL BEAM GUARD RAILING – WOOD POST AND WOOD BLOCK DETAILS	A77C	40
METAL BEAM GUARD RAILING – STEEL POST AND WOOD BLOCK DETAILS	A77CA	41
METAL BEAM GUARD RAILING – TYPICAL LAYOUTS	A77D	42
METAL BEAM GUARD RAILING – TYPICAL LAYOUTS	A77E	43
METAL BEAM GUARD RAILING – TYPICAL EMBANKMENT WIDENING FOR END TREATMENTS	A77F	44
METAL BEAM GUARD RAILING – TYPICAL LINE POST INSTALLATION	A77FA	45

PLAN TITLE | PLAN NO. | PAGE

GENERAL ROAD WORK (Miscellaneous) (Cont'd)

METAL BEAM GUARD RAILING – END TREATMENT, TERMINAL ANCHOR ASSEMBLY (TYPE SFT) A77G 46
METAL BEAM GUARD RAILING - ANCHOR CABLE AND ANCHOR PLATE DETAILS A77H 47
METAL BEAM GUARD RAILING – END TREATMENT, TERMINAL ANCHOR ASSEMBLY (TYPE CA) A77I 48
METAL BEAM GUARD RAILING – END TREATMENT, BURIED POST ANCHOR A77IA 49
METAL BEAM GUARD RAILING CONNECTIONS TO BRIDGE RAILINGS, RETAINING WALLS AND ABUTMENTS A77J 50
METAL BEAM GUARD RAILING CONNECTIONS TO BRIDGE SIDEWALKS AND CURBS A77K 51
METAL BEAM GUARD RAILING AND SINGLE FACED BARRIER RAILING - END TREATMENT A77L 52
METAL BEAM GUARD RAILING AND SINGLE FACED BARRIER RAILING - END TREATMENT A77M 53
METAL BEAM GUARD RAILING AND SINGLE FACED BARRIER RAILING - END TREATMENT A77N 54
THRIE BEAM BARRIER – TYPICAL WOOD POST WITH WOOD BLOCK A78A 55
THRIE BEAM BARRIER - TYPICAL STEL POST WITH WOOD BLOCK A78B 56
THRIE BEAM BARRIER – POSTS, BLOCKS AND STANDARD HARDWARE DETAILS A78C 57
THRIE BEAM BARRIER - MISCELLANEOUS DETAILS A78D 58
SINGLE THRIE BEAM BARRIER - END TREATMENTS A78E 59
DOUBLE THRIE BEAM BARRIER - END TREATMENT A78EA 60
THRIE BEAM BARRIER CONNECTIONS TO BRIDGE RAILING A78F 61
THRIE BEAM BARRIER CONNECTIONS TO BRIDGE CURBS, RETAINING WALLS AND ABUTMENTS A78G 62
THRIE BEAM BARRIER CONNECTION TO CONCRETE BARRIER TYPE 60 ..... A78I 63
CRASH CUSHION, SAND FILLED (UNIDIRECTIONAL) A81A 64
CRASH CUSHION, SAND FILLED (UNIDIRECTIONAL) A81B 65

NOTES

(1) If a message consists of more than one word, it should read "UP", i.e., the first word should be nearest the driver.

(2) The space between words should be at least four times the height of the characters for low speed roads, but not more than ten times the height of the characters. The space may be reduced appropriately where there is limited space because of local conditions.

(3) Minor variations in dimensions may be accepted by the Engineer.

(4) Portions of a letter, number or symbol may be separated by connecting segments not to exceed 50 mm in width.

A24E

1999 STD. PLAN A24E

NOTES

1. Transverse weakened plane joints shall be constructed in new portland cement concrete pavement on the skewed offset, as shown, and spaced at successive repeated intervals of 3.6 m, 4.0 m, 4.3 m and 4.6 m, except for the first joint at pavement end anchors and structure approaches. The skewed offset shall be 1 to 6 and rotated counter clockwise.
2. New transverse weakened plane joints shall match the skewed offset and spacing of the adjacent existing weakened plane joints, as shown. Where the existing transverse weakened plane joint spacing exceeds 4.6 m, an additional transverse wakened plane joint shall be constructed equal distance bewteen the existing joints.
3. Transverse contact (construction) joints, with tie bars spaced as shown, shall be installed at the end of paving operations and elsewhere if ordered by the Engineer. Transverse contact (construction) joints shall be placed at least 1.5 m from any weakened plane joint.
4. Construct longitudinal weakened plane joints as shown in Section B-B when more than one lane or shoulder widths are placed at one time. If constructing one lane at a time, use longitudinal contact (construction) joint, as shown in Section A-A.
5. If fresh portland cement concrete is placed adjacent to existing portland cement concrete, the top corner of the existing portland cement concrete does not need to be rounded to 6 mm radius, as shown.

PLANS APPROVAL DATE

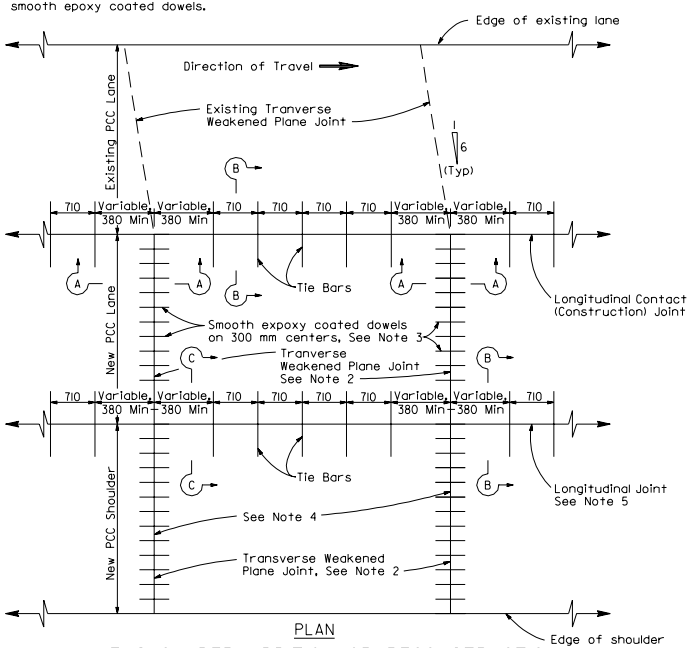
REGISTERED PROFESSIONAL ENGINEER Kevin M. Hewitt No. C36577 Exp. 6-30-00 CIVIL STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES

1. Transverse weakened plane joints shall be constructed at right angles to the centerline and edge of pavement lanes in new portland cement concrete pavement and spaced at successive repeated intervals of 3.6 m, 4.0 m, 4.3 m and 4.6 m, except for the first joint at pavement end anchors and structure approaches.
2. New transverse weakened plane joints shall match the spacing of the adjacent existing transverse weakened plane joints, as shown, and shall be constructed at right angles to the centerline and edge of pavement lanes. Where the existing transverse weakened plane joint spacing exceeds 4.6 m, an additional transverse weakened plane joint shall be constructed equal distance between the existing joints.
3. 38 mm ø smooth epoxy coated dowels are to be used with a pavement thickness, D, equal to or greater than 215 mm. For a pavement thickness, D, less than 215 mm, use 32 mm ø smooth epoxy coated dowels.
4. Dowels shall be placed in the transverse weakened plane joints in portland cement concrete shoulders unless otherwise specified in the Special Provisions.
5. Construct longitudinal weakened plane joints as shown in Section C-C when more than one lane or shoulder widths are placed at one time. If constructing one lane at a time, use longitudinal contact (construction) joint, as shown in Section B-B.
6. Transverse contact (construction) joints shall be installed at the end of all paving operations, and elsewhere if ordered by the Engineer. The location of the joint shall coincide with the successive interval spacing of transverse weakened plane joints when terminating paving operations.
7. If fresh portland cement concrete is placed adjacent to existing portland cement concrete, the top corner of the existing portland cement concrete does not need to be rounded to the 6 mm radius, as shown.



PLAN

BRIDGE EMBANKMENT SURCHARGE

PLAN

BRIDGE EMBANKMENT SURCHARGE

NOTES

1. Roadway embankment is not delineated on excavation drawings for clarity.
2. Embankment, if any, must be in place before structure excavation is made.
3. If no roadway or ditch excavation or embankment is involved at the wall, structure excavation will be measured from the original ground.
4. No deduction for crib wall member volumes is made from structure backfill quantities.
5. When an embankment settlement period is required, the upper limits of structure excavation are raised to conform to the elevation of the embankment after the settlement period or, when an embankment surcharge is used to the finished surface and grading plane elevations.
6. Embankment slopes to be as steep as material permits. Slope assumed to be 1:1 for purposes of quantity calculations.

NON-REINFORCED CONCRETE PIPE

NOTES

1. Unless otherwise shown on the plans or specified in the special provisions, the Contractor shall have the option of selecting the class of RCP and the method of backfill to be used, provided the height of cover does not exceed the value shown for the RCP selected.
   Example:
   600 mm RCP culvert with maximum cover of 5.80 m the options are:
   a) Class V Special or stronger with Method 1.
   b) Class III or stronger with Method 2.
   c) Class II or stronger with Method 3.
   Cover is defined as the maximum vertical distance from top of pipe to finished grade within the length of any given culvert.
2. The class of RCP, method of backfill and bedding selected shall be the same throughout the length of any given culvert.
3. The "length of any culvert" is defined as the culvert between:
   a) Successive drainage structures (inlets, junction boxes, headwalls, etc.).
   b) A drainage structure and the inlet or outlet end of the culvert.
   c) The inlet and outlet end of the culvert when there are no intervening drainage structures.
4. Slope or shore excavation sides as necessary.
5. Embankment height prior to excavation for installation of all classes of RCP under Methods 2 and 3A shall be as follows:
   Pipe sizes 300 mm to 1050 mm ID = 750 mm
   Pipe sizes 1200 mm to 2100 mm ID = 2/3 OD
   Pipe sizes larger than 2100 mm ID = 1500 mm
6. The maximum size for all classes of RCP placed under Method 1 is 1950 mm ID.
7. Non-reinforced precast pipe sizes 900 mm or smaller may also be placed under Methods 1, 2 or 3.
8. Oval or arch shaped RCP shall be placed under Method 2 only.
9. Embankment compaction requirements govern over the 90% relative compaction backfill requirement within 750 mm of finished grade.
10. Backfill shall be placed full width of excavation except where dimensions are shown for backfill width or thickness. Dimensions shown are minimums.
11. Minimum cover over top of pipe at edge of traveled way shall be 600 mm for AC pavement and 300 mm for PCC pavement.
12. Where the precast non-reinforced concrete pipe is used as a substitute for the cast-in-place pipe, both the wall thickness and the concrete strength shall be at least as great as that specified for the cast-in-place pipe. The fill height allowed shall not exceed that shown for the cast-in-place pipe.

LEGEND

- Structure Excavation (Culvert)
- Structure Backfill (Culvert) 95% relative compaction
- Structure Backfill (Culvert) 90% relative compaction

TYPE 1 INSTALLATION:

The haunch and outer bedding shall be compacted to a minimum 90 percent relative compaction. In addition, the minimum sand equivalent in these areas shall be 30 and the maximum percentage passing the 75 µm sieve size shall be 12. Lower side shall be suitable material as determined by the Engineer. Otherwise it shall be considered unsuitable as set forth in Section 19-2.02 of the Standard Specifications. See Note 9.

TYPE 2 INSTALLATION:

The haunch and outer bedding shall be compacted to a minimum 90 percent relative compaction. In addition, the minimum sand equivalent in these areas shall be 25. Lower side shall be suitable material as determined by the Engineer. Otherwise it shall be considered unsuitable as set forth in Section 19-2.02 of the Standard Specifications. See Note 9.

TYPE 3 INSTALLATION:

The haunch and outer bedding shall be compacted to a minimum 85 percent relative compaction. In addition, the minimum sand equivalent in these areas shall be 25. If the sand equivalent is between 20 and 25, 90 percent relative compcation will be required. This installation may not be used where the fill over the pipe is less than 1/2 O.D. Lower side shall be suitable material as determined by the Engineer. Otherwise it shall be considered unsuitable as set forth in Section 19-2.02 of the Standard Specifications. See Note 9.

INSTALLATION TYPE 1

No. 34509
Exp. 9-30-99
CIVIL
STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES:

1. Unless otherwise shown on the plans or specified in the special provision, the Contractor shall have the option of selecting the class of RCP and the type of installation to be used, provided the height of cover does not exceed the value shown for the RCP selected.
   Example: 600 mm RCP culvert with maximum cover of 5.80 m the options are:
   a) Class III or stronger with Installation Type 1.
   b) Class III Special or stronger with Installation Type 2.
   c) Class IV Special or stronger with Installation Type 3.
   Cover is defined as the maximum vertical distance from top of the pipe to finished grade within the length of any given culvert.
2. The class of RCP and Installation Type selected shall be the same throughout the length of any given culvert.
3. The "length of any culvert" is defined as the culvert between:
   a) Successive drainage structure (inlets, junction boxes, headwalls, etc.).
   b) A drainage structure and the inlet or outlet end of the culvert.
   c) The inlet and outlet end of the culvert when there are no intervening drainage structures.
4. Oval and arch shaped RCP shall not be used.
5. O.D./25 min, not less than 75.
6. Slurry cement backfill may be substituted for backfill in the outer bedding and haunch areas. If slurry is used the outer and middle beddings shallbe omitted. Prior to installation the soil under the middle 1/3 of the outside diameter of the pipe shall be softened by scarifying or other means to a minimum depth of O.D./25, but not less than 75 mm. Where slurry cement backfill is used clear distance to trench wall may be reduced as set forth in Section 19-3.062 of the Standard Specifications.
7. Backfill shall be placed full width of excavation except where dimensions are shown for backfill width or thickness. Dimensions shown are minimums.
8. Minimum cover over top of pipe at edge of traveled way shall be 600 mm for AC pavement and 300 mm for PCC pavement.
9. Where the pipe is placed in a trench, if the trench walls are sloped at 5 vertical to 1 horizontal or steeper for at least 90 percent of the trench height, or sloped up to not less than 300 mm from the grading plane, the firmness of the soil in the lower side need not be considered.
10. Non-reinforced precast concrete pipe sizes 900 or smaller may be placed under installation types 1, 2 or 3.

NOTES

1. Post, blocks and hardware to be used are shown on Standard Plans A77B, A77C and A77CA.
2. Guard rail post spacing to be 1905 mm center to center, except as otherwise noted.
3. Except as noted, posts shown are 150 mm x 200 mm wood. MW 150 x 14 steel posts with 200 mm x 200 mm notched wood blocks may be used for 150 mm x 200 mm wood posts and blocks where applicable and when specified.
4. Rail elements to be installed as shown on Standard Plan A77A for wood post and wood blocks installations and as shown on Standard Plan A77AA for steel post and wood block installations.
5. Direction of traffic indicated by ⟶
6. For connection details see Standard Plan A77J or A77K.
7. For terminal anchor assembly (Type CA) details, see Standard Plan A77I. Where a crash cushion is required as specified in Note 11 and the crash cushion attaches to the ends of the guard railing, the terminal anchor assembly (Type CA) and return section may not be required (see Project Plans).
8. For terminal anchor assembly (Type SFT) details, see Standard Plan A77C. Terminal Sections not to be installed on trailing end of guard railing constructed adjacent to one-way roadways.
9. On two-way roadways less than 18 m in width, a terminal system is to be used in place of the terminal anchor assembly (Type SFT) at the trailing end of guard railing for embankment installations.
10. For details of a terminal system typically used as a flared end treatment on Type 1A and Type 1B Layouts, see Standard Plan A77L. For details of terminal system typically used on Type 1A and Type 1B Layouts where site conditions will not accommodate a flared end treatment, see Standard Plans A77M and A77N. For embankment widening details to accommodate terminal system end treatments, see Standard Plan A77F.
11. A crash cushion is required for Type 3A layout, when the end of the guard railing is within 9.0 m of the edge of traveled way (ETW) of approaching traffic. For the type of crash cushion to be used, see Project Plans and the Special Provisions.
12. When width 'W' exceeds 3.8 m; to calculate the length of parabolic flare use "L=3W" and round to nearest 3.8 m.
13. As site conditions dictate, additional 3.8 m lengths of guard railing with post spacing at 1905 mm may be required at the point shown.
14. For the type of terminal system to be used, see Project Plans and the Special Provisions.
15. The 10:1 or flatter flare is based on the edge of the paved shoulder or offset line of edge of traveled way. The length of guard railing within the 10:1 or flatter flare may be increased by 3.8 m lengths, as site conditions dictate.
16. For buried end anchor details, see Standard Plan A77IA.
17. Use a flat plate washer on the rail face when attaching rail element to these posts. Wood post with wood block are only to be used for these posts and block.

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES

1. Post, blocks and hardware to be used are shown on Standard Plans A77B, A77C and A77CA.
2. Guard railing post spacing to be 1905 mm center to center, except as otherwise noted.
3. Except as noted, posts and blocks shown are 150 mm x 200 mm wood. MW 150 x 14 steel posts with 200 mm x 200 mm notched wood blocks may be used for 150 mm x 200 mm wood posts and blocks where applicable and when specified.
4. Rail elements to be installed as shown on Standard Plan A77A for wood post and wood block installations and as shown on Standard Plan A77AA for steel post and wood block installations.
5. A 1.2 m minimum clearance is required between the face of the railing and the face of a fixed object located directly behind a guard railing post. Where a fixed object is behind the railing, but not directly behind a guard railing post, a 910 mm minimum clearance, is required between the face of the railing and the face of the fixed object. Where minumum clearances cannot be obtained, construct guard railing as shown in "Approach Railing Transition Details for Fixed Objects" on this plan.
6. Direction of traffic indicated by ⟶.
7. For connection details, see Standard Plans A77J and A77K.
8. For terminal anchor assembly (Type CA) details, see Standard Plan A77I. Where a crash cushion is required as specified in Note 11 and the crash cushion attaches to the ends of the guard railing, the terminal anchor assembly (Type CA) and return section may not be required (see Project Plans).
9. For terminal anchor assembly (Type SFT) details, see Standard Plan A77G.
10. Terminal sections not to be installed on trailing end of guard railing constructed adjacent to one-way roadways.
11. A crash cushion is required for Type 4A, 5A and 6A layouts, when the end of the guard railing is within 9.0 m of the edge of traveled way (ETW) of approaching traffic. For the type of crash cushion to be used, see the Project Plans and Special Provisions.
12. When width 'W' exceeds 3.8 m; to calculate the length of parabolic flare use "L=3W" and round to nearest 3.8 m.
13. For the type of terminal system to be used, see Project Plans and the Special Provisions.
14. For details of a terminal system typically used as a flared end treatment on Type 8A Layouts, see Standard Plan A77L. For details of a terminal system typically used on Type 8A Layouts where site conditions will not accommodate a flared end, see Standard Plans A77M and A77N.
15. Use a flat plate washer on the rail face when attaching rail element to these posts.
16. Wood post with wood block are only to be used for these posts and blocks.

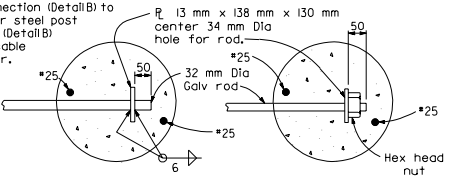
See Note 5

NOTES

1. For typical use of this terminal anchor, see metal beam guard railing Layout Types 3A, 4A, 5A and 6A on Standard Plans A77D and A77E.
2. Anchor cable to be parallel to guard railing for straight runs of rail. Anchor cable may have angle point at anchor plate if guard rail is curved.
3. Distance between end post and concrete anchor is 1.7 m with terminal section. May be less than 1.7 m with return sections if separate rods connect to concrete anchor.
4. Anchor rod hooks to be in contact with anchor reinforcement when concrete is placed. Wire ties may be used to position anchor rods.
5. Cable clip connection (Detail A) or clevis and bolt connection (Detail B) to be used with wood post guard railing installation. For steel post guard railing installations, clevis and bolt connection (Detail B) is to be used. Other alternative for attaching cable to anchor rod must be approved by the Engineer.



OPTIONAL ENDS ON SINGLE ANCHOR ROD

(Not to be used for double anchors)

NOTE

Use two 32 mm ø dia Galv rods with hook and eye for double guard rail anchor.

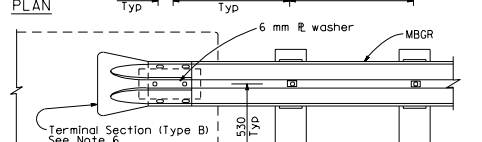
CONNECTION DETAIL B
See Note 7



CONNECTION DETAIL A
See Note 7

ELEVATION

GUARD RAILING CONNECTION TO BRIDGE RAILING

NOTES

1. These connection details apply to bridge railings, abutments and retaining walls. For additional connection details for bridge railing, see Standard Plan B11-53, B11-54, B11-55 and B11-56 and the project plans. See Standard Plan A77K for connection details to bridges with sidewalks or curbs.
2. Additional details of post, blocks and hardware are shown on Standard Plans A77B, A77C and A77CA.
3. Direction of traffic indicated by ⟶
4. For traffic approach railing details, see Standard Plans A77D, A77E and the "Approach Railing Transition Details" on this plan.
5. When metal box spacer is installed, place M24 bolts through 32 mm ø x 125 mm and 32 mm ø x 100 mm pipe spacers within tapered box spacer and place M24 bolts through 32 mm ø x 130 mm pipe spacers within straight box spacer.
6. Terminal sections not to be installed on trailing end of approach guard railing constructed adjacent to one-way roadways. When terminal section is not installed, use backup plate between rail element and metal box spacer. See Standard Plan A77B for backup plate details.
7. In addition to the use of "Connection Detail B" for traffic departure ends of structure, "Connection Detail B" shall be used on the traffic approach ends of structure on two-way roadways which are 18 m or less in width. Where "Connection Detail B" is used at the traffic approach ends of structures, the size and spacing of posts and blocks shall be as shown in the "Approach Railing Transition" detail on this plan.
8. Use timber shims without posts where clearance between rail element and wall or abutment is less than 380 mm.
9. Do Not attach railing to bridge columns. Use separate posts as shown on Standard Plan A77E.
10. Use a flat plate washer on the rail face when attaching rail element to these posts. Wood post with wood block are only to be used for these posts and blocks.

NOTES

1. Connection Details C and D applies to the traffic approach end of bridges with sidewalks or curbs. For traffic departure end of bridges, see Connection Detail E. See Standard Plan A77J for connection details to bridges without sidewalks or curbs.
2. When curb or sidewalk depth is less than 230 mm, use Connection Detail D.
3. Direction of traffic indicated by ⟶
4. For traffic approach railing details, see Standard Plans A77D, A77E and "Approach Railing Transition Details" on Standard Plan A77J.
5. Terminal sections not to be installed on the trailing end of approach guard railing constructed adjacent to one-way roadways, except as provided in Note 7.
6. Anchor post assembly to be galvanized after fabrication.
7. Terminal Section (Type C) to be used where pedestrian traffic is present. Adjust positioning of Terminal Section (Type C) to encircle anchor post. Drill necessary holes in rail element to attached Terminal Section (Type C) with 16 mm ø button head bolts with hex nuts and cut washers (5 per connection).
8. For additional connection details for bridge barrier railing, see Standard Plans B11-53, B11-54, B11-55 and B11-56 and the project plans.
9. "Connection Detail B" shown on Standard Plan A77J may be used in place of "Connection Detail E" for structures with walkways on two-way roadway 18 m or less in width.

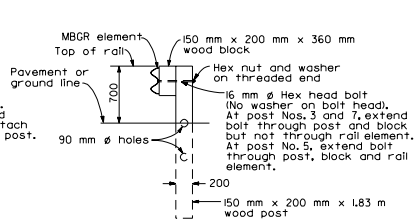
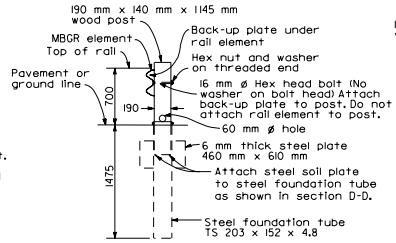
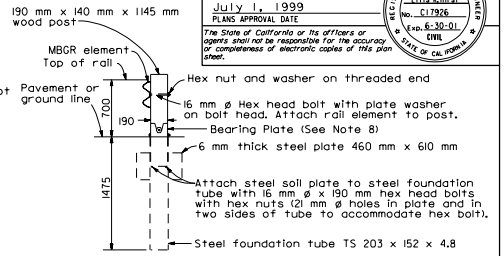
SECTION A-A



SECTION B-B

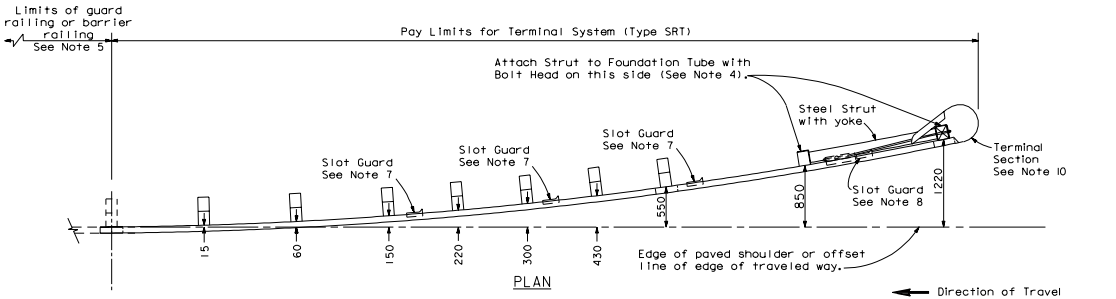


SECTION C-C

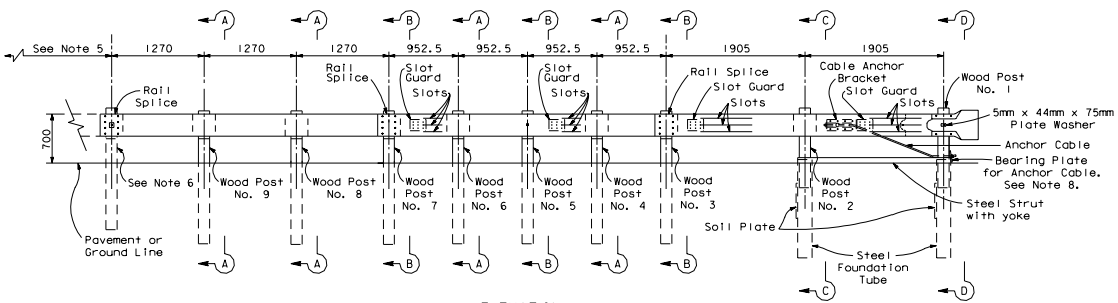


SECTION D-D

(Terminal Section not shown)



PLAN



ELEVATION

TERMINAL SYSTEM (TYPE SRT)

See Note 9

NOTES:

1. For additional details of Terminal System (Type SRT), refer to the manufacturer's installation instructions.
2. The post offset dimensions are given to the center of the traffic face of the block, except at the first two posts, where the dimension is to the center of the traffic face of the post. Offset points are to be located by chord measurements at the back of the rail equal to the nominal post spacings shown. Posts are to be set approximately radial to the railing at each post location.
3. Do not attach rail elements to posts 2, 3, 4, 6, 7, 8 and 9.
4. Attach strut to Post Nos. 1 and 2 foundation tubes with 16 mm ø hex head bolts, washers and hex nuts. Bolts extend through the strut, steel foundation tube, and wood posts.
5. For the length and type of guard railing or barrier the terminal system is attached to, see the Project Plans. For minimum length of guard railing used with terminal system end treatments, see Standard Plans A77D and A77E.
6. Attach rail element to this post and block. Payment for this post, block and hardware is included in payment for the type of railing or barrier the terminal system is attached to, not part of payment for Terminal System (Type SRT).
7. The deflector angle of the slot guard is to be positioned immediatley downstream of the slots.
8. For bearing plate orientation, refer to the manufacturer's installation instructions.
9. Terminal system (Type SRT) is a flared end treatment for guard railing or single faced barrier railing. See Type 1A and 1B Layouts on Standard Plan A77D and Type 8A Layout on Standard Plan A77E for typical use of this terminal system with guard railing. See Standard Plan A78E for typical use of this terminal system with single thrie beam barrier.
10. Terminal section may be a ¾ wrap terminal section attached only to face of rail or a complete wrap around terminal section shown.

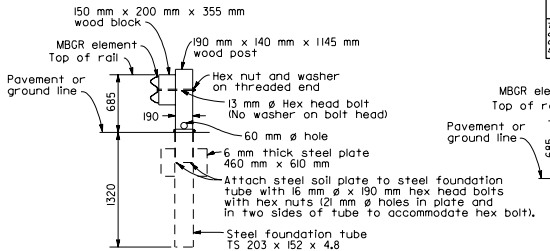
July 1, 1999
PLANS APPROVAL DATE

REGISTERED PROFESSIONAL ENGINEER Ellis K. Hirst No. C17926 Exp. 6-30-01 CIVIL STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

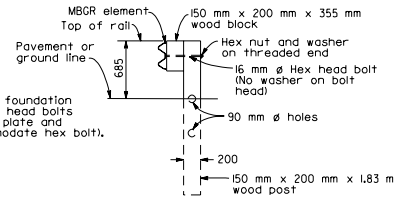
NOTES:

1. For additional details of Terminal System (Type ET), refer to the manufacturer's installation instructions.
2. Terminal System (Type ET) must be constructed so that the full length of the terminal system guard railing is in straight alignment. The Guard Rail Extruder head of the terminal system should not encroach upon the adjacent paved shoulder or lane. A traffic approach flare of 50:1 for the full length of Terminal System (Type ET) installation shall be used to keep the Guard Rail Extruder head from encroaching upon the adjacent paved shoulder or lane.
3. Slide Guard Rail Extruder over the end of the rail element and attach to Post No.1 with lag screws. Guard Rail Extruder attachment brackets have 3 holes in each bracket to provide tolerance adjustments. Use the holes in the bracket closest to center of Post No.1. Drill 6 mm pilot holes to accommodate lag screws.
4. Attach strut to Post Nos.1 and 2 foundation tubes with hex head bolts, washers and hex nuts. Bolts extend through the strut, steel foundation tube, and wood posts. Channel side of strut to face downward.
5. For length and type of guard railing or barrier the terminal system is attached to, see Project Plans. For minimum length of guard railing used with terminal system end treatments, see Standard Plans A77D and A77E.
6. Attach rail element to this post and block. Payment for this post, block and hardware included in payment for the type of railing or barrier the terminal system is attached to, not part of the payment for Terminal System (Type ET).
7. Yellow retroreflective sheeting, as provided by Terminal System (Type ET) manufacturer, shall be adhered to the face of extruder head. The sheeting shall be consistent with the design pattern and colors of a Type P object marker panel.
8. Attach rail to Post No.2 (no wood block) in same manner shown in section A-A. Do not bolt rail to Post No. 1, see Note 3.
9. Terminal System (Type ET) is an in-line end treatment for guard railing or single faced barrier railing where site conditions will not accomodate use of a flared end treatment. Do not use Terminal System (Type ET) where extrusion of the rail on the back side of the installation would be in the path of pedestrian or vehicular traffic.
10. A continuous rail element section between Post Nos.1 and 5 (no intermediate rail splices) may continue to be used in existing installations. New installations shall be constructed as shown.



SECTION A-A

Soil plate and wood post attachment to steel foundation tube similar for Post Nos. 1, 2 and 4. Wood blocks not used with Post Nos.1 and 2. See Note 8.



SECTION B-B

Post Nos. 5, 7 and 8 similar except rail elements are not attached to Post Nos. 5 and 7.

NO SCALE

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

A77M

1999 STD. PLAN A77M

NOTES:

1. For additional details of Terminal System (Type CAT), refer to the manufacturer's installation instructions.
2. Terminal System (Type CAT) is to be used as an in-line end treatment for guard railing or single faced barrier railing where site conditions will not accommodate use of a flared end end treatment. Terminal System (Type CAT) to be used only in locations where there will be traffic on one side of the terminal system. For those locations where traffic would be on both sides of the CAT system, see Standard Plan A82A.
3. The Terminal System Backup is required for all Terminal System (Type CAT) installations. This allows the slotted rail elements to slide over the face of the unslotted rail elements.
4. For length and type of railing or barrier the terminal system is attached to, see Project Plans. For minimum length of guard railing used with terminal system end treatments, see Standard Plans A77D and A77E.
5. Both of the 3.43 mm thick slotted rail elements have an attachment plate welded to the back side of one end of each rail element. Attach the welded plate end of the rail elements to Post No. 4 prior to splicing the 2.67 mm thick slotted rail element over the 3.43 mm thick slotted rail element.
6. The 2.67 mm thick slotted rail elements have four 19 mm diameter holes near one end of the rail elements for the attachment of the spacer channel. Attach this end of the rail elements to Post No. 2.
7. For details of the anchor plate and 19 mm cable attached to Post No. 6, see Standard Plan A77H.
8. Attach steel soil plate to steel foundation tube with 16 mm ø x 190 mm hex head bolts with hex nuts (21 mm ø holes in plate and in two sides of tube to accommodate hex bolts).
9. The 150 mm x 200 mm knockout tube is to be located 100 mm down from top of wood post. Attach the knockout tube to the post with two 10 mm ø lag screws and flat washers.
10. Attach strut to Post Nos. 1 and 2 foundation tubes with 16 mm ø hex head bolts, washers, and hex nuts. Bolts extend through the strut, steel foundation tube, and wood posts.
11. Do not attach the rail elements to Post Nos. 3, 5 and 6.
12. Yellow retroreflective sheeting, as provided by the Terminal System (Type CAT) manufacturer, shall be adhered to the rounded end of nose plate. The sheeting shall be consistent with the design pattern and colors of a Type P object marker panel. The sheeting shall be positioned on the end of nose plate so that it is visible to approaching traffic.

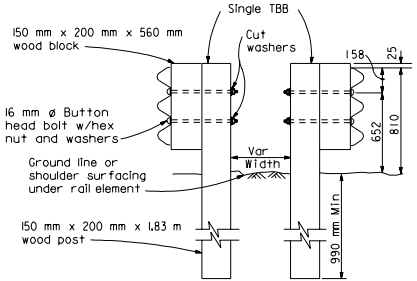
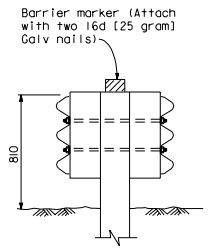
THRIE BEAM BARRIER AT FIXED OBJECTS

(Wood post and block shown)
For a series of fixed objects (bridge, columns, overhead sign supports, etc.) additional 250 mm x 250 mm x 1.83 DF posts with 200 mm x 200 mm x 560 DF blocks at 953 mm center to center are to be used between fixed objects.
See Notes 1 and 2.



SECTION A-A

Wood post with wood block shown
See Note 3



THRIE BEAM BARRIER DELINEATION

See Note 5

NOTES

1. For a typical steel post and wood block thrie beam barrier installation, use MW 150 mm x 22 mm x 2 m steel post with 200 mm x 200 mm notched wood blocks in place of the 250 mm x 250 mm 1.83 wood post with 200 mm x 200 mm x 560 mm wood blocks shown at 953 mm center to center spacing.
2. Where a minimum clearance of 900 mm can be obtained between the face of the thrie beam railing and the face of the fixed object, use 150 mm x 200 m x 1.83 m post with 150 mm x 200 mm x 560 mm blocks in place of the 250 mm x 250 mm x 1.83 m post with 200 mm x 200 mm x 560 mm blocks shown and use the typical 1905 mm center to center spacing for all posts.
3. See Standard Plan A78B for steel post with notched wood block construction details.
4. Attach rail element to wood block and steel post with 2 bolts on approaching traffic side of block and post web. For wood block details, see Standard Plan A78C.
5. Median barrier delineation to be used when required by the special provisions. Spacing of barrier markers to match spacing of raised pavement markers on adjacent median edgeline pavement delineation.
6. Direction of traffic indicated by →

DETAIL G

BEVELED METAL BOX SPACER

NOTES

1. These connection details apply to concrete bridge railing. For additional connection details see project plans.
2. For additional details of the thrie beam barrier transition to bridge railing, see "Approach Barrier Transition Details" on Standard Plan A78G.
3. Terminal sections and terminal connectors are to be fabricated to fit required spacing as shown.
4. Terminal section not to be installed on trailing end of approach thrie beam barrier constructed adjacent to one-way roadway. when terminal section is required, trim section to fit.
5. This dimension may vary slightly to fit existing bolt holes in existing bridge railing.
6. Connection Details 1 and 3 are to be used on traffic departure end of bridge.
7. Details for Connection Detail 3 similar to Connection Detail 1 except for anchorage bolts offset dimensions from end of bridge railing.
8. Connection Detail 1 and 3, as applicable to the bridge railing involved, shall be used for both the departure and approach end of the bridge where the bridge railing is 9 m or less from opposing traffic. Where Connection Detail 1 or 3 is used on the approach end of the structure, the thrie beam barrier shall be transitioned to the bridge railing as shown in the "Approach Barrier Transition Details" on Standard Plan A78G.
9. Direction of traffic indicated by →

A81C

1999 STD. PLAN A81C

NOTES:

1. For additional details of Crash Cushion (Type CAT), refer to the manufacturer's installation instructions.
2. Crash Cushion (Type CAT) may be used at sites where the sides of the crash cushion would be exposed to opposing directions of travel (bidirectional traffic) or the same direction of travel (unidirectional traffic). For locations where traffic would only be on one side of the CAT system, use the Standard Plan A77N.
3. The Crash Cushion Backup is required for all Crash Cushion (Type CAT) installations. This allows the slotted rail elements to slide over the face of the unslotted rail elements.
4. For length and type of railing or barrier the crash cushion is attached to, see Project Plans.
5. Both of the 3.43 mm thick slotted rail elements have an attachment plate welded to the back side of one end of each rail element. Attach the welded plate end of the rail elements to Post No. 4 prior to splicing the 2.67 mm thick slotted rail element over the 3.43 mm thick slotted rail element.
6. The 2.67 mm thick slotted rail elements have four 19 mm diameter holes near one end of the rail elements for the attachment of the spacer channel. Attach this end of the rail elements to Post No. 2.
7. Attach steel soil plate to steel foundation tube with 16 mm ø x 190 mm hex head bolts with hex nuts (21 mm ø holes in plate and in two sides of tube to accommodate hex bolts).
8. The 150 mm x 200 mm knockout tube is to be located 100 mm down from top of wood post. Attach the knockout tube to the post with two 10 mm ø lag screws and flat washers.
9. Attach strut to Post Nos. 1 and 2 foundation tubes with 16 mm ø hex head bolts, washers, and hex nuts. Bolts extend through the strut, steel foundation tube, and wood posts.
10. Do not attach the rail elements to Post Nos. 3, 5 and 6.
11. Yellow retroreflective sheeting, as provided by the Crash Cushion (Type CAT) manufacturer, shall be adhered to the rounded end of nose plate. The sheeting shall be consistent with the design pattern and colors of a Type P object marker panel for unidirectional traffic and that of a TYPE R object marker panel for bidirectional traffic. The sheeting shall be positioned on the end of nose plate so that it is visible to approaching traffic.

NOTES:

1. For additional details of Crash Cushion (Type ADIEM), refer to the manufacturer's installation instructions.
2. Crash Cushion (Type ADIEM) may be used at sites where the sides of the crash cushion would be exposed to opposing directions of travel (bidirectional traffic) or the same direction of travel (unidirectional traffic).
3. The crash cushion concrete base shall be placed on a smooth surface (pavement or well compacted soil base) on the same horizontal plane as the barrier or railing it is to be attached to.
4. Installation of the crash cushion concrete base shall be accomplished by driving the anchor rods in well compacted soil base or soft asphalt concrete or by driving the anchor rods in drilled holes in hard asphalt concrete or portland cement concrete. See Table A for the location and lengths of anchor rod to be used.
5. Attach the crash cushion to the barrier or railing by bolting the splice angle plates to the crash cushion and the barrier or railing.
6. Lubricate the crash cushion base track and slide the modules along the track to the positions shown.
7. Yellow retroreflective sheeting, as provided by the crash cushion manufacturer, shall be adhered to the first module facing approcaching traffic. This sheeting shall be consistent with the design pattern and colors of a Type P object marker panel for unidirectional traffic and that of the Type R object marker panel for bidirectional traffic.
8. For the length and type of barrier or railing the crash cushion is to be attached to, see the Project Plans.

2. Place this reinforcement for the full 3 meter length of the terminus of the concrete barrier.
3. Attach manufacturer supplied folded transition plates and W-Beam connectors to backup support with manufacturer supplied bolts.
4. Attach W-Beam Connectors to barrier with manufacturer supplied anchor bolts in the manner recommended by the manufacturer.

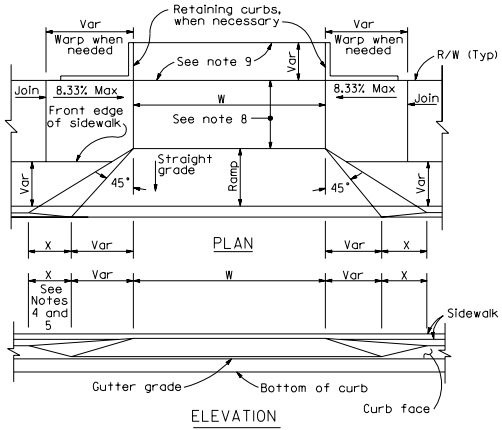
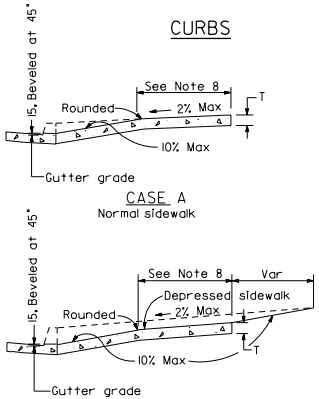
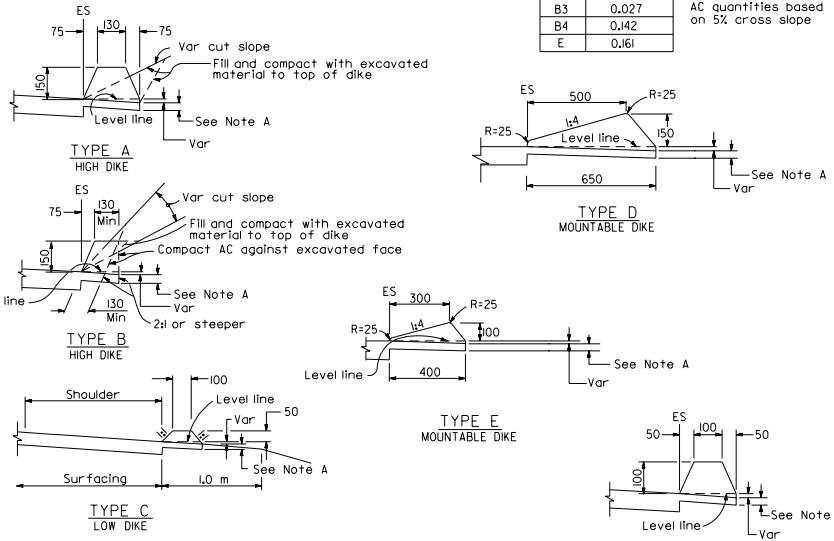
AC quantities based on 5% cross slope







ASPHALT CONCRETE DIKES

NOTE A - Extend top layer of AC placed on the shoulder under dike with no joint at the ES

NOTES

1. Case A normally applies.
2. Use Case B when ramp slopes would exceed 10% in Case A.
3. Use Case B when sidewalk cross slope would exceed 2% in Case A.
4. X=900 mm except for curb heights over 250 mm where 1:4 slopes shall be used on curb slope.
5. X is variable when sidewalk is located where wheelchairs may traverse the surface. Slopes shall be 8.33% maximum.
6. Sidewalk and ramp thickness "T" at driveway shall be 100 mm for residential and 150 mm for commercial.
7. Difference in slope of the driveway ramp and the slope of a line between the gutter and a point on the roadway 1.5 meters feet from gutter line shall not exceed 15%. Reduce driveway ramp slope, not gutter slope, where required.
8. Minimum width of clear passage shall be 1.22 meters. Where right of way restrictions, natural barriers or other existing conditions create an unreasonable hardship, the clear width may be reduced to 915 mm.
9. Retaining curbs and acquisition of construction easement may be necessary for narrow sidewalks or curb heights in excess of 150 mm.

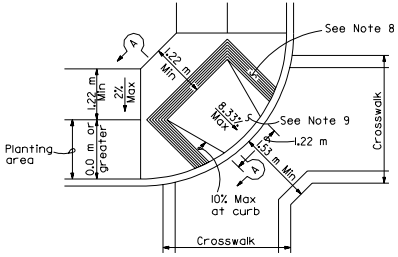
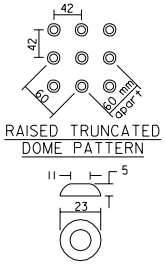
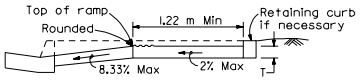
SECTION A-A



CASE E



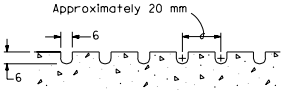
RAISED TRUNCATED DOME PATTERN



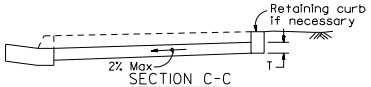
SECTION B-B
Depress entire sidewalk as required

RAISED TRUNCATED DOME

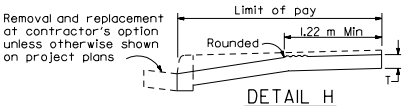
DETECTABLE WARNING SURFACE
See Note 9



GROOVING DETAIL



SECTION C-C



DETAIL H
Existing curb and sidewalk

NOTES

1. If distance from curb to back of sidewalk is too short to accommodate ramp and 1.22 m platform as in Case A the sidewalk may be depressed longitudinally as in Case B or C or may be widened as in Case D.
2. If sidewalk is less than 1.8 m wide, the full width of the sidewalk shall be depressed as shown in Case C on this plan or the sidewalk shall be ramped down as shown in Case CM on Standard Plan A88B.
3. When ramp is located in center of curb return, crosswalk configuration must be similar to that shown for Case E to accommodate wheelchairs.
4. For Cases F and G, the longitudinal portion of the sidewalk may need to be depressed as shown in Case B.
5. If located on a curve the sides of the ramp need not be parallel, but the minimum width of the ramp shall be 1.22 m.
6. Transitions from ramps to walks, gutters, or streets shall be flush and free of abrupt changes.
7. Sidewalk and ramp thickness, "T", shall be 90 mm minimum.
8. The ramp shall have a 300 mm wide border with 6 mm grooves approximately 20 mm on center. See grooving detail.
9. Curb ramps that have a ramp slope flatter than 6.67% shall have a detectable warning surface that extends the full width of the ramp and 600 mm minimum length, similar to that shown on Case D. Detectable Warning Surfaces, at the option of the Contractor, shall be contructed by cast-in-place or stamped method, or consist of a prefabricated surface. The prefabricated surface shall conform to the the requirements in the Special Provisions.
10. When detectable warning surface is not required on a curb ramp, the concrete finish of the ramp and its flared sides shall have a transverse broomed surface texture rougher than the surrounding sidewalk.
11. Ramp side slope varies uniformly from a maximum of 10% at curb to conform with longitudinal sidewalk slope adjacent to top of the ramp, except in Case C.
12. Utility pull boxes, manholes, vaults and all other utility facilities within the boundaries of the curb ramp will be relocated or adjusted to grade by the owner prior to, or in conjunction with, curb ramp construction.
13. Maximum slopes of adjoining gutters, the road surface immediately adjacent to the curb ramp and continuous passage to the curb ramp shall not exceed 5 percent within 1.22 m of the top or bottom of the curb ramp.
14. Design details approved by the Division of the State Architect on March 18, 1996.

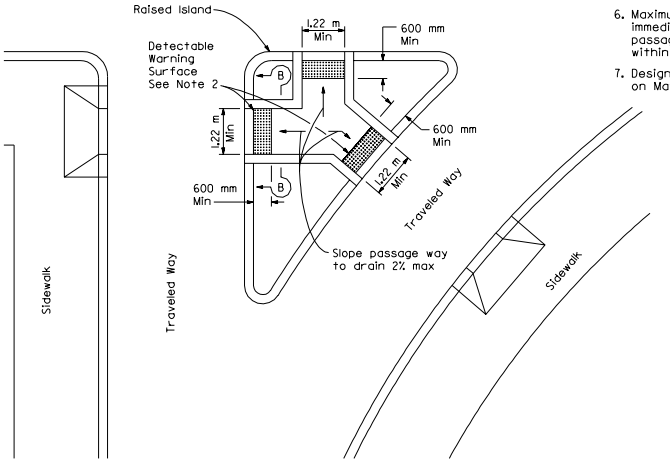
TYPE B PASSAGE WAY



TYPE C PASSAGE WAY

NOTES

1. Minimum width of passage way through raised islands shall be 1.22 m, except for locations where right of way restrictions, natural barriers, or other existing conditions create an unreasonable hardship, the clear width of the passage way may be reduced to 915 mm.
2. For details of detectable warning surfaces and grooving, see Standard plan A88A.
3. Transitions from ramps to walks, gutters, or streets shall be flush and free of abrupt changes.
4. Sidewalk, ramp and passage way thickness, "T", shall be 90 mm minimum.
5. Utility pull boxes, manholes, vaults, and all other utility facilities within the boundaries of the curb ramp will be relocated or adjusted to grade by the owner prior to, or in conjunction with, curb ramp construction.
6. Maximum slopes of adjoining gutters, the road surface immediately adjacent to the curb ramp and continous passage to the curb ramp shall not exceed 5 percent within 1.22 m of the top or bottom of the curb ramp.
7. Design details approved by the Division of State Architect on May 27, 1999.

PLANS APPROVAL DATE

REGISTERED PROFESSIONAL ENGINEER Brian P. Lee No. C33233 Exp. 6-30-02 CIVIL STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES

1. Accessible parking stalls shall be located as close as possible, and on the shortest accessible route of travel, to the pedestrian entrance or exit of the parking lot or garage.
2. One in every eight accessible off-street parking stalls, but not less than one, shall be served by an accessible aisle of 2.44 m minimum width and shall be signed van accessible. The R99A "Van Accessible" sign shall be mounted below the R99 "ISA Parking" sign.
3. In each parking stall, a curb or bumper shall be provided and located to prevent encroachment of vehicles over the required width of walkways. Parking stalls shall be so located that persons with disabilities are not compelled to wheel or walk behind parked cars other than their own.
4. When less than five parking stalls are provided, one stall with a minimum width of 5.19 m shall be made accessible to persons with disabilities. However, there is no requirement that the stall be reserved exclusively or identified for that purpose.
5. Surface slopes of accessible off-street parking stalls shall be the minimum possible and shall not exceed 2 percent in any direction. Surface slopes of accessible on-street parking stalls shall be the minimum feasible.
6. Table A shall be used to determine the required number of accessible parking stalls in any parking lot or garage.
7. Where new on-street or time limited parking is provided and designated in districts zoned for business use, accessible parking shall be provided in accordance with Table A.
8. Where R99 "ISA Parking" or R99A "Van Accessible" signs are installed on sidewalks or other paths of travel, the bottom of the sign panel shall be a minimum of 2.04 m above the surface of the sidewalk or path. Where R99 or R99A signs are not installed on sidewalks or other paths of travel, the bottom of the sign panel shall be at least 915 mm above the parking area surface.
9. Curb and sidewalk ramps shall conform to the details shown on Standard Plan A88.
10. Accessible on-street parking spaces shall not be smaller in length or width than that specified by the local jurisdiction for other spaces.
11. Blue paint, instead of white may be used for marking accessibility aisles in areas where snow may cause white markings to not be visible.
12. Design details approved by the Division of the State Architect on March 18, 1996.

GENERAL NOTES

1. Reinforced Concrete:
   Concrete - f'c = 25 MPa
   Bar Reinforcement - fy = 420 MPa
   Deformed Wire - fy = 450 MPa
2. Soil Parameters:
   Backfill - Φ = 34°
   δ = 22.7°
   γ = 19 kN/m^3
   Foundation - Φ = 34°
   Lateral earth pressure determined by Coulomb's theory.
3. Concrete to concrete bearing surfaces shall be finished to a smooth plane. The gap between bearing surfaces shall not exceed 3 millimeters. Where a gap of 1.5 millimeters to 3.0 millimeters exists, a 1.5 millimeters pad of asphalt felt or sheet neoprene shall be placed between the bearing surfaces. For wall Types D, E, and F, a 1.5 millimeters asphalt felt pad or sheet neoprene shall be placed between all concrete bearing surfaces below the 8950 millimeters level.
4. All members may be manufactured to dimensions 4 millimeters greater in thickness and stretchers 13 millimeters less in length.
5. Where an opening is specified in the face of a wall, special length stretchers and additional headers may be required.
6. For non-tangent wall alignment, special length stretchers may be required.
7. For non-tangent wall alignment and at locations where filler blocks are required, special length front face closure members may be required.
8. The thickness of the lowest step for each wall type shall not be less than the dimension shown on these plans.
9. Use of "Front Face Closure Member" shall be required only when specified on project plans or in the Special Provisions.
10. All stretchers are 3660 millimeters except as noted.

* Indicates pressure at heel

▮ Heavy vertical line indicates maximum allowable wall height for particular wall type and particular loading case.

DESIGN EXAMPLES

Example No. 1:

Given: Wall height 6100 mm
1:2 cut slope to be retained. Foundation site investigation indicates lateral pressure from material above will be equivalent to design loading case II condition and an allowable soil bearing capacity of 240 kPa.

Select: Battered Type C or Type D wall. Actual H = 6200 mm. Type D vertical wall can be used by increasing the allowable bearing capacity of the original ground.

Example No. 2:

Given: Wall height 2750 mm
Design Loading Case I (600 mm level ground surcharge plus 11.5 kPa of surcharge) to be retained. Base founded in embankment.

Select: Battered or vertical Type A or Type B wall. Actual H = 2900 mm.

Example No. 3:

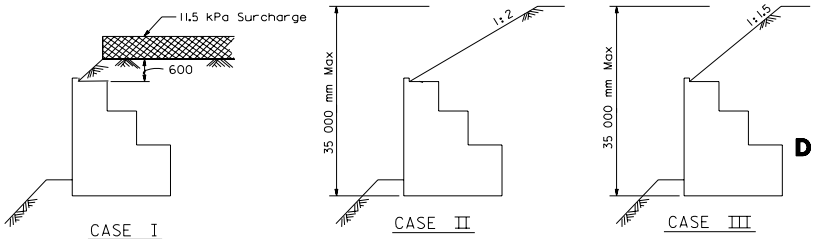
Given: Wall height 3050 mm
Design Loading Case III (1:1.5 embankment slope) to be retained. Base in original ground, sloping away from toe of wall at 1:2. Foundation investigation determines the allowable soil bearing capacity is 190 kPa (considering the sloping ground in front of wall).

Select: Battered Type B or Type C wall or Vertical Type C wall. Actual H = 3175 mm

Example No. 4:

Given: Wall height 9150 mm
Design Loading Case II (1:2 embankment slope) to be retained. Base in embankment (1525 mm depth minimum).

Select: Battered Type D, Type E or Type F wall or Vertical Type F wall. Actual H = 9225 mm. For all types the foundation pressure is between 240 and 385 kPa. Embankment material below the wall must be "Structure Backfill" (See Design Example Footnote 1).



DETAIL OF DESIGN LOADING CASES

DESIGN EXAMPLE FOOTNOTES

1. To constitute a "wall base in embankment" condition, a minimum of 1525 mm of embankment at 95 percent relative compaction is required below the base of the wall. When the foundation pressure is between 240 and 385 kPa, the embankment below the wall shall be constructed with structure backfill material to the limits specified for embankments constructed with relative compaction of 95 percent. The maximum allowable soil bearing capacity is 385 kPa.

2. For walls with "wall base in original ground" condition, the allowable soil bearing capacity, design lateral loads, and slope stability shall be determined by a foundation site investigation and by an analysis. Walls shall not be founded in original ground having an allowable soil bearing capacity of less than 145 kPa.

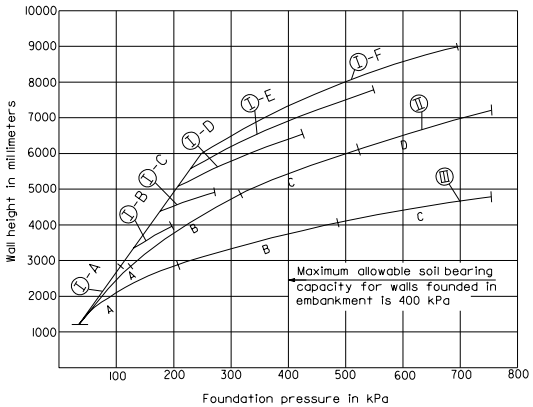
6 : 1 BATTERED WALL



VERTICAL WALL

DESIGN NOTES

1. Wall base in embankment: A minimum depth of 1500 millimeters of embankment at 95% relative soil compaction is required below the base of all walls in order to constitute an embankment condition. When the foundation pressure is between 240 and 400 kPa, embankment below the wall shall consist of "Structure Backfill" material as set forth in Section 19-3.06 of the Standard Specifications. The limits of relative compaction (95 percent) shall be as set forth in Section 19-5.03 of the Standard Specifications.

2. Wall base in original ground: Allowable soil pressure at toe of wall shall be determined by foundation site investigation. Walls that are to retain cut slopes shall be designed for lateral and toe pressures determined from site investigation data. Overall stability of slope with wall in place must be analyzed. If original ground slopes away from toe of wall, reduction in allowable bearing capacity due to slope must be considered. Walls shall not be founded in original ground having an allowable bearing capacity of less than 145 kPa. Consideration should be given to removal and replacement of unsuitable material with "Structure Backfill" material as set forth in Section 19-3.06 of the Standard Specifications. The limits of relative compaction (95 percent) shall be as set forth in Section 19-5.03 of the Standard Specifications.

3. Drainage:
   a. Internal: Section 19-3.06 of the Standard Specifications.
   b. External: If the combined height of wall and overfill (measured along face of wall and vertically from the toe of fill to top of fill) exceeds 7600 millimeters a system to drain water away from the back face of wall shall be provided. The type and extent of this system will depend on the type of backfill material expected to be used, the combined height of wall and backfill, and the location of the water table in the area.

4. Sloping Surcharge Limitations: The maximum height of fill behind any wall, or family of walls, shall not exceed 35 meters (measured vertically from the toe of the bottom wall to the top of fill behind the uppermost wall). For a family of walls the slope of a line drawn from the top of the front face of the bottom wall to the top of the front face of any intermediate or top wall, shall in no case be steeper than 1:1.5.

Material Specifications:
Steel sheets:
AASHTO M218
310 275 kPa Ultimate
227 535 kPa Yield
@ 20% Elongation
Bolts: ASTM A307 Grade A

DESIGN EXAMPLES

EXAMPLE NO. 1

Given: Wall height 7300 millimeters.
Design loading Case II.
35 meters maximum from toe of wall to top of slope.
Base in embankment (1500 millimeters depth minimum).

Select: 6:1 Battered wall. Vertical wall not permitted. Type D wall selected.
Maximum height on graph is 8050 millimeters at 400 kPa. Since the foundation pressure is 305 kPa at 7300 millimeters, the wall must be founded on a 1500 millimeters thickness of "Structure Backfill" (See Design Note 1).
A drainage system behind this wall will be required.

EXAMPLE NO. 2

Given: Wall height 8800 millimeters.
Design loading Case II. Foundation site investigation indicates lateral pressure from material above will be equivalent to 1:2 embankment slope. Base in excavation level at toe of wall. Foundation investigation determines the allowable soil bearing capacity at 300 kPa.

Select: Battered Type F wall maximum height at 400 kPa is 9000 millimeters, therefore the replacement of 1500 millimeters of excavation with "Structure Backfill" to increase the allowable soil bearing capacity to 400 kPa is required (See Design Note 1). A drainage system for this wall should be investigated.

EXAMPLE NO. 3

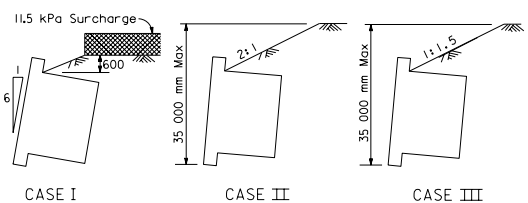
Given: Wall height 4600 millimeters.
Design loading Case III with overall height less than 35 millimeters. Base on original ground. Foundation investigation determines allowable soil bearing capacity at 200 kPa.

Select: Use a Type C Battered Wall. However foundation pressure exceeds 200 kPa, therefore the replacement of 1500 millimeters of excavation with "Structure Backfill" to increase the allowable soil bearing capacity to 400 kPa is required (See Design Note 1).

LEGEND FOR GRAPHS

A, B, C, D, E, F = Wall Type
I, II, III = Loading Case

- For description of loading case, see detail of design loading cases.
- Upper end of line indicates maximum wall height for a given wall type.



DETAIL OF DESIGN LOADING CASES

Note: Similar loading cases for vertical wall.

NOTES

1. All timber to be treated 200 mm x 200 mm full sawn No.1 grade douglas fir-larch. All members to be pre-cut before treatment.
2. Drift pins and holes to be 19 mm ϕ.
3. Drift pins to be of sufficient length to penetrate thru 2 members and 100 mm minimum into the third member. Drift pins shall cross each contact joint between headers and stretchers. Pins may lap, provided edge or end distance to pins is not less than 45 mm.
4. All stretchers to be laid horizontal.
5. Vertical walls are not permitted.
6. Maximum allowable height is 6600 mm.
7. All walls 5400 mm high or under shall have double sills at front and single sill at rear. When wall exceeds 2200 mm, 3800 mm, or 5400 mm, use a minimum of two courses of next longer headers.
8. For Design Data see Standard Plan C9B.

LEGEND FOR GRAPH

- A, B, C, D = Wall type.
- Solid lines indicate normal range of wall use. Upper end of line indicates maximum wall height for a given wall type and loading.
- For description of loading case see DETAIL OF DESIGN LOADING CASES.

DESIGN NOTES

1. WALL BASE IN EMBANKMENT: A minimum depth of 1500 mm of embankment at 95% relative soil compaction is required below the base of all walls in order to constitute an embankment condition. When the foundation pressure is between 240 kPa and 400 kPa embankment below the wall shall consist of "Structure backfill" material as set forth in Section 19-3.06 of the Standard Specifications. The limits of relative compaction (95%) shall be as set forth in Section 19-5.03 of the Standard Specifications.
2. WALL BASE IN ORIGINAL GROUND: Allowable soil pressure at toe of wall shall be determined by foundation site investigation. Walls that are to retain cut slopes shall be designed for lateral and toe pressures determined from site investigation data. Overall stability of slope with wall in place must be analyzed. If original ground slopes away from toe of wall, reduction in allowable bearing capacity due to slope must be considered. Walls shall not be founded in original ground having an allowable bearing capacity of less than 145 kPa. Consideration should be given to removal and replacement of unsuitable material with "Structure backfill" material as set forth in Section 19-3.06 of the Standard Specifications. The limits of relative compaction (95%) shall be as set forth in Section 19-5.03 of the Standard Specifications.
3. Soil Parameters:
   Backfill - ϕ = 34°, γ = 19 kN/m^3
   Foundation - ϕ = 34°
   Lateral earth pressure determined by Rankine Theory.

DESIGN EXAMPLES

EXAMPLE NO. 1

Given: Wall height 4200 mm
Design Loading Case II.
Base in embankment (1500 mm depth minimum See Note 1)

Select: 6:1 batter C wall gives 115 kPa foundation pressure.
Vertical Wall not permitted.
See chart for required numbers and sizes of timber members.

EXAMPLE NO. 2

Given: Wall height 5800 mm
Design Loading Case III. Base is in original ground.
Foundation site investigation determines the allowable soil bearing capacity at 300 kPa.

Select: 6:1 batter D wall gives 335 kPa foundation pressure.
Vertical wall not permitted. Since foundation pressure is greater than allowable bearing capacity of native material, replace original material with "Structure backfill" to increase base bearing capacity. (See Note 2)

EXAMPLE NO. 3

Given: Wall height 6600 mm
Design Loading Case II. Base is in embankment. (See Note 1)

Select: 6:1 batter D wall gives 230 kPa foundation pressure.
Vertical wall not permitted. Foundation pressure is less than 240 kPa. Base material below wall shall be compacted to a relative compaction of 95%. (See Note 1).

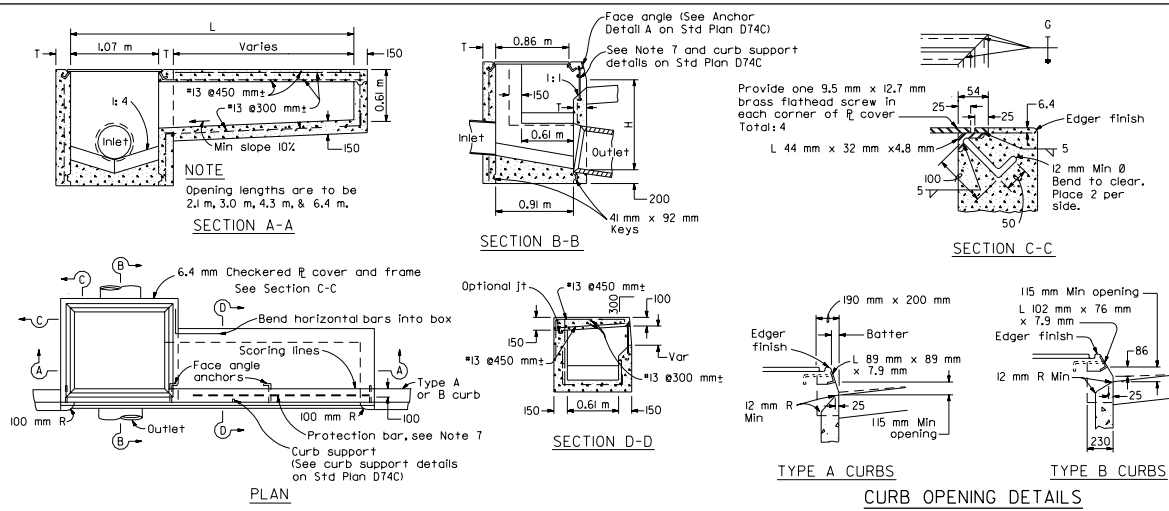
The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.



NOTES

1. "H" is the difference in elevation between the outlet pipe flow line and the normal gutter grade line undepressed at the curb face.
2. For "T" wall thickness, see Table A below.
3. Height of curb opening will vary with the type of curb and the depth of the local depression.
4. Wall reinforcing not required when "H" is 2.5 m or less and the unsupported width or length is 2.1 m or less. Walls exceeding these limits shall be reinforced with #13 bars @ 450 mm± centers placed 40 mm clear to inside of box unless otherwise shown.
5. Inlet bottom reinforcing not required. See Standard Plan D74C for alternative reinforced bottom.
6. Steps- None required where "H" is less than 0.75 m. Where "H" is 0.75 m or more, install steps with lowest rung 300 mm above the floor and highest rung not more than 150 mm below top of inlet. The distance between steps shall not exceed 300 mm and be uniform throughout the length of the wall. Place steps in the wall without an opening. Step inserts may be substituted for the bar steps. Step inserts shall comply with State Industrial Safety requirements. See Standard Plan D74C for step details.
7. When shown on the project plans, place a #20 mm plain round protection bar horizontally across the length of the opening and bend back 100 mm into the inlet wall on each side.
8. Pipe(s) can be placed in any wall.
9. Curb section shall match adjacent curb.
10. Except for inlets used as junction boxes, basin floor shall have a minimum slope of 1:4 from all directions toward outlet pipe and shall have a wood trowel finish.
11. Galvanizing-See Standard Specifications or Special Provisions.
12. See Standard Plans D77A and D77B for grate and frame details and masses of miscellaneous iron and steel.
13. See Standard Plan D78 for gutter depression details.
14. Full penetration butt welds may be substituted for the fillet welds on all anchors.
15. Standard square, hexagon, round or equivalent headed anchors may be substituted for the right angle hooks on the anchors shown on this plan.
16. 16. Cast-in-place or precast alternative is optional with contractor. See Standard Specifications.

TABLE A

CONCRETE QUANTITIES				
	H=0.90 m to 2.50 m (T=150 mm)		H=2.51 m to 6.00 m (T=200 mm)	
Type	H=0.90 m (m^3)	Additional PCC per meter (m^3)	H=2.51 m (m^3)	Additional PCC per meter (m^3)

NOTES

1. "H" is the difference in elevation between the outlet pipe flow line and the normal gutter grade line undepressed.
2. For "T" wall thickness, see Table A below.
3. Wall reinforcing not required when "H" is 2.5 m or less and the unsupported width or length is 2.1 m or less. Walls exceeding these limits shall be reinforced with #13 bars @ 450 mm± centers placed 40 mm clear to inside of box unless otherwise shown.
4. Inlet bottom reinforcing not required. See Standard Plan D74C for alternative reinforced bottom and alternative half round bottom.
5. Steps-None required where "H" is less than 0.75 m. Where "H" is 0.75 m or more, install steps with lowest rung 300 mm above the floor and highest rung not more than 150 mm below top of inlet. The distance between steps shall not exceed 300 mm and shall be uniform throughout the length of the wall. Place steps in the wall without an opening. Steps inserts may be substituted for the bar steps. Step inserts shall comply with State Industrial Safety requirements. See Standard Plan D74C for step details.
6. Details shown apply to both metal and concrete pipe.
7. Pipe(s) can be placed in any wall.
8. Curb section shall match adjacent curb.
9. Basin floors shall have wood trowel finish and a minimum slope of 1:4 from all directions toward outlet pipe.
10. Galvanizing - See Standard Specifications or Special Provisions.
11. Cast-in-place or Precast alternative is optional with contractor, See Standard Specifications.
12. Set inlet so that grate bars are parallel to direction of principal surface flow.
13. See Standard Plans D77A and D77B for grate and frame details and masses of miscellaneous iron and steel.
14. See Standard Plan D78 for gutter depression details.
15. This dimenison will vary with different grates, curbs types, box width and wall thickness.
16. Bar may be rotated as necessary to clear opening.

TABLE A

CONCRETE QUANTITIES				
Type	H=0.90 m to 2.50 m (T=150 mm)		H=2.51m to 6.00 m (T=200 mm)	
	H=0.90 m (m3)	Additional PCC per meter (m3)	H=2.51m (m3)	Additional PCC per meter (m3)
G-1	0.69	0.55	(1)	(1)
G-2*	1.31	0.99	3.32	1.14

Caltrans Metric

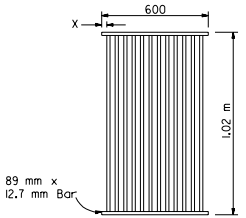
TYPE 450-9

35 mm Clear spacing. Use within the roadbed on highways where bicycles and pedestrians are excluded.



TYPE 600-9

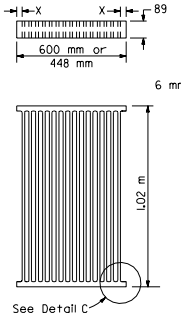
51 mm Clear spacing. Use in locations off the roadbed on all types of highways.

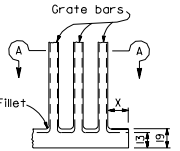
TYPE 600-12

35 mm Clear spacing. Use within the roadbed on highways where bicycles and pedestrians are excluded.

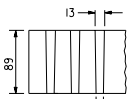
RECTANGULAR GRATE DETAILS

(See table below)



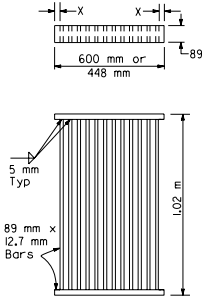


DETAIL C

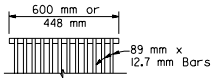


SECTION A-A

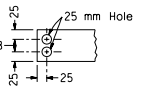
ALTERNATIVE CAST NODULAR IRON GRATE OR CAST STEEL GRATE



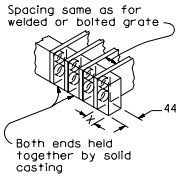
ALTERNATIVE WELDED GRATE



CAST END BLOCK



END OF BAR



ALTERNATIVE CAST NODULAR IRON OR CAST STEEL END BLOCK GRATE

NOTES

1. Grate type numbers refer to approximate width of grate in millimeters and number of bars, respectively.
2. Contractor has the option of using cast nodular iron, cast steel, welded, bolted, or cast end block grate.
3. See Special Provisions for requirements pertaining to galvanizing or asphalt dipping of grates and frames.
4. Rounded top of bars optional on all grates.
5. Pipe inlets with a grate shall be placed so that bars parallel direction of principle surface flow.
6. Full penetration butt welds may be substituted for the fillet welds on all anchors.
7. Standard square, hexagon, round or equivalent headed anchors may be substituted for the right angle hooks on the anchors shown on this plan.
8. Grate and frame weights are based on welded grates (weights of face angles, steps, protection bars, etc. are not included).

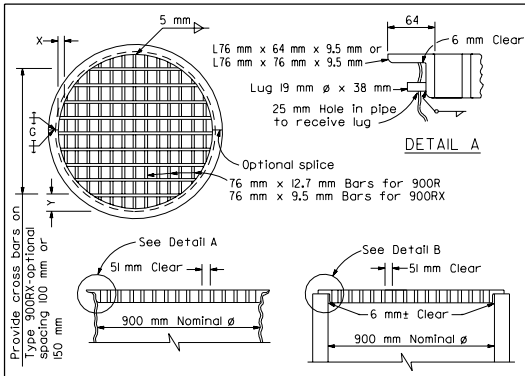
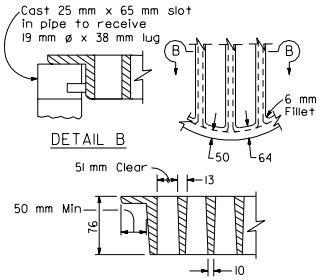
D77A

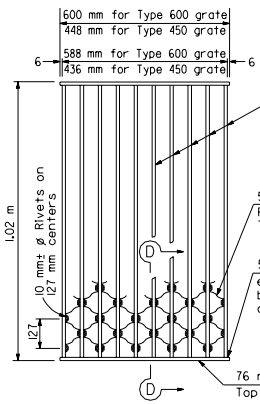
1999 STD. PLAN D77A

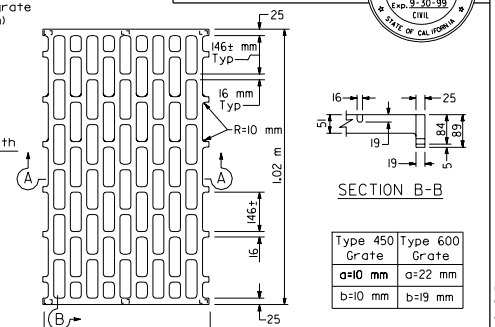


TYPE 900R AND 900RX GRATE DETAILS



ALTERNATIVE CAST NODULAR IRON GRATE OR CAST STEEL GRATE TYPE 900R AND 900RX





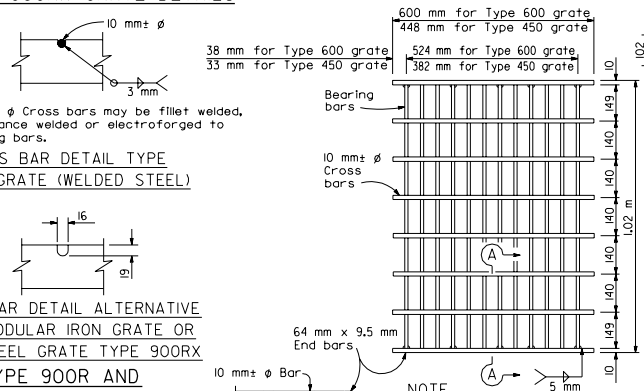
Type 450 Grate	Type 600 Grate
a=10 mm	a=22 mm
b=10 mm	b=19 mm

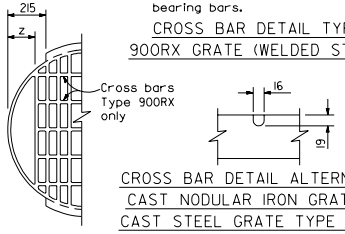
NOTE

Mass of Type 600 grate = 70 kg.
Mass of Type 450 grate = 59 kg.
On Type 450 grate omit center bearing point.

TYPE 450-8C AND 600-10C GRATE

(Cast nodular iron)





MODIFIED TYPE 900R AND 900RX GRATE FOR ODI INLET

NOTES

1. When alternative grates are allowed - Final pay based on alternative with the lesser mass.
2. Seal welding at all surfaces not required when grates are galvanized.
3. Use frame shown on Standard Plan D74A, D74B or D77A as appropriate.
4. When type 600-10S, 600-12X or 600-13 grates are used with GDO inlets, a 6.4 mm x 89 mm x 1.04 m steel bar shall be welded across the center of inlet frame to separate the individual grates.

GRATE BAR SPACING TABLE

TYPE	NO. OF BARS	CLEAR BAR SPACING	X (mm)	Y (mm) 100 mm SPACING	Y (mm) 150 mm SPACING	Z (mm)
900R	13	51 mm	54	-	-	-

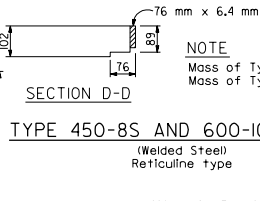
GMP, GCP, GCPI	900R	1	107

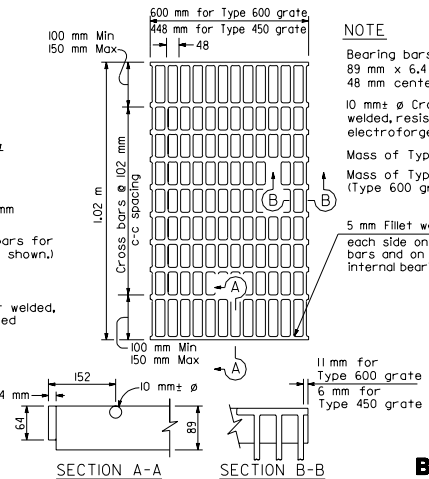


NOTE

Mass of Type 600 grate = 83 kg.
Mass of Type 450 grate = 66 kg.

TYPE 450-8S AND 600-10S GRATE

(Welded Steel)
Reticuline type



NOTE

Bearing bars to be 89 mm x 6.4 mm bars on 48 mm centers.

10 mm± ø Cross bars may be fillet welded, resistance welded or electroforged to bearing bars.

Mass of Type 600 grate = 64 kg.

Mass of Type 450 grate = 49 kg.
(Type 600 grate shown)

5 mm Fillet weld full depth each side on outside bearing bars and on every third internal bearing bar.

TYPE 450-10 AND 600-13 GRATE

(Welded Steel)

NOTE

Bearing bars to be 89 mm x 9.5 mm bars on 48 mm centers.

12 Bars for Type 600 grate - 9 bars for Type 450 grates. (Type 600 grate shown.)

Mass of Type 600 grate = 87 kg.

Mass of Type 450 grate = 66 kg.

10 mm± ø Cross bars may be fillet welded, resistance welded or electroforged to bearing bars.

TYPE 450-9X AND 600-12X GRATE

(Welded Steel)

CONSTRUCTION NOTES

1. For details of the method of excavation, backfill and bedding (Method 1, Method 2, etc.), see Standard Plan A62D.
2. The tables for minimum allowable classes and D-loads of RCP on Standard Plan A62D shall not apply to direct design RCP.
3. Notes 3, 9 and 10 on Standard Plan A62D shall apply to direct design RCP.
4. Throughout the length of any given culvert, the direct design selected by the Contractor shall be the same, including the method of excavation, backfill and bedding.
5. The embankment height prior to excavation specified in note 5 of the Standard Plan A62D shall apply to the direct design RCP installation when Method 2, 3A or 3B are used.
6. For single circular cage reinforcement, minimum clearance shall be 40% of the wall thickness (t). For elliptical and double circular cage reinforcement where the wall thickness (t) is less than 65 mm, the minimum clearance (Clr) for reinforcement shall be 20 mm, and where the wall thickness (t) is 65 mm or more the minimum clearance (Clr) for reinforcement shall be 25 mm.
7. Minimum cover measured at the edge of pavement shall be 600 mm to top of AC pavement and 300 mm to top of rigid pavement.

NOTES

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. Quantities are approximate and for design purposes only.
3. For boxes with span or height or cover greater than those shown in tables, a special design is required.
4. It is permissable to eliminate the 180° hooks on every other bar.
5. "e" bars are at half spacing (spans 3050 mm - 4270 mm only).
6. "a" bars are at half spacing (spans 3050 mm - 4270 mm only).
7. Provide paving notch when top is exposed and when pavement is portland cement concrete, and adjust quantities.
8. For design and details not shown, see Standard Plan D82.
9. For exposed top, provide #13 @ 450 mm each way (600 mm lap "c" bars of full span and adjust).

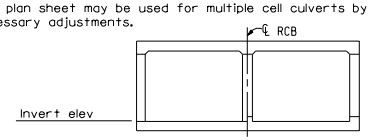
CIVIL
STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES

1. For boxes with span or height less than any of those shown in table, use next greater size box concrete dimensions and reinforcement. Make necessary changes in bar lengths and quantities.
2. For boxes with span or height or cover greater than those shown in tables, a special design is required.
3. Quantities are approximate and for design purposes only.
4. It is permissable to eliminate the 180° hooks on every other "e" bar.
5. "e" bars are at half spacing.
6. Provide paving notch when top is exposed and when pavement is portland cement concrete, and adjust quantities.
7. For design and details not shown, see Standard Plan D82.
8. This plan sheet may be used for multiple cell culverts by making necessary adjustments.



FLAT INVERT ALTERNATIVE

1999 STD. PLAN D81

DESIGN NOTES

Specifications:
Design:
Bridge Design Specification (1983 AASHTO Specifications with revisions by Caltrans)
Load Factors: 1.5 D + 1.5 E + 2.5 (L + I)
Where D=Dead Load
E=Earth Load
L=Live Load
I=Impact
Capacity reduction factor is included.

Loading:
Live load:
HS20-44 truck
Apply impact only to the roof slab.

Earth Cover (mm)	Impact (%)
Up to 300	30
301 to 600	20
601 to 900	10
Over 900	0

No surcharge on walls due to live load.
Earth load:
Earth pressures for two conditions:
22.0 kPa/m vertical, 6.6 kPa/m horizontal.
22.0 kPa/m vertical, 22.0 kPa/m horizontal.

Unit stresses:
f_c = 25 MPa
f_y = 400 MPa

Distribution "d" bars:
Up to and including 3.0 m cover
Expressed as a percent of main positive reinforcement required: $\frac{100}{0.05726\sqrt{S}}$, max 50%.
Over 3.0 m cover
#13 @ 450 mm maximum.

Shear:
Maximum allowable shear, $v_c = 0.29\sqrt{f'_c}$, MPa

Exclusions:
Compressive reinforcement and negative-moment reduction (for continuity) do not apply.
Axial loading on members has not been considered.

CONSTRUCTION NOTES

Construction loads:
Strutting required as shown on Standard Plan D88. Strutting may be required on culvert extensions when existing parapet is removed.

Expansion joints:
Invert:
No expansion joints shall be permitted.

Roof and Walls:
When cover is less than span length-
Place 13 mm expansion joint filler at 9 m± centers outside the paved roadway lanes and place Bridge Detail 3-2, Standard Plan B0-3, at 9 m centers under paved roadway lanes.
When cover is more than span length-
Place 13 mm expansion joint filler at 9 m± centers and additional 13 mm expansion joints at locations of change in foundation character, as directed by the Engineer.

Construction joints:
Temporary joints may be permitted if normal (or radial) to ℄ of RCB. Otherwise, the contractor is to submit a proposal for consideration.

Cutoff walls:
1.2 m cutoff walls are to be provided at inlet and/or outlet unless adjacent channel is lined and unless otherwise shown. These walls are to be extended if scour conditions warrant.

Earthwork:
See Standard Plan A62E.

Backfill:
See Standard Specifications, except that the difference in level of backfill (against outside walls) shall not exceed 600 mm.

Height \ Cover	3 m	6 m
1830 mm	95	150
2440 mm	105	160
3050 mm	115	170
3660 mm	125	180
4270 mm	135	190

DESIGN BEARING PRESSURE (kPa)

GENERAL NOTES

Designation:
Standard single or multiple box culverts are shown on plans as span times height with maximum cover over roof thus: 2440 mm x 1520 mm RCB with 3 m or DBL 3050 mm x 1520 mm RCB with 6 m, followed by alternatives.

Alternatives:
Single cell: invert will be sloped unless "trapezoidal invert", "flat invert" or "V invert" is included in designation
Multiple cell: invert will be vee unless "flat invert" is specified. Ends of culvert will be rounded unless "square ends" are designated. Parapets will be as shown unless designated in plans. Such designations may be different for inlet and outlet ends.

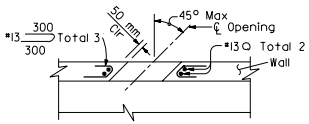
Quantities:
Quantities are for the sloped or vee invert and do not include "d" bars, nor splices in longitudinal bars, nor temperature reinforcement for exposed roof, nor concrete or reinforcement for parapets, cutoff walls or paving notches.

Reinforcement placement:
Main reinforcement is to be placed transverse or, for curved culverts, radial. When radial, reinforcing spacing of the "a", "f" and "g" bars is measured along the centerline. Stagger splices not shown. Hooks may be rotated or tilted, as necessary, for clearance.

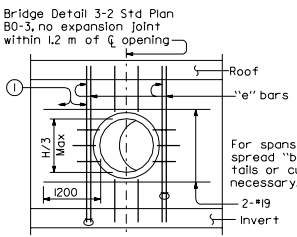
Special reinforcement coverage:
Box standard plans are not to be used for culverts in a corrosive environment or where there is a severe abrasive flow condition or in freeze-thaw locations.

Special design:
Required for culverts with conditions, loads, design bearing pressures or sizes greater than those given on this plan or Standard Plans D80 & D81. Also required for multiple cell culverts with unequal spans. For culverts with railroad loading, see the current AREA design specification.

3 or more cells:
For culverts with more than two cells, use dimensions and reinforcement for the standard "double box culvert" and adjust quantities accordingly.



PART PLAN-SECTION

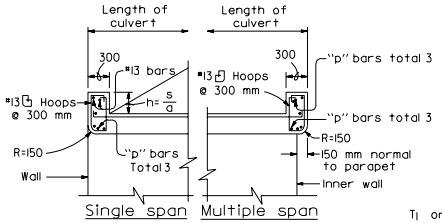


LONGITUDINAL SECTION

UTILITY OPENING-WALL

H= Height of box

(1) Adjacent to each side of the opening, place additional bars aquivalent to half the interrupted main reinforcement.



PARAPET DETAIL

s = Clear span (mm)
a = 12 cosine skew angle

Parapet "p" bars			
Span \ Skew Angle	0° TO 15°	16° TO 30°	31° TO 45°
1220 mm	#13	#13	#13
1830 mm	#13	#13	#16

Unit Stresses: f_s =165 MPa, f_c =9 MPa, n=10

Maximum Toe Pressure = 140 kPa

Elevations, length and angle of flare of wings may be varied by the Engineer to suit conditions encountered in the field. Walls designed for 600 mm liveload surcharge, 1:1.5 sloping surcharge not to exceed 1.5 m in elevation plus 600 mm liveload surcharge, or unlimited 1:2 surcharge.

Dimensions "H","L","M","N", Elevation "a" and "Angle of flare" (as apply) are shown on the plans.

Wall height may be exceeded by 150 mm before going to next greater "H".

Eliminate cutoff wall if adjacent channel is paved and skew is 20° maximum.

For wall offset values, see Standard Plan B3-8.

CORRUGATED METAL PIPE DOWNDRAIN ANCHOR ASSEMBLY

Cable and cable clamps to be used when required by the Special Provisions.

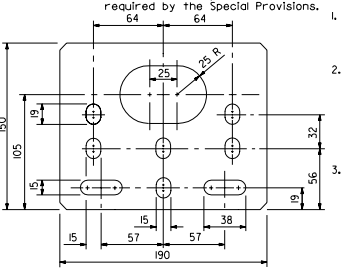

PLATE DETAIL

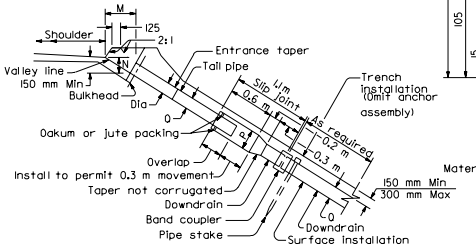
Material to be 6.4 mm plate galvanized after fabrication.

NOTES

1. All hardware to be galvanized after fabrication. All pipe stakes to be either galvanized after fabrication, or be fabricated from pre-galvanized pipe. If pre-galvanized pipe is used, weld areas shall be cleaned, and painted with zinc-rich primer.
2. Either Alternative A or Alternative B anchor assemblies and pipe stakes may be used at Contractor's option for corrugated steel pipe or corrugated aluminum pipe. Alternative A anchor assembly only to be placed in annular corrugation. Alternative A anchor assembly may be placed on annular coupling band if securely fastened on downstream side of joint. Alternative B anchor assembly to be fastened to pipe sections and not to a band coupler used to join sections.
3. For cable anchorage system details, see Standard Plan D87C.



SECTION A-A (TYPE I)

NOTE

1. Cable, slip joint or anchor assembly to be used when specified.
2. Slip joint to be omitted when completely buried.
3. Slip joint for Type I entrance taper shown. Type 2 similar.

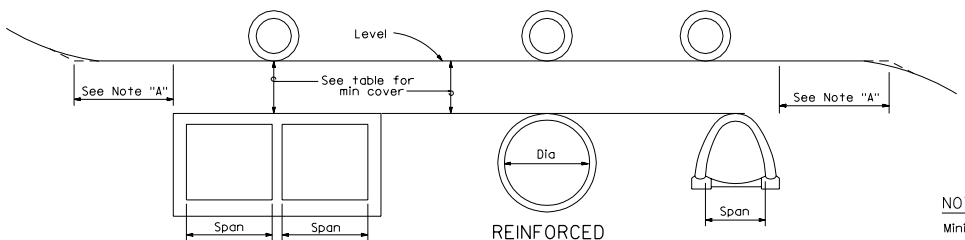
	Pipe Arches	All Spans	$\frac{Span}{3}$ or 1.2 m	$\frac{Span}{3}$ or 1.2 m	$\frac{Span}{3}$ or 1.2 m	$\frac{Span}{3}$ or 1.2 m
	Structural Plate Pipe, Arches and Vehicular Undercrossings	All Spans	$\frac{Span}{3}$ or 1.5 m	$\frac{Span}{3}$ or 1.5 m	$\frac{Span}{3}$ or 1.5 m	$\frac{Span}{3}$ or 1.5 m
Plastic Pipe		Dia 300 mm to 1200 mm	$\frac{Dia}{1.75}$ or 1.2 m	$\frac{Dia}{1.75}$ or 1.2 m	$\frac{Dia}{1.75}$ or 1.2 m	$\frac{Dia}{1.75}$ or 1.2 m

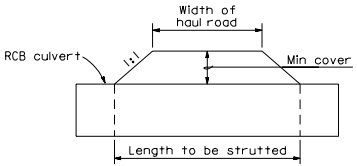
NOTE Minimum cover shall be the greater value of alternatives shown. The diameter and spans shown in the table to calculate the minimum cover (Example: $\frac{Dia}{1.75}$) are the diameter or span of the facility expressed in number of meters.



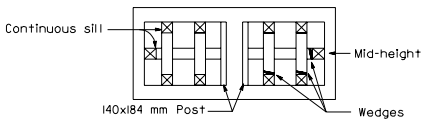
BOX CULVERTS

REINFORCED CONCRETE PIPES, PLASTIC PIPES AND METAL CULVERTS

REINFORCED CONCRETE ARCH CULVERTS



MINIMUM LENGTH OF STRUTTING



RCB STRUTTING DETAILS

NOTES

Length of strutting to be determined by the Engineer, but shall not be less than as shown in the sketch above.

Assumed tire patterns:

222 kN axle	610x460 mm
334 kN axle	910x610 mm
489 kN axle	910x760 mm
667 kN axle	910x910 mm

Impact = 10%

Sills to be glue-laminated or solid timber.

For strutting requirements of Structural Steel Plate Vehicular Undercrossing, Structural Steel Plate Arches and Structural Steel Plate Pipes during construction, see Standard Plans D88A.

NOTE "A"

Minimum distance equals 3 times the span or 3 times the diameter.

NOTES

Unit Stresses: f_s = 165 MPa, f_c = 9 MPa, n = 10
Maximum Toe Pressure = 144 kPa.
Elevation, length and angle of flare of wings may be varied by the Engineer to suit conditions encountered in the field. Walls designed for 600 mm live load surcharge, 1:1.5 sloping surcharge not to exceed 1.5 m in elevation plus 600 mm live load surcharge, or unlimited 1:2 surcharge. If 1:1.5 slope exceeds 1.5 m, use Type 2 retaining wall. Wall height may be exceeded by 150 mm before going to the next greater "H".

REINFORCED CONCRETE PIPE DRAIN

NOTES

1. Galvanizing: See Standard Specifications or Special Provisions. All hardware to be galvanized after fabrication.
2. Ladder may be constructed in one length at contractor's option on reinforced concrete pipe risers.
3. On corrugated steel pipe riser, connect ladder splice plate so joint can compress 10 mm.
4. Ladder splice plate to be connected with 13 mm ø bolts with double nuts.
5. Pay limit for 900 mm risers to centerline of cross pipe.
6. Where angle steps are required, the lowest angle shall not be more than 0.3 m above the flowline of the drain. The distance between angle steps and between the uppermost angle step and the lowest rung of the ladder shall not exceed 0.3 m. Power driven fasteners, equivalent to the 13 mm ø bolts shown, may be used for fixing the angle steps to the wall of the reinforced concrete pipe drain.
7. Install ladder so that the highest rung is not more than 0.3 m below the top of the riser.

FLARED END SECTIONS FOR CORRUGATED METAL AND PLASTIC PIPE CULVERTS

NOTES

1. All 3-piece bodies to have 2.8 mm thick sides and 3.5 mm thick center panels. Width of center panels to be greater than 20% of the pipe periphery. Multiple panel bodies to have lap seams which are to be tightly joined by rivets or bolts.
2. Reinforced edges to be supplemented with stiffener angles for the 1500 mm thru 2100 mm round, 1925 mm x 1300 mm and 2075 mm x 1425 mm pipe-arch sizes. The angles will be 51mm x 51mm x 6.4 mm for the 1500 mm thru 1800 mm round, 1925 mm x 1300 mm and 2075 mm x 1425 mm pipe-arch sizes and 64 mm x 64 mm x 6.4 mm for 1950 mm and 2100 mm round. The angles to be attached by 10 mm ø nuts and bolts.
3. Angle reinforcement shall be placed under the center panel seams on the 1925 mm x 1300 mm and 2075 mm x 1425 mm pipe-arch sizes.
4. Toe plate to be available as an accessory when specified.
5. End of pipe to be finished with annular corrugations to conform flared end section so that minimal leakage results from the connection. Other designs may be used with approval of the Engineer.
6. For 300 mm thru 600 mm helical end section connection, a universal coupling band attached to the metal end section by rivets, bolts or 25 mm long shop tack welds spaced at same intervals as dimples may be used in place of the 0.3 m stub. See Standard Plan D97C.
7. The types of alternative connections for pipe to metal flared end sections shall conform to the following:

CIRCULAR PIPES -
300 mm thru 600 mm Type I or III
750 mm thru 2100 mm Type II or III

PIPE-ARCHES -
525 mm x 375 mm thru 1425 mm x 950 mm Type II or III
1600 mm x 1075 mm thru 2075 mm x 1425 mm Type III

NOTES

1. All ferrous metal coupling band connection hardware shall be galvanized or electro-plated in accordance with the Standard Specifications.
2. For helically corrugated coupling bands, the connection angles may be oriented parallel to the pipe axis, provided connecting holes are slotted lengthwise sufficiently to allow adjustment for the helix angle.
3. Tension strap may be connected to band with either spot welds or fillet welds that develop minimum required strength of strap.
4. Use 32 mm gage line dimension on attached angle leg for rivets and spot welds.
5. Band thickness shall not be less than:
   (I) 3 standard thicknesses lighter than the thickness of the pipe for Corrugated Steel Pipe.
   (II) 2 standard thicknesses lighter than the thickness of the pipe and in no case lighter than 1.5 mm for Corrugated Aluminum Pipe.
6. Dimensions, thicknesses and strengths shown are minimum.
7. For pipe arches use same width band as for round pipe of equal periphery.
8. Fillet welds of equivalent strenght may be substituted for spot welds or rivets.
9. Spot welds shall develop minimum required strength of strap.
10. Pipe with rerolled ends having at least two 68 mm x 13 mm annular corrugations at each end with or without an upturned flange may be connected with any of the annular coupling bands shown for pipe of the same diameter and wall thickness and having 68 mm x 13 mm corrugations.
11. In the case of H-305 huggerbands, two piece bands are required for diameters through 2400 mm and three piece bands are required for diameters 2550 mm through 3000 mm.
12. Two piece bands are required for pipes greater than 1050 mm diameter.
13. The 57 mm x 51mm x 2.8 mm thick galvanized die-formed angle connector may be used in lieu of the 51mm x 51mm 4.8 mm angle connector for standard joints only on pipes through 1800 mm diameter.

NOTES

1. All ferrous metal coupling band connection hardware shall be galvanized or electroplated in accordance with the Standard Specifications.
2. For helically corrugated coupling bands, the connection angles may be oriented parallel to the pipe axis, provided connecting holes are slotted lengthwise sufficiently to allow adjustment for the helix angle.
3. Tension strap may be connected to band with either spot welds or fillet welds that develop minimum required strength of strap.
4. Use 32 mm gage line dimension on attached angle leg for rivets and spot welds.
5. Band thickness shall not be less than:
   (I) 3 standard thicknesses lighter than the thickness of the pipe for corrugated steel pipe.
   (II) 2 standard thicknesses lighter than the thickness of the pipe and in no case lighter than 1.5 mm for corrugated aluminum pipe.
6. Dimensions, thicknesses and strengths shown are minimum.
7. For pipe arches use same width band as for round pipe of equal periphery.
8. Fillet welds of equivalent strength may be substituted for spot welds or rivets.
9. Spot welds shall develop minimum required strength of strap.
10. Pipe with rerolled ends having at least two 68 mm x 13 mm annular corrugations at each end with or without an upturned flange may be connected with any of the annular coupling bands shown for pipe of the same diameter and wall thickness and having 68 mm x 13 mm corrugations.
11. In the case of H-305 huggerbands, two piece bands are required for diameters through 2400 mm and three piece bands are required for diameters 2550 mm through 3000 mm.
12. Two piece bands are required for pipes greater than 1050 mm diameter.

SLOTTED CORRUGATED STEEL PIPE

NOTES

1. Drain pipe seams may be continuous helical lock seam or helical weld seam.
2. Drain sections shall be assembled with either of the coupling bands shown.
3. The cross bar spacer shall be welded to the bearing bars in such a manner as to develop a minimum tensile strength of 55,000 N normal to the longitudinal axis of the bearing bars.
4. The maximum variance from a straight line between the extreme top corners of the bearing bars shall be 12 mm in 6.0 m.
5. All coupling band connections shall be galvanized or coated in accordance with the Standard Specifications.
6. Spot welds shall develop minimum required strength of strap.
7. Dimensions shown are minimums.
8. Contractor to provide an adequate method of keeping the asphalt concrete out of pipe, during paving operations.
9. Minimum pipe wall thickness is 1.6 mm.
10. 600 mm Diameter will not support normal highway wheel loads.
11. Use heel guard when specified.
12. Bottom edge of cross bar spacer offset in direction of flow.
13. Unless otherwise shown on the plans or specified in the special provisions, cross bar spacers shall be either rectangular or tapered at the contractor's option.

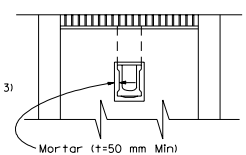
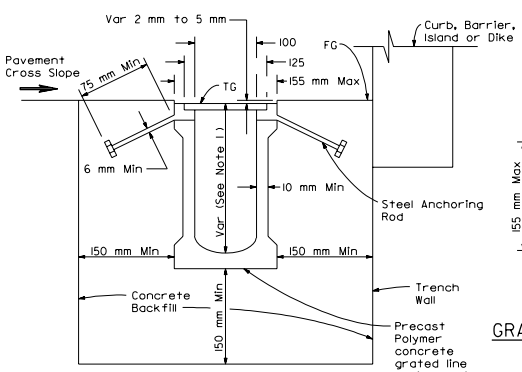
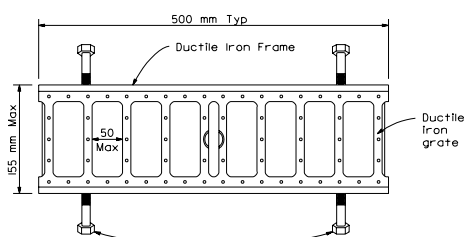
SECTION C-C



SECTION D-D



SECTION B-B
(Precast grated line drain with non-integral frame)
See Note 6



GRATED LINE DRAIN FRAME AND GRATE DETAIL
See Notes 4, 5 and 6

NOTES

1. Precast polymer concrete drain sections are available in non-sloped uniform depth sections (135 mm to 400 mm) or in 0.6 percent pre-sloped sections with graduated depths from 135 mm to 400 mm. See Project Plans for trench sections to be installed.
2. Nominal dimensions shown. Allowable tolerance +/- 2% .
3. For GMP inlet connection, field joint sealed with a pliable mixture of sand, portland cement and emulsified asphalt (mixture of 1 part portland cement, 3-5 parts sand and 1½ part SS1 emulsified asphalt).
4. Within designated pedestrian paths of travel, the maximum grate opening in the direction of pedestrian traffic shall be 12.7 mm.
5. Grate patterns may vary from detail shown. See Special Provisions for requirements.
6. Steel anchoring rods not used when frame is integral with polymer concrete grated line drain section.

(New construction)

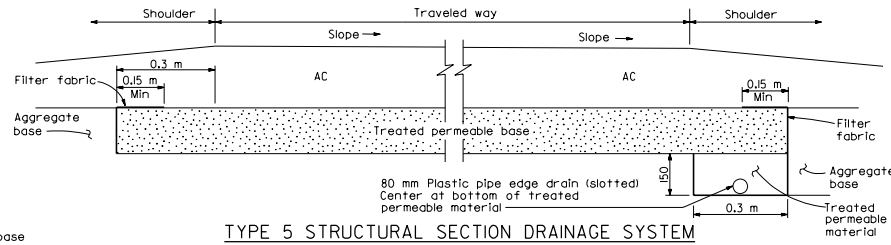
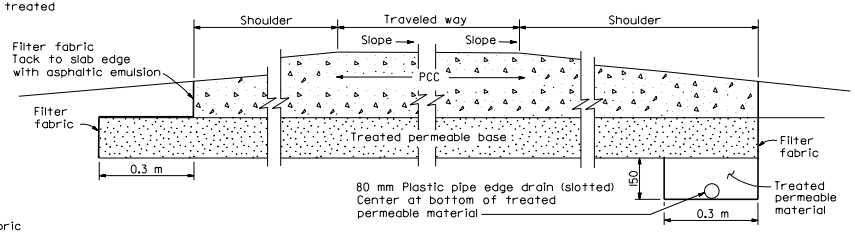
TYPE 4 STRUCTURAL SECTION DRAINAGE SYSTEM

(New construction)



TYPE 5 STRUCTURAL SECTION DRAINAGE SYSTEM

(New construction)



TYPE 6 STRUCTURAL SECTION DRAINAGE SYSTEM

(New construction)

NOTES

1. At the Contractor's option, on new construction, the vertical jointline (including the filter fabric) between the treated permeable material and the shoulder base/subgrade material may be rotated about its midpoint to a slope not flatter than 1:1 as shown by the dashed lines.
2. See the project plans and typical cross sections for pavement structural section details.
3. The plan layout for structural section drainage collector and outlet systems for new portland cement concrete pavement and new asphalt concrete pavement is the same as that shown on Standard Plan D99B.
4. For plastic pipe edge drain diameter larger than 80 mm, the minimum trench width shall be equal to the outside diameter of the plastic pipe plus 100 mm.
5. For plastic pipe edge drain diameters larger than 80 mm, all details for 80 mm plastic pipe edge drain shall apply.
6. For pavements thicker than 230 mm, the minimum trench depth is 0.3 m.

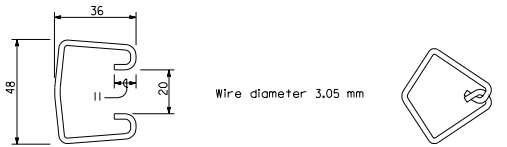
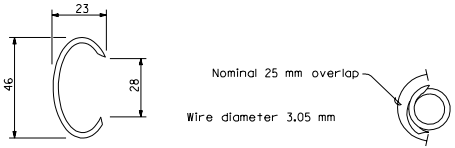
STANDARD TIE WIRE DETAIL

Alternating single and double half hitches (locked loops)
(See Note 2)



Before closure After closure

INTERLOCKING FASTENER



Before closure After closure

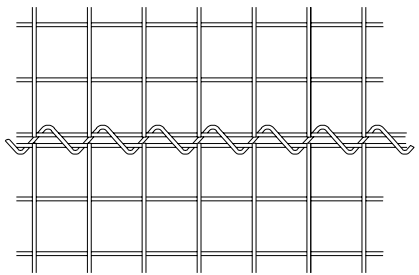
OVERLAPPING FASTENER

ALTERNATIVE GABION JOINT MATERIAL FASTENERS

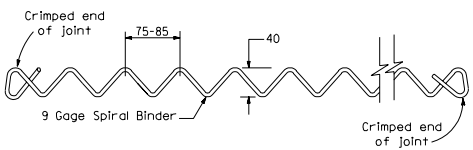
(Fastener dimensions nominal)
(See Notes 3 and 4)

NOTES

1. A joint connection must be made where any panel edge meets another panel. This includes adjacent gabion baskets, individual panels within a basket, diaphragm edges, etc.
2. Standard tie wire may be used as a joint connector for either twisted or welded mesh. Spiral binder is to be used with welded mesh only.
3. When alternative Gabion joint material fasteners are used, one fastener must be installed in each mesh opening (10 fasteners minimum per meter). Mesh openings are counted along one of the panels at the joint.
4. When alternative Gabion joint material fasteners are not capable of enclosing all wires along a joint, especially at Basket-To-Basket Joints, either standard tie wire or sprial binder, as applicable, must be used.

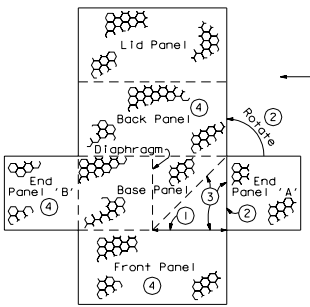


SPIRAL BINDER LACING



STANDARD SPIRAL BINDER

(See Note 2)



FLAT LAYOUT OF GABION BASKET

To Assemble Transitional Gabion Basket:

Step 1 Cut mesh along joint between Front Panel and Base Panel.

Step 2 Unfasten End Panel 'A' from Base Panel and rotate End Panel 'A'. Fasten End Panel Panel 'A' to Back Panel.

Step 3 Fold the cut portion of the Base Panel into upright position along diagonal from the diaphragm to the corner of the Back Panel.

Step 4 Fold the Back Panel, Front Panel and End Panel 'B' into upright positions. Fasten End Panel 'B' to the Back Panel and the Front Panel.

Step 5 Rotate End Panel 'A' and the cut portion of the Front Panel inward against the upturned portion of the Base Panel. Fasten along the overlapped portion of the Front Panel and End Panel 'A'. Fasten the overlapped portion of the Front Panel and End Panel 'A' to the folded upright portion of the Base Panel along the diagonal (described in Step 3).

Step 6 Fill the Transitional Gabion Basket with rock as per specifications.

Step 7 Close lid and fold over corner of Lid Panel. Fasten along Lid Panel edges.

CRASH CUSHION PALLET DETAIL

NOTES

1. (XXX) Indicates sand filled module location and mass of sand in kilograms for each module. Module spacing is based on the greater diameter of the module.
2. All sand masses are nominal.
3. The temporary crash cushion arrays shown on this plan shall be used only in locations where there will be traffic on one side of the temporary crash cushion array. For Array 'TSC', a solid backup (wall, barrier or a toe of cut or fill slope) is required along the backside of the crash cushion array to reduce penetration of the modules.
4. If the fixed object or approach end of the temporary railing is less than 4.60 meters from the edge of traveled way, a temporary crash cushion is required.
5. Temporary crash cushion arrays shall not encroach on the traveled way.
6. Arrays for median shoulders shall conform to details shown on this plan for outside shoulders.
7. Place the Type P marker panel so that the bottom of the panel rest upon the pallet and faces traffic.
8. Refer to Standard Plan A73B for marker details.
9. For shoulder widths less than 2.4 m, appropriate approved crash cushion protection, other than sand filled modules, shall be provided at fixed objects and at approach ends of temporary railing. The specific type of crash cushion protection shall be as shown on the project plans or as specified in the Special Provisions, or if not shown on the project plans or specified in the Special Provisions, shall be as approved by the Engineer.

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

NOTES

1. Median lane closures shall conform to the details for outside lane closures except that C20 (Lt) signs shall be used.
2. Not less than one person shall be assigned to full time maintenance of traffic control devices on all night lane closures or day-time closures exceeding 1.6 km in length, including taper.
3. Duplicate sign installations are not required:
   a) On opposite shoulder if at least one-half of the available lanes remain open to traffic.
   b) In the median if the width of the median shoulder is less than 2.4 m and the outside lanes are to be closed.
4. All advance warning sign installations shall be equipped with flags for daytime closures. Flashing beacons shall be placed at the locations indicated during night lane closure.
5. A C13 "END CONSTRUCTION" or C14 "END ROAD WORK" sign, as appropriate, shall be placed at the end of the lane closure unless the end of work area is obvious or ends within a larger project's limits.
6. If the C18 (or C23) sign would follow within 600 m of a stationary C18, C23 or C11 "STATE HIGHWAY CONSTRUCTION NEXT _____ MILES", use a C20 sign for the first advance warning sign.
7. Place a C30 sign every 600 m throughout length of lane closure.
8. One flashing arrow sign for each lane closed. The first flashing arrow sign shall be Type I. All others may be either Type I or Type II.
9. A minimum 450 m of sight distance shall be provided where possible for vehicles approaching the first flashing arrow sign. Lane closures shall not begin at top of crest vertical curve or on a horizontal curve.
10. All cones used for night lane closures shall be fitted with reflective sleeves as specified in the specifications.
11. Portable delineators, placed at one-half the spacing indicated for traffic cones may be used in lieu of cones for daytime closures only.
12. Unless otherwise specified in the special provisions, a minimum of 3 cones shall be placed transversely across each closed lane and shoulder at each location where a taper across a traffic lane ends and every 600 m as shown on the "Lane Closure" detail. Two Type II barricades may be used instead of the 3 cones. The transverse alignment of the cones or barricades on the closed shoulder may be shifted from the transverse alignment to provide access to the work.
13. Unless otherwise specified in the special provisions, the 150 m section of the lane closure shown along lanelines shall be used between the 300 m lane closure tapers when two or more adjacent traffic lanes are to be closed.
14. Unless otherwise specified in the special provisions, the G84 and W59 signs shall be used as shown.
15. Where specified in the special provisions, a W11 "LANE REDUCTION SYMBOL" sign is to be used in place of the C20 "RIGHT LANE CLOSED AHEAD" sign.
16. The W11 "LANE REDUCTION SYMBOL" sign shown at this location is to be used where the W11 sign is used as advance warning as described in Note 15.

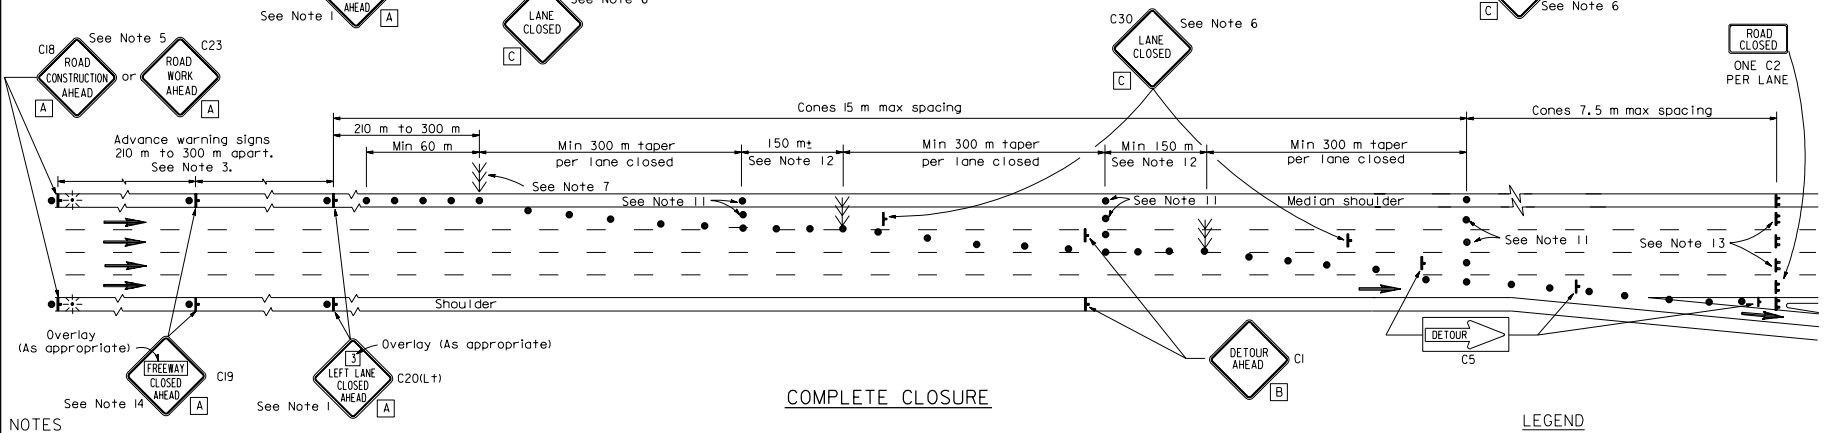
LANE CLOSURE WITH PARTIAL SHOULDER USE



COMPLETE CLOSURE

NOTES

1. Lane closures on the right side using partial median shoulder as a traffic lane shall conform to the details for inside lane closure except that C20(Rt) signs shall be used.
2. Not less than one person shall be assigned to full time maintenance of traffic control devices on all complete closures, on all night lane closures, and daytime closures exceeding 1.6 km in length, including taper.
3. All advance warning sign installations shall be equipped with flags for daytime closure. Flashing beacons shall be placed at the locations indicated during night lane closures.
4. A C13 "END CONSTRUCTION" or C14 "END ROAD WORK" sign, as appropriate, shall be placed at the end of the lane closure unless the end of work area is obvious or ends within a larger project's limits.
5. If the C18 (or C23) sign would follow within 600 m of a stationary C18, C23 or C11 "STATE HIGHWAY CONSTRUCTION NEXT ___ MILES" use a C20 sign for the first advance warning sign.
6. Place a C30 sign every 600 m throughout length of lane closure.
7. One flashing arrow sign for each lane closed. The first flashing arrow sign shall be Type I. All others may be either Type I or Type II.
8. A minimum 450 m of sight distance shall be provided where possible for vehicles approaching the first flashing arrow sign. Lane closures shall not begin at the top of crest vertical curve or on a horizontal curve.
9. All cones used for night lane closures shall be fitted with reflective sleeves as specified in the specifications.
10. Portable delineators, placed at one-half the spacing indicated for traffic cones, may be used in lieu of cones for daytime closures only.
11. Unless otherwise specified in the special provisions, a minimun of 3 cones shall be placed transversely across each closed lane and shoulder at each location where a taper across a traffic lane ends and every 600 m as shown on the "Lane Closure With Partial Shoulder Use" detail. Two Type II barricades may be used instead of the 3 cones. The transverse alignment of the cones or barricades on the closed shoulder may be shifted from the transverse alignment to provide access to the work.
12. Unless otherwise specified in the special provisions, the 150 m section of the lane closure shown along lanelines shall be used between the 300 m lane closure tapers when two or more adjacent traffic lanes are to be closed.
13. A minimum of Two Type II barricades shall be placed across each closed lane and shoulder at the location shown and every 600 m within the complete closure area. Within the complete closure area, the transverse alignment of the barricades on the closed shoulder may be shifted from the transverse alignment to provide access to the work.
14. Where specified in the special provisions, a C1 "DETOUR AHEAD" sign is to be used in place of the C19 "FREEWAY CLOSED AHEAD" sign.

NOTES

1. Where approach speeds are low, signs may be placed at 90 m spacing, and in urban areas, closer.
2. All advance warning sign installations shall be equipped with flags for daytime closures. Flashing Beacons shall be placed at the locations indicated for nighttime closures.
3. A C13 "END CONSTRUCTION" or C14 "END ROAD WORK" sign, as appropriate, shall be placed at the end of the lane closure unless the end of work area is obvious, or ends within a larger project's limits.
4. If the C18 (or C23) sign would follow within 600 m of a stationary C18, C23, or C11 "STATE HIGHWAY CONSTRUCTION NEXT _____ MILES", use a C20 sign for the first advance warning sign.
5. All cones used for night lane closures shall be fitted with reflective sleeves as specified in the specifications.
6. Portable delineators, placed at one-half the spacing indicated for traffic cones, may be used in lieu of cones for daytime closures only.
7. Flashing arrow sign shall be either Type I or Type II.
8. The maximum spacing between cones in a taper shall be approximately as shown in Table I and 15 m maximum spacing on tangent.
9. For approach speeds over 80 km/h, use the "Traffic Control System for Lane Closure On Freeways And Expressways" plan for lane closure details and requirements.
10. Where specified in the special provisions, a W11 "LANE REDUCTION SYMBOL" sign is to be used in place of the C20 "RIGHT LANE CLOSED AHEAD" sign.

NOTES

1. Where approach speeds are low, signs may be placed at 90 m spacing, and in urban areas, closer.
2. All advance warning sign installations shall be equipped with flags for daytime closures. Flashing beacons shall be placed at the locations indicated during night lane closures.
3. A C13 "END CONSTRUCTION" or C14 "END ROAD WORK" sign, as appropriate, shall be placed at the end of the lane control unless the end of work area is obvious, or ends within a larger project's limits.
4. If the C18 (or C23) sign would follow within 600 m of a stationary C18, C23, or C11 "STATE HIGHWAY CONSTRUCTION NEXT _____ MILES", use a C9A sign for the first advance warning sign.
5. All cones used for night lane closures shall be fitted with reflective sleeves as specified in the specifications.
6. Portable delineators, placed at one-half the spacing indicated for traffic cones, may be used in lieu of cones for daytime closures only.
7. Additional advance flaggers may be required. Flagger should stand in a conspicuous place, be visible to approaching traffic as well as approaching vehicles after the first vehicle has stopped. Nighttime flagger station shall be illuminated as provided in the current edition of the "Manual of Traffic Controls" published by the State of California, Department of Transportation. Place a minimum of four cones at 15 m intervals in advance of flagger station as shown.
8. Place C30 "LANE CLOSED" sign at 150 to 300 m intervals throughout extended work areas. They are optional if the work area is visible from the flagger station.
9. When a pilot car is used, place a C37 "TRAFFIC CONTROL-WAIT FOR PILOT CAR" sign at all intersections within traffic control area. Signs shall be clean and visible at all times.

MOVING LANE CLOSURE ON MEDIAN OR OUTSIDE LANE OF MULTILANE HIGHWAYS

LEGEND

V1	Sign Vehicle
V2	Shadow Vehicle
V3	Work/Application Vehicle
FAS	Flashing Arrow Sign
CMS	Changeable Message Sign
TMA	Truck-Mounted Attenuator
→	Direction of Travel

NOTES

1. Either the SC 10 sign panel shown or a changeable message sign shall be mounted on the rear of sign vehicle V1. A Type II flashing arrow sign shall be mounted on the rear of sign vehicle V1 and used with the SC 10 sign panel. A Type II flashing arrow sign will not be required with the changeable message sign provided the flashing arrow sign symbol may be displayed on the changeable message sign board. The changeable message sign shall be sequenced to show the "ROAD WORK AHEAD" message first, followed by the "LANE CLOSED AHEAD" message and then the flashing arrow sign symbol. For median lane closure, the flashing arrow sign symbol shall be reversed with the arrowhead on the right.
2. If traffic queues develop, sign vehicle V1 should be positioned upstream from the end of queue. Sign vehicle V1 shall be positioned where highly visible when shoulders are not available.
3. A minimum sight distance of 450 m should be provided in advance of sign vehicle V1.
4. Sign vehicle V1 should remain at the beginning of horizontal or vertical curves until the other vehicles (V2 and V3) are far enough beyond the curve to resume the minimum sight distance of 450 m.
5. Vehicle-mounted sign panels shall be Type III or IV reflective sheeting, black on white or black on orange with 150 mm minimum series D letters per Caltrans sign specifications.
6. Gross Vehicle Weight of shadow vehicle V2 shall be a minimum of 9000 kilograms and shall be equipped with a truck-mounted attenuator (TMA). The sign panel shown and a Type II flashing arrow sign shall be mounted on the rear of shadow vehicle V2. For median lane closure the flashing arrow sign symbol shall be reversed with the arrowhead on the right.
7. All vehicles used for lane closures shall be equipped with two-way radios and the vehicle operators shall maintain communication during the work or application operation.
8. All vehicles shall be equipped with flashing or rotating amber lights.
9. Where sufficient shoulder width is not available, sign vehicle V1 may encroach into the traffic lane staying as close to the edge of shoulder as practicable. When operating in this mode both V1 and V2 shall be equipped with a truck-mounted attenuator (TMA) and the Gross Vehicle Weight of V1 and V2 shall be a minimum of 9000 kilograms each.
10. Where workers would be on foot in the work area, a stationary type lane closure (Standard Plan T10, T11, etc., as applicable) shall be used instead of this plan.
11. For moving lane closure on interior lane of multilane highways, see Standard Plan T16.

MOVING LANE CLOSURE ON INTERIOR LANE OF MULTILANE HIGHWAYS

LEGEND

V1	Sign Vehicle
V2	Shadow Vehicle
V3	Work/Application Vehicle
FAS	Flashing Arrow Sign
CMS	Changeable Message Sign
TMA	Truck-Mounted Attenuator
→	Direction of Travel

NOTES

1. A changeable message sign shall be mounted on the rear of sign vehicle V1. The changeable message sign shall be sequenced to show the "ROAD WORK AHEAD" message first, followed by the "INTERIOR LANE CLOSED" message. The message "CENTER LANE CLOSED" may be used in place of the "INTERIOR LANE CLOSED" message.
2. If traffic queues develop, sign vehicle V1 should be positioned upstream from the end of queue. Sign vehicle V1 shall be positioned where highly visible when shoulders are not available.
3. A minimum sight distance of 450 m should be provided in advance of sign vehicle V1.
4. Sign vehicle V1 should remain at the beginning of horizontal or vertical curves until the other vehicles (V2 and V3) are far enough beyond the curve to resume the minimum sight distance of 450 m.
5. Vehicle-mounted sign panels shall be Type III or IV reflective sheeting, black on white or black on orange with 150 mm minimum series D letters per Caltrans sign specifications.
6. Gross Vehicle Weight of shadow vehicle V2 shall be a minimum of 9000 kilograms and shall be equipped with a truck-mounted attenuator (TMA). The sign panel shown and a Type II flashing arrow sign shall be mounted on the rear of shadow vehicle V2. For median lane closure the flashing arrow sign symbol shall be reversed with the arrowhead on the right.
7. All vehicles used for lane closures shall be equipped with two-way radios and the vehicle operators shall maintain communication during the work or application operation.
8. All vehicles shall be equipped with flashing or rotating amber lights.
9. Where sufficient shoulder width is not available, sign vehicle V1 may encroach into the traffic lane staying as close to the edge of shoulder as practicable. When operating in this mode both V1 and V2 shall be equipped with a truck-mounted attenuator (TMA) and the Gross Vehicle Weight of V1 and V2 shall be a minimum of 9000 kilograms each.
10. Where workers would be on foot in the work area, a stationary type lane closure (Standard Plan T10, T11, etc., as applicable) shall be used instead of this plan.
11. For moving lane closure on median or outside lanes of multilane highways, see Standard Plan T15.

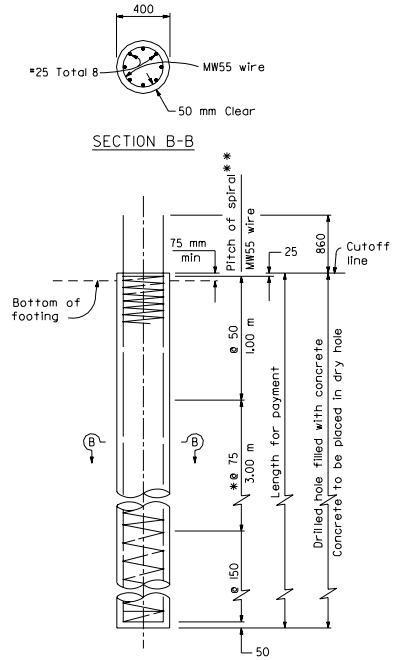
400 AND 625 KILONEWTON
DESIGN CAPACITY



ELEVATION
900 KILONEWTON
DESIGN CAPACITY

* @ 50 at option of contractor

** Extend at 50 mm pitch to top of anchor piles and load test piles.
For additional longitudinal reinforcement for anchor piles and load test piles, see "Load Test Pile Details (2)", Standard Plan B2-10.

NOTES

Reinforcement extending into footing shall be hooked as required to provide clearance to top of footing.

Lapped splices in spiral pile reinforcement shall be lapped at least 80 wire diameters. Spiral pile reinforcement at splices and at ends shall be terminated with a 135° hook with a 150 mm tail hooked around a longitudinal bar.

Piles shall be extended only in accordance with details shown in the Project Plans.

DESIGN NOTES

REINFORCED CONCRETE

f_y = 420 MPa

f'_c = 28 MPa

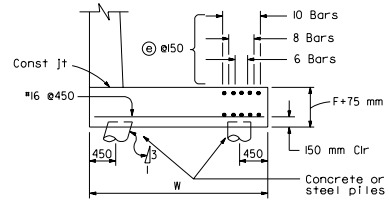
Design H	Front Row 1:3 Batter	Back Row Vertical
1200	5400	5400
1800	3600	5400
2400	2700	5400
3000	1800	3600
3600	1200	2400

For actual spacing, see Wall Layout.

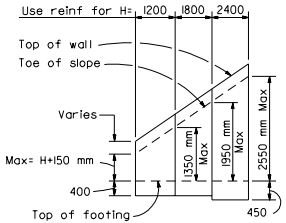
Pile layout does not apply to Case IV conditions.

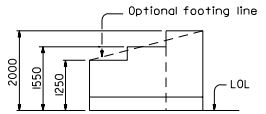


Reinforcement detailed is to be placed in addition to that shown for spread footings.

◉ For Design H=1200 use W=1550
All others from table

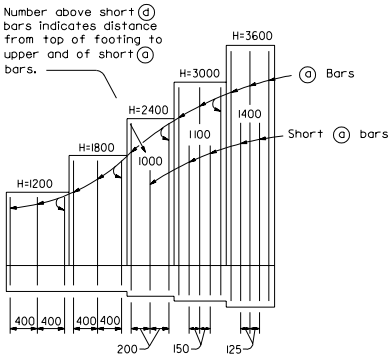
400 kN PILE FOOTING SECTION



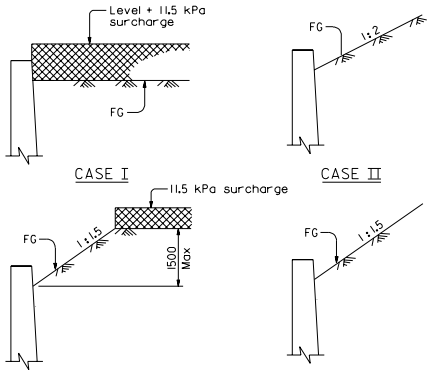


TYPICAL LAYOUT EXAMPLE

For joints required, see BO-3 3-3 & BO-3 3-4



ELEVATION



DETAIL OF DESIGN LOADING CASES

Case I Level +11.5 kPa surcharge
Case II 1:2 Unlimited slope
Case III 1:1.5 Limited slope (1500 max height) +11.5 kPa surcharge
Case IV 1:1.5 Unlimited slope

NOTES

Design Conditions:

Design H may be exceeded by 150 mm before going to the next size.
Special footing design is required where foundation material is incapable of supporting toe pressure loads listed in table.

Design Data:

f_c = 10 MPa f'_c = 25 MPa f_s = 168 MPa n = 10 earth = 19 kN/m^3
Case I- Wall design for equivalent fluid pressure = 4.2 and 5.6 kPa/m.
Case II, III, IV - Wall design is based on Rankine's formula with ø = 33° 42'.

NOTES

Design Conditions:

Design H may be exceeded by 150 millimeters before going to the next size. Special footing design is required where foundation material is incapable of supporting toe pressure listed in table.

Return wall not required unless shown elsewhere.

Design Data:

f_c = 10 MPa f_c = 25 MPa f_s = 168 MPa

n = 10 earth = 19 kN/m^3

11.5 kPa surcharge:

Equivalent fluid pressure =

5.6 kPa/m maximum for determination of toe pressure.

4.2 kPa/m minimum for determination of heel pressure.

Earth pressures for 1:2 unlimited slope, 1:1.5 slope, and 1:1.5 unlimited slope, determined from Rankine's formula with Ø=33°-42'.

NEAR OR BETWEEN COLUMNS

NOTES

1. The exact location, elevation, size and direction of openings shall be in accordance with the Project Plans and as directed by the Engineer.
2. Girders not shown. See Project Plans.
3. All reinforcement detailed to be placed in addition to reinforcement shown on Project Plans.
4. Seal utilities at abutments with concrete or mortar, after tightly wrapping utility with 2 layers of 7 kg building paper. If structure is prestressed, seal to be placed after stressing is completed.
5. Main reinforcement to clear opening.
6. Reinforcement to be same bar size and $^2/_3$ the spacing of adjacent reinforcement shown on Project Plans.
7. Replace each set of 2-#29 bars cut off by opening. Place $^1/_2$ on each side of opening.
8. When "Y" is less than 200 mm, extend top of opening to bottom of bearing seat elevation.
9. For future utility opening dimensions, see Project Plans and Detail U-4.
10. When there is insufficient space to place reinforcement as shown, hook reinforcement into exterior girder.
11. Unless otherwise shown on Project Plans, casing shall extend to the greater of 1.5 m beyond the end of the approach slab, 1.5 m beyond the end of the adjacent wingwall or 6 m beyond the back of the abutment.

DETAIL U43

NOTES

1. The manhole frame and cover shall be made of gray cast iron. Mass for payment is 200 kg.
2. All parts of the manhole frame and cover expect machined surfaces shall be coated with asphaltum paint.
3. The manhole frame and cover shall be tested for accuracy of fit and shall be marked in sets before delivery. The cover shall fit the frame snugly but not tightly.
4. Covers for use on sewer structures shall bear the letters "S"; on storm drain structures the letter "D"; on openings for utilities the letter "U".
5. The mass shall not vary more than ten percent from the mass for payment.
6. Step inserts may be substituted for the standard step detail. Step inserts shall comply with State Industrial Safety requirements.

NOTE

Frame and cover shall be cast iron. mass for payment is 110 kg.

Galvanize complete assembly after fabrication.

The mass shall not vary more than ten percent from the mass for payment.

Cover shall be supplied with bolt down or locking devices.

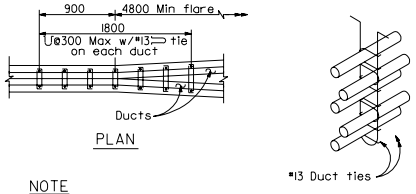
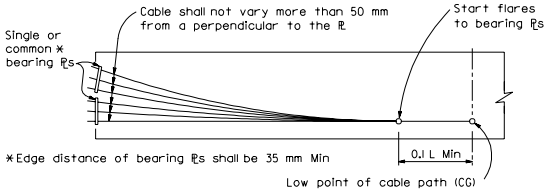
The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.



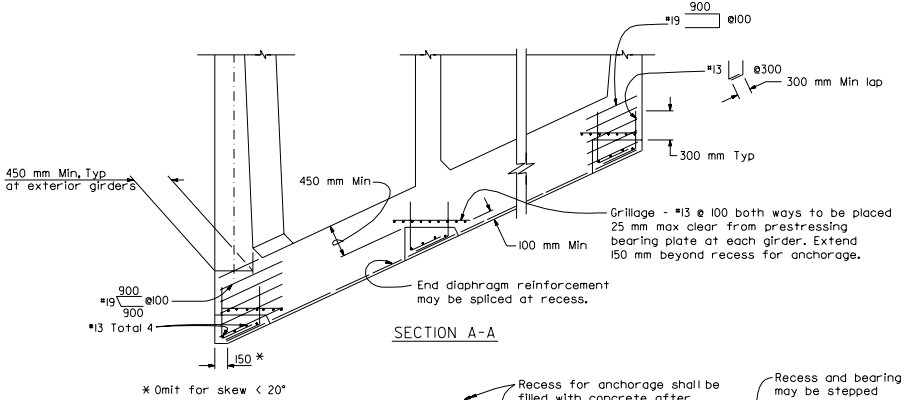
NOTE

Place closed end of duct ties in direction of flare.

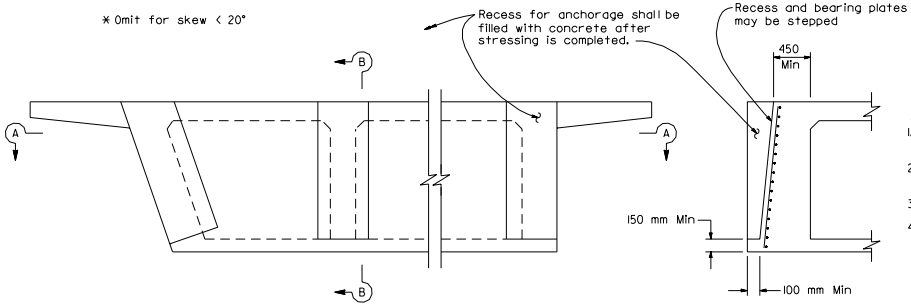
STIRRUP REINFORCEMENT AT FLARE OF GIRDER STEM



BEARING PLATE PRESTRESSING PATH



SECTION A-A



PRESTRESS ANCHORAGE DETAILS AT SEAT TYPE ABUTMENTS

SECTION B-B

NOTES

Distribution of prestressing force:

Unless otherwise noted, the prestressing force shall be distributed with an approximately equal amount in each girder and shall be placed symmetrically about the center line of the structure. In slabs, the prestressing force shall be uniformly distributed across the slab.

Stressing sequence:

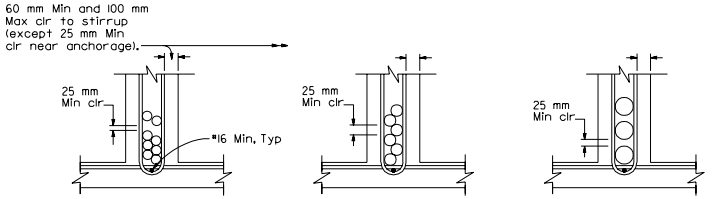
No more than 1/2 of the prestressing force in any girder may be applied before an equal force is applied in the adjacent girders. The maximum force variation between girders shall also not exceed the prestressing force of the largest tendon used in all girders. At no time during stressing operations will more than 1/6 of total prestressing force be applied eccentrically about the center line of the structure.

Girder stem may be flared near anchorage to provide clearances for the particular anchorage system.

Place duct ties, as shown for flare girder stem, at each location where ducts change horizontal direction.

Bar reinforcement interfering with the prestressing tendon alignment shall be adjusted, as approved by the Engineer.

The Contractor shall submit working drawings to the Engineer for approval. The working drawings shall include any additions or rearrangement of reinforcing steel from that shown on the plans. Sufficient points shall be shown on the working drawings to place ducts accurately.



DUCTS 75 mm OD AND LESS

DUCTS OVER 75 mm OD TO 114 mm OD

DUCTS OVER 114 mm OD

CLEARANCE REQUIREMENTS FOR DUCTS

NOTES

1. Duct patterns shown are for a 300 mm wide girder stem. For other widths the minimum clearances must be maintained.
2. ⊓ Stirrups may also be used. For continuous stirrups in girder stems greater than 400 mm wide (ie: at flares) use 2-#16 minimum ⊓ or ⊓.
3. For additional details see Standard Plan B7-1.
4. Approval of the Engineer is required for deviations.

NOTES

1. Railing assembly except chain link fabric to be galvanized after fabrication.
2. Posts shall be vertical.
3. Railing shall conform to horizontal and vertical alignment. When railing is placed on a curved horizontal alignment with radius of 45 m or less, thread the 7.9 mm ø cable through 10 mm ø welded eye rods embedded 100 mm into the top of the concrete parapet and equally spaced to limit the midordinate distance between the 7.9 mm ø cable and the curve to 25 mm maximum. Horizontal angle shall be bent to conform to horizontal alignment if radius is 45 m or less and may be on 3 m chords if radius is over 45 m.
4. Horizontal angle shall be continuous over not less than two intermediate posts, except that a shorter length is permitted at expansion joints, electroliers and other rail discontinuities.
5. When rail is on slope, place fabric parallel to slope.
6. Alternative details may be submitted by Contractor for Engineer's approval.
7. For details and reinforcement not shown see Standard Plan B11-54.
8. See Project Plans for limits of Chain Link Railing Type 7.
9. Provide thimbles at all cable loops.
10. Expansion joint same dimension as expansion joint in deck or wall. Increase slotted hole length and splice bar length correspondingly.

Structures require strutting for fill heights below heavy lines. See Note A.

TABLE A						
Spans (mm)	Soil Pressure kPa					
	Thickness (mm)					
	2.5	3.5	4.5	5.5	6.5	7.0
3708 to 5105	163	239	316	431	508	555
5258 to 6198	134	192	239	345	402	440

NOTES

A. For strutting requirements of structural steel plate vehicular undercrossing during construction, see Standard Plan D88A.

B. Minimum cover from crown to shoulder hinge point = 1.5 m.

C. Backfill shall be brought up uniformly on both sides of the structure.

D. Minimum cover for construction loading, see Standard Plan D88.

Reinforced concrete: F_S = 165 MPa
N = 10
F_C = 9 MPa

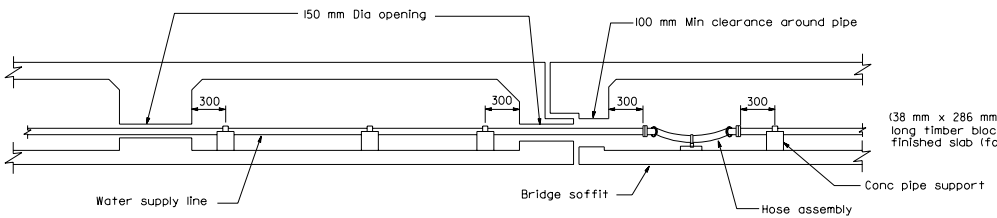
BOX GIRDER INSTALLATION

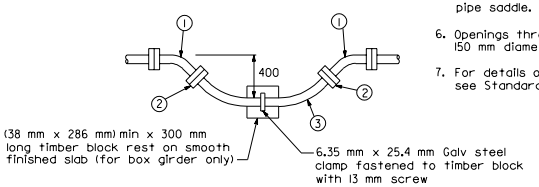
NUMBERED ITEM

1. 45 degree flanged elbow with insulated flange connection
2. Flanged hose fitting
3. Hose 2.0 m live length (size shall be same as pipe)



PIPE INSTALLATION AT HINGE

Same for hanger type installation



VIEW A-A

HOSE ASSEMBLY

NOTES

1. Extend pipe 1.5 m+ beyond the edge of shoulder or as shown on bridge plans. Terminate in a pull box as shown on Standard Plan B14-3, Detail B.
2. Water supply line shall be installed parallel to to bridge soffit or deck.
3. For concrete pipe support, pipe shall be tightly clamped at the pipe support located halfway between hose assemblies. At all other supports, pipe clamp shall be shimmed with steel washer plate to provide 5 mm clearance between pipe and clamp.
4. Maximum spacing between pipe hangers or supports shall be 3.0 m unless otherwise detailed on the plans.
5. **Install air release valve using threaded tee or** pipe saddle.
6. Openings through diaphrams and bent caps shall be 150 mm diameter unless otherwise detailed on the plans.
7. For details of pipe hanger and concrete pipe support see Standard Plan B14-5.

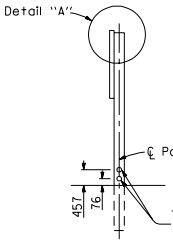
NOTE

Bolt hole Layout is dependent on type of panel. Drill holes in post to match panel furnished.

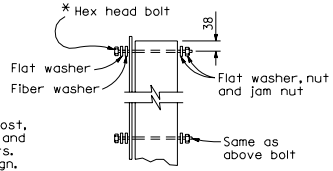


SIDE VIEW

BREAKAWAY FEATURE

Drill 76 mm holes in 140 mm x 184 mm post, 51 mm holes in 140 mm x 140 mm post, and 38 mm holes for 89 mm x 140 mm posts. Orient hole axis parallel to axis of sign. See Note 6 for tolerances of drilled holes.

TWO POST INSTALLATION



DETAIL A

*7.9 mm Diameter for single sheet aluminum panel signs.

9.5 mm Diameter for laminated panel signs or framed single sheet aluminum panel signs

NOTES

1. Place long dimension of post cross section normal to sign axis. See Section C-C.
2. Balanced single post installations of unframed single sheet aluminum panel signs shall have block spacers if 457 mm or more in depth and a combination of block spacers and back braces if 457 mm or more in depth and 864 mm or more in width. Sign panels less than 457 mm in depth and 864 mm or more in width shall have back braces only.
3. For post size see sign layout, format or quantity sheets.
4. Balanced single post installations of Laminated Panel and Framed single sheet panel signs require back braces when 864 mm or more in width.
5. Breakaway feature for single post installation shall be the same as the breakaway feature shown for the two post installation.
6. Tolerance for diameter of drilled holes in breakaway feature is ±3 mm.

TABLE 2

Minimum post embedment "E" for Type L post

NOTES

1. See Project Plans for:
   Location of each sign.
   Length of sign panel "A".
   Depth of sign "D".
   Height "h_L" and "h_R" of centerline of sign above ground line at each post.
   Type of post, L and M.
   See Standard Plans RS1 for other details.
2. "●" indicates location of 12.5 mm lag screws and existing holes in panels. Lag screws are to be embedded at least 25 mm into post using 8 mm diameter pilot holes.
3. "x" indicates location of additional 12.5 mm lag screws required when the depth of sign panel (d) and the length of sign panel (A) are as follows:

d	A
1524 mm	5.18 to 7.32 m
1372 mm	5.78 to 7.32 m
1219 mm	6.40 to 7.32 m
1067 mm	7.32 m

4. State furnished Type B laminated sign panels are 29 mm thick for sign lengths of 4.6 m and less. Panel over 4.6 m in length are 67 mm thick.
5. Embedment "E" for Type L post shall conform to the requirements in Table 2. Embedment for Type M posts shall be 1.8 m minimum.
6. Diameter of post holes for Type L posts shall be at least 750 mm. Diameter of post holes for Type M posts shall be at least 600 mm.

INSTRUCTIONS TO FABRICATOR

PROJECT PLANS SHOW:

1. Sign structure location.
2. Length of structure frame.
3. Panel size and locations on structure.
4. Walkway length for 2-post signs.
5. Post type and height to bottom of frame.
6. Base plate elevation.
7. Footing elevation or location of pile foundation.
8. Photoelectric cell location if required.

REFER TO THE FOLLOWING STANDARD PLANS FOR DETAILS NOT SHOWN ON PROJECT PLANS:

S1	Instructions and Examples
S2	Post Types II Thru VIII
S3	Post Types I-S Thru VII-S
S4	Structural Frame Members
S5	Structural Frame Members
S6	Structural Frame Details
S7	Frame Junction Details
S8A,B,C,D	Sign Panel Mounting Details
S9	Walkway Details No 1
S10	Walkway Details No 2
S11	Walkway Safety Railing Details
S13	Pile Foundation
ES-29	Mercury Sign Lighting Equipment
ES-32A	Sign Lighting Equipment

WALKWAY BRACKETS:
Space all walkway brackets maintaining uniform spacing where possible. Maximum spacing shall not exceed 1675 mm.

LIGHTING FIXTURE SUPPORTS:
Where distance from walkway bracket to end of sign panel exceeds 406 mm, extend lighting fixture supports to next walkway bracket. See Example No 2.

WALKWAY AND SAFETY RAILING:
Walkway to be continuous for entire length of frame for single post signs. For 2 post signs see Project Plans. Safety railing to protect entire walkway, but continuous for no more than 3.35 m in one unit.

NOTE

Signs are shown and dimensioned looking in the direction of traffic. Double faced signs are shown and dimensioned looking ahead along stationing.

NOTES

SPECIFICATIONS:

DESIGN: AASHTO Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, dated 1994.

CONSTRUCTION: Standard Specifications and the Special Provisions.

LOADING:
WIND LOADING:
Normal to face of sign: 1490 Pa
Transverse to face of sign: 20% of normal force.
WALKWAY LOADING:
Dead load+2.22 kN concentrated live load.

UNIT STRESSES:

STRUCTURAL STEEL:	fs = 138 MPa
REINFORCED CONCRETE:	fs = 138 MPa
	fc = 8.3 MPa
FOOTING SOIL PRESSURE:	120 KPa (spread footing)

MINIMUM CLEARANCE: Vertical roadway clearance 5.5 m.

WELDING: All welding continuous unless otherwise noted on the plans. All welding to be done in accordance with the Standard Specifications.

WELDED CHORD SPLICE

SPLICE NOTES

Location of Splices:

The splice shall be located so as not to interfere with mounting the walkway brackets or the clip angles for the removeable sign panel frame. The wind bracing in the area of the bolted chord splice shall be bolted to the chord angles with a 10 Ø HS bolt, nut, 2 cut washers and lock washer.

Filler PL:

The plates welded to the angle legs on the inside shall be welded before punching the bolt holes. They shall be the same length as the cover plates. The plates are not necessary on the single post signs if the splice is located over 1/3 of the cantilever length from the post. Alternative splice details may be used if approved by the Engineer.

PLANS APPROVAL DATE

REGISTERED PROFESSIONAL ENGINEER Jeffrey B. Woody No. C41260 Exp. 3-31-03 CIVIL STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

REMOVABLE FRAME GREATER THAN 6.10 m

* 2794 & 3048 sign panel frames will project above the top chord of the truss. In these cases the top clips shall be bolted to vertical frame members. See Standard Plan S8D for details.

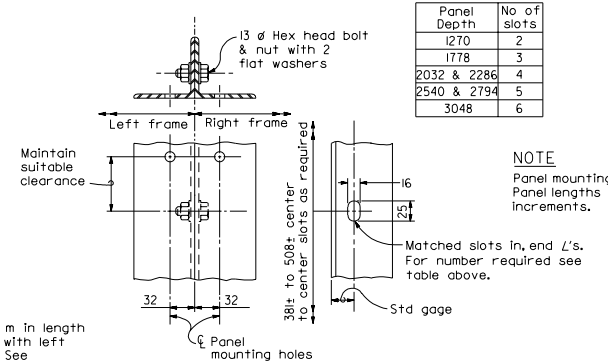
Sign Length (m)	Left Section (m)	Right Section (m)
6.71	3.66	3.05
7.32	3.66	3.66
7.93	3.66	4.27
8.54	4.88	3.66
9.15	4.88	4.27
9.76	4.88	4.88
10.37	4.88	5.49
10.98	6.10	4.88
11.59	6.10	5.49
12.20	6.10	6.10

NOTES

Frames for signs greater than 6.10 m in length shall be fabricated in two sections with left section a multiple of 1220 in length. See table above.

Sections shall be hoisted into place individually and bolted together as per detail 11 prior to tightening of mounting clip bolts.

Bolting two sections together and hoisting simutaneously will not be permitted.



Panel Depth	No of slots

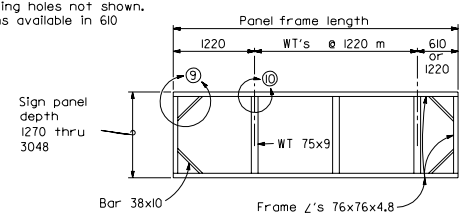
2540 & 2794	5
3048	6

DETAIL 11

NOTE

Panel mounting holes not shown. Panel lengths available in 610 increments.

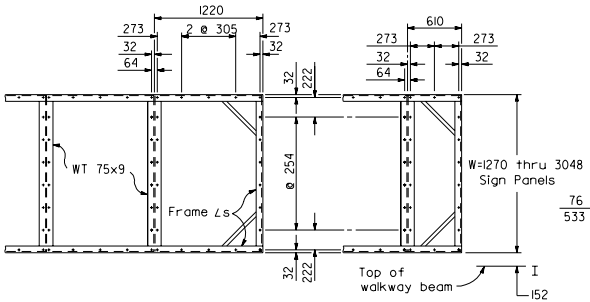


TYPICAL REMOVABLE FRAME

(1220 thru 6096)

NOTES

1. Frames shall be all-welded construction.
2. Panel mounting holes shall be drilled by template. Sign panel may be considered a template.
3. Drilled and tapped holes 6.34 mm may be used where interference due to welds or structural members is encountered.
4. WT 75 x 9 shall be flush with faces of frame angles.
5. Mounting clip angles shall be located such as to allow the top and bottom frame angles of the removable sign panel to lie on a straight horizontal line.
6. Holes for mounting removable sign panel frame may be slotted 25 mm maximum parallel to the axis of the sign.
7. WT 75 x 9 may be crimped at ends to join frame angles. Fillet weld all around.

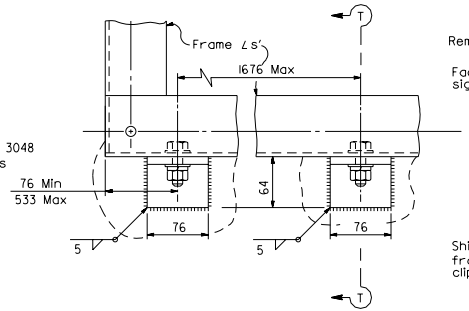


TYPICAL 1220 PANEL TYPICAL 610 PANEL

All holes 13 diameter maximum.

MOUNTING HOLE SPACING SIGN PANEL & FRAME

Hole spacing is for single sheet sign panels. For Overhead Formed Panels refer to "Overhead Formed Panel" Sheet.



FRAME MOUNTING DETAILS

Details shown apply for sign panel frames ≤ 2540 mm deep. Mounting details for deeper panels shown on Standard Plan S8D.

** Use Foundation Depth shown in table unless otherwise shown on the Project Plans.

* Bundled bars

NOTES

1. For anchor bolt layout see post sheet.
2. For "Base ℞ elevation" see Project Plans.
3. Pedestal and pile shall be Class "2" PCC.
4. Pedestals and base plates, longer sides shall be normal to axis of sign.
5. Prior to erection of the post, backfill which is equivalent to the surrounding material shall be in place.
6. Pedestal shall be formed 150 mm minimum below ground surface. Remainder to be placed against undisturbed material.
7. Slope protection required when indicated on the Project Plans.
8. Foundation design is based on a lateral soil pressure of 86 MPa.

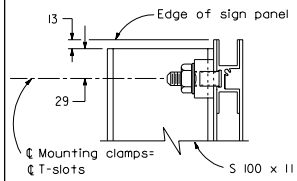
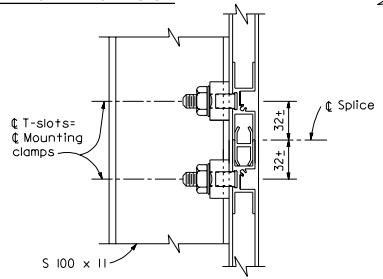
7315	3	914.5	2743	2743

* Signs longer than 7315 mm are fabricated and mounted as adjoining single panels.



SECTION E-E



SECTION F-F

NOTES

1. Laminated panel sign depths more than 1500 mm requires additional mounting clamps located 32 mm± each side of panel splice line. Exact location is dependent on sign panel manufacturer.
2. Position sign panel so that mounting beams will clear truss connections and arm to post joints. Where interference cannot be avoided, 13 mm Ø holes to pass the 10 mm Ø U-bolts may be drilled through mast arm angles or truss connection members as necessary.
3. Torque aluminum sign panel mounting bolt to 11.6 mm/N.
4. 300 mm for Type C-1 and C-2. Others 102 mm.
5. A stop plate is required at each mounting beam under sign panel.

NOTES

1. Base plates, pedestals and footings; longer sides shall be normal to axis of sign.
2. For anchor bolt layout see Standard Plans S40F and S40J.
3. For base plate elevation see Format sheet.
4. Prior to erection of the post, backfill which is equivalent to the surrounding material shall be in place.
5. Pile pedestal shall be formed 155 mm minimum below ground surface. Remainder to be placed against undisturbed material.
6. Pile footing - use foundation depth shown in table unless otherwise shown on Format sheet.
7. On single post sign structures the post shall be raked out of plumb with the use of the levelling nuts to make the bottom of the sign frame level.

INSTRUCTIONS TO FABRICATOR

Format sheet shows:

1. Sign structure location.
2. Length of structure span.
3. Panel size and location on structure.
4. Post height to bottom of panel or mast arm elevation.
5. Base plate elevation.
6. Photoelectric cell location if required.
7. Walkway location.

INDEX

1. Instructions and examples.
2. Single post type - layout and pipe selection.
3. Two post type - layout and pipe selection.
4. Structural frame details No. 1.
5. Structural frame details No. 2.
6. Walkway details (S9)
7. Safety railing and cable details (S11)
8. Foundation details.

WALKWAY BRACKETS:

Maintain uniform spacing where possible.
Maximum spacing shall not exceed 1.68 m
Minimum clear to field splice = 305 mm ±

WALKWAY AND SAFETY RAILING:

Walkway to extend full length of sign area and be continuous between signs. Extend walkway to edge of pavement if required. Safety railing to protect entire walkway.

PHOTOELECTRIC CELL:

Place behind sign panel nearest right shoulder unless otherwise shown on format sheet.

NOTES

Specifications:

Design: A.A.S.H.T.O. Standard Specifications for Structural and Supports for Highway Signs, Luminaires and Traffic Signals 1994.
Wind dynamics and resultant fatigue life were analyzed using Department of Transportation program WEFFLS as modified by structure Design.

Construction: Standard specifications and the special provisions.

Wind loading: 129 km/h velocity.

Soil pressure: .086 MPa

Minimum vertical clearance: 5.50 m above roadway and shoulders.

Welding: All welding continuous unless otherwise noted on the plans. All welding to be done in accordance with the Standard Specifications.

VERTICAL POST CANTILEVER

PIPE SELECTION PROCEDURE

A. Enter table to proper column with known panel depth "D" and appropriate height "h".

B. Read down column to desired span length.

C. Determine Pipe Post "Dia" and "R" for elbow by reading to the left horizontally.

NOTES

1. The maximum sign panel overlap onto the post elbow shall not exceed 1.83 m from the field splice.
2. When several sign panels are to be installed with a space between the panels, the space shall be as small as possible and 610 mm maximum.
3. All posts between base plate and field splice are extra strong pipe. All mast arms are standard pipe.
4. During sign erection the post shall be raked as necessary with the use of the leveling nuts to make the sign panel level.
5. At final position of post all top and bottom anchor bolt nuts shall be wrench tightened against base plate.
6. Drill and tap for 1½ NPS chase nipples and plug with recessed pipe plugs. Place perpendicular to sign panel axis and away from approaching traffic. See Standard Plan ES-32A.
7. NPS - Nominal Pipe Size

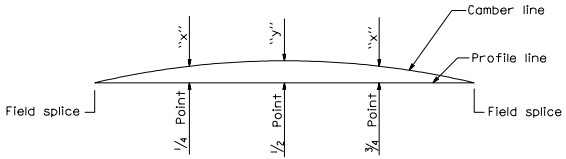
Ⓔ	114	152



CAMBER DIAGRAM

NOTES

1. The maximum sign panel overlap onto elbow shall not exceed 1.83 m from the field splice.
2. For vertical post type, add 2.44 m to the vertical post span and enter the table for slanted post type. This adjusted span (vertical span +2.44 m) shall not exceed the maximum span shown in the table.
3. When several sign panels are to be installed with spaces between the panels the total sign panel length is the sum of the individual sign panel lengths only.
4. Maximum total sign panel coverage = 70% of slanted post span, 80% of vertical post span for spans up to 33.5 m above 33.5 m, varies on a straight line to 60% of vertical post span at 42.7 m.
5. All posts between base plate and field splice are extra strong pipe. All mast arms are standard pipe.
6. Before any portion of the sign frames are assembled in their final positions the Contractor shall demonstrate to the Engineer by preassembly or other approved methods that the span lengths of the frames in the no load condition match within 13 m ± the field measured span lengths between foundations.
7. If the sign frames are erected as one unit, they shall be adequately suspended to avoid distortions or changes in span length between base plates.
8. At final position of post, all top and bottom anchor bolt nuts shall be wrench tightened against base plate.
9. Drill and tap for 1½ NPS chase nipples and plug with recessed pipe plugs. Place perpendicular to sign panel axis and away from approaching traffic. See Standard Plan ES-32A.
10. Maximum difference between post heights on an individual frame = 1.5 m.
11. For standard pipe members (Mast Arms) with lengths greater than 24 m an optional field splice will be permitted at ℄ of span to facilitate hauling operations.
12. NPS = Nominal Pipe Size.

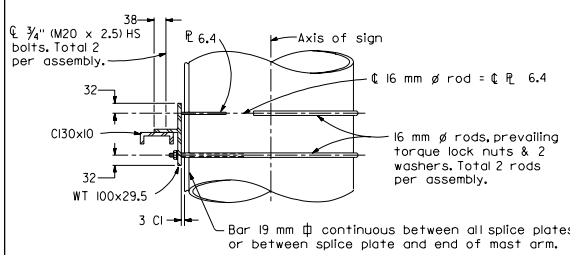
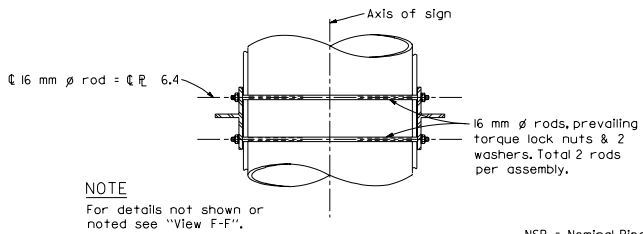
18	180	565
20	205	616
24	256	718

NOTES

For details not shown or noted see "Single Panel". Assembly details shown apply to tangent portion of pipe only. For mounting bracket on elbow see Detail B.

MOUNTING BRACKET ASSEMBLY DETAILS





NOTE

For details not shown or noted see "View F-F".

NOTES

1. The exterior mounting brackets to face outward to accommodate the walkway chain angle.
2. For HS bolt tension, see "Section H-H" Standard Plan S40S.
3. Splice line not necessarily ℄ mast arm. Exact location is dependent on sign panel manufacturer.
4. Install aluminum "H" Section closure extrusions at vertical and horizontal sign panel splice lines.
5. Drill through panel at integral track. Install elevator bolt with interstate green finish on head. Typical at panel splice.
6. Remove reflector. Drill through panel at integral track. Install elevator head bolt and attach reflector. Typical at border.

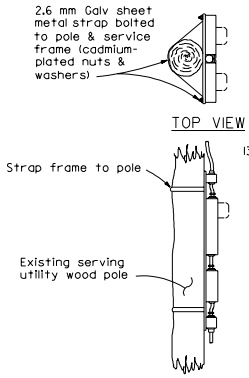
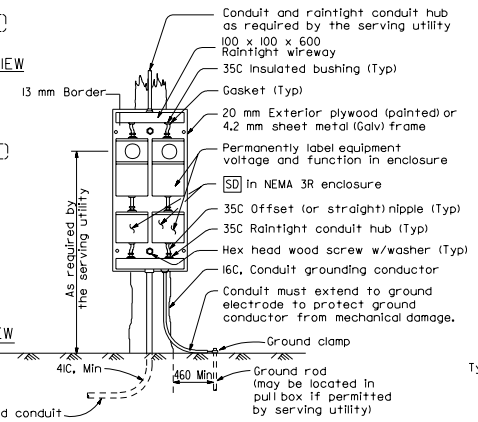
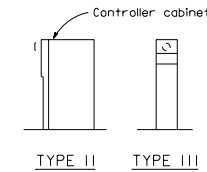
TYPE SCE-1 SERVICE



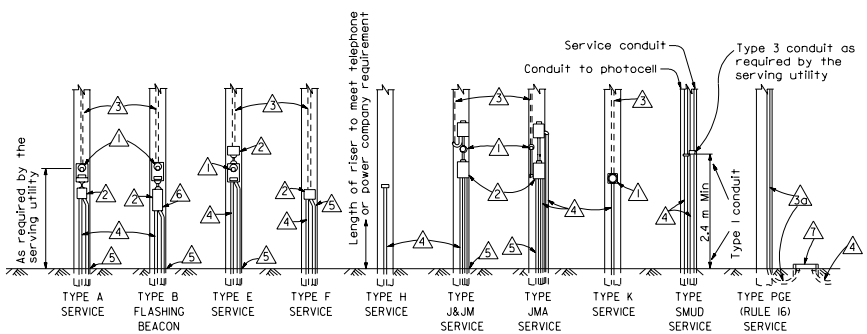


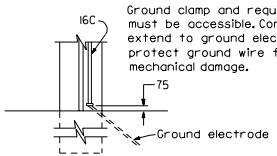
TYPE SCE-2 SERVICE



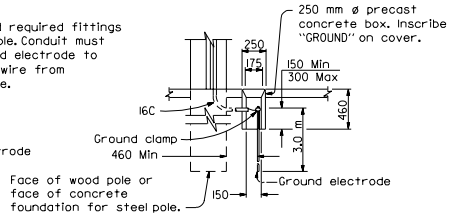
TYPE OF SERVICE (TYPICAL)

Type II service equipment enclosure mounted on a side of a controller cabinet.
Type III complete free-standing service equipment enclosure.





TYPE A



TYPE B

Use where serving utility requires 460 mm clearance between ground rod and pole or service cabinet. Installation shown is for sidewalk or paved areas. In unpaved areas, omit special box and locate ground clamp above ground or locate ground clamp in nearest pull box.

SERVICE GROUNDING

NOTES

1. Meter socket.
2. Service enclosure 60 A size minimum, unless otherwise shown.
3. (a) Utility owned pole. Service riser (and contactor with PEU where required) furnished and installed by the serving utility.
   (b) State owned pole. Service riser and all other required equipment furnished and installed by Contractor.
4. Conduit, length and size as required.
5. Ground conduit, 16C, 1#6 AWG bare copper. See "Service Grounding" detail.
6. Flashing beacon control assembly.
7. Service pull box [No.5 (E) unless otherwise noted] furnished and installed by Contractor. Exact location determined by the serving utility.

(Less covers and deadfront) For metered circuits only

(Less covers and deadfront) For metered and unmetered circuits

TYPE II-B SERVICE EQUIPMENT ENCLOSURE

NOTES-TYPE II SERVICE EQUIPMENT ENCLOSURES

1. Service equipment enclosures and metering equipment shall meet the requirements of the serving utility. When the serving utility provides both metered and unmetered circuits, a separate bus shall be provided for each circuit.
2. Service equipment enclosures shall be factory wired and conform to NEMA Standards and to Section 86-2.11, "Service" of the Standard Specifications.
3. Service equipment enclosures shall be NEMA 3R construction and shall be provided with dead front panel and provisions for padlocking.
4. All control wiring shall be 600 V number 14 stranded machine tool wire. Where subject to flexing, 19 strand wire shall be used.
5. All main bus shall be rated for 125 A and shall be tin-plated copper.
6. An engraved phenolic nameplate on the dead front panel indicating the function of each circuit breaker or device shall be installed with stainless steel rivets or stainless steel screws:
   a) Adjacent to the breaker or device. Character size shall be a minimum of 3 mm.
   b) At top of the exterior door panel indicating system number, voltage level and number of phases. Character size shall be a minimum of 5 mm.
7. A plastic laminated wiring diagram shall be provided and attached to the inside of the front door.
8. In unpaved areas, a raised portland cement concrete pad of 600 mm x 100 mm x width of service equipment enclosure foundation or controller cabinet foundation shall be constructed in front of Type II service equipment enclosures.
9. Internal bus, where shown, is typical only. Alternative designs of proposed service equipment enclosures shall be submitted to the Engineer for approval.
10. Circuit breakers may be mounted in the vertical or horizontal position.
11. Dimensions of service equipment enclosures shall meet the requirements of the serving utility.

NOTES-TYPE III SERVICE EQUIPMENT ENCLOSURES

1. Service equipment enclosure and metering equipment shall meet the requirements of the serving utility. When the serving utility provides both metered and unmetered circuits, a separate bus shall be provided for each circuit. The meter area shall have a sealable, lockable, raintight cover that can be removed without the use of tools.
2. Service equipment enclosures shall be factory wired and conform to NEMA Standards and to Section 86-2.11, "Service" of the Standard Specifications.
3. Dimensions of service equipment enclosures shall meet the requirements of the serving utility.
4. The dead front panels on Type III-A service equipment enclosures shall have a continuous stainless steel piano hinge. The panel in front of the breakers shall be secured with captive screws; the lower panel shall be secured with a latch or captive screws. No live parts shall be mounted on the dead front panel.
5. The exterior door shall have provisions for padlocking. The padlock hole shall be a minimum diameter of 11 mm.
6. Enclosures housing transformers of more than one (1) kVA shall have effective screened ventilation louvers of not less than 32 000 mm^2. Screen shall be stainless steel No. 304, with a No. 10 size mesh. Secure screen after painting with at least four bolts and frame.
7. Fasteners on the exterior of the enclosure shall be vandal-resistant and shall not be removable from the exterior. All screws, nuts, bolts and washers shall be stainless steel.
8. All terminals for incoming service conductors shall be compatible with either copper or aluminum conductors sized to suit the conductors shown on the plan. Terminal lugs shall be copper or tin-plated aluminum. Solid neutral terminal strip shall be rated for 125 A unless otherwise specified and for use with copper or aluminum conductors. The terminal shall include but not be limited to:
   a) Incoming terminals (landing lugs)
   b) Neutral lugs
   c) Solid neutral terminal strip
   d) Terminal strips for conductors within the enclosure.
9. At least 6 standard single pole circuit breaker spaces (20 mm nominal) shall be provided for branch circuits. Circuit breaker interiors shall be copper. Interiors shall accept plug-in or cable-in/cable-out circuit breakers.
10. All control wiring shall be 600 V, No. 14 stranded machine tool wire. Where subject to flexing, 19 strand wire shall be used.
11. Main bus shall be rated for 125 A and shall be tin-plated copper.
12. A plastic laminated wiring diagram shall be provided with brass mounting eyelets and attached to the inside of the enclosure, or the wiring diagram shall be mounted to the interior of the door with an UL or ETL approved method.
13. An engraved phenolic nameplate on the dead front panel indicating the function of each circuit within the enclosure shall be installed with stainless steel rivets or stainless steel screws:
   a) Adjacent to the breaker or device. Character size shall be a minimum of 3 mm.
   b) At top of the exterior door panel indicating system No., voltage level and number of phases. Character size shall be a minimum of 5 mm.
14. The plan shows the approximate location of devices within the enclosure. Components may be rearranged. However, the "working" clearances within the enclosure shall be maintained.
15. In unpaved areas a raised portland cement concrete pad 600 mm x 100 mm x width of foundation shall be constructed in front of new service installation. Pad shall be set to elevation of foundation.
16. Foundation shall extend 50 mm minimum beyond edge of enclosure.
17. Terminate conduits 50 mm maximum above top of foundation.
18. Internal bus, where shown, is typical only. Alternative design of proposed service equipment enclosure shall be submitted to the Engineer for approval.
19. Plug-in circuit breakers may be mounted in the vertical or horizontal position. Cable-in/cable-out circuit breakers shall be mounted in the vertical position.
20. On Type III-AF and Type III-BF service equipment enclosures, the meter viewing windows are located on the front side of the service equipment enclosure.
21. The Type III-AR and Type III-BR service equipment enclosures shall be similarly constructed as Type III-AF and Type III-BF respectively, except the meter viewing window shall be located on the back side of the service equipment enclosures.

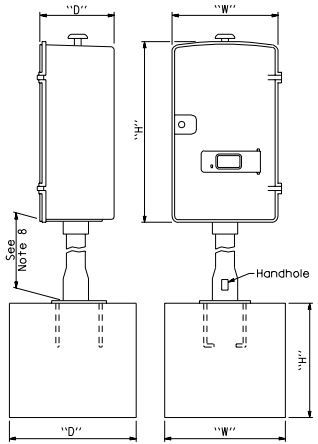
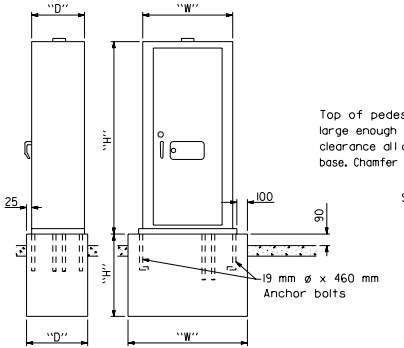
3. Type G, M, 336, P, R and S cabinets shall be installed with the back toward the nearest lane of traffic.
4. The controller cabinet grounding bus shall be bonded to conduit or equipment grounding conductor.
5. In unpaved areas, a raised Portland cement concrete pad shall be constructed in front of each controller cabinet. Pad shall be 900 mm x 900 mm x 100 mm for Type G cabinets and shall be 900 mm x 100 mm thick x width of foundation for Type M, 336, P, R and S cabinets.
6. In unpaved areas, the top of foundation for Type G, P, R and S cabinets shall be 150 mm above surrounding grade. Top of foundation for Type M or 336 cabinet shall be 460 mm above surrounding grade.
7. In sidewalks and other paved areas, top of foundation for Type G cabinet shall be level with surrounding grade. Top of foundation for Type P, R and S cabinets shall be 90 mm above surrounding grade.
8. The steel pedestal, base plate, bolt circle and foundation for Type G cabinet shall be the same as that shown for a Type I-C Standard. Pedestal shall be 640 mm-760 mm in length. Anchor bolts shall be 19 mm ø x 460 mm with a 50 mm-90° bend. Four bolts required per cabinet.
9. Type G cabinet shall be provided with a slipfitter to permit mounting on 114 mm outside diameter pedestal. Slipfitter shall be bolted to bottom of the cabinet.
10. Type G cabinet shall be provided with 8 screened, raintight holes, 13 mm diameter or larger, in the bottom of the cabinet.
11. A 25 mm drain shall be provided through the foundation of a Type M or 336 cabinet. Drain pipe shall be screened.
12. See Table for cabinet and foundation dimensions; "D"-Depth, "H"-Height, "W"-Width.
13. All cabinet shelves shall be adjustable for vertical spacing and shall be removable. Type M, P, R and S cabinets shall be provided with a minimum of two shelves.
14. Anchor bolts for Type M, 336, P, R and S cabinets shall be 19 mm ø x 460 mm with a 50 mm-90° bend. Four bolts required per cabinet.
15. An approved mastic or caulking compound shall be placed on the foundation prior to placing the cabinet to seal all openings between bottom of cabinet and foundation.
16. Controller units, plug-mounted equipment, shelf-mounted equipment and wall-mounted equipment shall be located to permit its safe and easy removal or replacement without removing any other piece of equipment.
17. Cabinet fan may be installed at an alternate location near the top of the cabinet when approved by the Engineer.
18. Where telephone interconnect is required, a minimum of 130 mm clear vertical space shall be provided inside the cabinet for the equipment.
19. Telephone interconnect conductors shall be enclosed in a 21C or larger conduit through the foundation. Type 4 metal conduit shall be used to separate telephone and power conductors in cabinets and pedestals.
20. For 332, 334 and 336 cabinet details, see "Traffic signal controller equipment specifications".



PCC FOUNDATION FOR TYPE G CABINET



PCC FOUNDATION FOR TYPE P, R AND S CABINETS

Top of pedestal shall be large enough to provide 20 mm clearance all around cabinet base. Chamfer edge 10 mm x 10 mm.

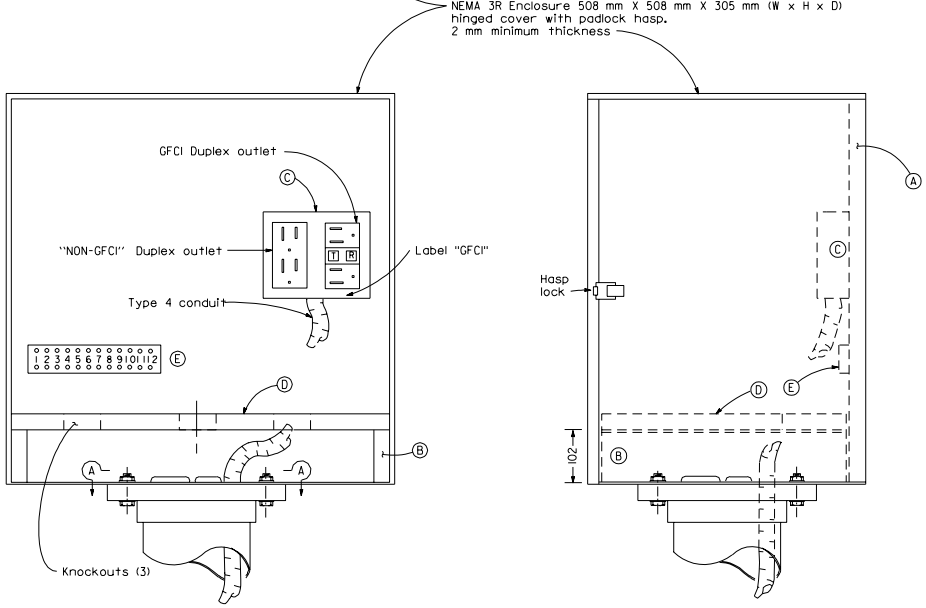
1. Mount cabinet on Type G cabinet pedestal. See ES-3C.
2. Use Type G cabinet PCC Foundation
3. Plywood shall be 13 mm thick and grade ACX.



FRONT

RIGHT SIDE

NOTES

1. Telephone demarcation cabinet shall be furnished with mounting boards, outlet box and outlet plate. All dimensions are nominal.
2. Telephone demarcation cabinet shall be installed with the back toward the nearest lane of traffic.
3. The telephone demarcation cabinet grounding bus shall be bonded to conduit or equipment grounding conductor.
4. All conduits, anchor bolts and enclosure cabinet shall be bonded to ground.
5. Telephone demarcation cabinet:
   a) Dimensions are 508 mm x 508 mm x 305 mm (W x H x D).
   b) Material shall be anodized aluminum 2 mm minimum thickness.
   c) Fabrication shall conform to the requirements in Section 86-3.04A, "Cabinet Construction" of the Standard Specifications.
   d) Door shall be lockable with padlock.
6. In unpaved areas, the top of foundation for the telephone demarcation cabinet shall be 150 mm above surrounding grade.
7. In sidewalks and other paved areas, top of foundation for the telephone demarcation cabinet shall be level with surrounding grade.
8. The steel pedestal, base plate, bolt circle and foundation for the telephone demarcation cabinet shall be the same as that shown for a Type 1-C Standard. Pedestal shall be 640 mm-760 mm in length. Anchor bolts required shall be 19 mm ø x 460 mm with a 50 mm-90° bend. Four bolts required per cabinet.
9. Telephone demarcation cabinet shall be provided with a slip fitter to permit mounting on 114 mm outside diameter pedestal. Slip fitter shall be bolted to bottom of cabinet.
10. Telephone interconnect conductors shall be enclosed in a 21C or larger conduit through the foundation. Type 4 metal conduit shall be used to separate telephone and power conductors in cabinets and pedestals.

BASE PLAN

NOTES

1. The telephone demarcation cabinet shall be furnished with a mounting panel, outlets and breaker and deadfront plates in place. All dimensions are nominal.
2. An approved mastic or caulking compound shall be placed on the foundation, prior to placing the pedestal, to seal all openings between the bottom of the pedestal and the foundation.
3. In unpaved areas, a raised PCC pad shall be placed in front of the telephone demarcation cabinet. Pad shall be 610 mm x 560 mm x 100 mm thick, with 50 mm above the finished grade.
4. All conduits, anchor bolts and enclosure cabinet shall be grounded and bonded to the ground rod.
5. Telephone demarcation cabinet:
   a) Material shall be anodized aluminum (3.2 mm thick).
   b) Fabrication shall conform to the requirements of Section 86-304A, "Cabinet Construction", of the Standard Specifications.
   c) The exterior door shall be side hunged and secured with a padlockable draw latch, the padlock hole shall be a minimum diameter of 11 mm to receive a State-furnished padlock.
   d) Venting louvers shall be located on the door.
   e) Fan shall be mounted in ventillator housing.
   f) Fan shall be thermostatically controlled and manually adjustable to turn on between 32°C and 65°C.
   g) Fan circuit shall be fused at 175 percent of the fan motor capacity.
   h) Fan capacity shall be at least 0.7 m^3 per minute.
   i) Fasten fixed mounting panels with nuts, lock and flat washers to 5 mm ø x 25 mm studs welded to enclosure.

LOOP INSTALLATION PROCEDURE

1. Install termination pull box with curb or shoulder termination detail (see Standard Plan ES-5E).
2. Loops shall be centered in lanes.
3. Saw slots in pavement for loop conductors as shown in details.
4. Distance between side of loop and a lead-in saw cut from adjacent detectors shall be 600 mm minimum. Distance between lead-in saw cuts shall be 150 mm minimum.
5. Bottom of saw slot shall be smooth with no sharp edges.
6. Slots shall be washed until clean, blown out and thoroughly dried before installing loop conductors.
7. Adjacent loops on the same sensor unit channel shall be wound in opposite directions.
8. Identify and tag loop circuit pairs in the termination pull box. Indentify and tag with loop number, start (S) and finish (F) of conductor. Identify and tag lead-in-cable with sensor number and phase.
9. Install loop conductor in slot using a 5 mm to 6 mm thick wood paddle. Hold loop conductors with wood paddles (at the bottom of the sawed slot) during sealant placement.
10. No more than 2 twisted pairs shall be installed in one sawed slot.
11. Allow additional length of conductor for the run to termination pull box plus 1.5 m of slack in pull box.
12. The additional length of each conductor for each loop shall be twisted together into a pair (6 turns per meter minimum) before being placed in the slot and conduit leading to termination pull box.
13. Test each loop circuit for continuity, circuit resistance and insulation resistance at the pull box before filling slots.
14. Fill slots as shown in details.
15. Splice loop conductors to lead-in cable. All splices shall be soldered using rosin-core solder.
16. End of lead-in-cable and Type 2 loop wire shall be waterproofed prior to installing in conduit to prevent moisture from entering the cable.
17. Lead-in-cable shall not be spliced between the termination pull box and the controller cabinet terminals.
18. Test each loop circuit for continuity, circuit resistance and insulation resistance at the controller cabinet location.
19. Where loop conductors are not to be spliced to a lead-in-cable, the ends of the conductors shall be taped and waterproofed with electrical insulating coating.

LAYOUTS AND DIMENSIONS

MAGNETOMETER DETECTOR INSTALLATION PROCEDURE

1. Prepare holes for sensing elements and saw slots in pavement for magnetometer cables as shown in details. Slots shall be washed until cleaned. Blow out and dry thoroughly with compressed air.
2. Install termination pull box. See termination details.
3. Install heads in holes and install cables in slots using 5 mm to 6 mm wood paddle and run to adjacent pull box allowing 1.5 m of slack at the pull box. Hold cables with wood paddles at the bottom of the sawed slot during sealant placement.
4. Identify cables by lane or sensor unit designation.
5. Splice magnetometer cables to lead-in-cables. All splices shall be soldered using rosin core solder.
6. Test each sensing element circuit at controller or count station cabinet before filling holes and slots. Excitation circuits shall have a resistance of 50 Ω* per head and detection circuits shall have a resistance of 300 Ω* per head. Measurements shall be made with a low range ohmmeter.
7. Fill slots and sensing element holes as shown in details.
8. Lead-in-cable shall not be spliced between the termination pull box and the controller cabinet terminals.
9. See Standard Plan ES-5E for curb termination details.

* Or other resistance per manufacturer's specifications

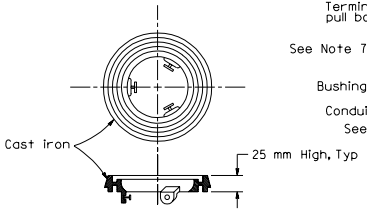
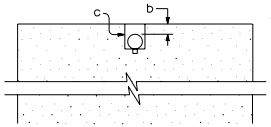
CURB TERMINATION DETAILS TYPE B



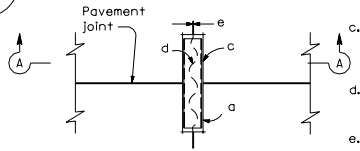
NOTE

Use for Type A detector handhole on pavement resurfacing only.

LOCKING GRADE RING



SECTION A-A



PLAN VIEW

TYPICAL LOOP LEAD-IN DETAILS AT PAVEMENT JOINT

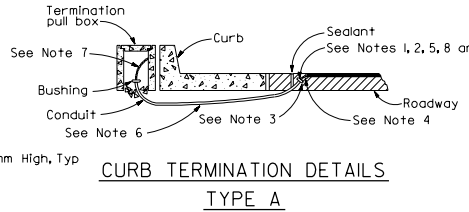
a. 2IC, Type 3 conduit 150 mm long minimum, plug both ends with caulking compound to keep out sealant.

b. 13 mm minimum between top of conduit and pavement surface.

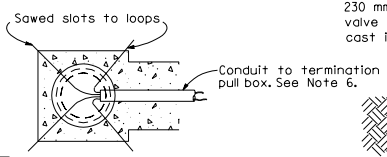
c. Saw cut shall not exceed 25 mm in width and 3 mm longer than conduit to be installed.

d. Conductors with 13 mm minimum slack inside conduit.

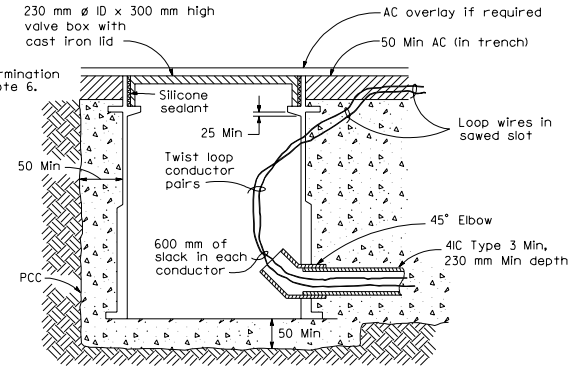
e. Inductive loop detector saw slot.



CURB TERMINATION DETAILS TYPE A



TOP



TYPE B DETECTOR HANDHOLE DETAILS

INSTALLATION REQUIREMENTS

TYPE B DETECTORS HANDHOLE

1. Outline of trench shall be saw cut to a minimum depth of 80 mm except where asphalt concrete overlay is to be placed.
2. The valve box shall be fabricated of calcium carbonate and polyester resins with fiberglass reinforcement and designed for heavy traffic loads.
3. Cast iron lid shall be marked "Detector" and shall be secured in placed by applying waterproof silicone sealant. Valve box shall be centered on lane line, unless otherwise shown on the plans.
4. Entire length of trench, from valve box to adjacent pull box, shall be backfilled with portland cement concrete except the top 50 mm in asphalt concrete surfaced roadways shall be backfilled with asphalt concrete.

NOTES (This sheet only)

1. Bushing shall be used at roadway end of conduit.
2. Tape detector conductors or cables 75 mm each side of bushing.
3. Install duct seal compound to each end of termination conduit before installing sealant.
4. Round all sharp edges where detector conductors or cables have to pass.
5. End of conduit shall be 80 mm below roadway surface.
6. Conduit size / Loop Conductors / Magnetometer Cables

Conduit size	Loop Conductors	Magnetometer Cables
27C Minimum	1 to 2 pairs	1 to 3 cables
41C Minimum	3 to 4 pairs	4 to 8 cables
53C Minimum	5 or more pairs	9 or more cables

7. Splice detector conductors or cables to lead-in-cable run to controller cabinet.
8. Location of detector handhole when shown on plans.
9. When the shoulder and traveled way are paved with the same material and there is no joint between them, the conduit shall extend only 600 mm into the shoulder pavement.

GENERAL NOTES

SPECIFICATIONS

DESIGN : AASHTO specifications for the design and construction of structural supports for highway signs, luminaires and traffic signals, dated 1994.

Loading

WIND LOADINGS : 129 km/h AASHTO

Unit Stresses

STRUCTURAL STEEL : fy = 331 MPa (tapered sheet steel)
fy = 248 MPa unless noted otherwise noted

CONSTRUCTION : Standard Specifications and the Special Provisions

NOTES

1. 4-ASTM A-307 anchor bolts are required for each pole. Provide a hex nut, leveling nut and 2 washers for each bolt.
2. Luminare arms shall be round, tapered steel tubes, taper of 11.45 mm/m to 11.66 mm/m with an end section 60 mm OD for mounting hardware. Extensions of 2 NPS pipe and 178 mm long may be used at the option of the manufacturer. When low pressure sodium luminaires are required, the extension shall be 381 mm.
3. Signal arms shall be round, tapered steel tubes, maximum taper 11.66 mm/m.
4. Handhole reinforcement ring shall be 6 mm x 51 mm for 3.04 mm to 6.07 mm poles, 10 mm x 51mm for 7.94 mm.
5. Handholes for lighting standards shall be located on the downstream side of the pole unless otherwise noted on the plans.
6. Detail F, fatigue resistant weld, is required at signal arm plate and pole base plate.
7. In lieu of the torque requirements for HS bolts, cap screws shall be tightened by the turn-of-nut method 1/3 turn from a snug tight condition. No washer will be required.
8. During pole erection, the post shall be raked as necessary with the use of leveling nuts to provide a plumb pole axis.
9. When Project Plans show a lesser number of signs and signals, the Project Plans shall prevail.
10. Outside diameter, wall thickness, and corresponding section properties at the base of traffic signal poles and arms as shown in the Standard Plans are minimums. Unless otherwise specified, alternative sections require approval by the Engineer.

NOTES ON PULL BOXES

1. Traffic pull box shall be provided with steel cover and special concrete footing. Steel cover shall have embossed non-skid pattern.
2. Steel reinforcing shall be as regularly used in the standard products of the respective manufacturer.
3. Top of pull boxes shall be flush with surrounding grade or top of adjacent curb, except that in unpaved areas where pull box is not immediately adjacent to and protected by a concrete foundation, pole or other protective construction, the box shall be placed with its top 30 mm above surrounding grade. Where practicable, pull boxes shown in the vicinity of curbs shall be placed adjacent to the back of curb, and pull boxes shown adjacent to standards shall be placed on side of foundation facing away from traffic, unless otherwise noted. When pull box is installed in sidewalk area, the depth of the pull box shall be adjusted so that the top of the pull box is flushed with the top of the sidewalk.
4. Pull box covers shall be marked as follows.
   a. No. 3½ pull box.
      1) "SIGNAL" Traffic signal circuits with or without street and/or sign lighting circuits.
      2) "ST LIGHTING" Street and/or sign lighting circuits where no voltage is above 600 V.
      3) "SERVICE" Service circuits between service point and service disconnect.
      4) "SPRINKLER-CONTR" Sprinkler control circuits, 50 V or less.
      5) "CALTRANS" On all pull boxes, except pull boxes marked "SPRINKLER-CONTROL".
      6) "TELEPHONE" Telephone service.
   b. No. 5,6,9 or 9A pull boxes.
      1) "TRAFFIC SIGNAL" Traffic signal circuits with or without street and/or sign lighting circuits.
      2) "STREET LIGHTING" Street and/or sign lighting circuits where no voltage is above 600 V.
      3) "STREET LIGHTING-HIGH VOLTAGE" Street and/or sign lighting circuits where voltage is above 600 V.
      4) "SERVICE" Service circuits between service point and service disconnect.
      5) "SPRINKLER-CONTROL" Sprinkler control circuits, 50 V or less.
      6) "IRRIGATION" Circuits to irrigation controller 120 V or more.
      7) "RAMP METER" Ramp meter circuits.
      8) "COUNT STATION" Count and/or speed monitor circuits.
      9) "COMMUNICATION" Communication circuits.
      10) "CALTRANS" On all pull boxes, except pull boxes marked "SPRINKLER-CONTROL".
      11) "TELEPHONE" Telephone service.
      12) "TOS COMMUNICATIONS" TOS communications trunk line.
      13) "TOS POWER" TOS power.
      14) "TDC POWER" Telephone demarcation cabinet power.
      15) "CCTV" Closed circuit television circuits.
      16) "TMS" Traffic monitoring station circuits.
      17) "CMS" Changeable message sign circuits.
      18) "HAR" Highway advisory radio circuits.
5. Bonding jumper for metal covers shall be 1 m long, minimum.
6. The nominal dimensions of the opening in which the cover sets shall be the same as the cover dimensions except the length and width dimensions shall be 3 mm greater.
7. All covers and boxes shall be interchangeable with California standard male and female gages. When interchanged with a standard male or female gage, the top surfaces shall be flush within 3 mm. Top outside edge of all concrete covers and pull boxes shall have a 6 mm minimum radius.
8. Pull box shall not be installed within the boundaries of new or existing curb ramps.
9. Pull boxes for electroliers and signal standards shall be located at the same station (1.5 m) as the adjacent electrolier or signal standard. Pull boxes shall be placed adjacent to back of curb or edge of shoulder except where this is impractical, a box may be placed in another suitable protected and accessible location.

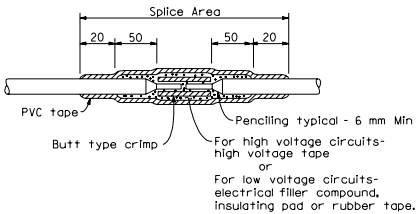
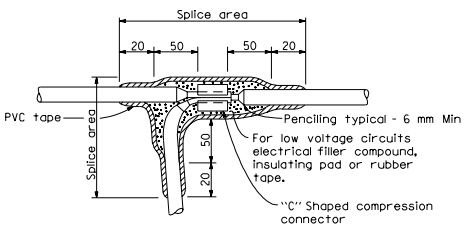
TYPE "C" SPLICE

Between 1 free-end and 1 through conductor



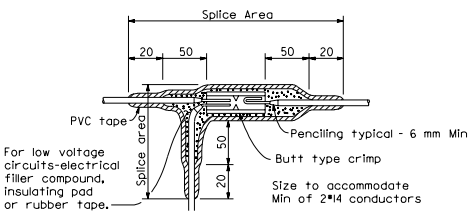
TYPE "S" SPLICE

Between 2 free-ends



TYPE "T" SPLICE

For 3 free-ends



TYPE "ST" SPLICE

NOTES

1. All dimensions are minimum.
2. Rubber tapes shall be rolled after application.

INSULATION METHODS

Low Voltage Circuits (0-600 V)

METHOD "A" (Used only when specified)

1. Completely cover the splice area with electrical insulating coating and allow to dry.
2. Apply electrical filler compound with minimum thickness of 4 mm.
3. Apply 3 layers half lapped polyvinyl chloride tape.
4. Cover entire splice with electrical insulating coating and allow to dry.

OR

METHOD "B"

1. Completely cover the splice area with electrical insulating coating and allow to dry.
2. Apply 2 layers of electrical insulating pad with minimum thickness of 4 mm each layer or 2 layers, half lapped, synthetic oil resistant, self fusing rubber tape.
3. Apply 3 layers half lapped polyvinyl chloride tape.
4. Cover entire splice with electrical insulating coating and allow to dry.

High Voltage Circuits (Over 600 V)

1. Completely cover the splice area with electrical insulating coating and allow to dry.
2. Apply high voltage tape to a minimum thickness equal to original insulation.
3. Apply 3 layers half lapped polyvinyl chloride tape.
4. Cover entire splice with electrical insulating coating and allow to dry.

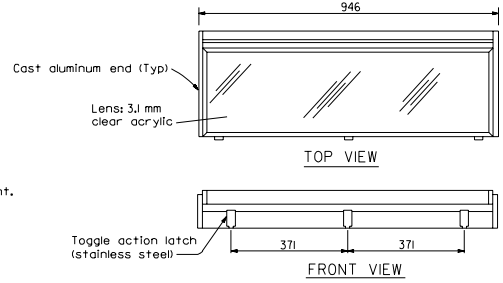
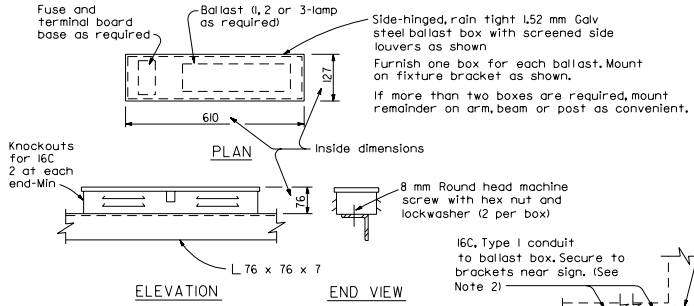
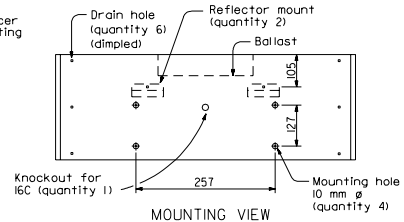
HINGE SECTION





BALLAST BOX DETAILS

SIGN LOAD (WATTS) AND FUSING		
1	Lamp and ballast - 75 W	1 A
2	Lamps and ballast - 150 W	2.5 A
3	Lamps and ballast - 215 W	3 A



NOTES

1. Wiring between ballast box and nearest fixture and between fixtures shall be run in 16C, Type 4 conduit.
2. Conduit shall be secured to nearest member using one-hole galvanized malleable iron or steel straps at 1.5 m maximum centers and brass machine screws tapped into the member.
3. Ballasts and terminal boards shall be marked with legible symbols. Conductors shall be tagged and their identification marked on the corresponding terminal on the terminal board as shown on the Typical Fixture Wiring Diagram. An alternative cover design shall be submitted for approval.
4. Ballast shall be one, two or three lamp types as required, rated at 800 mA.
5. Each ballast shall be fused with 32 mm x 6 mm slow-blow glass tube fuse.
6. Fuseholder shall be a panel mounted type, with screw type finger knob.
7. At the option of the Contractor, the fixture may be supplied with an integral ballast. The ballast box will not be required when fixtures with integral ballasts are supplied.
