PMPC Pavement Preservation Sub Task Group Meeting notes

Attendance: Steve Lee, Todd Vargason, Raguparan Thangavelautham, Sallie Houston

Notes by: Todd Vargason

1. CT 332 comments
 - All proposed changes were accepted by the working group. We verified that section 7 of AASHTO T59 was an appropriate test method to replace CT-331 in preparing a sample for Torsional recovery testing.
2. Working Bin List review
 - Left remaining items on list and added 100% RAP aggregates to be utilized on type II slurry and microsurfacing as well as chip seal.
3. FHWA Comments regarding section 37 revisions
 - The group reviewed additional comments from FHWA.
 - Most comments appeared to be around the nature of Caltrans nested specifications and are mostly addressed in subsequent subsections within the specification. We will forward on our responses with an invitation to have a meeting to hopefully address the concerns and offer some guidance on how the specification is put together.
 - If further work is needed, then a bin list item can be added and prioritized as the questions presented were outside of our original scope in amending section 37.

Action Items

- Steve will send email response to comments to Chu Wei and offer a meeting to discuss open items further
- Steve will send the reviewed Bin List
- Steve will forward our response to the lab regarding changes to CT-332
- Next meeting to be scheduled May 18, 2022 afternoon for 2 hours
