CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 64 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

ITEM 1.

Modify tower strut façade, clarify holes in cross-bracing flanges and boss plates, and correct fillet weld details as shown on sheets two (2) through five (5) of this change order. The following revised contract plan sheets detail all changes: 0573R1, 574R1, 575R2 and 920R1 (of 1204).

This change order resolves the costs associated with Contractor Request For Information (RFI) Nos. 71, 71R1, 183, 316, 316R1, 1023 and 1322 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $400,000.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum Price..... $400,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108 to prevent a double payment. Total amount paid under CCO 108, and to be credited to this change, is $400,000.00.

Adjustment of Compensation at Lump Sum Price..... <$400,000.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation for work pursuant to this change order	$400,000.00
(ITEM 2) Amount paid under CCO 108 for this change order	<$400,000.00>
Total net pay for this change order	$0.00

Contract time is addressed in CCO 108 for all work identified in this change order. Therefore contract time will not be adjusted in this change order.

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0.00**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Submitted by

Signature _____ **Resident Engineer** Mark Woods for Gary Pursell, Sup.T.E. **Date** 10 Feb 2010

Approval Recommended by

Signature _____ **Supervising Transportation Engineer** Gary Pursell, Sup.T.E. **Date** 2/10/10

Engineer Approval by

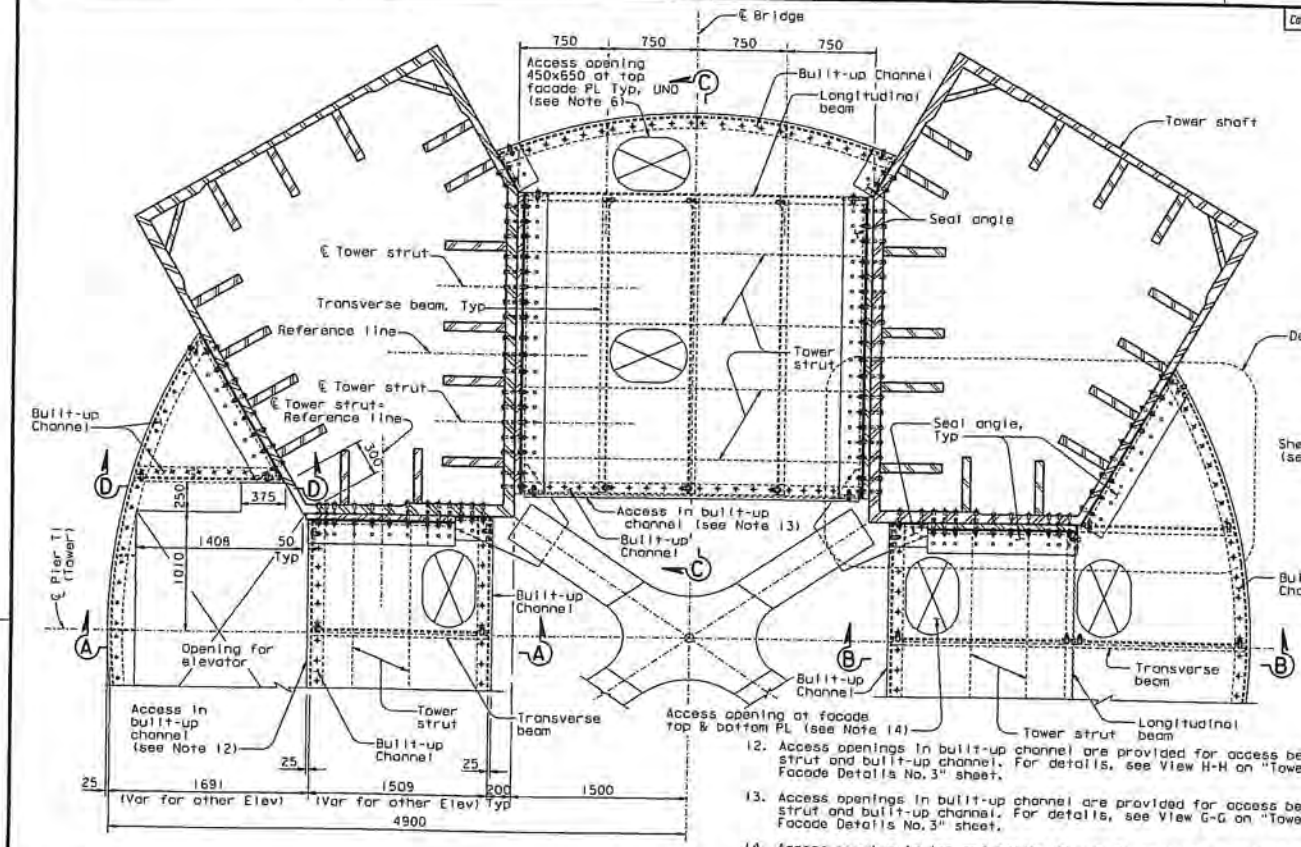
Signature _____ **Supervising Transportation Engineer** Gary Pursell, Sup.T.E. **Date** 2/23/10

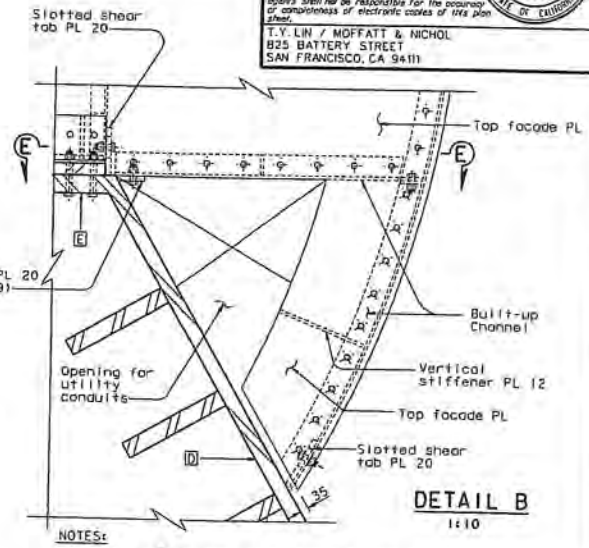
We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

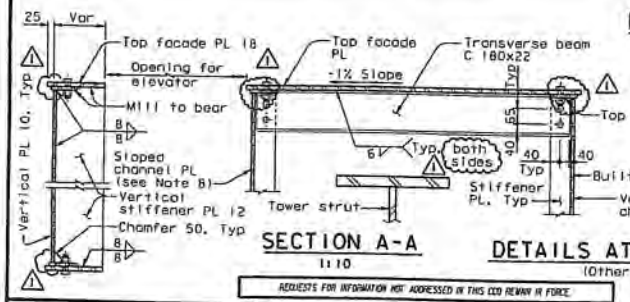
Contractor Acceptance by

Signature _____ (Print name and title) Michael D. Flowers Project Director **Date** 2-22-10



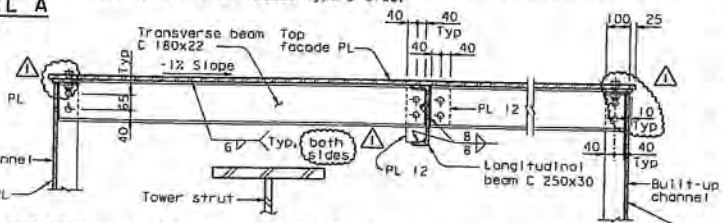


DETAIL B
1:10



DETAIL A
1:20

SECTION A-A
1:10



DETAILS AT ELEVATION 119.000 m (Other elevations similar)

SECTION B-B (Section C-C similar)
1:10

NOTES:

1. For Detail D, see "Tower Strut Facade Details No.4" sheet.
2. For tower shaft details, see "Tower Shaft Details" sheets.
3. All bolts are A325 M24 unless noted otherwise.
4. For Section D-D and E-E, see "Tower Strut Facade Details No.3" sheet.
5. All details of tower strut facade shall account for the 1% slope of the tower top and bottom facade plates.
6. For access opening details, see "Tower Access Details" sheets. Access opening shall be located such that there is minimum interference with tower strut and tower strut facade framing system.
7. For details of built-up channel, see "Tower Strut Facade Details No.3" sheet.
8. Vertical plate of built-up channel at corner of plate D E shall be sloped to match the slope of edge of plate E.
9. Shear tab plate is similar to slotted shear tab plate but with standard holes. For details of slotted shear tab plate, see "Tower Strut Facade Details No.4" sheet.
10. Framing details and support at bottom of strut facade are similar to those at the top of strut facade, UNO.
11. For sealing details, see "Tower Strut Facade Details No.4" sheet.
12. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View H-H on "Tower Strut Facade Details No.3" sheet.
13. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View G-G on "Tower Strut Facade Details No.3" sheet.
14. Access opening in top and bottom facade PL shall be provided at this location for strut facade Type B also.

ACCESS OPENING WITH DOOR AT VERTICAL FACE OF TOWER STRUT FACADE

1:10

NOTES:

1. Width of opening is limited to clear distance between stiffeners. For location of access opening and stiffener spacing in tower, see "Tower Shaft Details" sheets.
2. Doors shall be secured by cam locks with locking L-handles and interior release.
3. Door hinges shall be stainless lift-off type with 16 mm pin size 150 kg rated capacity per hinge.
4. Use step PL where door sill is greater than 500 above landing.
5. For access openings at elevations 54,550, 90,550 and 140,550 omit doubler PL below join line. Connect upper portion to strut doubler PL using CJP welds at join line. For strut doubler PL, see "Tower Strut Details" sheets.
6. Access opening shown is for openings in tower shaft skin plates and shear plates. Access opening in tower skirt and tower head are similar. The doubler PL shall match the thickness of the penetrated skirt or tower head PL and shall be connected with a PJP weld 8 mm.
7. Contractor shall provide internally mounted pivot hinges. No part of hinge shall protrude beyond the outside surface of door or facade when door is closed. Hinges shall permit door to swing outwards at least 120°. Each hinge shall be rated to resist 900 N in any direction.
8. Contractor shall provide through-hole mounted cam lock with key. Lock shall be flush with outside face of door.
9. Door shall be flush with outside face of facade. Edges of door shall be sealed with 5x20 Neoprene seals.
10. Dehumidification access openings shall have R=50 mm typical. Dehumidification access openings at tower head only shall be 680 mm x 900 mm.

CCO DESCRIPTION:
Tower Strut Facade and Cross Bracing

PROJECT DESCRIPTION
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time	Time Adj.: This Change	Previously Approved CCO Time Adjustments	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**227** Day(s)	**9** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

- Modifying tower strut facade by relocating access holes and increasing plate size.
- Clarifying diameter of hole located in cross-bracing flanges and boss plates.
- Correcting fillet weld specified between rolled sections and diaphragm plates.

Tower strut façade access holes will be relocated to avoid conflicts with other tower elements and plate size shall be increased to accommodate fillet weld. Additional Contractor requested information needed to clarify cross-bracing flange and boss plate hole diameter. Fillet weld callouts errors, between rolled sections and diaphragm plates, require plan sheet corrections. This change resolves Contractor RFI's 71R0, 71R1, 183R0, 316R0, 316R1 and 1023.

This work is not covered by any contract items. Therefore, payment for this work will be at Adjustment of Compensation at Lump Sum for the amount of $400,000.00. Since the cost, of $400,000.00 in this change, is included in Contract Change Order 108 Supplement 1 (CCO 108S1) Claim Settlement Report No. 1 resolution costs the net payment in this change order is zero.

A determination of the delay in completion of the contract due to work specified by this change order, has been made in CCO 108S1 and is part of the Claims Settlement Report (CSR) No. 1 for this project. Therefore, no adjustment of time is warranted by reason of this change order.

This change order received concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Peter Siegenthaler (Principal TE), Rich Foley (HQ Oversight), Ken Terpstra (Project Manager), Richard Land (Chief Engineer), Jon Tapping (HQ Coordinator), Tony Anziano (Toll Bridge Program Manager), Brian Maroney (Project Engineer), Marwan Nader (Design of Record), Wenyi Long (Design Oversight), and Lina Ellis (Structure Maintenance).

Claims Settlement Report (CSR) No. 1, for this project, revises the authority to "Issue and Approve" the changes listed in CCO 108S1 Appendices A & B. The authority to "Issue and Approve" the changes listed in Appendices A & B for the values of time and money contemplated therein has been delegated to the District for approval and approval of each of these change orders by the Headquarters CCO Desk will not be required. Since this change order is included in CCO 108S1 no Headquarters CCO Desk "Issue and Approve" is required, a copy of CCO 108S1 is attached for reference.

NOTES:
1. All bolts are A325 M24 unless noted otherwise.
2. For details of built-up channel, see "Tower Strut Facade Details No.3" sheet.
3. All details of tower strut facade shall account for the 1% slope of the tower top and bottom facade plates.
4. For tower cross bracing location, see "Tower Strut Details No.9" sheet.
5. Seal plates and sealant material shall be placed such that the interior of the tower strut facade is properly sealed from the exterior.
6. PTFE film (0.5 thick) shall be applied on the faying surfaces between the slotted shear tab and the built-up channel plate, between the seal angle and the top facade PL, and between the seal angle and the bottom facade PL.
7. Seal plate shall be tight fit to the cross bracing gusset plate.
8. Cope vertical channel plate and slotted shear tab as necessary to accomodate cross bracing gusset plate. Slot location shall match slot in doubler plate . For doubler plate slot details, see "Tower Shaft Details No.11" sheet.
9. For sealing plate details, see Details E,F and Sections N-N, P-P, Q-Q.

ACCESS OPENING WITH DOOR AT VERTICAL FACE OF TOWER STRUT FACADE
1:10

NOTES:

1. Width of opening is limited to clear distance between stiffeners. For location of access opening and stiffener spacing in tower, see "Tower Shaft Details" sheets.
2. Doors shall be secured by cam locks with locking L-handles and interior release.
3. Door hinges shall be stainless lift-off type with 16 mm pin size 150 kg rated capacity per hinge.
4. Use step PL where door sill is greater than 500 above landing.
5. For access openings at elevations 54.550, 90.550 and 140.550 omit doubler PL below join line. Connect upper portion to strut doubler PL using CJP welds at join line. For strut doubler PL, see "Tower Strut Details" sheets.
6. Access opening shown is for openings in tower shaft skin plates and shear plates. Access opening in tower skirt and tower head are similar. The doubler PL shall match the thickness of the penetrated skirt or tower head PL and shall be connected with a PJP weld 8 mm.
7. Contractor shall provide internally mounted pivot hinges. No part of hinge shall protrude beyond the outside surface of door or facade when door is closed. Hinges shall permit door to swing outwards at least 120°. Each hinge shall be rated to resist 900 N in any direction.
8. Contractor shall provide through-hole mounted cam lock with key. Lock shall be flush with outside face of door.
9. Door shall be flush with outside face of facade. Edges of door shall be sealed with 5x20 Neoprene seals.
10. Dehumidification access openings shall have R=50 mm typical. Dehumidification access openings at tower head only shall be 680 mm x 900 mm.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 64 **Suppl. No. 1** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

ITEM 1.

Modify Tower strut facades and cross bracing including, but not limited, to the following:

- Adjust the Strut Façade grating support L152x89x12.7 to allow the support to fit
- Revise the connection between the Tower cross bracing and spherical bushing bearings
- Use closed cell backer rod in lieu of expandable polyurethane foam filler in the gap between the cover plate and façade side plate

Adjustment of Compensation at Lump Sum..... $21,843.00

Estimate of Increase in Contract Items at Contract Price:

ITEM 2.

Add walkway grating support shims, erection tabs, and new channels.

Item No. 82: MISCELLANEOUS METAL (BRIDGE)
379 KG (0.15%) @ $15.00 /KG =+$5,685.00 (0.15%)

The quantity increase shown herein for Item #82, when combined with the quantity shown in the Engineer's Estimate, and as modified by any previous change orders or revisions to dimensions made by the Engineer, shall be the final quantity for which payment will be made.

Total Cost for Increase in Contract Item..... $5,685.00

Estimate of Decrease in Contract Items at Contract Price:

ITEM 3.

Revise the shear tabs on Skin D at Strut Façade Type A in Lift 4.

Item No. 52: FURNISH STRUCTURAL STEEL (BRIDGE) (TOWER)
-825 KG (-0.01%) @ $10.00 /KG =-$8,250.00 (-0.01%)

Item No. 53: ERECT STRUCTURAL STEEL (BRIDGE) (TOWER)
-825 KG (-0.01%) @ $1.00 /KG =-$825.00 (-0.01%)

The quantity decreases shown herein for Items #52 and #53, when combined with the quantity shown in the Engineer's Estimate, and as modified by any previous change orders or revisions to dimensions made by the Engineer, shall be the final quantity for which payment will be made.

Total Credit for Decrease in Contract Item.....($9,075.00)

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 64 Suppl. No. 1 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 **FED. AID LOC.:**

The following revised plan sheets detail the changes addressed in this change order: 570R2, 571R1, 573R3, 574R2, 575R5, 919R3, and 926R5 (of 1204) as shown on sheets 3 through 9 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 183R1, 188R0, 188R1, 316R0, 316R1, 1140, 1932, and TC-RFI-0152R0 with respect to changes listed above.

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation at Lump Sum	$21,843.00
(ITEM 2) Increase in Contract Items at Contract Prices	$5,685.00
(ITEM 3) Decrease in Contract Items at Contract Prices	($9,075.00)
Total net pay for this change order	$18,453.00

This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Estimated Cost: Increase ☒ **Decrease** ☐ **$18,453.00**

By reason of this order the time of completion will be adjusted as follows: 0 Days

Submitted by

Signature _____ **Resident Engineer** Kannu Balan, Senior T.E. **Date** 11-18-11

Approval Recommended by

Signature _____ **Senior Bridge Engineer** Mark Woods, Senior B.E. **Date** 18 Nov. 2011

Engineer Approval by

Signature _____ **Supervising Transportation Engineer** William Casey, Sup. T.E. **Date** 12-2-11

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature _____ (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 29NOV11

COST: **$18,453.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☐ YES ☑ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Tower Strut Facades and Cross Bracing	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Modifying the Tower strut facades and cross bracing including adjusting the strut façade grating support, revising the connection between the cross bracing and spherical bushing bearings, using closed cell backer rod in lieu of expandable polyurethane foam filler, and revising the shear tabs on Skin D at Strut Façade Type A in Lift 4.

The Strut Façade grating support is adjusted to remove interference with the 8mm weld of the Built-up channel. The tower cross bracing connection needs to be modified due to the pipe spacers and boss plates interfering with the retainer ring and M16 bolts during installation. The polyurethane foam needed to be trimmed back after it had set, which would have caused poor caulk adhesion. The shear tabs on Skin D are orientated perpendicular to the direction of movement, therefore modifications are needed to weaken the connection and minimize impact to the design movement.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 183R1, 188R0, 188R1, 316R0, 316R1, 1140, 1932, and TC-RFI-0152R0 with respect to changes listed above.

The total cost of this change order is $18,453.00, which can be financed from the contingency fund. A detailed cost analysis is on file. The cumulative total of CCO 64S0 and CCO 64S1 is $18,453.00.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Peter Siegenthaler (Principal TE), Rick Morrow (Sup. BE), Lina Ellis (Maintenance), and Wenyi Long (Bridge Design).

NOTES:

1. For Detail D, see "Tower Strut Facade Details No. 4" sheet.
2. For tower shaft details, see "Tower Shaft Details" sheets.
3. All bolts are A325 M24 unless noted otherwise.
4. For Section D-D and E-E, see "Tower Strut Facade Details No. 3" sheet.
5. All details of tower strut facade shall account for the 1% slope of the tower top and bottom facade plates.
6. For access opening details, see "Tower Access Details" sheets. Access opening shall be located such that there is minimum interference with tower strut and tower strut facade framing system. Access openings may be offset subject to review and approval of the Engineer.
7. For details of built-up channel,. see "Tower Strut Facade Details No. 3" sheet.
8. Vertical plate of built-up channel at corner of plate D E shall be sloped to match the slope of edge of plate E.
9. (3) At the Contractor's option, an alternative material may be used for the Shear tab PL 6, subject to review and approval of the Engineer. Also, the Contractor may use standard oversize holes.
10. Framing details and support at bottom of strut facade are similar to those at the top of strut facade, UNO.
11. For sealing details, see "Tower Strut Facade Details No. 4" sheet.
12. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View H-H on "Tower Strut Facade Details No. 3" sheet.
13. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View G-G on "Tower Strut Facade Details No. 3" sheet.
14. Access opening in top and bottom facade PL shall be provided at this location for strut facade Type B also.

LEGEND:

⊕ M24 A325-X Bolt

○ 24 Dia A307 Bolt

NOTES:

1. All bolts are A325 M24 unless noted otherwise.
2. All details of tower strut facade shall account for the 1% slope of the tower top and bottom facade plates.
3. For access opening details, see "Tower Access Details" sheets. Access opening shall be located such that there is minimum interference with tower strut and tower strut facade framing system.
4. Vertical plate of built-up channel at corner of plate D E shall be sloped to match the slope of edge of plate E.
5. For tightening the bolts shown in Section D-D, the nuts may be tack welded.
6. Access openings in built-up channel are provided for access between tower strut and built-up channel, see View G-G.
7. This access opening is at tower strut facade between elevation 18 and 77 only. For access between tower strut and built-up channel, between elevations 89 to 109, access opening is provided in built-up channel instead, see View H-H.
8. Additional reinforcing plates are required for built-up channel with access openings.
9. Stiffener plates shall be terminated as required for openings in built-up channel.
10. The center of rotation shall be located at the intersection of the Reference line with the tower strut elevation line.
11. For sealing details, see "Tower Strut Facade Details No.4" sheet.
12. For access in bottom facade PL, see Note 14 on "Tower Strut Facade Details No.2" sheet.
13. At the Contractor's option, an alternative material may be used for the Shear tab PL 6, subject to review and approval of the Engineer. Also, the Contractor may use standard oversize holes.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 65 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

ITEM 1.

Modify tower access by relocating or deleting deflector plates, ladders, and removable grating covers, and providing ladder expansion joints.

The following revised and supplemental plan sheets detail all changes in this change order: 573R2, 575R3, 796R1, 917R1, 918R1, 919R1, 919S1, 920R2, 921R1, 923R1, 924R1, 925R1, 926R2, 929R4 and 932R2 (of 1204), as shown on sheets 2 through 16 of this change order.

This change order resolves the costs associated with Contractor Request For Information (RFI) Nos. 149, 150, 225R0, 225R1, 225R2, 239R0, 239R1, 707, 1001, 1011R0, 1011R1, 1011R2, 1034R0, 1034R1, 1034R2, 1045R0, 1045R1, 1045R2, 1184, 1187, 1189, 1281R1, 1312R0, 1312R1, 1312R2, 1312R3, 1319, 1362 and 1466 with respect to changes listed above.

Adjustment of Compensation at Lump Sum Price..... $50,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108S1 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108S1 to prevent a double payment. Total amount paid under CCO 108S1, and to be credited to this change, is $50,000.00.

Adjustment of Compensation at Lump Sum Price..... <$50,000.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation for work pursuant to this change order	$50,000.00
(ITEM 2) Amount paid under CCO 108S1 for this change order	<$50,000.00>
Total net pay for this change order	$0.00

Contract time is addressed in CCO 108S1 for all work identified in this change order. Therefore, contract time will not be adjusted in this change order.

Estimated Cost: Increase ☐ Decrease ☐ $0.00

By reason of this order the time of completion will be adjusted as follows: 0 days

Submitted by

Signature Kannu Bala — **Resident Engineer** Kannu Balan, Senior T.E. — **Date** 6-29-10

Approval Recommended by

Signature [signature] — **Supervising Bridge Engineer** Rick Morrow, Sup. B.E. — **Date** 6/30/10

Engineer Approval by

Signature [signature] FOR PURSELL — **Supervising Transportation Engineer** Gary Pursell, Sup. T.E. — **Date** 7/27/2010

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

NOTES:

1. For Detail D, see "Tower Strut Facade Details No.4" sheet.
2. For tower shaft details, see "Tower Shaft Details" sheets.
3. All bolts are A325 M24 unless noted otherwise.
4. For Section D-D and E-E, see "Tower Strut Facade Details No.3" sheet.
5. All details of tower strut facade shall account for the 1% slope of the tower top and bottom facade plates.
6. For access opening details, see "Tower Access Details" sheets. Access opening shall be located such that there is minimum interference with tower strut and tower strut facade framing system. Access openings may be offset subject to review and approval of the Engineer. 2
7. For details of built-up channel, see "Tower Strut Facade Details No.3" sheet.
8. Vertical plate of built-up channel at corner of plate D E shall be sloped to match the slope of edge of plate E.
9. Shear tab plate is similar to slotted shear tab plate but with standard holes. For details of slotted shear tab plate, see "Tower Strut Facade Details No.4" sheet.
10. Framing details and support at bottom of strut facade are similar to those at the top of strut facade, UNO.
11. For sealing details, see "Tower Strut Facade Details No.4" sheet.
12. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View H-H on "Tower Strut Facade Details No.3" sheet.
13. Access openings in built-up channel are provided for access between tower strut and built-up channel. For details, see View G-G on "Tower Strut Facade Details No.3" sheet.
14. Access opening in top and bottom facade PL shall be provided at this location for strut facade Type B also.

1:10

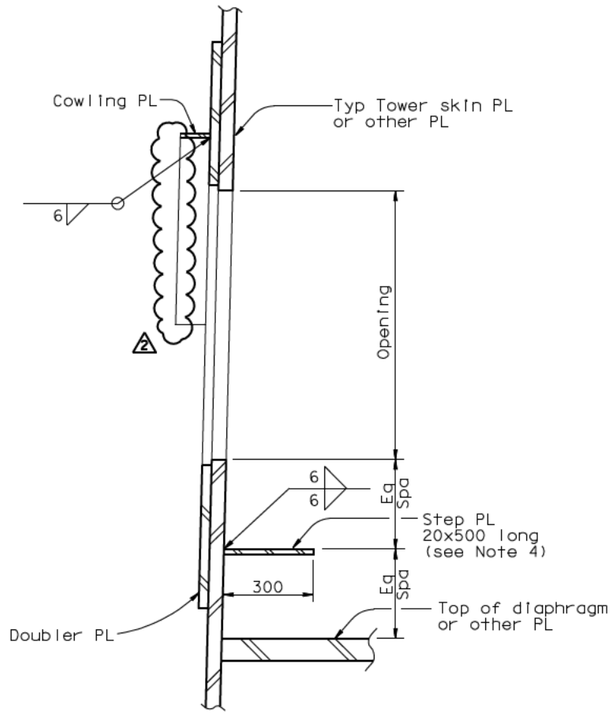
ACCESS OPENING DETAIL

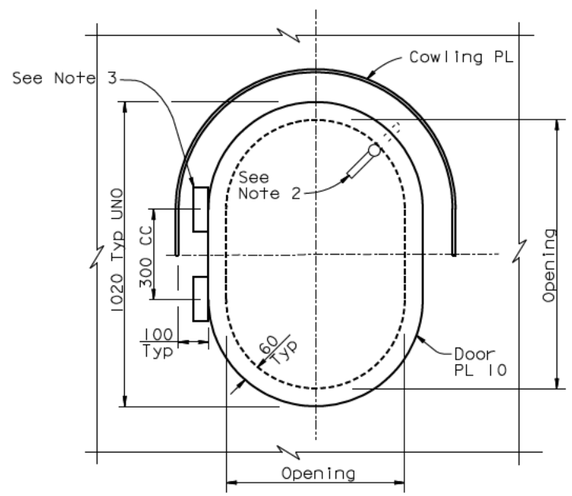
(see Note 6)
(Dehumidification access opening similar)

1:10



SECTION A-A

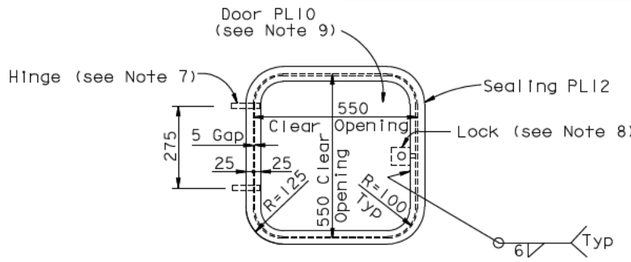
1:10



ACCESS OPENING DOOR DETAIL

1:10
(Dehumidification access opening door similar)

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN



ACCESS OPENING WITH DOOR AT VERTICAL FACE OF TOWER STRUT FACADE

1:10

NOTES:

1. Width of opening is limited to clear distance between stiffeners. For location of access opening and stiffener spacing in tower, see "Tower Shaft Details" sheets.
2. Doors shall be secured by cam locks with locking L-handles and interior release.
3. Door hinges shall be stainless lift-off type with 16 mm pin size 150 kg rated capacity per hinge.
4. Use step PL where door sill is greater than 500 above landing.
5. For access openings at elevations 54.550, 90.550 and 140.550 omit doubler PL below join line. Connect upper portion to strut doubler PL using CJP welds at join line. For strut doubler PL, see "Tower Strut Details" sheets.
6. Access opening shown is for openings in tower shaft skin plates and shear plates. Access opening in tower skirt and tower head are similar. The doubler PL shall match the thickness of the penetrated skirt or tower head PL and shall be connected with a PJP weld 8 mm.
7. Contractor shall provide internally mounted pivot hinges. No part of hinge shall protrude beyond the outside surface of door or facade when door is closed. Hinges shall permit door to swing outwards at least 120°. Each hinge shall be rated to resist 900 N in any direction.
8. Contractor shall provide through-hole mounted cam lock with key. Lock shall be flush with outside face of door.
9. Door shall be flush with outside face of facade. Edges of door shall be sealed with 5x20 Neoprene seals.
10. Dehumidification access openings shall have R=50 mm typical. Dehumidification access openings at tower head only shall be 680 mm x 900 mm.

LEGEND:

Direction of main reinforcement of grating

NOTES:

1. Cover detail without riser shall be used only for the top plates of strut facades adjacent to elevator at Elevations 53.850 m, 89.850 m, and 139.850 m.
2. Grating shall be galvanized steel grating with fasteners. Grating working load shall be 4.8 kN/m (100psf).
3. Welded link shall be installed so as to permit free rotation of access cover.
4. Access cover shall be secured by cam locks with locking L-handles and interior release.
5. Shape of cover to match access opening. Edge PL or riser shall be provided as noted.
6. For Detail B callout, see "Tower Access Details No.3" and Tower Access Details No.10" sheets.
7. Walkway support beam connection shall be as shown in Section G-G on "Tower Access Details No.3" sheet, and similar. Cope flange as necessary.
8. At the Contractor's option, size of cover plate may be reduced for openings at Elevations 89.850 m and 139.850 m.
9. At the Contractor's option, for openings at Elevations 89.950 m and 139.850 m, cover plate may be trimmed up to 20 mm for clearance with seal angle to accommodate design movement. M16 bolts shall be relocated to provide 20 mm edge distance, and a Max spacing of 200 mm.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 66 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

ITEM 1.

Change the silicon-based caulking to a non-silicone based caulking at painted structural steel areas as shown in this change order. Revise the fourth paragraph of Section 10-1.59 "STEEL STRUCTURES," subsection "FABRICATION," subsection "Bolted Connections" as shown on sheet 2 of this change order.

The following revised and supplemental plan sheets detail all changes in this change order: 542R2, 543R3, 547R2, 548R3, 552R2, 553R2, 558R2, 559R2, 575R4, 762R2, 825R2, 833R2, 834R2, 835R2, 836R2, 838R2 and 875R3 (of 1204) as shown on sheets 3 through 19 of this change order.

Adjustment of Compensation at Lump Sum Price..... $100,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108S1 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108S1 to prevent a double payment. Total amount paid under CCO 108S1, and to be credited to this change, is $100,000.00.

Adjustment of Compensation at Lump Sum Price..... <$100,000.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation for work pursuant to this change order	$100,000.00
(ITEM 2) Amount paid under CCO 108S1 for this change order	<$100,000.00>
Total net pay for this change order	$0.00

Contract time is addressed in CCO 108S1 for all work identified in this change order. Therefore, contract time will not be adjusted in this change order.

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Submitted by

Signature Kannu Balan **Resident Engineer** Kannu Balan, Senior.T.E. **Date** 6-23-10

Approval Recommended by

Signature for **Supervising Bridge Engineer** Richard Morrow, Sup.BE. **Date** 6/23/2010

Engineer Approval by

Signature Gary Pursell **Principal Transportation Engineer** Gary Pursell, Sup. T.E. **Date** 7/12/2010

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature Michael D. Flowers **(Print name and title)** Michael D. Flowers, Project Director **Date** 7-7-10

The fourth paragraph of Section 10-1.59 "STEEL STRUCTURES," subsection "FABRICATION," subsection "Bolted Sections" is revised as follows:

"Alignment and contact for the tower shaft bolted splice shall conform to the requirements of AWS D1.5, Section 3.5.1.14, except that filler plates will not be permitted between the exterior face of the skin plates and the exterior splice plates. Attention is directed to section 10-1.59, "STEEL STRUCTURES," subsection "FABRICATION," subsection "Fabrication/Erection Procedure and Mock-Ups." The tower lift erection splice mock-up(s) shall demonstrate such contact. Splice plates may be heat bent to achieve contact. At the option of the Contractor, tower lift ends shall be milled to bear or shimmed such that the gap shall be no greater than 2 mm. Thermal cut surfaces shall meet the requirements of AWS D1.5, Section 3.2.2. Shimming of up to 5 mm thickness will be permitted. At any given location, the shim shall be a single thickness of steel. Gaps between shims and skin plates shall be filled with ~~silicone caulk~~ non-silicon type sealing compound conforming to the requirements in Federal Specification TT-S-230, Type II, or other approved material, prior to installation of the exterior splice plates. Over-size holes will not be permitted. The Contractor shall prepare a work plan that describes the procedure for meeting these requirements and that shall be approved by the Engineer before use. The work plan shall be demonstrated on the mock-up required above. The mating segments of each lift shall be mated at the fabrication site, and the required fit demonstrated, before moving each lift to the final assembly site. Bolted connections shall conform to the requirements in the Research Council on Structural Connections, "Specification for Structural Joints Using ASTM A325 or A490 Bolts," 2000 (RCSC Specification), with the following revisions:"

CCO DESCRIPTION: Caulking	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**227** Day(s)	**9** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

Changing silicone caulking specified to polysulfide or polyurethane caulking at painted structural steel areas. In order to implement this change the fourth paragraph of Section 10-1.59 "STEEL STRUCTURES," subsection "FABRICATION," subsection "Bolted Sections" of the Special Provisions shall be revised along with deleting reference to silicone on plan sheets as shown and included with the change order.

METS informed the Division of Construction and the Designers of Record that paint will not adhere to the silicone caulk specified in the contract documentation. Therefore all parties concurred that silicone caulking, applied at painted structural steel areas, shall be changed to polysulfide or polyurethane. A non-silicon type sealing compound, polysulfide or polyurethane caulking, shall comply with July 1999 Standard Specifications, Section 59-2.12 "Painting" which requires conformance to the requirements of Federal Specification TT-S-230, Type II or other approved material.

Since the cost, of $100,000.00 in this change, is included in Contract Change Order 108 Supplement 1 (CCO 108S1) Claim Settlement Report No. 1 resolution costs the net payment in this change order is zero.

A determination of the delay in completion of the contract due to work specified by this change order, has been made in CCO 108S1 and is part of the Claims Settlement Report (CSR) No. 1 for this project. Therefore, no adjustment of time is warranted by reason of this change order.

This change order received concurrences from Gary Pursell (Resident Engineer), Rick Morrow (Structure Rep.), Patrick Treacy (HQ Liaison), Mike Forner (Principal Engineer), Marwan Nader (Design of Record), Lina Ellis (OSMI Oversight) and Ken Terpstra (Project Manager).

Claims Settlement Report (CSR) No. 1, for this project, revises the authority to "Issue and Approve" the changes listed in CCO 108S1 Appendices A & B. The authority to "Issue and Approve" the changes listed in Appendices A & B for the values of time and money contemplated therein has been delegated to the District for approval, therefore approval of this change order by the Headquarters CCO Desk will not be required. Since this change order is included in CCO 108S1 no Headquarters CCO Desk "Issue and Approve" is required, a copy of CCO 108S1 is attached for reference

NOTES:

1. Weld of longitudinal stiffener to the tower shaft skin plates beyond the length indicated shall be in accordance with Table 1 in "Tower Splice Details No.2" sheet.
2. Longitudinal stiffeners for skin plate "A" are 450 deep UNO. Longitudinal stiffeners for skin plates "B" through "E" are 455 deep UNO.
3. For tower grillage details, see "Tower Saddle Grillage Details" sheets.
4. For tower plate and stiffener sizes above elevation 144.000 m, see "Tower Saddle Grillage Details" sheets.
5. For splice #4, splice plates shall be A709M HPS 485W steel.
6. Elevation 144 corresponds to the change of stiffener size, see "Tower Shaft Details" sheets.
7. Longitudinal stiffeners B1 and D4 shall be coped at the top as shown on "Tower Saddle Grillage Details No.7" sheet.
2 8. Caulk sealing shall be applied around the perimeter (horizontal and vertical edges) of all exterior splice plates.
9. To facilitate installation of the bolted splice for longitudinal stiffener A1, the Contractor may use counterbore for the bolt head in the interior splice plate for the first bolt row on each side of the longitudinal stiffener. Each counterbore shall be 60 mm Dia and 10 mm deep. See Detail A on "Tower Splice Details No.16" sheet.

NOTES:

1. Weld of longitudinal stiffener to the tower shaft skin plates beyond the length indicated shall be in accordance with Table 1 in "Tower Splice Details No.2" sheet.
2. Longitudinal stiffeners for skin plate "A" are 450 deep UNO. Longitudinal stiffeners for skin plates "B" through "E" are 455 deep UNO.
3. For tower grillage details, see "Tower Saddle Grillage Details" sheets.
4. For tower plate and stiffener sizes above elevation 144.000 m, see "Tower Saddle Grillage Details" sheets.
5. For splice #4, splice plates shall be A709M HPS 485W steel.
6. Elevation 144 corresponds to the change of stiffener size, see "Tower Shaft Details" sheets.
7. Longitudinal stiffeners B1 and D4 shall be coped at the top as shown on "Tower Saddle Grillage Details No.7" sheet.
2 8. Caulk sealing shall be applied around the perimeter (horizontal and vertical edges) of all exterior splice plates.
9. To facilitate installation of the bolted splice for longitudinal stiffener A1, the Contractor may use counterbore for the bolt head in the interior splice plate for the first bolt row on each side of the longitudinal stiffener. Each counterbore shall be 60 mm Dia and 10 mm deep. See Detail A on "Tower Splice Details No.16" sheet.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 67 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Fabricate, ship and verify dimensions of a second tower base template and ship (4) field template parts, furnished by the Department to ABF on January 23, 2008, to China fabricated for Contract 04-0120E4 as described in this change order.

Extra Work at Lump Sum:

1. Ship Contract No. 04-0120E4 base plate field template parts to ZPMC in China to complete the State Furnished Steel Template previously furnished by the Department and described in Special Provisions Section 10-1.59, "Steel Structures," subsection "Template".

2. Fabricate a Second Tower Base Template using steel meeting the strength requirements of ASTM A709M Gr. 345 as shown on sheets three (3) through five (5) of this change order.

3. The Contractor shall verify the location of the holes by physically matching the Second Tower Base Template to the State Furnished Steel Template. This shall be witnessed by the Engineer.

The following revised sheets detail all changes:

Supplemental Contract Plan Sheet Nos. 600S1R1, 600S2R1 and 600S3R1 (of 1204).

For this work, the Contractor shall receive a sum of $473,652.00. This sum constitutes full compensation, including markups, for this change.

Cost of Extra Work at Lump Sum $473,652.00

Adjustment of Compensation at Lump Sum

In lieu of performing the work of shipping, assembling and comparing the State Furnished Steel Template on the Tower footing as described in Special Provisions Section 10-1.59, "Steel Structures," the Contractor shall perform the following work to the second tower base template as directed by the Engineer:

1. Ship and assemble the second template for use in comparing to the existing T1 foundation.

2. The Second Tower Base Template shall be compared to the existing T1 foundation as required in Special Provisions Section 10-1.59, "Steel Structures" prior to the shipment of Lift 1 of the Tower or as agreed by the Engineer.

For this work, the Contractor shall receive a sum of $39,175.00. This sum constitutes full compensation, including markups, for this change.

Cost of Adjustment of Compensation at Lump Sum $39,175.00

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 67 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

Estimated Cost: Increase ☒ Decrease ☐ $512,827.00

By reason of this order the time of completion will be adjusted as follows: 0 days

Submitted by

Signature Mark P. Woods, Sr. Br. Engr for Resident Engineer Gary Pursell, Sup.T.E. Date 24 Feb 2009

Approval Recommended by

Signature Supervising Bridge Engineer Richard Morrow, Sup.T.E. Date 3/25/09

Engineer Approval by

Signature Supervising Transportation Engineer Peter Siegenthaler, Prin.T.E. Date 3/10/09

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) Michael D. Flowers Project Director Date 3-5-09

FROM: Gary Pursell, P.E., Sup.T.E.	**CO-RTE-PM** SF-80-13.2/13.9
	FED. NO.
CCO#: **67** SUPPLEMENT#: **0** Category Code: **CHTX**	CONTINGENCY BALANCE (incl. this change) **$116,003,393.40**
COST: **$512,827.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☐ YES ☑ NO
SUPPLEMENTAL FUNDS PROVIDED: **$512,827.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Tower Base Template	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**30** Day(s)	**1** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

Transporting four, T1 tower anchor rod and dowel, templates from Oakland, California to ABF tower fabricator ZPMC in Shanghai, China and fabricate, ship and verify dimensions of a second tower base template as directed by the Engineer.

The E2/T1 Contractor was unable to provide complete "as-fabricated" templates due to the interference of temporary lifting lugs with permanent anchor rods and dowels. T1 footing box dowels that interfered were installed after lifting lugs were removed. Four additional field templates were then fabricated on site to accurately describe the location of dowels and adjacent anchor rods.

Providing the four additional field templates, along with the original templates already provided, shall complete the "as-fabricated" templates called for in the contract documentation. This change order shall reimburse the Contractor for shipping the four additional field templates from Oakland, California to ABF tower fabricator ZPMC in Shanghai, China.

In addition to the field template, it was determined by the Department's Risk Management Team that a second tower base template using a higher grade steel and a field dimensional accuracy would be fabricated and compared to the tower base in China. This would act as a second verification on the base dimensions of the tower so when the tower base arrives on the jobsite, the base will fit the anchor rods at Pier T1.

Payment for the work the shipping of the first and second template to China, fabricating the second template and verification of holes on the second template will be at Extra Work at Lump Sum for a cost of $473,652.00. Payment for shipping the second template to the jobsite, assembling the second template at the jobsite and comparing this template to the T1 foundation will be paid for as an Adjustment of Compensation at Lump Sum for the cost of $39,175.00. The total cost of this change order is estimated at $512,827.00 which can be financed from the contingency fund. A total of $1,130,000.00 is available within the supplemental funds for this change order. A detailed cost analysis is on file.

No time adjustment is warranted, as this change order does not affect the controlling operation.

This change order received concurrence from Gary Pursell (Sup. TE), Richard Morrow (Sup. BE), Michael Forner (Principal TE), Patrick Treacy (HQ Oversight), Marwan Nader (Design of Record) and Ken Terpstra (Project Manager). Design Oversight and Maintenance is not required for this change.

The Resident Engineer requests that this change order be approved.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 68 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

ITEM 1.

Provide additional conduit penetrations and cover, doubler, and mounting plates in and around the SAS Tower as identified by Caltrans letter 05.03.01-004475, dated June 26, 2009, and on Orthotropic Box Girder and Tower Shop Drawings approved prior to November 17, 2010.

This change order resolves the costs associated with Contractor Request For Information (RFI) numbers 1029R0, 1029R2, 1029R3 and 1326 with respect to changes listed above.

Adjustment of Compensation at Lump Sum Price..... $158,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108S1 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108S1 to prevent a double payment. Total amount paid under CCO 108S1, and to be credited to this change, is $158,000.00.

Adjustment of Compensation at Lump Sum Price..... <$158,000.00>

ITEM 3.

Provide an additional 5 conduit penetrations and 9 mounting plates in and around the SAS Tower as identified by Caltrans letter 05.03.01-007349, dated April 27, 2010, and added after November 17, 2010.

Adjustment of Compensation at Lump Sum Price..... $2,419.00

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 68 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation at Lump Sum Price	$158,000.00
(ITEM 2) Amount paid under CCO 108S1 for this change order	<$158,000.00>
(ITEM 3) Adjustment of Compensation at Lump Sum Price	$2,419.00>
Total net pay for this change order	$2,419.00

This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Contract time is addressed in CCO 108S1 for Item 1 in this change order. Therefore, contract time will not be adjusted in this change order.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$2,419.00**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Submitted by

Signature Kannu Balan **Resident Engineer** Kannu Balan, Senior T.E. **Date** 7-23-10

Approval Recommended by

Signature **Supervising Bridge Engineer** Richard Morrow, Sup. B.E. **Date** 7/26/10

Engineer Approval by

Signature **Supervising Transportation Engineer** Gary Pursell, Sup. T.E. **Date** 8/9/10

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

CCO DESCRIPTION:
Additional Tower Penetrations

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**227** Day(s)	**9** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

Providing additional conduit penetrations and cover, doubler, and mounting plates in and around the SAS Tower.

This change order resolves the costs associated with Contractor Request For Information (RFI) numbers 1029R0, 1029R2, 1029R3 and 1326 with respect to changes listed above.

Additional penetrations and doubler plates are needed for FAA and US Coast Guard warning systems and also for Homeland Security Agency systems. Additional penetrations are needed for mechanical, electrical, and plumbing purposes due to conflicts with strut openings. To balance the loss of strength at penetration locations additional doubler plates are required. Additional mounting plates are needed for camera and MVDS conduit support. This change order will incorporate these changes into the SAS Tower fabrication.

Since the cost, of $158,000.00 for the changes prior to November 17, 2010, is included in Contract Change Order 108 Supplement 1 (CCO 108S1) Claim Settlement Report No. 1 resolution costs the net payment in this change order is $2,419.00 for the changes that occurred after November 17, 2010. The cost of this change order can be financed from the contingency fund. A detailed cost estimate is on file.

A determination of the delay in completion of the contract due to work specified by Contract Change Order 68, has been made in CCO 108S1 and is part of the Claims Settlement Report (CSR) No. 1 for this project. Therefore, no adjustment of time is warranted by reason of this change order.

This change order received concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Mike Forner (Principal TE), Robert Kobal (HQ Oversight), Ken Terpstra (Project Manager), Wenyi Long (Design Oversight), and Lina Ellis (Structure Maintenance).

Claims Settlement Report (CSR) No. 1, for this project, revises the authority to "Issue and Approve" the changes listed in CCO 108S1 Appendices A & B. The authority to "Issue and Approve" the changes listed in Appendices A & B for the values of time and money contemplated therein has been delegated to the District for approval and approval of each of these change orders by the Headquarters CCO Desk will not be required. Since this change order is included in CCO 108S1 no Headquarters CCO Desk "Issue and Approve" is required, a copy of CCO 108S1 is attached for reference.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 68 **Suppl. No. 1** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

Item 1.

As identified by Submittals #1239 Rev. 6 and Rev. 9 and revised after April 27, 2010, modify the following in Tower Head Lift 5:

- Provide an additional eight (8) 150x150x13 mm mounting plates in the Diaphragm and West Shaft
- Enlarge the hole size of five (5) penetrations
- Increase the size of three (3) dehumidification openings

For this work, the Contractor will receive a lump sum price of $5,234.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum.....$5,234.00

Estimate of Increase in Contract Item at Contract Price:

Item 2.

- Additional conduit mounting plates.
- Increased size of dehumidifier doubler plate in/outlets and dehumidifier doubler plate makeup.

Item No. 52: FURNISH STRUCTURAL STEEL (BRIDGE) (TOWER)
44 KG (+0.00%) @ $10.00 /KG =+$ 440.00 (+0.00%)

Item No. 53: ERECT STRUCTURAL STEEL (BRIDGE) (TOWER)
44 KG (+0.00%) @ $1.00 /KG =+$ 44.00 (+0.00%)

The quantity increases shown herein for Items #52 and 53, when combined with the quantity shown in the Engineer's Estimate, and as modified by any previous change orders or revisions to dimensions made by the Engineer, shall be the final quantity for which payment will be made.

Total Cost for Increase in Contract Item..... $484.00

Estimated Cost: Increase ☒ Decrease ☐ $5,718.00

By reason of this order the time of completion will be adjusted as follows: 0 Days

Submitted by

2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**1**

THIS CHANGE ORDER PROVIDES FOR:

Modifying Tower Head Lift 5 by providing additional mounting plates, enlarging the hole size of penetrations, and increasing the size of dehumidification openings.

Submittals #1239 Rev. 6 and Rev. 9 "Tower Head" added plates and revised plate and penetration locations for conduit support and to avoid interference with the handrails. The changes are highlighted in red font in the attached Tower Head Penetration and Mounting Plate Attachment chart, developed in accordance to Submittals #1239 Rev. 6 and Rev. 9. Note that these locations are taken using the cambered elevation 159.869 m as a reference point. This change order will compensate the Contractor for changes that were not identified prior to April 27, 2010, in CCO 68S0.

The cost of this supplemental change is $5,718.00, which can be financed from the contingency fund. This will result in a cumulative amount of $8,137.00 for CCO 68S0 and 68S1. A detailed cost estimate is on file.

No time adjustment is warranted, as this change order does not affect the controlling operation.

This change order has concurrence from Peter Siegenthaler (Principal TE), Rick Morrow (Sup. BE), Jing Chen (District Design), and Wenyi Long (Design Oversight). Maintenance concurrence is not required.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 69 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Eliminate the requirement to pressure test the closed U-ribs stiffeners underneath the steel orthotropic bridge deck. Add capping plates to the diagonal stiffener plates at the BC and CD corners of the tower legs as shown in this change order.

Adjustment of Compensation at Lump Sum Price:

Revise Section 10-1.59, "STEEL STRUCTURES," subsection "INSPECTION AND TESTING," subsection "Pressure Test," of the Special Provisions as follows:

Where a pressure test is specified on the plans other than for the OBG U-ribs, ~~such as to verify the integrity of closed rib sections,~~ the air tightness of the enclosed area shall be pressure tested. The air pressure used for the test shall be ~~0.2~~ 3.0 bar. The enclosed area shall be pressurized, and then isolated by closing the fill valve. Valves shall be placed in the ends of the capping plates ~~diaphragm of the rib~~. A calibrated pressure gage with suitable precision shall be monitored over a period of 2 hours. The pressure shall not drop by more than 10%. Compensation for pressure variations due to temperature changes shall be permitted within a range of 5 degrees Centigrade.

~~Five percent of ribs between bolted splices shall be leak tested. If leaks are detected, all of the rib spaces within the panel shall be subjected to leak testing.~~ If leaks are detected, t~~T~~he Contractor shall repair the defects at the Contractor's expense.

The following revised contract plan sheets detail all changes:

Sheets 544R3, 549R3, 554R3, 607R1 and 628R1 (of 1204).

This change order resolves the costs associated with Contractor Request For Information (RFI) Nos. 1058 and 1058R1 with respect to changes listed above.

For this work, the Contractor agrees to perform this work at no additional cost to the Department. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum Price.....$0.00

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0.00**

By reason of this order the time of completion will be adjusted as follows: **0 days**

NOTES:

1. See schedule A in conjunction with Detail D for tower PL and stiffener size between elevations 144.000 m and 150.900 m.
2. ⚠1 End of diagonal stiffener shall be sealed with a capping plate with no copes. This detail also applies at the ends of every lift where bolted splices occur at elevations 50.30 m, 83.00 m and 114.00 m. See "Tower Splice Details No.5, No.10 and No.15" sheets.
3. Details at elevation 147.500 m are not shown for clarity. For details at elevation 147.500 m, see Section L-L and Section M-M on "Tower Saddle Grillage Details No.6" sheet.
4. For stiffener size, see "Tower Splice Details No.19" sheet.
5. For location of stiffeners between elevations 144.000 m and 147.500 m, the stiffeners shall be extended straight using the layout shown on "Tower Shaft Details No.3" through "Tower Shaft Details No.7" sheets.
6. The top and bottom 25% of the weld length shall be CJP (see Detail A).

	FED. NO.
CCO#: 69 SUPPLEMENT#: 0 Category Code: CHPA	CONTINGENCY BALANCE (incl. this change) $115,510,407.40
COST: $0.00 INCREASE ☐ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: $0.00	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: U-rib and Tower Corner Sealing	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	30 Day(s)	1 %	5

THIS CHANGE ORDER PROVIDES FOR:

Eliminating pressure testing of closed U-ribs stiffeners located under the steel orthotropic bridge deck and installing cap plates to the diagonal stiffener plates at BC and CD tower leg corners.

The contract plans require the interior of the closed ribs be sealed and tested for leaks. A leak test cannot be performed due to a partial joint penetration weld connecting the rib to the deck plate, which is not a sealed connection.

Painting inside the diagonal stiffener plates at tower leg corners BC and CD cannot be performed due to the limited space, therefore cap plates will be installed to seal the space.

These changes have offsetting cost, therefore this will be a no cost change order. A detailed cost analysis is on file.

No time adjustment is warranted, as this work does not impact the critical path.

This change order has concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Ken Terpstra (Project Manager), Pete Siegenthaler (Principal TE), Richard Foley (HQ), Wenyi Long (CT-OSCM), Lina Ellis (CT-OSM&I) and Marwan Nader (Project Engineer).

The Resident Engineer received an Issue and Approve (I&A) from the Division of Construction for this change on January 15, 2009.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 70 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

This change order includes but is not limited to:

- Revise enclosures in the Tower.
- Add pull boxes in the Tower at elevator landings, dehumidifier No. 5, and for Tower shaft lighting.
- Revise mounting details for switches and receptacles in the Tower.
- Revise cable tray locations in the Tower.
- Revise utility panel locations and details in the Tower.
- Revise Tower ladder platform lighting.
- Revise power and lighting plans at Tower elevation 89.85 m, 139.85 m, and 154.60 m to 156.75 m.
- Add power and lighting plans for Tower elevation 92.50 m and 127.00 m.

The following revised plan sheets detail the changes addressed in this change order: 91R2, 93R5, 113R2, 142R5, 263R1, 264R1, 270R2, 271R4, 271S1, 271S2, 271S3, 271S4, 271S6, 271S7, 275R1, 275S2R1, 279R1, 280R1, 280S1, 281R2, 282R1, 283R1, 284R2, 285R1, 286R1, 287R1, 287S1, 288R2, 288S1, 288S2, 288S3, 288S4, 289R2, 290R2, 319R1, 334R3, 381R3, 382R2, 383R2, 384R2, 385R2, 386R4, and 400R3 (of 1204) as shown on sheets 3 through 45 of this change order.

Revise Special Provisions Section 10-3.15 "FIXTURES," subsection "TYPE H3," as shown on page 2 of this change order.

Add Special Provisions Section 10-3.155 "LIGHT SWITCHES," as shown on page 2 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 706, 707R0, 707R1, 707R2, 707R3, 707R4, 726R0, 726R1, 729, 1134, and 1932 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $494,931.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum.....$494,931.00

Electrical modifications to Tower Platform 53.85 m (except for Panelboard UP-210, disconnect, transformer, and pull boxes) and Dehumidifier No. 5 will be addressed in a separate change order.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$494,931.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature **Resident Engineer** Darryl Schram, Senior T.E. **Date** 5/9/12

Approval Recommended by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 5/10/12

Engineer Approval by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 5/18/12

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefore the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

CCO#: **70** SUPPLEMENT#: **0** Category Code: **CBPC**	CONTINGENCY BALANCE (incl. this change) **$114,300,488.58**
COST: **$494,931.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Tower Utility Panels	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

This change order includes but is not limited to:

- Revising enclosures for YBI substation utility panels.
- Adding pull boxes in the Tower at elevator landings, dehumidifier #5, and for Tower shaft lighting.
- Revising mounting details for switches and receptacles in the Tower.
- Revising cable tray locations in the Tower.
- Revising utility panel locations and details in the Tower.
- Revising Tower ladder platform lighting.
- Revising power and lighting plans at Tower elevation 89.85 m, 139.85 m, and 154.60 m to 156.75 m.
- Adding power and lighting plans for Tower elevation 92.50 m and 127.00 m.

Revising Special Provisions Section 10-3.15 "FIXTURES," subsection "TYPE H3".

Adding Special Provisions Section 10-3.155 "LIGHT SWITCHES."

Relocating electrical equipment and conduits to inside the Tower shafts will protect the equipment and provide easier access for maintenance workers. On the Tower platforms, electrical equipment and conduits are modified and relocated due to limited space and the need to provide minimum clearance. Lighting at the ladder platforms is revised to provide sufficient light at these locations. Power and lighting are added for the new elevator stop at elevation 127.00 m.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 706, 707R0, 707R1, 707R2, 707R3, 707R4, 726R0, 726R1, 729, 1134, and 1932 with respect to changes listed above.

The total cost of this change order is $494,931.00, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from William Casey (Supervising TE), Rich Foley (HQ Oversight), Ken Terpstra (Project Manager), Wenyi Long (Bridge Design), Lina Ellis (Maintenance), and Jing Chen (District Design).

23. 27C, 7#10 + #10 G.
24. 27C, 6#10 + #10 G.

GENERAL NOTES

1. Conduit routing is diagrammatic. Pull box locations shall be located as shown on plan drawings. The Contractor shall provide additional pull boxes as required. Exact locations of equipment and devices may be adjusted depending on field conditions or by the Engineer.
2. Minimum size of conduits shall be 21 mm. Exposed conduits shall be PVC coated rigid galvanized steel, and conduits located inside girder shall be rigid galvanized steel.
3. Conduit fittings for 78 mm conduits and larger shall have a 610 mm minimum bending radius.
4. All conduits, including spares, shall be provided with pull wires prior to cable installations.
5. All equipment and devices shall be provided with nameplate tags per drawings.
6. All feeders and branch circuits shall be provided with ground wire.
7. 15 kV splice boxes shall be installed as shown and permanently marked "DANGER-HIGH VOLTAGE-KEEP OUT". The letters shall be block type and at least 50 mm in height.
8. The Contractor shall label all conductors and cables per wiring diagrams.
9. Padlocks shall be installed on all cabinets located on the platforms to prevent unauthorized access.
10. Call boxes will be State-furnished. (The Contractor shall install and terminate conductors per wiring diagram.
11. Ladder type cable trays shall be installed for each 15 kV and 600 V systems.
12. Solid bottom cable trays shall be installed for each low level signals, CALTRANS communications, fiber optic systems, and for Non-Caltrans utilities.
13. For Strong Motion Detection System general notes, see sheet E-361.
14. All E sheets are accurate for electrical work only.
15. All dimensions are in millimeters unless otherwise shown.
16. All unused conductors inside pull boxes shall be taped and coiled.
17. "Similar" when shown on the plans means this detail is applicable to different structure and conduit sizes.
18. Electrical fixtures shall not be field welded to the box girders or crossbeams. All welding to the box girders and crossbeams shall be shown on the box girder and crossbeam shop drawings for review and approval by the Engineer.
19. All welding of electrical fixtures to the tower shall be shown on the tower shop drawings for review and approval by the Engineer.
20. All connections to steel elements of the self-anchored suspension bridge superstructure of electrical equipment and fixtures, including conduits, pull boxes, lighting fixtures, messenger cables and others, shall be shop welded or bolted. All connection details shall appear on the working drawings for review and approval by the Engineer.
21. Prior to ordering any cable tray support structures, the Contractor shall:
    - Refer to Structural sheets to determine the locations of cable tray support structures.
    - Determine, based upon field conditions, when and where to use cable tray vertical or horizontal bends, horizontal tees or reducers.
    - Refer to AS-sheets to determine the type of cable tray support to use based on field conditions.
    - Cable tray support structures shown on the AS-sheets are generic and may have to be adapted to suit field conditions.
    - All modifications to the cable tray support structures as shown on the AS-sheets shall be approved by the Resident Engineer.
22. All installation of electrical conduit, equipment or pull boxes shall be either shop welded or bolted.
23. All cable trays shall be securely anchored to support. Appropriate type of anchors (hold down brackets, hold down clamps or guides) shall be used to suit the cable tray type, location and supports. For similar attachment details, see TYPE I & II on E-122A and E-205A.

5 24. Contractor shall seal all wall penetrations with conduit within the dehumidified area using a rubber pipeseal that will expand to fill the gap between the penetration sleeve and conduit to create a seal. Caulking (silicone caulk) shall not be used at these locations.

SHEET NOTES:

1. Enclosed in a fiberglass enclosure located on the service platform.
2. Safety disconnect switch shall be horsepower rated.
3. Enclosed in separate Nema type 12 enclosures located on the SAS main tower (elev 89.85).
4. Electrical Panel with Main Lugs only.
5. Revision to feeder circuit breaker rating and feeder conductor size accomplished by YBI-1 contract.
6. Enclosed in separate stainless steel Nema 4X enclosures located on the SAS main tower (elev. 53.85) and/or service platforms.

NOTES:

1. Single line diagram as shown does not represent physical separation of different contracts. Refer to other drawings for physical separation of different contracts.
2. The combination starter unit and thermal magnetic circuit breakers shall be suitable for and coordinated for 42,000 RMS system fault current.

Caltrans now has a web site! To get to the web site, go to http://www.dot.ca.gov

SHEET NOTES:

1. All conduits which thereafter cross the access walkways shall be raised to a level of at least 2438 above the grating to pass overhead, allowing free walkways on the remaining three quadrants of the platform. Door on north face of SE tower shaft shall remain accessible.
2. For FDP-5 location, conduit route and mounting details, see sheets E-293 and AS-13E.
3. For SMR #3 location, conduit route and mounting details, see sheets E-366 and E-264E.
4. Deleted.
5. For Pull Box and grounding installation and additional details, see Detail 8, sheet E-111A.
6. For cable tray bonding, see Details 4 & 5, sheet E-111B. 2
7. Ground conductor shall be protected from damage when exposed outside the structures. Route ground cable in liquidtight flexible metal conduit (LFMC) for protection.
8. Conduits are at El. 56.422 and connected to 600 V cable tray at this elevation inside respective tower shaft.

NOTES:

1. References:
   - For typical conduit installation details, see sheet E-268.
   - For utility panel UP-210 schedule, see sheet E-278.
   - For types of pull boxes, splice boxes and enclosures, see sheets E-83 and E-169.
   - For conduit and cable tray schedules, see sheets starting at E-401.
2. Electrical conduits shall enter the tower shafts between stiffeners A3 and A4 only for conduits going up or down inside the tower shafts between C1 and C2 only. For conduit entry details, see Structural Utility drawings.
3. All conduits and fittings routed exposed at grating shall be rigid galvanized steel, PVC coated. 2
4. For lighting installation and details, see sheet E-264B and E-264C
5. For other related work not shown on this sheet, see Electrical Special Provisions.
6. For Section B-B, see sheet E-264A
7. Typical conduit installation. See Detail 8, sheet E-268.

NOTES:

1. References:
   - For utility panel UP-210 schedule, see sheet E-278.
   - For conduit and cable tray schedules, see sheets starting at E-401.
   - For lighting fixture schedule, see sheet E-273.
   - For vertical conduit runs support system, see sheet E-287.
   - For lighting installation details, see sheet E-267.
2. All conduits and fittings routed exposed at grating shall be rigid galvanized steel, PVC coated, UNO.
3. Fixture mounting height elevation shall be 2.125 m above floor/platform elevation UNO.

SHEET NOTES:

(1) Bolt lengths to be long enough to fully engage all materials through which they pass, including all washers and nuts, and where attaching to structural steel be anchored in threads to a depth at least 1.2 times the bolt diameter. Holes in structural members shall be drilled and bottom tapped to 5 mm minimum deeper than the depth to which the bolt will engage the steel.

(2) 203 x 203 x 1220, 304SS, Nema 4X wireway. with bracket hanger for mounting.

(3) For continuation, see sheets E-293, and E-366.

(4) Install #2 bare copper wire (bonding jumper) inside conduit and connect to conduit insulated grounding bushing and to enclosure grounding terminal. Use servit post Burndy Type KC or equal inside bottom of the enclosure when no factory grounding terminal is provided. See Detail 8, sheet E-111B for similar installation.

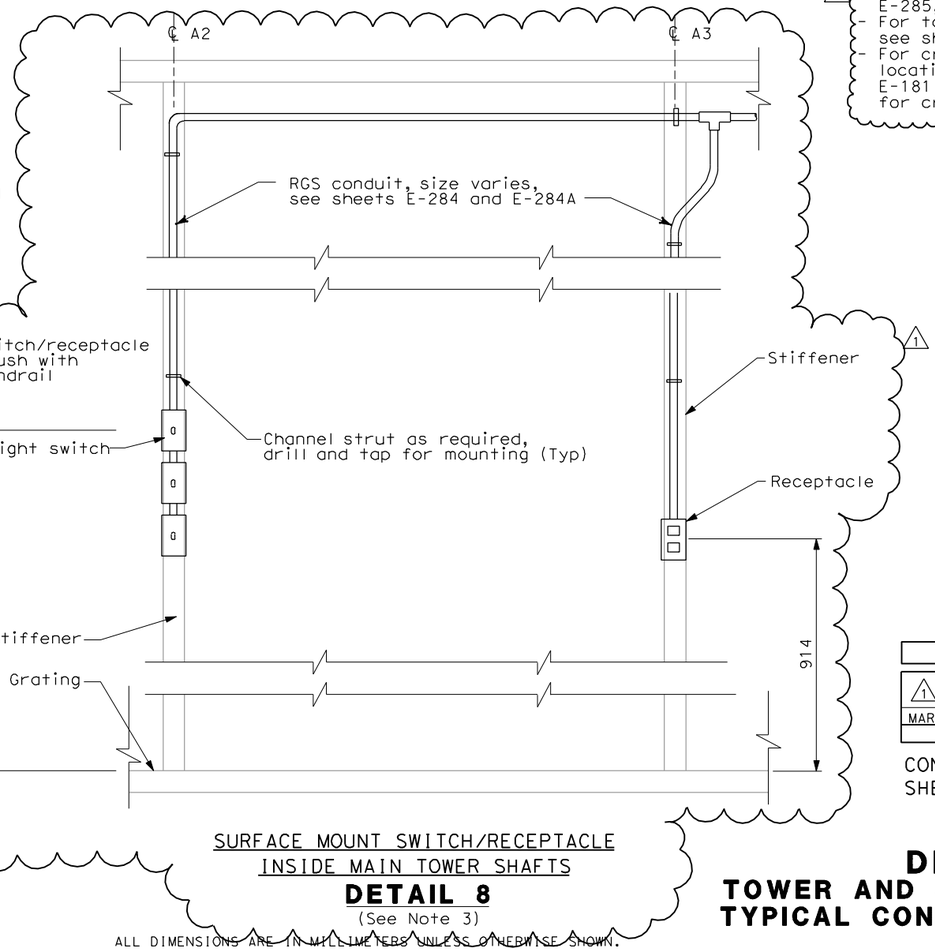
HANDRAIL MOUNT

SECTION A-A



SURFACE MOUNT SWITCH/RECEPTACLE INSIDE MAIN TOWER SHAFTS

DETAIL 8

(See Note 3)

THIS PLAN ACCURATE FOR ELECTRICAL WORK ONLY.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN.

NOTES:

1. Switches and receptacles are indicated in details to show mountings only.
2. Attach fixture, receptacle and conduit. For mounting to steel surfaces drill and tap structural member and attach equipment with hex head machine bolts as required. Verify mounting holes with each piece of equipment.
3. References:
   - For typical tower ladder platform lighting, switch and receptacle layout, see E-284 and E-284A.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
   - For tower shaft diaphragm lighting and receptacle locations, see sheets E-264B, E-274, E-275, E-275A. E-285, E-285A and E-286.
   - For tower platform lighting and receptacle locations, see sheets E-264B, E-285, E-285A, E-285D and E-286.
   - For crossbeam and girder lighting and receptacle locations, see E-96 thru E-101 for Westbound, E-181 thru E-186A for Eastbound and E-114 thru E-118 for crossbeam area.

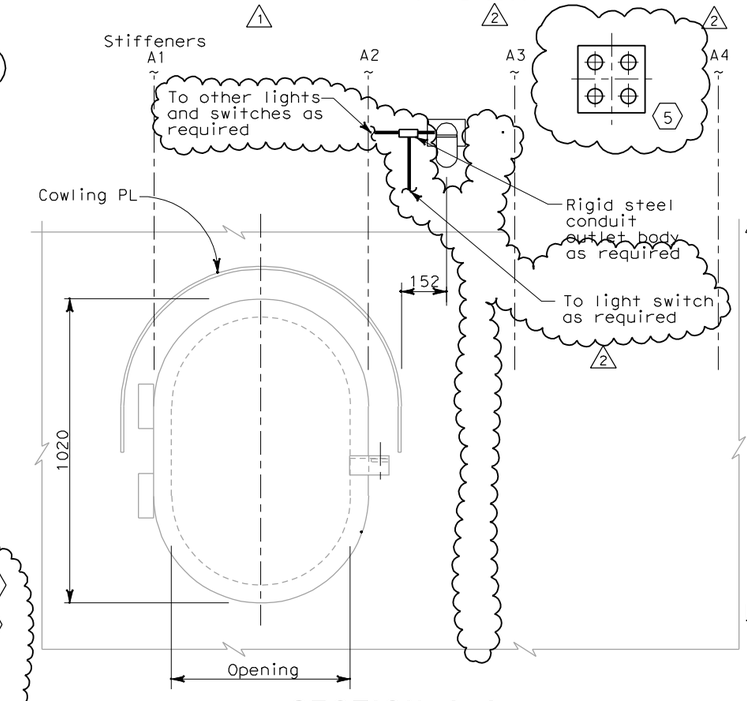
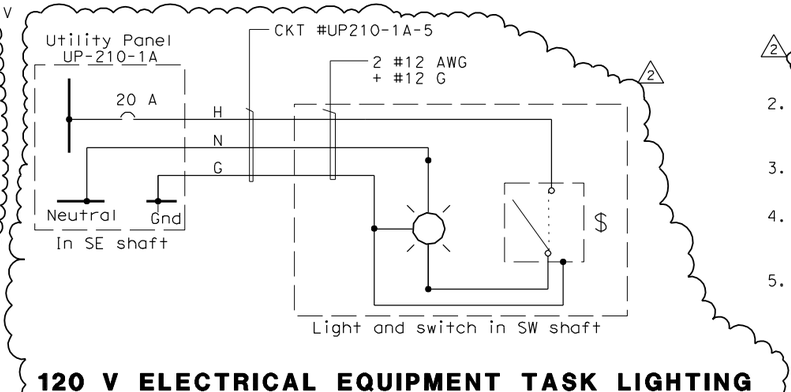
PLAN AT ELEVATION 89.85 m

SCALE: 1:40



SECTION A-A ACCESS OPENING DOOR

NO SCALE



120 V ELECTRICAL EQUIPMENT TASK LIGHTING WIRING DIAGRAM

(Shown for circuit #UP210-1A-5 only, light in SE shaft is similar, but fed from UP-210-1B-5 in the SW shaft)

SHEET NOTES:

1. For tower shaft ladder and platform lighting and power layout, see section B-B on sheet E-284 & E-284A.
2. Light shown mounted under ceiling.
3. For shaft lighting and receptacle distribution box details, see Detail 1, Sheet E-285C.
4. Multiple switches at certain elevations. See sheets E-284 and E-284A and Detail 8 sheet E-268
5. See sheet E-285B for penetration doubler plate schedule and details.
6. Numbers and sizes of conduits are field route to lights, receptacles and switches. See sheets E-284 and E-284A for conduit information.

NOTES:

1. References:
   - For typical conduit installation details, see sheet E-268.
   - For utility panel UP-210-1A and UP-210-1B panel schedules, see sheets E-279 and E-280.
   - For types of pull boxes, splice boxes and enclosures, see sheets E-83 and E-169.
   - For conduit and cable tray schedules, see sheets starting at E-401.
   - For lighting installation details, see sheet E-267.
   - For lighting fixture schedule, see sheet E-273.
2. All conduits and fittings routed exposed at grating shall be rigid galvanized steel, PVC coated.
3. Fixture mounting height elevation shall be 2.125 m above floor/platform elevation UNO.
4. Electrical conduits shall enter the tower shafts between stiffeners A3 and A4 only. For conduit entry details, see Structural Utility drawings.
5. For other related work not shown on this sheet, see Electrical Special Provisions.

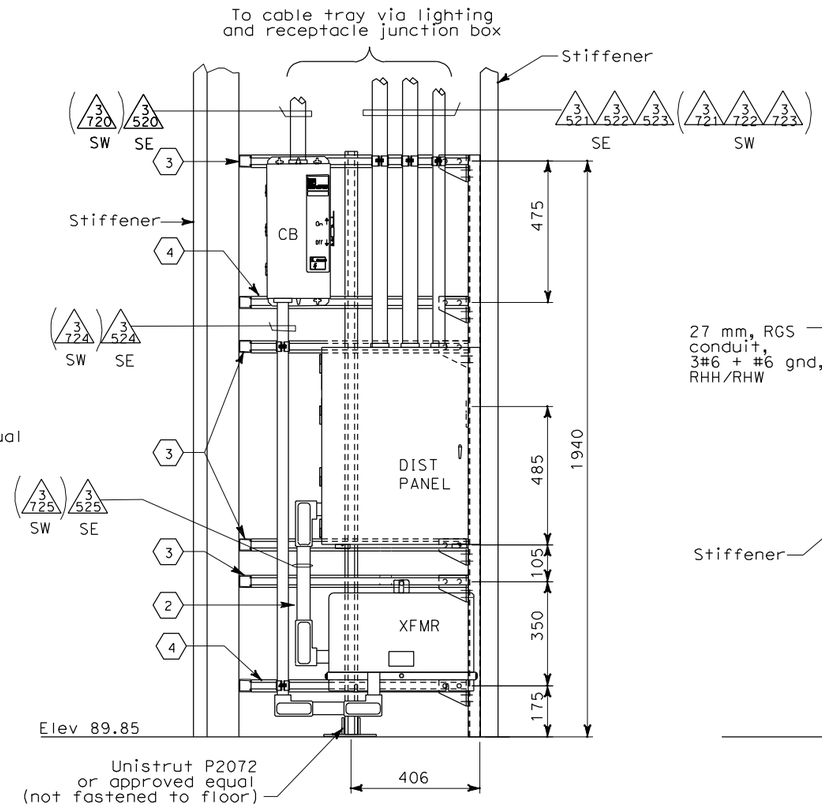
DETAIL 1 AT EL. 89.85 m

SCALE: 1:10
SE shown, SW typical but opposite hand.

1 / E-285

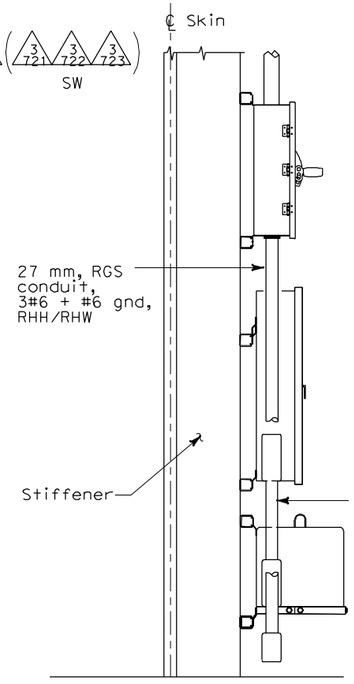


SECTION B-B ELEVATION

NO SCALE

Equipment inside southeast quadrant (UP-210-1A) as shown.
Equipment inside southwest quadrant (UP-210-1B) opposite hand

Dimensions shown are approximate only.
Contractor to adjust to facilitate installation



SECTION A-A SIDE VIEW

NO SCALE

Supports and some conduits
are not shown for clarity

SHEET NOTES:

1. Bolt lengths to be long enough to fully engage all materials through which they pass, including all washers and nuts, and where attaching to structural steel be anchored in threads to a depth at least 1.2 times the bolt diameter. Holes in structural members shall be drilled and bottom tapped to 5 mm minimum deeper than the depth to which the bolt will engage the steel.
2. At SW shaft, output from transformer connects from lower right side of transformer to top right side of distribution panel, facing front as in section B-B.
3. Unistrut P1000 or approved equal.
4. Unistrut P1000 H3 or approved equal.

DATE PLOTTED => 12/10/2009
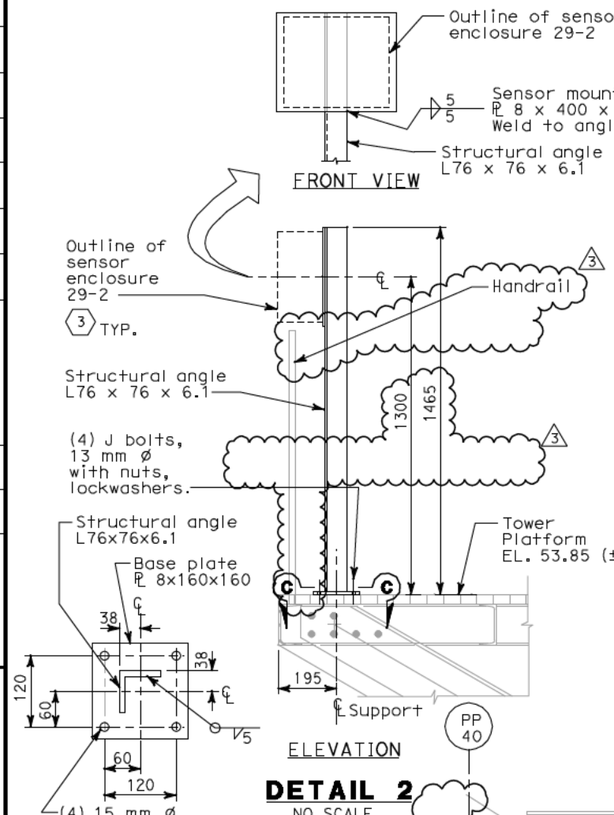
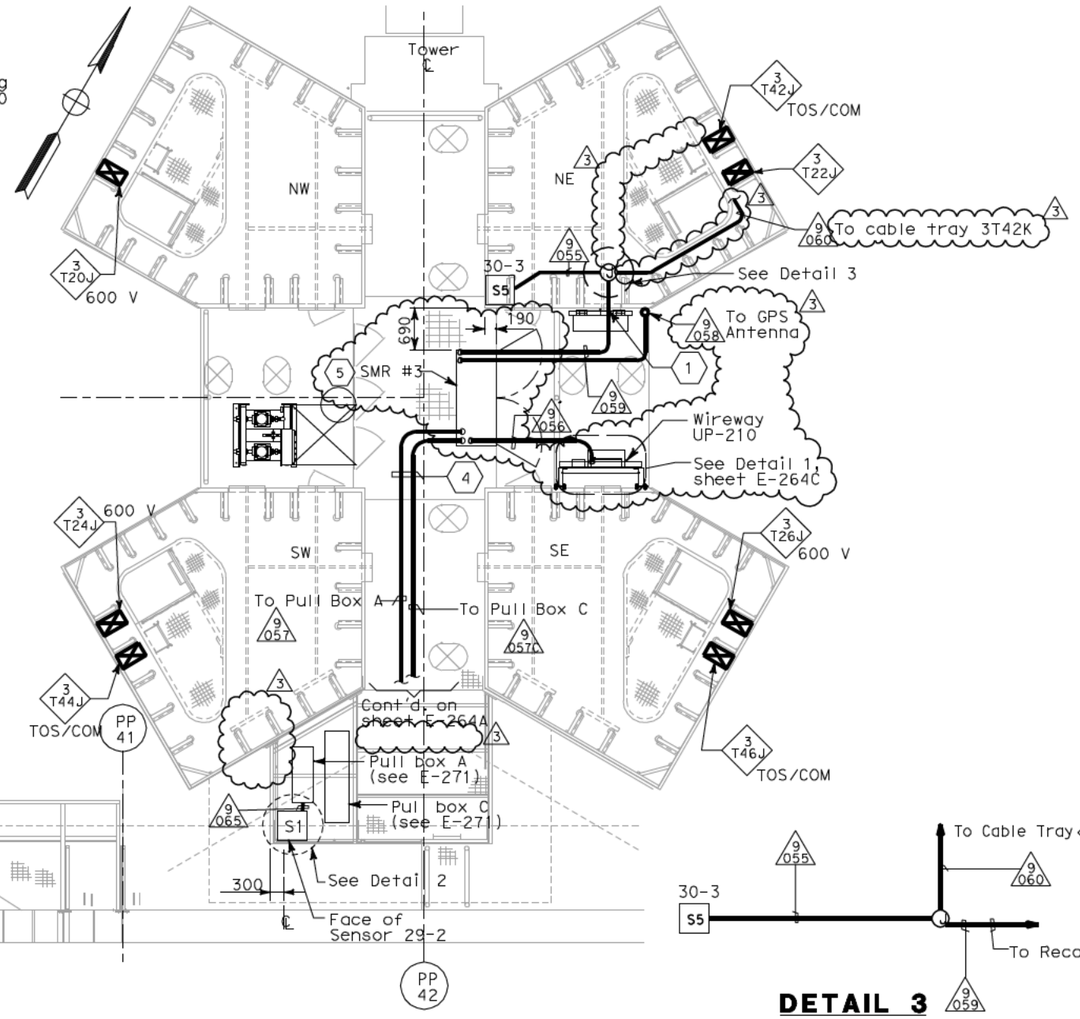
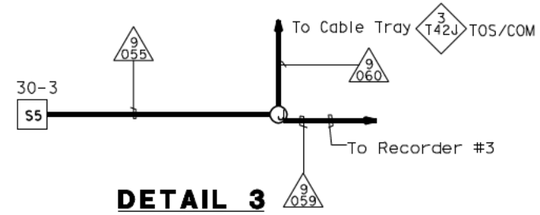
TIME PLOTTED => 4:04:52 PM





PLAN AT MAIN TOWER, ELEV 53.85 m
SCALE 1:50

Some conduits and equipment are not shown for clarity. See sheets E-264, E-264B, E-281 and E-345 for more conduit and equipment information



DETAIL 3
NO SCALE

NOTES:

1. For other related work not shown on this drawing, see Electrical Special Provisions.
2. References:
   - For nameplates, sensor enclosures and recorder schedules, see sheets E-379, E-380 and E-381.
   - For cable block diagram, see sheets E-382, E-383 and E-384.
   - For general notes on the strong motion detection system, see sheet E-361.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
3. All conduits and fittings located outside or inside pier shall be rigid galvanized steel, PVC coated.
4. Deleted.
5. For Section B-B, see sheet E-264A.

SHEET NOTES:

(1) Pipe sleeves shall be provided with watertight seals after conduits are installed. Spare sleeves shall be capped and plugged. Conduit is at El. 56.422. 3

(2) Deleted

(3) For nameplate engraving, see nameplate Schedule on sheet E-379.

(4) All conduits which thereafter cross the access walkways shall be raised to a level of at least 2438 above the grating to pass overhead, allowing free walkways on the remaining three quadrants of the platform. Door on north face of SE tower shaft shall remain accessible.

(5) For SMR #3 details, see sheet E-264E. 3

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 71 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price

ITEM 1.

Modify E2 bearings, shear keys, and cross beam including, but not limited to the following:

1) Revise bolting details
2) Increase the radius at the two lower corners of the bearing top housing
3) Use oversized holes in bearing top housing and shear key housing
4) Decrease bearing bottom housing base plate thickness
5) Roughen bottom surface of base plate
6) Assemble shear key housing at cross beam 35 mm lower
7) Additional machining for catcher brackets on the shear keys
8) In lieu of galvanizing, paint spherical washers
9) Change grout used on bearing and shear key anchor rods to high strength nonshrink
10) In lieu of the neoprene seal, wrap Denso debonding tape on the bearing and shear key anchor rods
11) Eliminate the formwork for planned concrete blockout in E2 cross beam

Replace the sixth paragraph of Special Provisions Section 10-1.47 "SPHERICAL BUSHING BEARING (PIER E2)," subsection "MATERIALS," and insert subsequent paragraphs as shown on sheet 3 of this change order.

The following revised and supplemental plan sheets detail the changes addressed in this change order: 514R3, 882R1, 882AR1, 883R2, 884R1, 884S1, 885R1, 887R2, 888R1, 888AR1, and 888BR2 (of 1204) as shown on sheets 4 through 14 of this change order.

ITEM 1 of this change order resolves the costs associated with Contractor Request For Information (RFI) numbers 17, 515, 553, 560, 566R0, 567, 582, 633, 646, 698R0, 698R1, 701R0, 722, 723, 724, 760, 824R1, 824R2, 858, 1191, 1233R2, 1233R5, 1357, 1418, 1419, 1435, 1622, 1644R2, 2063R0, 2063R1, and 2137R0 with respect to changes listed above.

Adjustment of Compensation at Lump Sum $425,287.00

Estimate of Increase in Contract Item at Contract Price:

ITEM 2.

Increase concrete item quantity to fill-in E2 cross beam blockout.

Item No. 38: STRUCTURAL CONCRETE BRIDGE
50.2 M3 (+0.61%) @ $4,700.00 /M3 = +$235,940.00 (+0.61%)

The quantity increase shown herein for Item No. 38 (STRUCTURAL CONCRETE BRIDGE), when combined with the quantity specified in the Engineer's Estimate, and as modified by any previous change orders, shall be the final quantity for which payment will be made.

Total cost for Increase in Contract Item..... $235,940.00

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 71 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

Extra Work at Lump Sum

ITEM 3.

Perform additional testing for proof of concept for E2 bearing and shear key anchor rods, as directed by the Engineer.

Perform additional testing to determine the minimum coefficient of friction between the spherical bushing assembly and the bottom housing of the Pier E2 bearing as directed by the Engineer.

ITEM 3 of this change order resolves the costs associated with Contractor Request For Information (RFI) numbers 1233R3, 1233R4, and 1458 with respect to changes listed above.

Extra Work at Lump Sum.....$52,753.00

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation at Lump Sum	$425,287.00
(ITEM 2) Increase in Contract Items at Contract Price	$235,940.00
(ITEM 3) Extra Work at Lump Sum	$52,753.00
Total net pay for this change order	$713,980.00

This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Additional material costs and field work to install the catcher brackets on the shear keys, as described in RFI's 2137R0, 2137R1, and 2137R2, will be addressed in a future change order.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$713,980.00**

By reason of this order the time of completion will be adjusted as follows: 0 Days

Engineer Approval by

Signature Peter Siegenthaler **Principal Transportation Engineer** Peter Siegenthaler, Prin. T.E. **Date** 1-6-11

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 05JAN11

Replace the sixth paragraph of Section 10-1.47, "SPHERICAL BUSHING BEARING (PIER E2)," subsection, "MATERIALS," of the Special Provisions and insert subsequent paragraphs as follows:

Steel components including plates and anchor bolts shall conform to the details shown on the plans, the provisions in "Steel Structures," of the Standard Specifications, and these special provisions except that the spherical washers for E2 anchor rods will not be galvanized. ~~Clean and paint spherical bushing bearing shall conform to the requirements in "Clean and Paint Structural Steel (Seismic Joint, Spherical Bushing Bearing, and Shear Key)," of these special provisions.~~ Paint spherical washers for E2 anchor rods in accordance with Standard Specifications Section 59-2.13, "Application of Zinc Rich Primer", Section 91, "Paint", Special Provisions Section 10-1.70, "Clean and Paint Structural Steel (modular joint seal assembly, spherical bushing bearing, and shear key)" and the following:

- Outer diameter, top and bottom flat surfaces – single coat inorganic zinc primer dry film thickness between 90µm (microns) and 150µm (microns).
- Inner diameter and spherical surface – one application of zinc rich primer (organic vehicle type).
- Complete painting the surfaces requiring inorganic zinc before applying zinc rich primer (organic vehicle type) to the spherical surface and inside diameter.

In lieu of the requirements for the Paint Quality Work Plan (PQWP) in Special Provisions Section 10-1.70, for the spherical washers, the requirements for the PQWP are as follows:

Prior to painting the spherical washers, submit to the Engineer three (3) copies of a separate Painting Quality Work Plan (PQWP) in conformance with the provisions in Section "Working Drawings," in these special provisions. The PQWP shall include the following:

A. The name of each Contractor or subcontractor used.
B. Proposed methods and equipment to be used for any paint application.
C. Proof of AISC Certification, Paint Endorsement.
D. Proposed methods to control environmental conditions in accordance with the manufacturer's recommendations and these special provisions.
E. Proposed method to protect the product during curing, shipping, handling and storage.

The Engineer shall have 10 days to approve the PQWP submittal after a complete plan has been received.

STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION

CONTRACT CHANGE ORDER MEMORANDUM

TO: Pete Siegenthaler, Prin TE /	FILE: **E.A.** 04 - 0120F4

CCO#: **71** SUPPLEMENT#: **0** Category Code: **CHPA**	CONTINGENCY BALANCE (incl. this change) **$172,473,404.81**
COST: **$713,980.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: E2 Cross Beam	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Modifying E2 bearings, shear keys, and cross beam including, but not limited to the following:

1) Revising bolting details
2) Increasing the radius at the two lower corners of the bearing top housing
3) Using oversized holes in bearing top housing and shear key housing
4) Decreasing bearing bottom housing base plate thickness
5) Roughening bottom surface of base plate
6) Assembling shear key housing at cross beam 35 mm lower
7) Additional machining for catcher brackets on the shear keys
8) In lieu of galvanizing, painting spherical washers
9) Changing grout used on bearing and shear key anchor rods to high strength nonshrink
10) In lieu of the neoprene seal, wrapping Denso debonding tape on the bearing and shear key anchor rods
11) Eliminating the formwork for planned concrete blockout in E2 cross beam
12) Performing additional testing for proof of concept for E2 bearing and shear key anchor rods
13) Filling the cross beam block-out by increasing bid item 38, Structural Concrete Bridge.

Special Provisions Section 10-1.47 requires the Contractor to provide substantiating calculations for the spherical bushing bearing and its components to be used to determine details not shown in the plans for the bearings. Revisions are made to plan sheets to incorporate working drawing and submittal details. Bolt layouts are changed to provide adequate clearance for jacking and avoid conflicts. Tapered anchor bolt dimensions are revised to increase tolerance for erection. An alternate nut recess is provided for the bearing hold down assembly since there is not enough clearance to install nuts. The cross beam shear key is modified to correct alignment since the cross beam key plate is lower than the OBG key plate. The bearing gap clearance is increased to avoid interference during rotation around the shaft. Oversized holes in the bearing top housing will allow for adjustment after load transfer. To maintain the required gap with the hold down assembly, the bearing bottom housing base plate thickness is decreased. The radius of the shear key stub is reduced to support the hydraulic tensioner for the anchor rods. To meet the increased hardness requirement, the spherical washers will be painted. High strength grout around the anchor bolts will be used to accommodate higher stresses. The debonding tape system provides superior corrosion protection. Additional required testing shall be performed on the anchor rods and bearings due to the increased strength requirements. Additional testing is required for long ASTM A345 rods and nuts, to determine adequacy of threads at ultimate load, and also to confirm static coefficient of friction requirements are met between the spherical bushing assembly and the bottom housing.

The cross beam concrete block-out was eliminated in Contract Addendum 5, however the addendum inadvertently omitted the increase of bid item 38 (Structural Concrete Bridge) in the revised estimate.

Catcher brackets are added to the shear keys to prevent excessive rotation of the spherical housing. Additional material costs and field work to install the catcher brackets on the shear keys will be addressed in a supplemental change order.

This change order resolves the costs associated with Contractor Request For Information (RFI) numbers 17, 515, 553, 560, 566R0, 567, 582, 633, 646, 698R0, 698R1, 701R0, 722, 723, 724, 760, 824R1, 824R2, 858, 1191, 1233R2, 1233R3, 1233R4, 1233R5, 1357, 1418, 1419, 1435, 1458, 1622, 1644R2, 2063R0, 2063R1, and 2137R0 with respect to changes listed above.

ADA Notice: For individuals with sensory disabilities, this document is available in alternate formats. For information call: (916) 654-6410 or TDD (916) 654-3880 or write Records and Forms Management, 1120 N Street, MS-89, Sacramento, CA 95814.

The total cost of this change order is $713,980.00, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Rick Morrow (Sup. Structure Rep), Peter Siegenthaler (Principal TE), Rich Foley (HQ Oversight), Wenyi Long (Design Oversight), Lina Ellis (Maintenance), and Ken Terpstra (Project Manager).

The Resident Engineer requests Head Quarters CCO Desk "Issue and Approve". 12-20-10 I&A received JCA

LEGEND:

CR Center of Rotation

NOTES:

1. For Section B-B, see "Pier E2 Bearing Details No. 2" sheet.
2. Connections to box girder and Pier E2 are not shown for clarity.
3. The bearing top housing and bearing hold down assembly shall be Structural Casting Grade 345.
4. The bearing bottom housing and the solid shaft shall be Structural Casting Grade 550.
5. The grout pad thickness is shown for information only. Before grout pour, Contractor shall verify in the field the grout pad thickness required to align the center of rotation of the shear key and bearings at 0.750 m from the bottom surface of the box girder and ensure center of rotation of all bearings and shear keys are aligned in the same axis.
6. Gaps shall be maintained during installation by using shims placed below the dust cover locations. Remove shims after grouting. 1 Alternatively, 3/4" diameter spacing bolts may be installed. These shall remain undamaged during installation and shall be replaced with plug bolts.
7. The Contractor may provide optional leveling plates to achieve fit-up and level contact surfaces for the bearings and shear keys. The Contractor shall erect the E2 cap beam and E2 girders to the elevations and tolerances specified in the plans and special provisions.
8. Leveling plate shall be attached with 2 plug welds at 0.5 m Max spacing, and a perimeter PJP weld.
9. All faying surfaces of the girder key plate, the bearing top housing, and the optional leveling plate shall be machined after all welding for flatness and smoothness as specified for the top of the bearing top housing. See "Pier E2 Bearing Details No. 3" sheet.

1:10
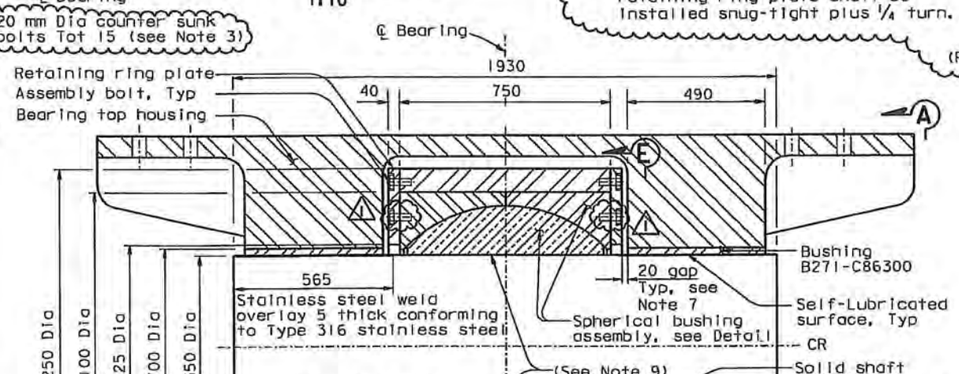
(Retaining Ring PL)

15. A354 BD assembly bolts for the spherical housing shall be stressed to 0.7 Fy.

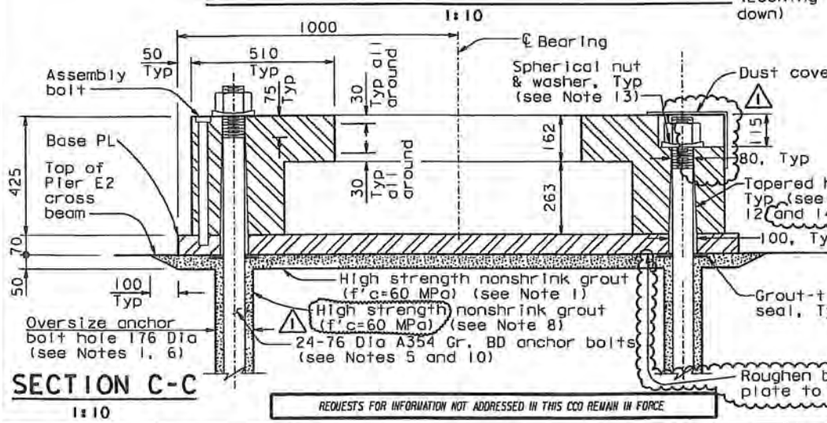
16. For Detail A and A', see "Pier E2 Bearing Details No. 2A" sheet.

17. A354 BD assembly bolts for the retaining ring plate shall be installed snug-tight plus ¼ turn.



SECTION B-B

1:10



SECTION C-C

1:10

13. The spherical nut and washer shall be able to accomodate a maximum rotation of 3 degrees in any direction.

14. At the Contractor's option, the tapered anchor hole may increase to 200 in lieu of the 100 shown on the plans.

NOTES:

1. The grout pad thickness is shown for information only. The Contractor shall verify in the field the grout pad thickness required to align the center of rotation of the shear key and bearings at 0.750 m from the bottom surface of the box girder.
2. The lubricant shall be Self-lubricated.
3. Bearing plate shall be fastened to bottom of bottom housing using (A240 Type 316) counter sunk bolts.
4. All assembly bolts shall be A240 Type 316 unless noted otherwise.
5. The anchor bolt shall be pretensioned to 70% of ultimate tensile strength. Wherever there is no access from the top, anchor bolt shall be prestressed from the bottom.
6. The oversize anchor bolt holes are provided to accommodate construction tolerances.
7. 20 mm gap ±2 mm shall be maintained on both sides during installation.
8. For additional prestressing details, see "Prestressing Notes" sheet.
9. Solid shaft in bushing is press fit.
10. The prestressed anchor bolts shall be wrapped in a PT supplier recommended debonding tape, subject to the review and approval of the Engineer.
11. Grout-tight neoprene seal shown is schematic and is for information only. The seal shall prevent any high strength nonshrink grout from seeping inside the anchor bolt tapered holes during grouting of the base plate. This is necessary for proper stressing of the anchor bolts. The Contractor may propose an alternate detail to suit his erection means and methods, subject to review and approval of the Engineer.
12. For tapered hole details, see "Pier E2 Shear Key Details No. 1" sheet.

LEGEND:

Level I testing shall be required for areas within 30 mm of the final surface for the zone indicated.

NOTES:

1. Solid shaft in bushings is press fit.
2. For longitudinal shear plate location on box girder, see "Girder At East Transition No. 1" sheet.
3. "E"-South bearing and "W"-South bearing are similar. "E"-North bearing and "W"-North bearing are similar.
4. Bolt hole location shall be cross checked with the box girder stiffener layout before drilling holes. Bolt edge distance and clearance for tightening shall be verified and submitted for review and approval by the Engineer. A template shall be used to drill bolt holes in bearing top housing and girder key plate to ensure hole matching.
5. The anchor bolt shall be pretensioned to 70% of ultimate tensile strength.
6. At the Contractor's option, oversized holes and appropriate washer plates may be used in the bearing top housing.

SECTION B-B

1:20
(Bolts not shown for clarity)

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

NOTES:

1. The shear key stub shall be Structural Casting Grade 345.
2. The lubricant shall be self-lubricated.
3. The grout pad thickness is shown for information only. The Contractor shall verify in the field the grout pad thickness required to align the center of rotation of the shear key and bearings at 0.750 m from the bottom surface of the box girder.
4. The anchor bolts shall be pretensioned by jacking to 70% ultimate tensile strength.
5. The oversize anchor bolt holes are provided to accommodate construction tolerances.
6. For additional prestressing details, see "Prestressing Notes" sheet.
7. The prestressed anchor bolts shall be wrapped in a PT supplier recommended debonding tape, subject to the review and approval of the Engineer.
8. The spherical nut and washer shall be able to accomodate a maximum rotation of 3 degrees in any direction.
9. Grout-tight neoprene seal shown is schematic and is for information only. The seal shall prevent any high strength nonshrink grout from seeping inside the anchor bolt tapered holes during grouting of the shear key stub. This is necessary for proper stressing of the anchor bolts. The Contractor may propose an alternate detail to suit their erection means and methods, subject to review and approval of the Engineer.
10. Bolted connection between shear key housing and box girder is slip-critical connection with class B contact surface.
11. The Contractor may provide optional leveling plates to achieve fit-up and level contact surfaces for the bearings and shear keys. The Contractor shall erect the E2 cap beam and E2 girders to the elevations and tolerances specified in the plans and special provisions.
12. Leveling plate shall be attached with plug welds at 0.5 m Max spacing, and a perimeter fillet weld.
13. All faying surfaces of the girder key plate, the shear key housing, and the optional leveling plate shall be machined after all welding for flatness and smoothness as specified for the top of the shear key housing. See "Pier E2 Shear Key Detail No. 2" sheet.
14. Extension length for anchor bolts at "E" Line and "W" Line shear keys shall be long enough to engage hydraulic lock.
15. At the Contractor's option, the tapered anchor hole may increase to 200 in lieu of the 100 shown on the plans.
16. The top shear key stub shaft section shall be "snug-fit" inside the spherical ring with a diameter gap between ring and stub of 1 mm Max.
17. At the Contractor's option, 10 mm radius may be used to facilitate stressing of anchor bolts.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 71 **Suppl. No. 1** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Extra Work at Lump Sum:

Fabricate and install catcher brackets to the shear keys.

Brackets shall conform to Standard Specifications Section 55 "Steel Structures" and shall be Grade 250 steel or better.

The following revised plan sheet details the changes addressed in this change order: 888BR3 (of 1204) as shown on sheet 2 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 2137R1 and 2137R2 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $23,510.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Extra Work at Lump Sum..... $23,510.00

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$23,510.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature _____ **Resident Engineer** Kannu Balan, Senior T.E. **Date** 2-29-12

Approval Recommended by

Signature _____ **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 3-5-12

Engineer Approval by

Signature _____ for Casey **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 3-12-12

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature _____ (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 08MAR12

COST: **$23,510.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: E2 Shear Key Catcher Brackets	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Fabricating and installing catcher brackets to the shear keys.

Catcher brackets are being added to the shear keys to prevent excessive rotation of the spherical housing. CCO 71S0 compensated for the additional machining at the fabrication facility in Korea. This supplement will include the material and field installation costs of the catcher brackets.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 2137R1 and 2137R2 with respect to changes listed above.

The cost of this supplemental change is $23,510.00, which can be financed from the contingency fund. This will result in a cumulative amount of $737,490.00 for CCO 71S0 and 71S1. A detailed cost estimate is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Peter Siegenthaler (Principal TE), Brian Boal (Supervising BE), Ken Terpstra (Proj. Manager), Rich Foley (HQ Oversight), Wenyi Long (Bridge Design), Jing Chen (District Design), and Lina Ellis (Maintenance) February 28, 2012.

NOTES:

1. The mating surfaces of the spherical ring and bearing plate shall be 5 mm thick stainless steel weld overlay conforming to the requirements of A240, Type 316.
2. The lubricant shall be self-lubricated.
3. High strength bolts shall be installed snug-tight only.
4. Contact steel surfaces shall comply with Class A surface (slip coefficient 0.33).
5. The Contractor shall ensure the flatness requirements are met at the faying surfaces.
6. Welding shall be made after field measurement and actual shim plate thickness has been determined.
7. Field measurement shall be made to determine actual thickness of neoprene layer.
3. 8. Bolts shall be installed snug-tight plus 1/4 turn.
9. Catcher brackets shall be installed for shear keys at crossbeam only.
10. Neoprene pad shall satisfy the requirements of Caltrans Standard Specifications Section 51-1.14.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 72 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Modify cable band stanchions, messenger cable, and messenger cable attachments.

The following revised plan sheets detail the changes addressed in this change order: 261R1, 261S1, 261S2, 261S3, 261S6, 261S7, 266R1, 752R2, 809R1, 812R1, 813R4, 813S1, 813S2R3, 813S3R2, 813S4, 813S5, 814R4, 814S1R1, and 815R2 (of 1204) as shown on sheets 2 through 20 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 270, 1237, 1433, 1456R0, 1456R1, 1568R0, 1568R1, 1907R2, 2404R0, and 2404R1 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $688,678.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum..... $688,678.00

Any electrical and painting shown on these plan sheets will be addressed in a separate change order.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$688,678.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature **Resident Engineer** Darryl Schram, Senior T.E. **Date** 7/18/12

Approval Recommended by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 7/19/12

Engineer Approval by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 7-27-12

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 25JUL12

CCO DESCRIPTION:
Cable Electrical

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Modifying cable band stanchions, messenger cable, and messenger cable attachments.

This change order clarifies and provides details missing from the Contract plans. The messenger cable is relocated to minimize its visual impact and to improve access to the cable mounted lights for maintenance. Stanchion details are modified to accommodate the anchor stanchion channels, safety gates, and additional pull boxes.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 270, 1237, 1433, 1456R0, 1456R1, 1568R0, 1568R1, 1907R2, 2404R0, and 2404R1 with respect to changes listed above.

The total cost of this change order is $688,678.00, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from William Casey (Supervising TE), Rich Foley (HQ Oversight), Ken Terpstra (Project Manager), Wenyi Long (Bridge Design), Lina Ellis (Maintenance), and Jing Chen (District Design).

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 73 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Modify the routing of the bikepath railing lighting, belvedere lighting, and bikepath emergency call box conduits. On the South side of the bikepath install pipe sleeves through the bikepath deck panels at each bikepath railing light location. Use Type 4 Liquidtight flexible metal conduit and fittings in lieu of metal clad cable.

Conduit penetrations and welded area of the mounting studs shall be cleaned, primed, and finish painted in accordance with Special Provisions Section 10-1.69 "CLEAN AND PAINT STRUCTURAL STEEL."

The following revised plan sheets detail the changes addressed in this change order: 72R6, 93R10, 188R5, 189R6, 190R4, 191R4, 192R6, 193R4, 197R5, 198R4, 204R3, 205R3, 206R3, 207S2R1, 207S3R1, 207S4R1, 210R5, 210S1R3, 210S2R2, 210S3R1, 210S4R1, 210S5R2, 210S6, 213R2, 355R3, 366R3, 367R4, 367S1R2, 368R4, 369R5, 370R5, 371R5, 372R2, 373R7, 373S1R1, 374R7, 394R4, 395R6, 396R5, 397R4, 398R3, 399R4, 400R6, 407S9R5, 407S10R2, 407S12R4, 819R3, 819S1, 900R5, 900S1R5, and 901R4 (of 1204) as shown on sheets 2 through 52 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 969R0, 969R1, 969R2, 2496R0, and 2534R0 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $943,653.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum..... $943,653.00

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$943,653.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature **Resident Engineer** Kannu Balan, Senior T.E. **Date** 12-9-11

Approval Recommended by

Signature **Supervising Transportation Engineer** William Casey, Sup. T.E. **Date** 12-20-11

Engineer Approval by

Signature **Supervising Transportation Engineer** William Casey, Sup. T.E. **Date** 1-10-12

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Bikepath Conduit	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Modifying the routing of the bikepath railing lighting, belvedere lighting, and bikepath emergency call box conduits. On the South side of the bikepath installing pipe sleeves through the bikepath deck panels at each bikepath railing light location. Using Type 4 Liquidtight flexible metal conduit and fittings in lieu of metal clad cable. Cleaning, priming, and finish painting conduit penetrations and welded mounting studs.

This change order will bring the conduit for the bikepath railing light fixture from the bottom of the bikepath and into the divider rail on the West post of the South side railing. Reducing and revising the conduit routing along the bikepath will give the conduit a uniform look as well as enhance maintenance along the length of the bikepath. In addition, the metal clad cable requirement is changed to prevent corrosion from the marine environment.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 969R0, 969R1, 969R2, 2496, and 2534 with respect to changes listed above.

The total cost of this change order is $943,653.00, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Peter Siegenthaler (Principal TE), William Casey (Sup. TE), Rich Foley (HQ Oversight), Ken Terpstra (Project Manager), Wenyi Long (Bridge Design), Lina Ellis (Maintenance), and Jing Chen (District Design) August 30, 2011.

Toll Bridge Program Oversight Committee (TBPOC) approved this change order on September 8, 2011, for a value not to exceed amount of $1.6M.

7 REVISIONS SUPERCEDED 9

MAXWELL FUMIO TAKATA, No. E 8651, Exp. 9/30/2008 ELECTRICAL, REGISTERED PROFESSIONAL ENGINEER, STATE OF CAL IFORNIA

FOR REVISION ONLY 1

S. A. ESTOQUE, JR., No. E-10151, Exp. 12/31/2008 ELECTRICAL, REGISTERED PROFESSIONAL ENGINEER, STATE OF CALIFORNIA

FOR REVISION ONLY 2 3

GENERAL NOTES

1. Conduit routing is diagrammatic. Pull box locations shall be located as shown on plan drawings. The Contractor shall provide additional pull boxes as required. Exact locations of equipment and devices may be adjusted depending on field conditions or by the Engineer.
2. Minimum size of conduits shall be 21 mm. Exposed conduits shall be PVC coated rigid galvanized steel, and conduits located inside girder shall be rigid galvanized steel. (unless noted otherwise) 9
3. Conduit fittings for 78 mm conduits and larger shall have a 610 mm minimum bending radius.
4. All conduits, including spares, shall be provided with pull wires prior to cable installations.
5. All equipment and devices shall be provided with nameplate tags per drawings.
6. All feeders and branch circuits shall be provided with ground wire.
7. 15 kV splice boxes shall be installed as shown and permanently marked "DANGER-HIGH VOLTAGE-KEEP OUT". The letters shall be block type and at least 50 mm in height.
8. The Contractor shall label all conductors and cables per wiring diagrams.
9. Padlocks shall be installed on all cabinets located on the plotforms to prevent unauthorized access.
10. Coil boxes will be State-furnished. (The Contractor shall install and terminote conductors per wiring diagram.
11. Ladder type cable trays shall be installed for each 15 kV and 600 V systems.
12. Solid bottom cable trays shall be installed for each low level signals, CALTRANS communications, fiber optic systems, and for Non-Caltrans utilities.
13. For Strong Motion Detection System general notes, see sheet E-361.
14. All E sheets are accurate for electrical work only.
15. All dimensions are in millimeters unless otherwise shown.
16. All unused conductors inside pull boxes shall be taped and coiled.
17. "Similar" when shown on the plans means this detail is applicable to different structure and conduit sizes.
18. Electrical fixtures shall not be field welded to the box girders or crossbeams. All welding to the box girders and crossbeams shall be shown on the box girder and crossbeam shop drawings for review and approval by the Engineer.
19. All welding of electrical fixtures to the tower shall be shown on the tower shop drawings for review and approval by the Engineer.
20. All connections to steel elements of the self-anchored suspension bridge superstructure of electrical equipment and fixtures, including conduits, pull boxes, lighting fixtures, messenger cables and others, shall be shop welded or bolted. All connection details shall appear on the working drawings for review and approval by the Engineer.
21. Prior to ordering any cable tray support structures, the Contractor shall:
    - Refer to Structural sheets to determine the locations of cable tray support structures.
    - Determine, based upon field conditions, when and where to use cable tray vertical or horizontal bends, horizontal tees or reducers.
    - Refer to AS-sheets to determine the type of cable tray support to use based on field conditions.
    - Cable tray support structures shown on the AS-sheets are generic and may have to be adapted to suit field conditions.
    - All modifications to the cable troy support structures as shown on the AS-sheets shall be approved by the Resident Engineer.
22. All installation of electrical conduit, equipment or pull boxes shall be either shop welded or bolted.
23. All cable trays shall be securely anchored to support. Appropriate type of anchors (hold down brackets, hold down clamps or guides) shall be used to suit the cable tray type, location and supports. For similar attachment details, see TYPE I & II on E-122A and E-205A.
24. Contractor shall seal all wall penetrations with conduit within the dehumidified area using a rubber pipeseal that will expand to fill the gap between the penetration sleeve and conduit to create a seal. Caulking (silicone caulk) shall not be used at these locations.

SHEET NOTES:

1. Conduit from barrier pull box or other equipment down into Girder Box, see sheet E-181.
2. For conduit to suspension cable lighting, see sheet E-226.
3. Roadway Barrier Receptacle, see Detail 1, sheet E-162.
4. Deleted.
5. Railing lights are contractor furnished and installed by others.
6. Bike path electrical components west of PP-9 are furnished by contractor and installed by others.
7. See drawing E-160C for continuation of conduits.

NOTES:

1. References:
   - For typical details and locations of conduit connections to light poles, barrier outlet boxes, call boxes, overhead sign lighting, CMS, CCTV and MVDS, see sheets E-160 thru E-162 and E-169.
   - TOS equipment is shown for conduit routing only. For typical details of TOS controller and devices, see sheets E-344 through E-357.
   - For types of pull boxes, splice boxes and enclosures, see sheet E-169.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
2. For Roadway level, Bike Path and Belvedere Lighting Fixture Schedules and wiring diagrams see sheets E-146, E-147 and E-165.
3. For Roadway level and Bike Path Call Box Schedule, see sheet E-397.
4. For number of lighting fixtures (main tower lights) see lighting schedule sheets E-271 and E-272.
5. All conduits and fittings routed exposed between the Bike Path and the roadway shall be galvanized rigid steel, PVC coated.
6. See sheets E-160 thru E-165 for conduit locations.
7. For Belvedere Lighting Fixture installation, see sheet E-173.

SHEET NOTES:

1. Conduit from barrier pullbox or other equipment down into Girder Box, see sheet E-183.
2. For conduit to tower and suspension cable lighting see sheet E-228.
3. Contractor shall furnish and install UP-206 and LP-221 per sheet E-73. For complete scope of work on platform and other related work not shown on this sheet, see Electrical Special Provisions.
4. Roadway Barrier Receptacle, see Detail 1, sheet E-162.

NOTES:

1. References:
   - For typical details and locations of conduit connections to light poles, barrier outlet boxes, call boxes, overhead sign lighting, CMS, CCTV and MVDS, see sheets E-160 thru E-162 and E-169.
   - TOS equipment is shown for conduit routing only. For typical details of TOS controller and devices, see sheets E-344 through E-357.
   - For types of pull boxes, splice boxes and enclosures, see sheet E-169.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
2. For Roadway Level Call Boxes, refer to sheet E-396.
3. For Roadway level, Bike Path and Belvedere Lighting Fixture Schedules, see sheets E-146, E-147 and E-165.
4. For Roadway level and Bike Path Call Box Schedule, see sheet E-397.
5. For number of lighting fixtures (main tower lights) see lighting schedule sheets E-271 and E-272.
6. All conduits and fittings routed exposed between the Bike Path and the roadway shall be galvanized rigid steel, PVC coated.
7. See sheets E-160 thru E-165 for conduit locations.

Caltrans now has a web site! To get to the web site, go to http://www.dot.ca.gov

SHEET NOTES:

1. Contractor shall coil 70 meters inside cable tray at PP15 for feed into PB-COM by others.
2. Railing lights are conrtractor furnished and installed by others.
3. Roadway Barrier Receptacle, see Detail 1, sheet E-68.
4. See drawing E-135 for continuation of conduits.
5. Conduit arrangement may be adjusted to suit field condition.
6. Contractor shall verify dimension and locate PB-LTG with sufficient distance to accommodate required clearance for the expansion joint.
7. Stub-out conduits are furnished and installed by Contractor. Conduit shall stub-out at the non-roadway side of the barrier with the coupler flushed to the barrier face wall and provided with plug.
8. Capped end of conduit stub-ups.
9. Bike path electrical components west of PP-9 are furnished by Contractor and installed by others.

NOTES:

1. For additional general notes, see E135.

DETAIL 1 - PLAN
BELVEDERE LIGHT POST AT SOUTH SIDE OF BIKE PATH

SHEET NOTES:

1. Use threaded plug to cover spare hole for future use.
2. Contractor to ensure box installation is watertight.
3. Provide approximately 7 m of pigtails for power conductors for future termination to the belvedere light. Seal each conductor end to prevent water from entering the insulation. Pigtails shall be coiled and protected from damage and placed inside belvedere light post housing.

NOTES:

1. For location of bike path light fixtures and belvedere lights, see sheets E-135 through E-140.
2. All conduit connections shall be watertight.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 74 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Modify strong motion detection system including, but not limited to, relocate sensor enclosures, reroute conduits and cable, and revise cable material and pull box connections.

Revise Special Provisions Section 10-3.18 "STRONG MOTION DETECTION SYSTEM," subsection "MATERIAL," subsection "Cables and Conductors," as shown on sheet 2 of this change order.

The following revised plan sheets detail the changes addressed in this change order: 271R3, 329R1, 330R1, 331R1, 332R1, 334R2, 334S1, 335R2, 336R1, 337R1, 338R1, 339R1, 340R1, 341R1, 342R1, 343R2, 344R2, 345R1, 346R1, 347R1, 348R1, 349R1, 350R1, 402R1 and 403R1 (of 1204) as shown on sheets 3 through 27 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 376, 402R0, 463 and 726R0 with respect to changes listed above.

For this work, the Contractor will receive a lump sum of $55,604.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum.....$55,604.00

Estimated Cost: Increase ☒ Decrease ☐ $55,604.00

By reason of this order the time of completion will be adjusted as follows: 0 Days

Submitted by

Signature Kannu Balan **Resident Engineer** Kannu Balan, Senior T.E. **Date** 6-28-11

Approval Recommended by

Signature W. Shedd for **Supervising Bridge Engineer** Richard Morrow, Sup. B.E. **Date** 6-28-11

Engineer Approval by

Signature FOR SIEGENTHALER **Principal Transportation Engineer** Peter Siegenthaler, Prin. T.E. **Date** 11 JULY 2011

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 30 JUN 11

Special Provisions changes:

1. In the Special Provisions, Section 10-3.18, " STRONG MOTION DETECTION SYSTEM", the subparagraph "Cables and Conductors" under "MATERIAL" paragraph is revised as follows:

Cables and Conductors

A. **Seismic Sensor Cable**: Seismic sensor cable, SSC, shall be four twisted pairs stranded tinned copper conductors, AWG No. 22 (7 x 30 strands), insulation 0.18 mm thick, individually shielded pairs with an aluminum polyester shield and AWG No. 22 stranded tinned copper drain wire for each pair, overall nominal outside diameter of 7.6 mm or less and outer jacket of 0.23 mm thick. Cable shall be instrument cable, NEC rated CLP2 plenum cable rated for 150°C. Cable shall be ~~similar to Belden plenum cable, Catalog No. 87778 except with only four pairs~~ **Consolidated Electronics Wire & Cable, product no. SX00-55226-1 or equal** and having a color code as specified below:

1st Pair	red, black
2nd Pair	white, brown
3rd Pair	blue, violet
4th Pair	yellow, orange

~~Seismic sensor cable shall be United Wire and Cable Co., Inc., Consolidated Wire and Cable, or equal.~~ Cable spools shall be of sufficient length to allow cables to be installed without splices from the sensor enclosures to the recorder cabinets as shown on the plans.

B. **Telephone Cable**: Telephone cable shall be waterproof filled-sheath, ISDN rated cable with four twisted pairs, individually shielded stranded conductor, minimum AWG No. 22 tinned copper, polyethylene insulated, with a foil aluminum-polyester shield, and chrome PVC jacket rated for 300 V. Cable spools shall be of sufficient length to allow the cables to be installed without splices from telephone service point to the seismic recorders.

C. **Interconnect Cable**: Interconnect cable, IC, shall be EIA RS-485 applications cable, Plenum type, NEC rated CL2P for temperature of 150°C. Cable shall be ~~similar to Belden cable No. 9844 but plenum rated~~ **Consolidated Electronics Wire & Cable, product no. SX00-55226-2 or equal.** The cable shall have eight tinned-copper, insulated conductors (4 twisted pairs). Overall aluminum-polyester shield and 24 AWG stranded tinned copper drain wire. Overall tinned copper braid shield (90 percent coverage). Overall nominal O.D. of 8.9 mm or less, with outer jacket of 0.23 mm thick. Color code shall be as specified below:

1st Pair	White/Blue Stripe, Blue/White Stripe
2nd Pair	White/Orange Stripe, Orange/White Stripe
3rd Pair	White/Green Stripe, Green/White Stripe
4th Pair	White/Brown Stripe, Brown/White Stripe

~~Interconnect cable shall be United Wire and Cable Co., Inc., Consolidated Wire and Cable, or equal.~~

Conductors: Conductors shall conform to "Conductors and Wiring" specified elsewhere in these special provisions.

CCO DESCRIPTION:
Strong Motion Detection System

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	501 Day(s)	20 %	1

THIS CHANGE ORDER PROVIDES FOR:

Modifying strong motion detection system including relocating sensor enclosures, rerouting conduits and cable, and revising cable material and pull box connections.

Revising Special Provisions Section 10-3.18 "STRONG MOTION DETECTION SYSTEM," subsection "MATERIAL," subsection "Cables and Conductors."

This change order resolves structural conflicts and accommodates changed penetration points. Conduits are rerouted at the Tower Head to accommodate changed sensor locations and also for aesthetics. Conduits running vertically up the Tower have been rerouted to cable trays for ease of installation. The strong motion cable material specification is revised due to the unavailability of specified material and to be consistent with cables used on the Skyway area.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 376, 402R0, 463 and 726R0 with respect to changes listed above.

The total cost of this change order is $55,604.00, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Rick Morrow (Sup. BE), Mike Forner (Principal TE), Patrick Treacy (HQ Oversight), Ken Terpstra (Proj. Manager), Carl Petersen (CDMG), Wenyi Long (Design Oversight), Lina Ellis (Maintenance), Pat Hiplay (CT Earthquake Department) August 6, 2008, and Jing Chen (District Design) November 12, 2008.

The Resident Engineer requests Headquarters CCO Desk "Issue and Approve".

SCALE 1:25

SHEET NOTES

1. Coil 3 meters long of cable for each circuits inside the pull boxes.
2. Provide hooked cable support grips for cable or groups of cables at each liquidtight flexible metallic conduit inside the pull box.
3. Pull Box shall be fabricoted of Nemo 4X stainless steel, type 304. Pull Box shall be of reinforced construction to provide verticol support at bottom side of box for weighted conduit ond cables inside. The top side of the Pull Box shall be reinforced and provided with hooks for cable support grips inside the pull box.
4. Electricol conduit design between Eastbound Structure and Main Tower is based on the maximum expansion of 1000 mm oll directions.

NOTES

1. For locotion of sleeves Eastbound Structure PP-40 and PP-41, see Structural Plans.
2. Each liquidtight flexible metallic conduit shall be provided with #6 green insulated ground conductor outside the conduit.

FOR REVISION ONLY

GENERAL NOTES:

1. Install strong motion sensor cables continuous without splices from strong motion sensor enclosure to the strong motion recorder boxes. No splices or tops are permitted.
2. Provide 600 mm slack in each strong motion sensor cable inside each strong motion sensor enclosure box, junction box and pull box.
3. Provide 700 mm slack in each strong motion sensor cable inside each strong motion recorder box enclosure.
4. Unless otherwise shown or specified, all strong motion junction boxes shall be stainless steel NEMA Type 4X with hinged door and door clamps.
5. Install a stainless steel NEMA Type 4X pull box every 180 meters along horizontal conduit runs and every 45 meters along vertical runs. Each of these pull boxes shall be 304 mm x 304 mm x 152 mm (unless noted otherwise) with a hinged door and door clamps. Pull boxes are not shown on the plans for clarity.
6. Install stress relief cable support strops in all boxes along vertical runs.
7. Install Strong Motion Recorders #2 box A, #2-box B and #3 enclosures on service platform #5 (shown on sheet E-72), and tower (shown on sheet E-366), respectively.
8. For other work related not shown on this drawing, see electrical special provisions.
9. References:
   - For cable block diagrams, see sheets E-382, E-383 and E-384.
   - For strong motion sensor enclosures, see sheets E-377 and E-378.
10. 1

SHEET NOTES:

(1) For locations of sensors at Pier W2 see sheets E-362 and E-363.

(2) For locations of sensors at mid point between W2 and Tower see sheets E-364 and E-365.

(3) For locations of sensors at Tower see sheets E-366, E-367 and E-368.

(4) For locations of sensors at 1/3 distance between Tower and Pier E2 see sheets E-365 and E-369.

(5) For locations of sensors at 2/3 distance between Tower and Pier E2 see sheet E-370.

(6) For locations of sensors at Pier E2 see sheets E-371 and E-372.

(7) For locations of sensors at Hinge A see sheets E-373 and E-374.

FOR REVISION ONLY

THIS PLAN IS ACCURATE FOR ELECTRICAL WORK ONLY.

SHEET NOTES:

1. Punch hole for 27C.
2. 27C, schedule 40 PVC, 90 °elbow (female threaded-female slip).
3. 27 chase nipple, zinc.
4. 27C, schedule 40 PVC. Secure item in place with PVC cement (length as required, cut after installation).
5. Hose screen, Stainless steel screen material (used in washing machine).
6. 3.2 mm diameter drain hole. Drill at the lowest point of the box to drain ony moisture.
7. Enclosures for Strong Motion Recorders #3 and #2 shall be Caltrans Type S, corrosion resistont without shelves or police panels.
8. See Sheet E-379 for nameplate schedule for engravings and materials.

NOTES:

1. The high and low vent sides shall be selected os required to facilitate conduit entrances and mounting location.
2. Strong motion sensor enclosures and mounting plates shall be installed parallel and perpendicular to the structure unless otherwise noted. (2)
3. Strong motion enclosures shall be mounted to concrete with concrete fasteners, 6.35 dia, 40 mm depth embedment and allowable working load of tension at 1.223 kN and shear 2.91 kN. Enclosures mounted on structural steel shall be drill and tap. The strong motion sensor mounting plate shall be bolted through the enclosure to the structural steel. All hardware shall be stainless steel. (2)
4. For Downhole Enclosures details, see Sheet E-366A. (2)

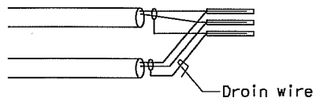
PIGTAIL SPLICING DETAIL

(1) (THIS DETAIL IS APPLICABLE TO CABLE SSC IN ALL STRONG MOTION SENSOR ENCLOSURES)

SPLICING INSTRUCTIONS:

1. Strip outer jacket cables back 80 mm.
2. Separate individual conductors and drain wires and splice matching colored wires and drain wires using jelly filled splice connectors and crimping tool.
3. Secure cables with cable straps approximately 50 mm from end of outer jacket.
4. Tape from cable strap to splice with vinyl electrical tape (3M Scotch Super 88 or equal). Tape shall cover all splices. Coat with sealing compound or equal, then tape with self-fusing tape and an outer layer of vinyl electrical tape.

   Note: Insure crimps are secure before taping.



SPLICING DETAIL

1 Pair spliced (Typ. of 4)

SHEET NOTES:

(1) The Contractor shall extend and coil 5 meters of cable in manhole 27. All cables shall be tagged with circuit numbers as shown.

(1) (2) For seismic sensor cables see YBI Transition Structures.

NOTES:

1. For other related work not shown on this drawing, see Electrical Special Provisions.
2. References:
   - For general notes of the strong motion detection system, see sheet E-361.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
3. All conduits and fittings located outside or inside pier shall be rigid galvanized steel, PVC coated.
4. Secure enclosure to concrete (1) with manufacturer's recommended mounting and approved by the Engineer.

SHEET NOTES:

1. Strong Motion sensor cable Type SSC, unless otherwise indicated.
2. Strong Motion Recorder #3 consists of one 18-channel recorder and two 12-channel recorders, connected to a total of 39 sensors.
3. Sensor enclosure with identification number as shown.
4. Sensor enclosure 23-3 at tower elevation 3M. Sensor orientation assembly at minus 60M. Installation of downhole sensor package and associated cabling by others.

NOTES:

1. For other related work not shown on this drawing, see Electrical Special Provisions.
2. References:
   - For general notes of the strong motion detection system, see sheet E-361.
   - For circuit and conduit/cable tray schedules, see sheets starting at E-401.
3. All conduits and fittings located outside or inside pier shall be galvanized rigid steel, PVC coated.
4. Secure enclosure to concrete with manufacturer's recommended mounting and approved by the Engineer.
5. Strong motion recorder #3 located at tower, see sheet E-366.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 76 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

ITEM 1.

Adjust the seismic joint blockout and barrier reinforcement in the vicinity of Hinge K.

The following revised plan sheets detail all changes in this change order: 891R2 and 892R1 (of 1204) as shown on sheets 2 through 3 of this change order.

Adjustment of Compensation at Lump Sum Price..... $50,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108S1 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108S1 to prevent a double payment. Total amount paid under CCO 108S1, and to be credited to this change, is $50,000.00.

Adjustment of Compensation at Lump Sum Price..... <$50,000.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation for work pursuant to this change order	$50,000.00
(ITEM 2) Amount paid under CCO 108S1 for this change order	<$50,000.00>
Total net pay for this change order	$0.00

Contract time is addressed in CCO 108S1 for all work identified in this change order. Therefore, contract time will not be adjusted in this change order.

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Submitted by

Signature Kannu Balan **Resident Engineer** Kannu Balan, Senior.T.E. **Date** 7-2-10

Approval Recommended by

THIS CHANGE ORDER PROVIDES FOR:

Providing Quality Assurance (QA) improvements for the Orthotropic Box Girder (OBG), and Tower assemblies. Quality Assurance shall be improved by increasing welding report requirements and by implementing a Quality Assurance database along with a physical tagging procedure (green tagging procedure) for fabricated assemblies. The tagging procedure, in conjunction with the database system, establishes a process that tracks, verifies, and documents incremental progress in real time for fabricated sub-assemblies and assembly stages.

Quality Control (QC) is the responsibility of the Contractor and Quality Assurance (QA) is the prerogative of the Engineer, as defined under the Standard Specifications and the Special Provisions. The established practice of the Department's QA program is such that QC processes are verified independently and separately but not until the fabricator has completed their QC process. The Department is required to accept all fabricated work, in accordance with the QA process, prior to shipment.

The SAS Orthotropic Box Girder (OBG) and tower are comprised of thousands of welded steel stiffened members. Multiple members are then joined and welded into larger sub-assemblies. All members and sub-assemblies must meet QA requirements before incorporation into larger assemblies. Resolving QA issues once members are assembled and buried in larger assemblies will be difficult without adversely impacting the schedule. Therefore, it is necessary to improve the Department's QA process to ensure the contract requirements are met continuously throughout fabrication.

Contract Special Provision Section 8-3, Welding, subcategory "Welding Quality Control", requires Contractor submission of QC welding reports every 10 days for welding completed on the project. This information is delivered in large volumes with numerous reports for completed welding non-destructive testing (NDT), repairs, repeated NDT, heat straightening, daily production logs and other documents. The contract requires QC inspection, testing, and reporting on all welding related work. However, the contract does not specify formatting or organization, of the information, and reports to be submitted.

The large volume of Contractor QC reporting documentation along with no contract specified formatting or organizational requirements has created serous challenges for the Department to fulfill it's QA responsibilities in a timely manner. QA process inefficiencies are causing delays to the verification and QA acceptance process that are difficult to recover from as the workload and documentation volume increases. In addition, there is also no contractually required means to enforce traceability between the subassemblies and the submitted weld reports.

This change order provides enhanced weld reporting, a Quality Assurance database along with a fabricated assembly tagging procedure (green tagging procedure). The implementation of the database system will provide traceability, organization, and reporting functions, which will be utilized in conjunction and to support the physical tagging procedure. These enhancements will allow the Department's QA personnel to verify the QC process in a timely fashion, mitigating possible schedule delays.

The physical tagging (Green Tagging) procedure in conjunction with the QA database will provide a uniform procedure for in-process inspection verification and acceptance of OBG and Tower components. The Green Tagging procedure along with QA database provides the following:

1. A process that creates a direct link between subassemblies and welding reports.
2. Allows the QC/QA process to be executed efficiently.
3. Information is accessible, available, and sort able in real-time.
4. Will ensure records are reconciled before components and assemblies are shipped.
5. Subassemblies will be accepted and certified upon completion.
6. Reports (data packets) for each assembly or sub-assembly shall be generated based on Department needs.
7. Provides a progress tracking capability for fabricated sub-assemblies and assembly stages.

This change order reduces the Department's exposure to potential fabrication delays caused by the discovery of unacceptable work late in the fabrication process or after shipment due to inefficiencies in the performance of QA acceptance. This change provides a searchable and traceable database documenting the QC/QA procedures for OBG and Tower components fabricated in China.

Payment to provide and input into the QA database system and implement the physical tagging (Green Tagging) procedure will be at Extra Work at Agreed Unit Price in the amount of $2,893,461.00. Payment to provide access and use of the Contractor's database, data base software, software training, and compensation for work previously authorized by Department Authority to Proceed (ATP) will be paid as Adjustment of Compensation at Agree Lump Sum in the amount of $1,105,863.00. This change is estimated to total $3,999,324.00, which can be financed from the contingency fund. A detailed cost estimate is on file.

This change order work is estimated for six months with the exception being the agreed lump sum items. This change will be re-evaluated after approximately five months to determine funding needs and/or modifications needed to continue the improved QA process. If it is determined that the improved QA process will continue through the duration of fabrication, then additional cost will be determined based upon past production rates and learning curves using a measured-mile approach.

The Contractor and the Department mutually agree that this change does not warrant a time adjustment, as it does not affect the controlling operation.

This change order has concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Patrick Lowry (METS), Ken Terpstra (Project Manager), Pete Siegenthaler (Principal TE), Mike Forner (Principal TE) and Marwan Nader (Project Engineer). TBPOC approval was obtained on 11/6/08 for the amount not to exceed $4,000,000.00. Design and Maintenance concurrences are not required for this change.

The Resident Engineer received an Issue and Approve (I&A) from the Division of Construction on 12/4/2008 for this change.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 77 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate

This change order provides Quality Assurance (QA) improvements for the Orthotropic Box Girder (OBG), and Tower assemblies. Quality Assurance shall be improved by increasing welding report requirements and by implementing a Quality Assurance database along with a physical tagging procedure (green tagging procedure) for fabricated assemblies. The tagging procedure, in conjunction with the database system, establishes a process that tracks, verifies, and documents incremental progress for fabricated sub-assemblies and assembly stages.

Extra Work at Agreed Unit Price:

Input the following information into the QA database:

No.	Description	No.	Description	No.	Description
1	OBG or Tower	14	Joint Type	27	MT Acceptance Date
2	Lift	15	(Item Deleted)	28	Name of MT Level II
3	Segment	16	Filler Metal	29	Date of UT
4	Assembly	17	Date Welding Started	30	UT Result
5	Sub-Assembly	18	Date Welding Completed	31	Length of UT Defects
6	Plate Number	19	Date of VT	32	UT Acceptance Date
7	Weld ID	20	VT Result	33	Name of UT Level II
8	Total Weld Length	21	Length of VT Defects	34	Date of RT
9	Length of Defect	22	VT Acceptance Date	35	RT Result
10	Repair Report (Summarize)	23	Name of VT CWI	36	Length of RT Defects
11	Welder ID	24	Date of MT	37	RT Acceptance Date
12	Weld Process	25	MT Result	38	Name of RT Level II
13	Weld Position	26	Length of MT Defects		

The above listed input information is required per Special Provisions section 8-3.01 Welding and the Welding Quality Control Plan (WQCP), with the exception of "Item No. 8 - Total Weld Length" and summarization required to input "Item No. 10 - Repair Report." Update the Quality Assurance Database (QAD) daily with the latest information listed above.

Implement the following Quality Assurance Procedure (Green Tagging) for the Tower and Orthotropic Box Girders (OBG):

1. Purpose

1.1 This written procedure establishes the guidelines that shall be followed for In-Process and final Quality Assurance Acceptance of components on the SFOBB Project including the following

1.1.1. Production planning and scheduling
1.1.2. Documentation verification
1.1.3. Approval request notification

2. References

2.1. The following documents shall be used as guidelines for developing this written procedure:

2.1.1. QA Approval form
2.1.2. Fabricators Welding Reports
2.1.3. Welding Report Summary Log
2.1.4. Quality Assurance Acceptance package
2.1.5. SFOBB Status tags

2.2. This procedure is intended to provide a uniform procedure for all Quality Assurance (QA) and Quality Control (QC) personnel representing the Fabricator, the Contractor, and the Department. A team consisting of members from all parties shall be established to execute the In-Process inspection verification of components.

2.3. The In-Process inspection verification team shall have the authority to adopt necessary processes required to facilitate and expedite the acceptance described in this procedure.

3. Production Planning and Scheduling

3.1. The Contractor's Fabrication Manager shall be the person designated for the responsibility of production planning and scheduling.

3.2. Prior to submitting components for formal acceptance the Contractor shall implement In-Process verification that shall include the following:

3.2.1. The yellow In-Process tag (figure 1) shall be affixed to the component, by the Contractor's representative, before part is moved from welding station. The yellow tag shall document that the items listed below have been completed.
3.2.2. All contract required non-destructive examination (NDE) has been performed and is documented on the component as being acceptable.
3.2.3. All contract required visual inspections have been performed and is documented on the component as being acceptable.
3.2.4. All critical and non-critical weld repairs have been completed and re-inspected by the original method of inspection and are documented on the component as being acceptable.
3.2.5. All Heat Straightening Request and Internal Heat Straightening Reports have been completed and the affected welds inspected by the appropriate NDT method.
3.2.6. All Non-conformance reports issued by the Fabricator, Contractor, or Department for material and/or workmanship have been corrected.
3.2.7. All contract required dimensional inspections have been performed and found to be acceptable as part of the dimensional control plan.
3.2.8. Upon completion of welding, NDT and dimensional inspections the team described in section 2.2 shall mutually agree upon the status of the component and complete the yellow In-Process tag by initialing in the appropriate area.
3.2.9. If the specified inspection method is not applicable, the inspector shall write NA.
3.2.10. Tag numbers shall be issued and controlled by the Contractor's Quality Control Manager QCM.
3.2.11. Upon this mutual agreement, the team described in section 2.2 shall indicate acceptance of the In-Process verification on the QA Approval form (Figure 4). The Contractor shall submit the QA Approval form to the QCM for document verification as described in section 4 of this procedure.
3.2.12. After QA approval the yellow In-Process tag may be removed. The green Accept tag (figure 2) shall be placed by the QCM or designated representative.
3.2.13. Store components in accordance with approved Fabrication Procedure and the Contract Provisions.

3.3. The QA Approval form shall include the weld joint number (s) requesting approval, subassembly number, assembly number, grade and date. The QA Approval form shall be issued for the following subassemblies:

1) OBG

a. Bottom plates before assembly into three-panel unit.
b. Side Plates before assembly into three panel unit or corner assembly.
c. Edge Plates before assembly into corner assembly.
d. Deck Plates before assembly into three panel unit and installation of diaphragms or Corner assembly.
e. Longitudinal Diaphragms before segment assembly.
f. Floor beams before segment assembly. Applicable to FL-1, FL-2, FL-3, and whole unit assembles.
g. All three panel assemblies before they go into segment assembly and super panels.
h. Corner assemblies.
i. Segment assembly before painting and lift assembly.
j. Lift assembly and painting before loading onto ship.

2) Tower

a. Diaphragms before assembly into tower shaft.
b. Skin plates before stiffeners are welded onto it.
c. Skin plates with stiffeners before assembly into tower shaft.
d. Tower shaft assembly before painting.
e. Lift assembly and painting before loading onto ship.

3) Crossbeams

a. Bottom plates before assembly.
b. Side Plates before assembly.
c. Deck Plates before assembly.
d. Crossbeam assembly and painting before loading onto ship including matching to OBG.

4) Counterweights before installation onto the OBG or prior to shipping.

5) Suspender bracket before installation onto the OBG.

6) Bike Path brackets before shipping.

7) Bike Path prior to shipping.

8) Barrier prior to shipping.

9) Tower struts prior to shipping.

10) Cross Braces before shipping.

11) Other Sub-assemblies as directed by the Engineer.

3.4. A red Outstanding Repair tag (figure 3) shall be affixed near the yellow tag when any HSR, CWR or NCR is written to indicate an item that requires correction and/or closure prior to acceptance of the item. The red tag shall indicate the reason for tagging (specific HSR, CWR or NCR), the issuing body (the Fabricator, the Contractor, or the Department) and the date issued.

3.5. The issuing and placement of the red outstanding repair tag shall be the responsibility of the contractor's QC Department.

4. Documentation Verification

4.1. The Contractor's Quality Control Manager is responsible for the verification of documentation.

4.2. Following receipt of the QA Approval form, the Contractor's QC Department shall conduct a document review process that shall insure the following:

4.2.1. All contract required nondestructive examination (NDE) has been performed and reported acceptable as part of the weld report submitted by the Fabricator.
4.2.2. All contract required visual inspections have been performed and reported as acceptable as part of the weld report submitted by the Fabricator.
4.2.3. All critical and non-critical weld repairs have been re-inspected and reported to be acceptable per the original inspection method.
4.2.4. All Heat Straightening Requests and Internal Heat Straightening Reports have been completed and the appropriate NDT performed and reported to be acceptable per the original inspection method.
4.2.5. All related Non-Conformance Reports (NCR's) issued by the Fabricator, the Contractor, or the Department for material and/or workmanship shall be closed.
4.2.6. All contract required dimensional inspections have been performed and reported as acceptable as part of the dimensional control / dimensional verification plan.
4.2.7. Following the document review process the contractor's QC shall notify the fabricator's QC of any omitted or missing reports, records or logs. Notification shall be submitted in writing.
4.2.8. Omitted reports, records and logs shall be submitted and accepted by the Contractor prior to proceeding with formal acceptance by the Department as described by section 5 of this procedure.
4.2.9. A Weld Summary Log shall be created for all welds represented by the approved QA Approval form.
4.2.10. Acceptable QA Approval forms shall be signed by the Contractor's QA Manager and attached to the Weld Summary Log representing the components listed and shall be retained.

5. Approval Request Notification

5.1. The Contractor shall initiate approval Request Notification.

5.2. The contractor's QC shall submit the following to the Department for Quality Assurance Acceptance as part of the Quality Assurance Acceptance Package.

5.2.1. QA approval form.
5.2.2. Welding Summary Log.
5.2.3. Dimensional verification reports (when applicable).

The following mutually agreed, all-inclusive monthly unit rates include straight time and overtime and constitute full compensation for the work, including all markups. The all-inclusive mutually agreed monthly unit rate will be paid for all staff that work 50% or more of the calendar days and are dedicated to the extra work described. The agreed unit prices are based on an exchange rate of 6.800 RMB/USD. No adjustment in compensation will be made for exchange rates that vary by less than 0.300 RMB/USD, i.e., between 6.500 RMB/USD and 7.100 RMB/USD. Should the exchange rate vary by more than 0.300 RMB/USD, a lump sum adjustment in compensation, increase or decrease, will be made at the end of the completion of the work described in this CCO. The adjustment will be based on the variations between 6.800 RMB/USD and the actual exchange rate paid in excess of 0.300 RMB/USD.

Description	Agreed Monthly Unit Rate in RMB's	Estimated* Monthly Unit Rate in USD	Estimated Man-months	Estimated Total
1. Data Processing & Input by Local Consultants	46,152	$ 6,787	50	$ 339,350
2. Data Processing & Input by Fabricator (ZPMC)	31,198	$ 4,588	76	$ 348,688
3. Data Collection & Green Tagging Inspectors	62,662	$ 9,215	175	$ 1,612,625
4. Contractor Inspectors and Oversight Personnel	NA	$ 16,937	35	$ 592,798
Total Est. Extra Work at Agreed Unit Price (6 Month Period)				**$ 2,893,461**

The Contractor must submit a monthly log of the additional labor force dedicated for the implementation of this contract change order. The log shall include the individual's name, labor description category, and days worked. A representative of the Contractor and a representative of the Department shall sign the monthly log prior to submittal for payment. This extra work at agreed unit price has been estimated for a duration of six (6) months, agreed prices and estimated units will be reevaluated with issuance of supplemental change order at the Contractor or Departments request.

Estimated Extra Work at Agreed Unit Price ..... $ 2,893,461.00

Adjustment of Compensation at Agreed Lump Sum

QUALITY ASSURANCE DATABASE

The Contractor shall provide web based Internet access capable of performing all task specified in this change order for use by the Contractor and Department personnel. The database shall be backed up off-site. The Department shall receive full access and use of the database. The Contractor shall implement the QA database for all information identified in this change order.

SOFTWARE AND HARDWARE

QA database hardware and software, including applicable licenses and annual maintenance renewal fees, shall be provided by the Contractor.

The Contractor shall submit, for approval by the Engineer, all software specifications the Contractor proposes to furnish. All database technical support and repair shall be performed by the Contractor. Software maintenance, including licensing and other fees shall be maintained for the duration of the change order. The Contractor shall instruct and assist the Engineer in the use of the software. Computer software shall remain the property of the Contractor and shall not be disabled until 30 days after the Contractor has received the final estimate, or as authorized by the Engineer.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 77 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

TRAINING

After approval of the database system by the Engineer, the Contractor shall provide an initial 8-hour training session to the Department in the use of the software.

The Contractor shall provide training sessions, at 4 hours per session. The Contractor can expect subsequent training sessions to be distributed throughout the duration of the change order until all 8 sessions have been completed, refer to Database System Cost Break-Down for quantity and units.

Each training session shall accommodate up to 12 Department Employees. Training sessions shall be at a location, date and time acceptable to the Engineer.

The Session Trainer shall be approved by the Engineer.

DATA DELIVERY REQUIREMENTS

All documents generated for the Department shall also be supplied in an Adobe (.pdf) file format that is generated digitally, not scanned.

PAYMENT

The agreed lump sum price paid for the database system shall include full compensation for furnishing all labor, material, tools, equipment, and incidentals, and for doing all the work involved in providing and maintaining the database system.

If the Contractor fails to complete any of the work in providing and maintaining the QA Database required by this section, the Engineer shall make an adjustment in compensation in conformance with the provisions in Section 4-1.03C, "Changes in Character of Work," of the Standard Specifications for the work not performed. Adjustments in compensation for QA Database will not be made for any increased or decreased work ordered by the Engineer in furnishing QA Database.

The agreed lump sum price paid shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved.

Agreed Lump sum payment resolves all prior cost related to this change and association with authority to proceed issued by the Department. For this work, the Contractor will be paid the Agreed Lump Sum of $ 1,105,863.00; this sum constitutes full compensation, including markups, for this change.

Adjustment of Compensation at Agreed Lump Sum.....$ 1,105,863.00

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$3,999,324.00**

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 77 Suppl. No. 1 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate

This supplemental change order provides additional funds for Quality Assurance (QA) improvements for the Orthotropic Box Girder (OBG), and Tower assemblies. Funds are also provided for electronic version of QA database and other related work.

Extra Work at Unit Price:

Provide additional funds for the continued implementation of the Quality Assurance improvements. The following mutually agreed, all-inclusive monthly unit rates include straight time and overtime and constitute full compensation for the work, including all markups. The all-inclusive mutually agreed monthly unit rate will be paid for all staff that work 50% or more of the calendar days and are dedicated to the extra work described. The agreed unit prices are based on an exchange rate of 6.800 RMB/USD. No adjustment in compensation will be made for exchange rates that vary by less than 0.300 RMB/USD, i.e., between 6.500 RMB/USD and 7.100 RMB/USD. Should the exchange rate vary by more than 0.300 RMB/USD, a lump sum adjustment in compensation, increase or decrease, will be made at the end of the completion of the work described in this CCO. The adjustment will be based on the variations between 6.800 RMB/USD and the actual exchange rate paid in excess of 0.300 RMB/USD.

Description	Agreed Monthly Unit Rate in RMB's	Converted Monthly Unit Rate in USD	Estimated Man-months	Estimated Total
1. Data Processing & Input by Local Consultants	46,152	$6,787	240	$1,628,880
2. Data Processing & Input by Fabricator (ZPMC)	31,198	$4,588	407	$1,867,316
3. Data Collection & Green Tagging Inspectors	62,662	$9,215	338	$3,114,670
4. Contractor Inspectors and Oversight Personnel	NA	$16,937	70	$1,185,590
Total Estimated Cost of Extra Work at Unit Price				**$7,796,456**

The Contractor must submit a monthly log of the additional labor force dedicated for the implementation of this contract change order. The log shall include the individual's name, labor description category, and days worked. A representative of the Contractor and a representative of the Department shall sign the monthly log prior to submittal for payment. This extra work will be reevaluated with issuance of a supplemental change order at the Contractor or Departments request.

Estimated Cost of Extra Work at Unit Price $7,796,456.00

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 77 Suppl. No. 1 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

Adjustment of Compensation at Lump Sum:

The Contractor shall provide supervision, office space, and supplies required to fully support the extra work being performed at unit price in this change order. This lump sum payment provides full compensation for all support regardless of the ultimate duration of the work, including future supplemental Contract Change Orders, required to complete QA improvements in this change order.

If the Contractor fails to complete any of the work required by this section, the Engineer shall make an adjustment in compensation in conformance with the provisions in Section 4-1.03C, "Changes in Character of Work," of the Standard Specifications for the work not performed. Adjustments in compensation for QA Database will not be made for any increased or decreased work ordered by the Engineer in furnishing support for the QA Database.

The agreed lump sum price paid shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved.

For this work, the Contractor will be paid the agreed lump sum of $202,421.00, this sum constitutes full compensation, including markups, for this change.

Cost of Adjustment of Compensation at Lump Sum.....$202,421.00

Extra Work at Force Account:

Provide software and data, used and generated by this change, and additional support as directed by the Engineer. Additional work will include, but will not be limited to the following:

1. All data in a read only format.
2. Database software with full front-end capable of printing data with no restrictions, unlimited time, and a lifetime license.

Labor, equipment and material authorized by the Engineer, as necessary, will be paid in accordance with the provisions of Section 4-1.03D, "Extra Work" of the Standard Specifications and Section 5-1.24, "Force Account Payment" of the Special Provisions.

Estimated Cost of Extra Work at Force Account.....$100,000.00

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$8,098,877.00**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	30 Day(s)	1 %	4

THIS CHANGE ORDER PROVIDES FOR:

Additional funding for Quality Assurance (QA) improvements for the Orthotropic Box Girder (OBG), and Tower assemblies. Funding is also provided for an electronic version of QA database and other related work as directed by the Engineer.

The original change order work was estimated for six months with the exception being the agreed lump sum items. It was anticipated that this change would be re-evaluated to determine funding needs and/or modifications needed to continue the improved QA process. Using the measured-mile estimating approach it has been estimated that an additional $7,796,456.00 will fund the extra work at agreed unit price portion of this change through fabrication completion. Resources required to perform this work vary, which may require the Department to re-valuate this change before fabrication completion.

An agreed lump sum payment of $202,421.00 is needed to provide supervision, office space, and supplies required to fully support the extra work being performed at unit price in this change order. This support work was not funded in the original change order. The Contractor agrees that this lump sum payment provides full compensation for all support regardless of the ultimate duration of the work, including future supplemental Contract Change Orders, required to complete QA improvements in this change order.

This change also provides provisions for preserving the electronic database data generated by this change. It is anticipated that the Quality Assurance Data being gathered will need to be accessed after fabrication completion. Preserving a fully functional electronic version of the database will enable Department personnel to sort and print all the data elements after fabrication and project completion. This tool will greatly enhance the Departments abilities to create meaningful reports from millions of data elements. Additional required support, to be approved and directed by the Engineer, will also needed to support this change. This extra work at force account is estimated at $100,000.00.

This supplemental change is estimated to total $8,098,877.00, which can be financed from the contingency fund. This will result in a cumulative amount of $12,098,201.00 for this change order. A detailed cost estimate is on file.

The Contractor and the Department mutually agree that this change does not warrant a time adjustment, as it does not affect the controlling operation.

This change order has concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Patrick Lowry METS), Ken Terpstra (Project Manager), Pete Siegenthaler (Principal TE), Mike Forner (Principal TE) and Marwan Nader Project Engineer). Design and Maintenance concurrences are not required for this change.

BPOC approved this change order at their February 4, 2009 meeting.

The Resident Engineer received an Issue and Approve (I&A) from Headquarters Division of Construction for this change on /13/2009.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 77 Suppl. No. 2 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate

This supplemental change order:

- Revises, in Item 1 below, the method of payment from Extra Work at Unit Price to Extra Work at Agreed Lump Sum for implementing the Quality Assurance (QA) improvements/database specified in Contract Change Order 77, Supplements 0 and 1.
- Provides, in Item 1 below, an agreed lump sum payment of $1,410,690.00, in addition to estimated amounts previously provided in CCO 77 Supplements 0 and 1, for a total agreed lump sum payment of $12,100,607.00 for all QA improvements specified in this change order and CCO 77 Supplements 0 and 1. The total agreed lump sum payment includes all work completed to date and all future QA improvement work performed through the completion of fabrication at ZPMC's facilities in China.
- Modifies, in Item 2 below, the QA database software as needed to incorporate additional QA information, PAUT results, which was not included in CCO 77, Supplements 1 and 2, and provides for inputting PAUT test results for the Orthotropic Box Girder (OBG) deck panels into the QA database, including PAUT completed to-date and through completion of fabrication at ZPMC's facilities. Incorporating this additional QA information will be compensated for at an agreed lump sum amount of $35,000.00.
- Finalizes all cost and additional work for implementing and completing the QA database through fabrication completion at ZPMC's facilities in China regardless of the actual fabrication completion date, currently anticipated to be the summer of 2011, except as specified in this change order.

Extra Work at Agreed Lump Sum Price:

ITEM 1 – Complete all QA Improvements.

Revise method of payment from "Extra Work at Unit Price" to "Extra Work at Agreed Lump Sum" in Contract Change Order 77 Supplements 0 and 1 (CCO 77S0 and CCO 77S1), for implementing the Quality Assurance (QA) improvements. Payments made under the previous payment method, Extra Work at Unit Price, will be carried over and paid under the new payment method, Extra Work at Agreed Lump Sum.

Provide an additional agreed lump sum payment amount of $1,410,690.00 for completing all QA improvements, specified in this change order and CCO 77 Supplements 0 and 1, through fabrication completion at ZPMC's facilities in China.

This agreement is based on the scope of the existing Quality Assurance (QA) improvements as established in CCO 77S0 and CCO 77S1, which implements a database along with a process that tracks, verifies, and documents incremental progress for fabricated sub-assemblies and assembly stages.

The following table summarizes the payment revisions and additional payment provided in Item 1 of this change order:

Description	Total CCO Cost (Informational)	FROM: Extra Work at Unit Price	TO: Extra Work at Agreed Lump Sum
Revise Payment Method in CCO 77S0	$3,999,324.00	$2,893,461.00	$2,893,461.00
Revise Payment Method in CCO 77S1	$8,098,877.00	$7,796,456.00	$7,796,456.00
Add. (Item 1) Payment in this CCO 77S2	$1,445,690.00	$0.00	$1,410,690.00
Totals	$13,543,891.00	$10,689,917.00	**$12,100,607.00**

For this work, the Contractor will be paid the total agreed lump sum of $12,100,607.00, with partial payments made according to a schedule of values approved by the Engineer. This newly agreed lump sum payment amount of $12,100,607.00 is comprised of $10,689,917.00, previously provided in CCO 77 Supplements 0 and 1, and an additional agreed lump sum payment of $1,410,690.00 for completing all QA improvements through fabrication completion.

Total Cost of Extra Work at Lump Sum Price.....	$12,100,607.00
Less previously provided in CCO 77S0 and CCO 77S1	<$10,689,917.00>
(ITEM 1) Extra Work at Lump Sum (Complete all QA improvements)	$1,410,690.00

ITEM 2 – Phased Array Ultrasonic Testing (PAUT)

Modify QA database software and input all PAUT information for the Orthotropic Box Girder (OBG) deck panels. For this work, the Contractor will be paid the agreed lump sum of $35,000.00. This lump sum payment provides full compensation for furnishing all labor, materials, tools, equipment, and incidentals for doing all work required to complete work identified above.

Cost of Extra Work at Lump Sum Price..... $35,000.00

COST SUMMARY

ITEM 1 - Previously provided in CCO 77S0 and CCO 77S1	<$10,689,917.00>
ITEM 1 - Extra Work at Lump Sum (Complete all QA improvements)	$12,100,607.00
ITEM 1 Sub-Total - Extra Work at Lump Sum (Complete all QA improvements)	$1,410,690.00
ITEM 2 - Extra Work at Lump Sum (PAUT)	$35,000.00
Total net cost of this change order.....	$1,445,690.00

It is agreed there will be no further adjustment of compensation for the work specified herein and CCO 77 Supplements 0 and 1, whether fabrication is completed earlier or later than currently anticipated, and regardless of responsibility for delays to fabrication. However, additional adjustment of compensation will be considered if fabrication at ZPMC's facilities is delayed beyond January 1, 2012. This lump sum payment provides full compensation for furnishing all labor, materials, tools, equipment, and incidentals for doing all work required to complete QA improvements as specified in this change order.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$1,445,690.00**

By reason of this order the time of completion will be adjusted as follows: **0 days**

THIS CHANGE ORDER PROVIDES FOR:

- Revising the method of payment from Extra Work at Unit Price to Extra Work at Agreed Lump Sum for implementing the Quality Assurance (QA) improvements/database specified in Contract Change Order 77, Supplements 0 and 1.
- Providing an agreed lump sum payment of $1,410,690.00, in addition to estimated amounts previously provided in CCO 77 Supplements 0 and 1, for a total agreed lump sum payment of $12,100,607.00 for all QA improvements specified in the change order and CCO 77 Supplements 0 and 1. The total agreed lump sum payment includes all work completed to date and all future QA improvement work performed through the completion of fabrication at ZPMC's facilities in China.
- Modifying the QA database software as needed to incorporate additional QA information, PAUT results, which was not included in CCO 77, Supplements 1 and 2, and provides for inputting PAUT test results for the Orthotropic Box Girder (OBG) deck panels into the QA database, including PAUT completed to-date and through completion of fabrication at ZPMC's facilities. Incorporating this additional QA information will be compensated for at an agreed lump sum amount of $35,000.00.
- Finalizing all cost and additional work for implementing and completing the QA database through fabrication completion at ZPMC's facilities in China regardless of the actual fabrication completion date, currently anticipated to be the summer of 2011, except as specified in the change order.

The original QA improvements funded in CCO 77S0 were estimated for a six months period, with the knowledge that this change order would be re-evaluated to determine funding needs and/or modifications needed to continue the improved QA process. Using the measured-mile estimating approach it was estimated that an additional $7,796,456.00, provided in CCO 77S1 unit price section, would fund the QA process for another one to two years and possibly through fabrication completion. Although it was also anticipated, due to varying completion dates and resources required to perform this work, that the Department would need to again re-valuate this change before fabrication completion. Now that fabrication is well underway and the work required to complete and fully fund the QA process is understood the Department has determined that this supplemental change order, for an additional $1,445,690.00, will fully fund this work to completion.

In order to bring complete scope and funding closure to this change order it has been determined that the QA database include PAUT information and the payment terms be revised from Extra Work at Unit Price to Extra Work at Agreed Lump Sum. The Department directed the Contractor to perform additional PAUT testing of the OBG deck panels, which is not covered under any contract item or specification requirement. Incorporating the additional PAUT testing was not contemplated prior to issuing the original change order, therefore it was not included in the scope. Revising the method of payment to a lump sum will cap the cost to perform this work and significantly reduce the Departments risk too possible future cost escalation up to January 1, 2012. OBG and Tower assemblies' fabrication is currently scheduled to be complete by mid July 2011.

This supplemental change is estimated to total $1,445,690.00, which can be financed from the contingency fund. This will result in a cumulative amount of $13,543,891.00 for this change order. A detailed cost estimate is on file. The original Contractors estimate to perform this work was approximately $22 million.

The Contractor and the Department mutually agree that this change does not warrant a time adjustment, as it does not affect the controlling operation.

This change order has concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Patrick Lowry (METS), Ken Terpstra (Project Manager), Pete Siegenthaler (Principal TE), and Marwan Nader (Project Engineer). Maintenance concurrence is not required for this change.

TBPOC approved this change order on April 1, 2010.

The Resident Engineer requests an Issue and Approve (I&A) from Headquarters Division of Construction for this change.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 78 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

ITEM 1.

Modify the dimensions of the bearing block base and change the material from ASTM A572M Grade 345 to ASTM A 148 Grade 550-345 in conformance with Section 10-1.59, "STEEL STRUCTURES," subsection, "CASTING," of the Special Provisions and as shown on sheets 2 through 4 of this change order. The following revised contract plan sheets detail all changes: 733R1, 736R1 and 737R1 (of 1204).

This change order resolves the costs associated with Contractor Request For Information (RFI) 1183 and 1293 with respect to changes listed above.

For this work, the Contractor will be paid the sum of $415,271.00. This sum constitutes full compensation, including all mark ups, for this work.

Adjustment of Compensation at Lump Sum Price..... $415,271.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108 to prevent a double payment. Total amount paid under CCO 108, and to be credited to this change, is $415,271.00.

Adjustment of Compensation at Lump Sum Price..... <$415,271.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation for work pursuant to this change order	$415,271.00
(ITEM 2) Amount paid under CCO 108 for this change order	<$415,271.00>
Total net pay for this change order	$0.00

Contract time is addressed in CCO 108 for all work identified in this change order. Therefore, contract time will not be adjusted in this change order.

Estimated Cost: Increase ☐ Decrease ☐ $0.00

By reason of this order the time of completion will be adjusted as follows: 0 days

Submitted by

Signature **Resident Engineer** Brian Boal for Gary Pursell, Sup.T.E. **Date** 1 MARCH 2010

Approval Recommended by

Engineer Approval by

Signature **Supervising Transportation Engineer** Gary Pursell, Sup.T.E. **Date** 4/21/10

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) Michael D. Flowers Project Director **Date** 4-1-10

CCO DESCRIPTION: Cast Bearing Blocks at E2	PROJECT DESCRIPTION CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time	Time Adj.: This Change	Previously Approved CCO Time Adjustments	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	227 Day(s)	9 %	6

THIS CHANGE ORDER PROVIDES FOR:

Modifying the dimensions of the bearing block base and changing the material from ASTM A572M Grade 345 to ASTM A 148 Grade 550-345 in conformance with Section 10-1.59, "STEEL STRUCTURES," subsection, "CASTING," of the Special Provisions.

Plan specified bearing block material is not commercially available, therefore material will be changed. Changing the material also necessitates enlarging the bearing blocks in order to maintain strength requirements. This change order resolves Contractor Request For Information (RFI) Nos. 1183R0 and 1293R0 with respect to the changes listed above.

This work is not covered by any contract items. Therefore, payment for this work will be at Adjustment of Compensation at Lump Sum for the amount of $415,271.00. Since the cost, of $415,271.00 in this change, is included in Contract Change Order 108 Supplement 1 (CCO 108S1) Claim Settlement Report No. 1 resolution costs the net payment in this change order is zero.

A determination of the delay in completion of the contract due to work specified by this change order, has been made in CCO 108S1 and is part of the Claims Settlement Report (CSR) No. 1 for this project. Therefore, no adjustment of time is warranted by reason of this change order.

This change order received concurrence from Gary Pursell (Resident Engineer), Rick Morrow (Sup. Structure Rep), Peter Siegenthaler (Principal TE), Rich Foley (HQ Oversight), Ken Terpstra (Project Manager), Richard Land (Chief Engineer), Jon Tapping (HQ Coordinator), Tony Anziano (Toll Bridge Program Manager), Brian Maroney (Project Engineer), Wenyi Long (Design Oversight), and Lina Ellis (Structure Maintenance).

Claims Settlement Report (CSR) No. 1, for this project, revises the authority to "Issue and Approve" the changes listed in CCO 108S1 Appendices A & B. The authority to "Issue and Approve" the changes listed in Appendices A & B for the values of time and money contemplated therein has been delegated to the District for approval and approval of each of these change orders by the Headquarters CCO Desk will not be required. Since this change order is included in CCO 108S1 no Headquarters CCO Desk "Issue and Approve" is required, a copy of CCO 108S1 is attached for reference.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 80 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Revise the project limits to encompass the limits between the Yerba Buena Island (YBI) tunnel to the San Francisco Oakland Bay Bridge (SFOBB) Toll Plaza as follows:

From: 04-SF-80 KP 13.2/13.9

To: 04-SF-80 KP 12.2/KP 14.3, 04-ALA-80 KP 0.0/KP 4.0

Provide compensation for direct and indirect impacts related to extending project limits that would not have otherwise been incurred within the project limits. This includes, but is not limited to, additional insurance premiums, mobilization, marine access, exposure to insurance deductibles and other risks. For this, the Contractor will be paid the agreed upon lump sum of $500,000.00. The agreed upon lump sum is based on an anticipated range of extra work within the extended project limits being between $10,000,000.00 and $20,000,000.00. The agreed upon lump sum will be subject to re-negotiation should the total extra work within the extended project limits fall below the lower or exceed the upper limit of the anticipated range.

Compensation for additional cost and/or time impacts associated with performing extra work within the extended contract limits will be addressed in separate change orders that direct the additional work.

The Contractor will not be required to perform additional work in the extended project limits without the consent of the Contractor. Within these extended limits, the Department will relieve the Contractor of responsibility for injury or damage resulting from use by public traffic or from the action of the elements or from any other cause but not from injury or damage resulting from the Contractor's own operations or from the Contractor's negligence.

Adjustment of Compensation at Lump Sum Price.....$500,000.00

Estimated Cost: Increase ☒ Decrease ☐ $500,000.00

By reason of this order the time of completion will be adjusted as follows: 0 Days

CCO DESCRIPTION: Extend Project Limits	**PROJECT DESCRIPTION** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time	Time Adj.: This Change	Previously Approved CCO Time Adjustments	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**150** Day(s)	**6** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

Revising the project limits to encompass the limits between the Yerba Buena Island (YBI) tunnel to the San Francisco Oakland Bay Bridge (SFOBB) Toll Plaza along the Route 80 corridor in San Francisco and Alameda counties and provide compensation for direct and indirect impacts related to extending project limits that would not have otherwise been incurred. This includes, but is not limited to, additional insurance premiums, mobilization, marine access, exposure to insurance deductibles and other risks.

The project limits are being revised in order for the Contractor to perform anticipated additional work within the extended limits. This anticipated work includes the final tie-in of electrical and communication lines along the I-80 corridor between the various projects. Additional work within the extended project limits has been deleted from other completed projects or is not included on other ongoing projects.

The Contractor is in agreement with this change. However they will be given the right to refuse work within the extended contract limits although it is not anticipated that this right will be exercised. The Contractor's right of refusal is needed to ensure his forces do not become overtaxed by Department demands to perform excessive amounts of additional work. The Department will also relieve the Contractor of responsibility for injury or damage resulting from use by public traffic or from the action of the elements or from any other cause but not from injury or damage resulting from the Contractor's own operations or from the Contractor's negligence. This clause is needed in order to protect the Contractor from inadvertently being held responsible for actions by others and any possible deficiencies of previously accepted work.

This change, which extends the project limits, is the first of several anticipated changes needed to consolidate Mechanical, Electrical & Plumbing (MEP) work into the Self-Anchored Suspension contract for the San Francisco Oakland Bay Bridge (SFOBB) corridor. Anticipated additional change order work, within the extended contract limits, will be addressed in separate change orders that direct the additional work. Project MEP consolidation is in response to a Toll Bridge Program Oversight Committee (TBPOC) request to mitigate corridor risks and accelerate contract completion. In October 2008, the Department proposed consolidating all remaining MEP work from contracts EA 04-012024 (Skyway) and EA 04-0120L4 (Oakland Touchdown) onto the SAS contract. This will reduce risk by providing greater integration of equipment throughout the corridor/structure. This concept, including extending project limits and performing work through the SAS Contract, was approved by the TBPOC in the 4th Quarter of 2008.

For this change, the Contractor will be paid the agreed upon lump sum of $500,000.00, which can be financed from the contingency fund. The agreed upon lump sum is based on an anticipated range of extra work within the extended project limits being between $10,000,000.00 and $20,000,000.00. The agreed upon lump sum will be subject to re-negotiation should the total extra work within the extended project limits fall below the lower or exceed the upper limit of the anticipated range. A cost analysis is on file.

This change order has been discussed with Jon Tapping, Headquarters Construction Coordinator - Toll Bridge, in regard to the need for a Director's Order as addressed in Section 5-302 of the Construction Manual. It has been determined that this change order is within the scope of the project and therefore a Director's Order is not required.

No time adjustment is warranted, as this change order does not affect the controlling operation.

This change order received concurrence from Pochana Chongchaikit (Program Manager), Ken Terpstra (Project Manager), Todd Van Santen (Department Legal Representative), Gary Pursell (Sup. TE), Richard Morrow (Sup. TE), Peter Siegenthaler (Principal TE), Rich Foley (HQ Rep) and Jon Tapping (HQ Principal). Maintenance and Design concurrences are not required for this change.

This change order received an Issue and Approve from the Division of Construction on November 16, 2009 (A copy is attached for reference).

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 80 **Suppl. No. 1** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Revise the CCO 80 S0 liability statement as follows:

From:

The Contractor will not be required to perform additional work in the extended project limits without the consent of the Contractor. Within these extended limits, the Department will relieve the Contractor of responsibility for injury or damage resulting from use by public traffic or from the action of the elements or from any other cause but not from injury or damage resulting from the Contractor's own operations or from the Contractor's negligence.

To:

The Contractor will not be required to perform additional work in the extended project limits without the consent of the Contractor. Within these extended limits, the Department will relieve the Contractor of responsibility for injury or damage resulting from use by public traffic, any third party that the Department brings on to perform work in the extended project limits, from the action of the elements, or from any other cause but not from injury or damage resulting from the Contractor's own operations or from the Contractor's negligence.

Adjustment of Compensation at Lump Sum Price.....$0.00

Estimated Cost: Increase ☐ Decrease ☐ $0.00

By reason of this order the time of completion will be adjusted as follows: 0 Days

THIS CHANGE ORDER PROVIDES FOR:

Revising the CCO 80 S0 liability statement to relieve the Contractor of responsibility for third parties that the Department brings on the extended project limits to perform work.

CCO 80 S0 revised the project limits so the Department could have the Contractor perform additional work within the extended project limits of the Skyway and Oakland Touchdown. This supplemental change order revises the CCO 80 S0 liability statement in order to address the Contractor's third party liability concerns resulting from the Department's decision to allow third parties into the extended project limits to perform other work separate from the SAS Contract. This change order is specific to the extended project limits and is consistent with Section 10-1.10 "Cooperation" of the Special Provisions. This supplement revises the CCO 80 S0 liability statement so that the Contractor is not responsible for third parties performing work within the extended project limits.

There shall be no change in cost to the Department by reason of this Change Order. The cumulative total of CCO 80 S0 and CCO 80 S1 is $500,000.00.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has received concurrence from William Casey (Supervising TE), Ken Terpstra (Project Manager), and Rich Foley (HQ Oversight). Maintenance and Design concurrences are not required for this change.

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

ITEM 1.

Modify the Traffic Operation System (TOS) and Supervisory Control and Data Acquisition (SCADA) Remote Terminal Unit (RTU) system as follows:

- Provide model GE RX3i or equal for the SCADA RTU programmable logic controller system
- Revise Closed Circuit Television equipment
- Relocate TOS cameras at Tower elevation 144.165 M
- Revise the TOS cameras pedestals
- Reroute conduit risers on skin plate D of Northwest and Southeast shafts
- In lieu of splice cabinet at Manhole 27, fiber splice closures will be installed by separate contract

Revise Special Provisions Section 10-3.09 "PULL BOXES, SPLICE BOXES AND JUNCTION BOXES," subsection "FIBER OPTIC SPLICE CLOSURE" as shown on sheet 3 of this change order.

Revise Special Provisions Section 10-3.10 "CONDUCTORS, CABLES AND WIRING," subsection "FIBER OPTIC OUTSIDE PLANT CABLE" as shown on sheets 3 through 22 of this change order.

Revise Special Provisions Section 10-3.13 "TRAFFIC OPERATION SYSTEM" as shown on sheets 23 through 40 of this change order.

The following revised plan sheets detail the changes addressed in this change order: 149R5, 166R4, 167R4, 168R5, 169R4, 170R4, 216R2, 219R3, 284R3, 320R1, 320S1, 321R1, 322R1, 324R1, 325R1, 327R1, 328R1, 328S1, 328S2, 362R6, 363R6, 373R8, 373S1R2, 375R6, 376R5, 382R5, 383R4, 389R6, 395R7, and 407R5 (of 1204) as shown on sheets 41 through 70 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 1133 and 2921 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $354,199.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum..... $354,199.00

Estimate of Decrease in Contract Item at Contract Price:

ITEM 2.

Eliminate pan/tilt unit and video transmitter duplex data for TOS Cameras.
Revise fiber optic splice closures for TOS Cameras.

Item No. 112: Pan/Tilt Unit					
-2 EA	(-100.00%)	@	$4,500.00 /EA	=-$9,000.00	(-100.00%)
Item No. 114: Video Transmitter Duplex Data					
-2 EA	(-100.00%)	@	$3,000.00 /EA	=-$6,000.00	(-100.00%)
Item No. 119: Fiber Optic Splice Closure					
-2 EA	(-25.00%)	@	$1,300.00 /EA	=-$2,600.00	(-25.00%)

In accordance with Section 4-1.03B(3), "Eliminated Items," of the Standard Specifications, the adjustment due to the elimination of item Nos. 112 and 114 is zero.

The quantity decrease shown herein for item No. 119 when combined with the quantity shown in the engineer's estimate, and as modified by any previous change orders or revisions to dimensions made by the engineer, shall be the final quantity for which payment will be made.

Total Credit for Decrease in Contract Item..... ($17,600.00)

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Adjustment of Compensation at Lump Sum	$354,199.00
(ITEM 2) Decrease in Contract Items at Contract Prices	($17,600.00)
Total net pay for this change order	$336,599.00

This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Estimated Cost: **Increase** ☒ **Decrease** ☐ **$336,599.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

COST: **$336,599.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: **$118,400.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: TOS Modifications	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Modifying the Traffic Operation System (TOS) and the Supervisory Control and Data Acquisition (SCADA) Remote Terminal Unit (RTU) system by providing model GE RX3i or equal for the SCADA RTU programmable logic controller system, revising Closed Circuit Television equipment, relocating TOS cameras at Tower elevation 144.165 M, revising the TOS cameras pedestals, rerouting conduit risers on skin plate D of Northwest and Southeast shafts. In lieu of splice cabinet at Manhole 27, fiber splice closures will be installed by separate contract

Revising Special Provisions Sections 10-3.09 "PULL BOXES, SPLICE BOXES AND JUNCTION BOXES," 10-3.10 "CONDUCTORS, CABLES AND WIRING," and 10-3.13 "TRAFFIC OPERATION SYSTEM."

The original contract specifies cameras and programmable logic controller that are no longer available. Therefore, this change order is needed to provide compatible and available equipment. TOS cameras will be relocated to maximize the viewable area of the structure roadway and to provide safe maintainability of the equipment. The TOS camera mounting detail requires correcting on the pedestals. Conduit risers will be rerouted to resolve conflicts with the mechanical piping. The splice cabinet is larger than the manhole's access opening, therefore a fiber splice closure will be used. The pan/tilt unit and video transmitter duplex data bid items will be deleted and fiber optic splice closure bid item quantity revised to be consistent with the newer model cameras being provided.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 1133 and 2921 with respect to changes listed above.

This change order eliminates Bid Items: 112 - Pan/Tilt Unit, 114 - Video Transmitter Duplex Data, and 119 - Fiber Optic Splice Closure. This change order modifies Bid Items: 111 - Camera With Housing Enclosure, 113 - Camera Control Unit, and 118 - Fiber Optic Cable (12-Fiber Indoor/Outdoor).

The cost of this change order consists of a lump sum of $354,199.0 and a bid item credit of ($17,600.00) for a total of $336,599.00, of which $118,400.00 will be financed from provided supplemental funds and the remaining $218,199.00 from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has obtained concurrence from William Casey (Supervising TE), Ken Terpstra (Proj. Manager), Rich Foley (HQ Oversight), Wenyi Long (Bridge Design), Lina Ellis (Maintenance), and Jing Chen (District Design).

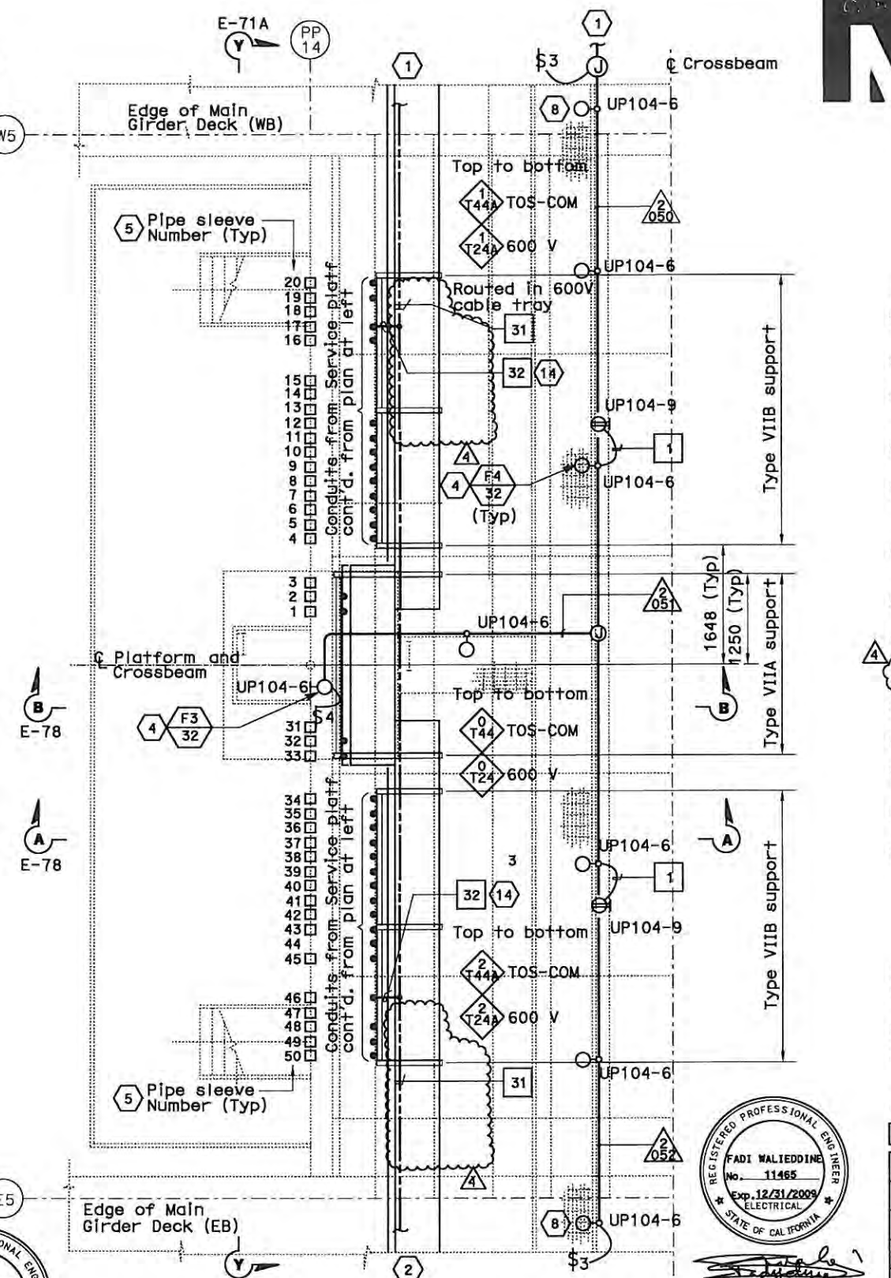
WIREWAY AND CONDUIT PLAN AT SERVICE PLATFORM

SCALE 1:40



CABLE TRAY AND CONDUIT PLAN INSIDE CROSSBEAM

SCALE 1:40

SHEET NOTES:

1. For continuation inside WB girder, see sheets E-97 and E-114B.
2. For continuation inside EB girder, see sheet E-182 and E-114B.
3. Deleted.
4. For typical lighting fixture installation see Details 2 and 3, sheet E-123.
5. Pipe sleeve without conduit going through is spare. Contractor to provide plug or cap at both ends. For location see Section Y-Y on sheet E-72A.
6. Locate light fixture approximate half way between girder wall and girder walkway.
7. For wireway numbers, see sheet E-72.
8. DELETED
9. Terminate conduits at Terminal Box #TEL-5.
10. Terminate conduits at Terminal Box #COM-5.
11. See Detail 4, Dwg E-111B for Structural rack grounding.
12. #2 Bare Copper Wire in conduit, For installation details, see sheet E-72A.
13. Ground conductor shall be protected from damage when exposed outside the structure. Route ground conductor in liquidtight flexible metal conduit for protection, unless noted otherwise on plans. For additional installation details, see Detail 7, sheet E-111A.

NOTES:

1. Reference:- For circuit, conduit/cable tray schedules, see sheets starting at E-401.
2. For wireway support details, see AS sheets.
3. For location of pipe sleeves at the utility platform crossbeams, see Typical Crossbeam Details sheets.
4. For platform elevations, see sheet E-72A.

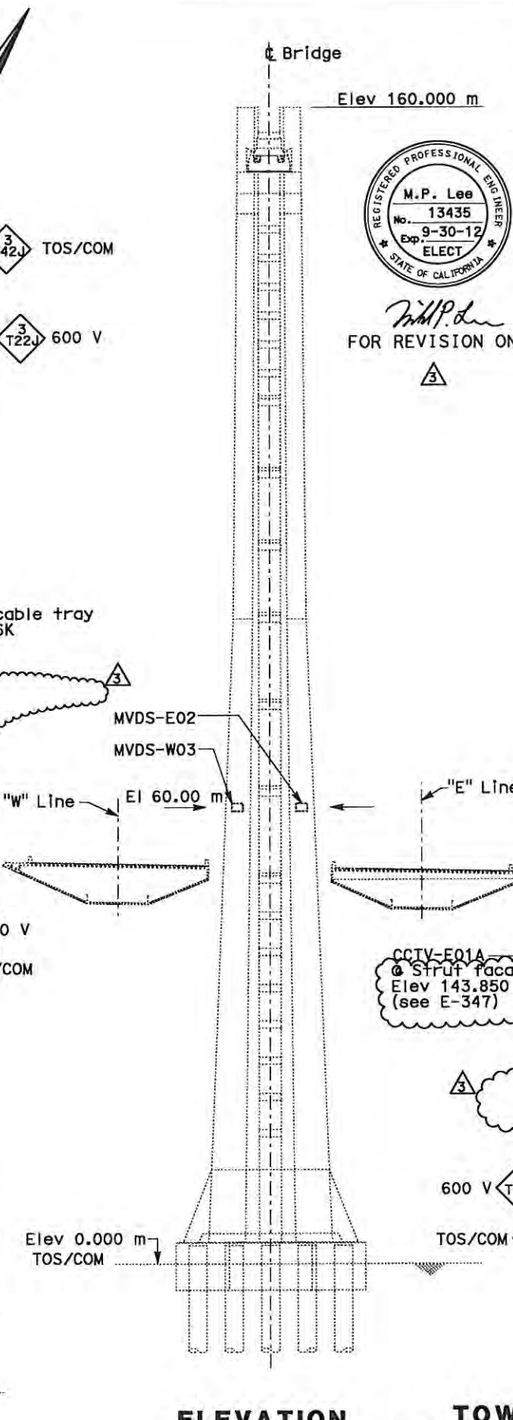
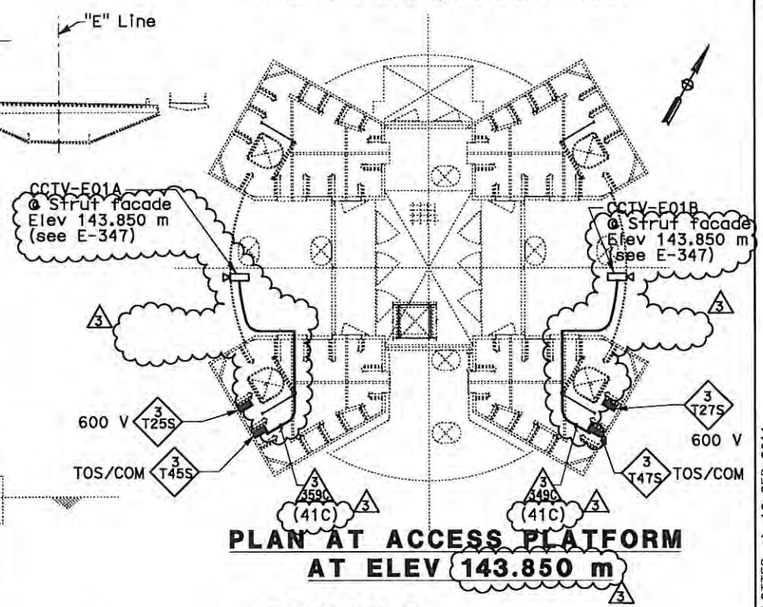
PLAN AT ACCESS PLATFORM AT ELEV 53.85 m

Some conduits and equipment are not shown for clarity.
See sheets E-264, E-264B, E-345, and E-366
for more conduit and equipment information.



ELEVATION



PLAN AT ACCESS PLATFORM AT ELEV 143.850 m

DETAILS
TOWER AND SUSPENSION CABLE TRAFFIC OPERATIONS SYSTEM CONDUIT

NO SCALE

SHEET NOTES:

1. For conduit routing to MVDS units. See elevation on this sheet and sheet E-345.
2. All conduits which thereafter cross the access walkways shall be raised to a level of at least 2438 above the grating to pass overhead, allowing free walkways on the remaining three quadrants of the platform. Door on north face of SE tower shaft shall remain accessible.
3. Conduits are at El 56.422 and connected to 600 V cable tray at this elevation inside respective tower shaft.

NOTES:

1. References:
   - For conduit and cable tray schedules, see sheets starting at E-401.
2. For Section B-B, see sheet E-264A.

CONTRACT CHANGE ORDER

Change Requested by: Contractor

CCO: 82	Suppl. No. 0	Contract No. 04 - 0120F4	Road SF-80-13.2/13.9	FED. AID LOC.:

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENT**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Modify Section 10-1.41 "TEMPORARY TOWERS," Sub-section "DRIVEN PILING", Sub-section "Driving Equipment," to allow the Contractor to use a diesel hammer to drive temporary piles. The first sentence of this section shall be revised as follows:

From: "Diesel and steam hammers shall not be used to install driven piling."

To: "Steam hammers shall not be used to install driven piling."

For this work, the Department shall receive an credit of ($10,000.00). This sum constitutes full compensation, including markups, for this change.

Cost of Adjustment of Compensation at Lump Sum .....($10,000.00)

Estimated Cost: Increase ☐ Decrease ☑ **($10,000.00)**

By reason of this order the time of completion will be adjusted as follows: 0 days

Submitted by

Engineer Approval by

Signature	Supervising Transportation Engineer	Date
Gary Pursell	Gary Pursell, P.E., Sup. TE	6/17/08

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as may otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

CCO DESCRIPTION:
Diesel Hamer for Temp Piles

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	30 Day(s)	1 %	0

THIS CHANGE ORDER PROVIDES FOR:

Modifying Section 10-1.41 "TEMPORARY TOWERS," Sub-section "DRIVEN PILING," Sub-section "Driving Equipment," to allow the Contractor to use a diesel hammer to drive temporary piles.

The Contractor is requesting this change primarily to drive battered temporary piles with a lighter hammer than the hydraulic hammer called for in the Special Provisions. The weight of the hydraulic hammer may bend the temporary piles and not allow the correct placement of these piles required to support the temporary structures. This allowance may also benefit risk management of the project since this modification will allow the Contractor to use a hydraulic hammer and diesel hammer at two different locations at the same time.

For this change, the Department will receive a credit of $10,000.00, which will be returned to the contingency. A detailed analysis of the cost adjustment is on file in the project files.

No adjustment of contract time is warranted, as this change does not affect the controlling operation.

The SAS Environmental division has approved the use of the diesel hammer on this project. The Contractor will have to implement additional BMP measures to implement this change.

This change order received concurrence from Rick Morrow (Structure Representative), Ken Terpstra (Project Manager), Mike Forner (Principal Construction Engineer), Amy Fowler (Environmental) and Patrick Treacy (Division of Construction Representative). Maintenance concurrence is not required for his change as this work is temporary in nature.

The Division of Construction approved this change on June 10, 2008. A copy is attached for your reference.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 83 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

Revise mechanical work including, but not limited to, the following:

- Add PS-2 pipe support for the 10 NPS sewer line at the W2 cap beam
- Modify the PS-7, PS-13, and PS-20 pipe supports along the bikepath
- Relocate the expansion tank at elevation 53.85 m
- Reroute dehumidifier ductwork at the east cable anchorage and tower heads
- Allow pipe supports to be field welded to the girder plates
- Provide PS-15 pipe support details
- Reroute the 4" NPS compressed air pipe over the north cable housing at the east cable anchorage
- Change spacing of the PS-3 pipe supports at the cable shroud
- Change PS-3 pipe support to bolted connection to the PS-1 and PS-24
- Any new steel and any damaged existing steel shall be cleaned, primed, and finish painted in accordance with Special Provisions Section 10-1.69 "CLEAN AND PAINT STRUCTURAL STEEL."
- Provide full compensation for additional shop drawing structural detailing related to mechanical modifications in CCO 83 plan sheets.

The following revised plan sheets detail all changes in this change order: 46R6, 47R2, 49S1R1, 50R2, 51R5, 52R3, 54R3, 55R3, 56R5, 57R6, 64R1, 65R1, 66R1, 67R1, 958R1, and 961R3 (of 1204) as shown on sheets 2 through 17 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 738, 1219, 1404R3, 1471, 1871R0, 1871R1, 2007, 2079, 2114, 2174, 2178, 2197, and 2227 with respect to changes listed above.

For this work, the Contractor will receive a lump sum price of $136,747.00. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum..... $136,747.00

Estimated Cost: Increase ☒ **Decrease** ☐ **$136,747.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature **Resident Engineer** Darryl Schram, Senior T.E. **Date** 7/23/12

Approval Recommended by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E **Date** 7/27/12

Engineer Approval by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 8-7-12

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) BRIAN A. PETERSEN - PROJECT DIRECTOR **Date** 07AUG12

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments.	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Revising mechanical work including modifying pipe supports, relocating an expansion tank, and rerouting ductwork and piping.

Through the Contractor Request for Information (RFI) process as well as internal constructibility review meetings with the designer, it was determined that revisions were needed to the mechanical pipe supports and dehumidifiers. Revisions were made to the pipe supports when conflicts did not allow them to be installed per design. The expansion tank was relocated to eliminate interference with the hatch cover. Modifications were made to the dehumidification units and ductwork to resolve constructibility conflicts.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 738, 1219, 1404R3, 1471, 1871R0, 1871R1, 2007, 2079, 2114, 2174, 2178, 2197, and 2227 with respect to changes listed above.

The total cost of this change order is $136,747.00 lump sum, which can be financed from supplemental funds. A detailed cost analysis is on file.

No time adjustment is warranted, as this change order does not affect the controlling operation.

This change order has concurrence from Rick Morrow (Supervising BE), Wenyi Long (Bridge Design), Jing Chen (District Design) and Lina Ellis (Maintenance).

PIPE SUPPORT DETAIL **PS-5**

ALL DIMENSIONS IN MILLIMETERS UNLESS OTHERWISE SHOWN

NOTES FOR PS-3

1. Contractor to provide engineered supports rated by manufacturer for the loads and movements shown in the details.
2. Support configuration shown is intended to illustrate general form of support. Actual configurations may vary depending on manufacturer, loads and movements.
3. Slide pads shall be Teflon or Ultra-HDPE running on a stainless steel plate.
4. Submit product data for each support. Each support shall be identified by a unique support model number corresponding to performance data from the manufacturer.
5. Pipe support loads act on pipe centerline.
6. Slide plates not required on supports for piping 6 NPS and smaller.
7. Minimum clamp width for use with ductile iron pipe = 75 mm U.N.O.

GENERAL NOTES FOR PIPE SUPPORTS

1. For piping outside of bridge girder, all steel surfaces of pipe supports and components shall be hot dip galvanized except supplementary steel members attached to bridge structure and components requiring field welding. Pipe supports inside bridge girder shall be painted.
2. All manufactured support components shall be load rated by manufacturer.
3. Expand all grooved and restrained joint couplings prior to setting pipe clamp locations.
4. All supports shall meet the requirements of applicable MSS Standards
5. Provide all necessary nuts, bolts, pins washers etc. to complete pipe support assemblies.
6. Holes for bolts, pins etc. shall not be torch cut unless approved by engineer.
7. All welding for pipe supports shall be per project welding specification and vendor instructions.
8. "Type" Designation for manufactured hanger components refers to MSS-SP69.
9. Support components welded to embed plates shall be centered on embed plates, U.N.O.
10. For embed plate details see drawing M-4.
11. Maintain minimum 200 mm clearance between pipe rolls and piping obstructions, ie; pipe bells, welds, branches etc.
12. Pipe supports shall not be field welded to steel box girder. All welding to girders shall be shop weld.

NOTES:

1. For all duct openings doubler plates shall equal the penetrated structural plate.
2. For walkway support beams, see "Tower Access Details No.3" sheet.
3. Galvanized steel grating with fasteners to be provided by contractor. Grating working load shall be 7.0 kN/m (145 psf).
4. Base frames, support beams and fasteners shall be detailed to fit the dehumidifier.
5. For support platform details not shown, see "Dehumidification Support Details No.3" sheet.
6. For louver locations and details, see "East Cable Anchorage Dehumidification" sheets.
7. For similar duct mounting, see Detail B on "East Cable Anchorage Dehumidification Detail No.2" in the mechanical sheets.
8. Cable shroud pipe sleeve and duct connection shall be detailed to permit airtight bolted attachment of the dehumidification ducts. See mechanical sheets.
9. At Contractor's option, a gap of up to 25 mm may be used. For 25 mm gap, caulking with backing shall be used.
10. For tower skirt, doubler PL not used.
11. For 14 mm floorbeams, the doubler plates need only extend 100 mm beyond the duct opening.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 84 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Extra Work At Agreed Lump Sum:

ITEM 1.

Reimburse ABF for engineering time necessary to investigate using load cells or calibrated jacks to accurately weigh completed box girder segments at the fabrication site prior to shipping

Extra Work at Agreed Lump Sum..... $10,000.00

ITEM 2.

The items identified above in this change order have been paid as part of CCO 108S1 resolution. Therefore, the amount due under this change order will be adjusted by the amount paid under CCO 108S1 to prevent a double payment. Total amount paid under CCO 108S1, and to be credited to this change, is $10,000.00.

Adjustment of Compensation at Lump Sum Price..... <$10,000.00>

CHANGE ORDER COST AND TIME SUMMARY

(ITEM 1) Extra work at agreed lump sum pursuant to this change order	$10,000.00
(ITEM 2) Amount paid under CCO 108S1 for this change order	<$10,000.00>
Total net pay for this change order	$0.00

There is no time adjustment pursuant to this extra work.

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0**

By reason of this order the time of completion will be adjusted as follows: **0 days**

Submitted by

Signature **Resident Engineer** Kannu Balan, Senior T.E. **Date** 7-6-10

Approval Recommended by

Signature **Supervising Bridge Engineer** Brian Boal, Sup. B.E. **Date** 7/6/10

Engineer Approval by

Signature **Supervising Transportation Engineer** Gary Pursell, Sup. T.E. **Date** 7/12/10

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

Signature (Print name and title) Michael D. Flowers Project Director **Date** 7-8-10

	FED. NO.
CCO#: **84** SUPPLEMENT#: **0** Category Code: **CHPT**	CONTINGENCY BALANCE (incl. this change) **$33,747,102.40**
COST: **$0.00** INCREASE ☐ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☐ YES ☑ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Weighing OBG Sections	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**227** Day(s)	**9** %	**6**

THIS CHANGE ORDER PROVIDES FOR:

The additional cost incurred for engineering time necessary to investigate using load cells or calibrated jacks to accurately weigh completed box girder segments at the fabrication site prior to shipping.

Section 10-1.59, "STEEL STRUCTURES," Sub-section "WEIGHT CONTROL," calls for using "nominal weights taken off the fabrication drawings increased by 3%" for the Contractor's erection analysis. Originally this CCO was developed to validate the 3% figure used in the specifications by requesting the contractor to either physically weigh the OBG segments or to measure and analyze actual plate thickness versus nominal plate thickness. Eventually the Department decided not to pursue this request but evaluate the weights by other means during the erection of the OBGs. This CCO compensates for the cost incurred by the contractor for the preparation of weighing operation at ZPMC facility.

Since the cost, of $10,000.00 in this change, is included in Contract Change Order 108 Supplement 1 (CCO 108S1) Claim Settlement Report No. 1 resolution costs the net payment in this change order is zero.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order received concurrence from Gary Pursell (Resident Engineer), Brial Boal(Sup. Structure Rep), Mike Forner (Principal TE), Ken Terpstra (Project Manager), Design of Record, Marwan Nader, P.E.

Claims Settlement Report (CSR) No. 1, for this project, revises the authority to "Issue and Approve" the changes listed in CCO 108S1 Appendices A & B. The authority to "Issue and Approve" the changes listed in Appendices A & B for the values of time and money contemplated therein has been delegated to the District for approval, therefore approval of this change order by the Headquarters CCO Desk will not be required. Since this change order is included in CCO 108S1 no Headquarters CCO Desk "Issue and Approve" is required, a copy of CCO 108S1 is attached for reference

	CO-RTE-PM SF-80-13.2/13.9
FROM: Kannu Balan, Senior TE	**FED. NO.**
CCO#: **85** SUPPLEMENT#: **0** Category Code: **CXSA**	CONTINGENCY BALANCE (incl. this change) **$113,813,658.58**
COST: **$908,787.00** INCREASE ☑ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Elevator Details	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Revising the Tower elevator. Revising ship ladder supports at 15 m. Adding grating at 127 m for a new elevator stop.

Revising Special Provisions Section 10-4.05 "ELEVATOR."

Design requested these elevator changes. Sufficient details were not provided in the Contract Plan Sheets for the elevator supports, safety enclosures, and gates, therefore these details are clarified and upgraded. ASME A17.1-1996 was in effect at the time of the project bid and the Contractor will be compensated for changed requirements due to the current ASME A17.1-2007 code. The elevator controller room enclosure height is revised to meet the new code requirements. An additional elevator stop is provided at elevation 127.85 m for maintenance operations. The elevator stop at 54.97 m and front cab door are eliminated since the Vacuum Abrasive Blasting platform was deleted in CCO 114 (Handrail and Platforms) and access is no longer needed. The elevator cab is redesigned to include windows, which added weight to the cab requiring larger motors. The door is changed to a single power assisted vertical opening to accommodate the additional weight from adding glass panels. The elevator door width and opening orientation are changed to alleviate safety concerns. The elevator cab will be painted to match the color of the bridge. The flooring and roofing materials are changed to aluminum to reduce car weight and increase durability. The maintenance landing ladder is changed to a ships ladder to provide better maintenance access, which did not leave enough clearance for the controller and it will be relocated. The buffer system is changed to hydraulic to better protect the glass cab during a buffer engagement. Safety doors will have keyed access to prevent them from opening when access gratings are removed. Safety enclosures (16 total) were added at strut facades where there are no elevator stops.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 236, 538, 818, 994R0, 1851, 1951, 1975, 2249R1, 2377, 2587, and TC-RFI-0057 with respect to changes listed above.

The total cost of this change order is $906,334.00 lump sum and $2,453.00 increase in contract items for a total of $908,787.00 for this change, which can be financed from the contingency fund. A detailed cost analysis is on file.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from Tony Anziano (Program Manager), William Casey (Supervising TE), Rich Foley (HQ Liaison), Ken Terpstra (Project Manager), Wenyi Long (Bridge Design), Jing Chen (District Design), and Lina Ellis (Maintenance).

Toll Bridge Program Oversight Committee (TBPOC) approved this change order on December 1, 2011, for a value not to exceed amount of $1.4M.

NOTES:

1. For elevator opening details, see "Tower Strut Facade Details" sheets.
2. For railing and safety handrail details, see "Tower Access Details No.8" sheet.
3. For ladder details not shown, see "Tower Access Details No.7" sheet.
4. For Detail B and access cover details, see "Tower Access Details No.9" sheet. All covers are with risers, unless noted otherwise.
5. For strut facade, see "Tower Strut Facade Details" sheets.
6. Galvanized steel grating with fasteners to be provided by Contractor. Grating working load shall be 4.8 kN/m² (100psf) unless noted otherwise.
7. Gratings at elevations 53.000, 89.000 and 139.000 shall support "VAB" equipment, to be supplied by others. Walkway grating for "VAB" shall be galvanized steel grating with fasteners to be provided by Contractor. Grating working load shall be 14.8 kN/m² (300psf).
8. For Safety gate details, see "Road Plans" sheets.
9. For access opening and door details, see "Tower Access Details No.4" sheet. Access openings are without door unless noted otherwise.
10. For location of access openings in strut facade, see "Tower Strut Facade Details" sheets.
11. For location of elevator landing and safety enclosures, see "Tower Elevator Support Details" sheets.
12. This access opening is to be provided in strut facades from elevation 18.000 m to 77.000 m only.
13. These access openings are to be provided between elevation 89.000 m to 143.000 m.
14. For bottom face access opening provide door to swing in. Door shall open clear of obstructions. For other details, see door at vertical face of tower strut facade on "Tower Access Details No.4" sheet.
15. The Contractor shall provide ladders inside the front facades to align with the exterior ladder segments. Ladder do not penetrate the strut facade plates.
16. At locations where ladder lengths exceed 6.5 meters, contraction joints shall be provided. Ladder length is defined as the distance between the centerlines of the top and bottom end supports. Contraction joints shall be located below ladder supports unless noted otherwise. For contraction joint details, see "Tower Access Details No.7" sheet.
17. Ladder supports shall be spaced at 6 meters maximum.
18. For Section Z-Z and Detail A', see "Tower Access Details No.3A" sheet.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 87 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Revise the East end Orthotropic Box Girder (OBG) Lifts 12 through 14 including, but not limited to, anchorage, floorbeams, longitudinal diaphragms, architectural housing, saddle housing and grillage, cable strand cutouts, saddle support beams, connections, access openings, stiffeners, plates, and counterweights.

This change order includes East end OBG additional fabrication costs identified prior to August 26, 2010, and compensated for in CCO 160 "East End Delay Impacts."

The following revised plan sheets detail the changes addressed in this change order: 426R1, 622R3, 625R1, 627R2, 628R2, 629R4, 630R2, 631R3, 632R1, 633R3, 633S1, 634R1, 635R1, 635S1, 635S2, 635S3, 638R3, 640R1, 640S1R1, 653R1, 664R1, 674R1, 675R3, 675S1, 676R1, 676S1, 677R1, 678R1, 679R1, 679S1, 680R1, 681R1, 681S1, 682R2, 683R1, 685R1, 686R1, 687R1, 688R1, 691R1, 693R1, 693S1, 694R3, 694S1R1, 695R3, 695S1R1, 696R3, 697R3, 698R3, 699R1, 699S1, 700R1, 701R1, 702R1, 703R2, 703S1, 704R2, 704S1R1, 705R1, 706R2, 707R1, 708R2, 709R2, 710R3, 710S1R1, 711R1, 712R2, 714R3, 715R1, 716R1, 716S1, 717R1, 718R1, 719R1, 720R1, 721R1, 722R2, 722S1, 723R1, 725R2, 725S1, 726R2, 727R1, 727S1, 732R3, 732S1, 733R4, 733S1, 733S2, 735R4, 736R5, 737R4, 740R3, 785R1, 786R1, 789R1, 790R1, 790S1, 790S2, 805R1, 805S1, 806R1, 806S1, 811R1, 877R3, 878R3, 943R3, 943S1R1, 949R2, 951R4, 959R1, 986R1 and 986S1 (of 1204) as shown on sheets 3 through 115 of this change order.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 22, 62, 89R1, 106, 254R2, 258, 268, 325, 341, 342, 347, 364R0, 364R1, 425, 443, 446, 491, 503, 504, 508R4, 513, 517, 550, 551, 552, 558, 582, 597, 605R0, 606R1, 664, 744, 747, 762R0, 762R2, 772, 777R2, 777R4, 777R5, 777R6, 777R7, 783, 814R0, 814R1, 869, 889, 894, 904, 929, 930R0, 930R1, 930R2, 980, 992, 1003, 1031, 1078, 1081R1, 1126, 1137R1, 1165R0, 1165R1, 1170R0, 1171, 1200, 1201R0, 1201R1, 1201R2, 1209, 1210R0, 1210R1, 1213, 1214, 1220, 1226, 1228, 1230, 1231, 1232R0, 1232R1, 1235R0, 1246, 1261R0, 1261R1, 1270R0, 1270R1, 1271, 1273R0, 1273R1, 1276, 1282, 1289, 1300, 1301R0, 1301R1, 1302, 1303R0, 1303R1, 1304, 1305R0, 1305R1, 1305R2, 1305R3, 1309R1, 1309R2, 1310R0, 1310R1, 1310R2, 1311R0, 1313, 1324R0, 1324R1, 1335R0, 1335R1, 1335R2, 1336, 1338R0, 1341, 1342R0, 1342R1, 1343, 1344, 1347, 1349, 1355, 1358R0, 1358R1, 1373, 1375, 1377, 1386, 1394R0, 1394R1, 1421R1, 1421R2, 1421R3, 1421R4, 1428, 1429R1, 1430, 1459R0, 1463, 1467, 1485, 1503R0, 1503R1, 1511R0, 1516, 1555, 1572, 1573, 1628, 1640, 1644R0, 1644R3, 1673, 1753R0, 1766, 1882R1, 1977, 2032, TC-RFI-0002R0, TC-RFI-0005R0, TC-RFI-0011R0, TC-RFI-0018R1, TC-RFI-0031R0, TC-RFI-0034R0, TC-RFI-0034R2, TC-RFI-0035R0, TC-RFI-0043R0, TC-RFI-0045R0, TC-RFI-0051R0, TC-RFI-0055R0, TC-RFI-0055R1, TC-RFI-0060R0, TC-RFI-0061R0, TC-RFI-0062R0, TC-RFI-0074R0, TC-RFI-0080R0, TC-RFI-0086R0, TC-RFI-0088R0, TC-RFI-0094R0, TC-RFI-0097R1, TC-RFI-0102R0, TC-RFI-0115R0, TC-RFI-00125R0, TVC-RFI-0004R0, TVC-RFI-0010R0, TVC-RFI-0026R0, TVC-RFI-0029R0, TVC-RFI-0033R0, TVC-RFI-0035R0, TVC-RFI-0036R0, TVC-RFI-0037R0, TVC-RFI-0039R0, TVC-RFI-0042R0, TVC-RFI-0042R1, TVC-RFI-0065R0, TVC-RFI-0067R0, TVC-RFI-0070R0, TVC-RFI-0071R0, TVC-RFI-0079R0, TVC-RFI-0123R0, TVC-RFI-0125R0, TVC-RFI-0137R0, TVC-RFI-0142R0, TVC-RFI-0144R1, TVC-RFI-0148R0, TVC-RFI-0153R0, TVC-RFI-0156R2, TVC-RFI-0161R0, TVC-RFI-0162R1, TVC-RFI-0206R0, TVC-RFI-0209R0, TVC-RFI-210R0, TVC-RFI-0231R0, TVC-RFI-0234R0, TVC-RFI-0237R0, TVC-RFI-0238R0, TVC-RFI-0257R0, TVC-RFI-0261R0, TVC-RFI-0261R1, TVC-RFI-0272R0, TVC-RFI-0327R0, TVC-RFI-0575R0, TVC-RFI-0575R1, and TVC-RFI-0646R0 with respect to changes listed above.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 87 **Suppl. No.** 0 **Contract No.** 04 – 0120F4 **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

This is a no cost change, since the cost for these change order items has been included in CCO 160. This sum constitutes full and complete compensation for furnishing all labor, material, tools and incidentals including all markups by reason of this change.

Adjustment of Compensation at Lump Sum Price.....$0.00

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**

Submitted by

Signature **Resident Engineer** Darryl Schram, Senior T.E. **Date** 1-28-13

Approval Recommended by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 1-28-13

Engineer Approval by

Signature **Supervising Transportation Engineer** William Casey, Supervising T.E. **Date** 2-20-13

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

Contractor Acceptance by

COST: **$0.00** INCREASE ☐ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☐ YES ☑ NO
SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: East End OBG	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Revising the East end Orthotropic Box Girder (OBG) Lifts 12 through 14 including anchorage, floorbeams, longitudinal diaphragms, architectural housing, saddle housing and grillage, cable strand cutouts, saddle support beams and connections, access openings, stiffeners, plates, and counterweights.

Through the Contractor submittal and RFI process, various conflicts between the details shown in the plan sheets were corrected and revisions were made to avoid interferences within the East end OBG. The costs for CCO 87 were included in CCO 160 "East End Delay Impacts." CCO 160 compensated the Contractor for all East end OBG element changes in Lifts 12 through 14 as of August 26, 2010.

This change order resolves the costs associated with Contractor Request for Information (RFI) numbers 22, 62, 89R1, 106, 254R2, 258, 268, 325, 341, 342, 347, 364R0, 364R1, 425, 443, 446, 491, 503, 504, 508R4, 513, 517, 550, 551, 552, 558, 582, 597, 605R0, 606R1, 664, 744, 747, 762R0, 762R2, 772, 777R2, 777R4, 777R5, 777R6, 777R7, 783, 814R0, 814R1, 869, 889, 894, 904, 929, 930R0, 930R1, 930R2, 980, 992, 1003, 1031, 1078, 1081R1, 1126, 1137R1, 1165R0, 1165R1, 1170R0, 1171, 1200, 1201R0, 1201R1, 1201R2, 1209, 1210R0, 1210R1, 1213, 1214, 1220, 1226, 1228, 1230, 1231, 1232R0, 1232R1, 1235R0, 1246, 1261R0, 1261R1, 1270R0, 1270R1, 1271, 1273R0, 1273R1, 1276, 1282, 1289, 1300, 1301R0, 1301R1, 1302, 1303R0, 1303R1, 1304, 1305R0, 1305R1, 1305R2, 1305R3, 1309R1, 1309R2, 1310R0, 1310R1, 1310R2, 1311R0, 1313, 1324R0, 1324R1, 1335R0, 1335R1, 1335R2, 1336, 1338R0, 1341, 1342R0, 1342R1, 1343, 1344, 1347, 1349, 1355, 1358R0, 1358R1, 1373, 1375, 1377, 1386, 1394R0, 1394R1, 1421R1, 1421R2, 1421R3, 1421R4, 1428, 1429R1, 1430, 1459R0, 1463, 1467, 1485, 1503R0, 1503R1, 1511R0, 1516, 1555, 1572, 1573, 1628, 1640, 1644R0, 1644R3, 1673, 1753R0, 1766, 1882R1, 1977, 2032, TC-RFI-0002R0, TC-RFI-0005R0, TC-RFI-0011R0, TC-RFI-0018R1, TC-RFI-0031R0, TC-RFI-0034R0, TC-RFI-0034R2, TC-RFI-0035R0, TC-RFI-0043R0, TC-RFI-0045R0, TC-RFI-0051R0, TC-RFI-0055R0, TC-RFI-0055R1, TC-RFI-0060R0, TC-RFI-0061R0, TC-RFI-0062R0, TC-RFI-0074R0, TC-RFI-0080R0, TC-RFI-0086R0, TC-RFI-0088R0, TC-RFI-0094R0, TC-RFI-0097R1, TC-RFI-0102R0, TC-RFI-0115R0, TC-RFI-00125R0, TVC-RFI-0004R0, TVC-RFI-0010R0, TVC-RFI-0026R0, TVC-RFI-0029R0, TVC-RFI-0033R0, TVC-RFI-0035R0, TVC-RFI-0036R0, TVC-RFI-0037R0, TVC-RFI-0039R0, TVC-RFI-0042R0, TVC-RFI-0042R1, TVC-RFI-0065R0, TVC-RFI-0067R0, TVC-RFI-0070R0, TVC-RFI-0071R0, TVC-RFI-0079R0, TVC-RFI-0123R0, TVC-RFI-0125R0, TVC-RFI-0137R0, TVC-RFI-0142R0, TVC-RFI-0144R1, TVC-RFI-0148R0, TVC-RFI-0153R0, TVC-RFI-0156R2, TVC-RFI-0161R0, TVC-RFI-0162R1, TVC-RFI-0206R0, TVC-RFI-0209R0, TVC-RFI-210R0, TVC-RFI-0231R0, TVC-RFI-0234R0, TVC-RFI-0237R0, TVC-RFI-0238R0, TVC-RFI-0257R0, TVC-RFI-0261R0, TVC-RFI-0261R1, TVC-RFI-0272R0, TVC-RFI-0327R0, TVC-RFI-0575R0, TVC-RFI-0575R1, and TVC-RFI-0646R0 with respect to changes listed above.

Since the cost for these change order items has been included in Contract Change Order 160 (CCO 160) resolution costs, the net payment in this change order is zero.

A determination of the delay in completion of the contract due to work specified by Contract Change Order 87, has been made in CCO 160. Therefore, no adjustment of time is warranted by reason of this change order.

This change order has concurrence from William Casey (Supervising TE), Wenyi Long (Bridge Design), Jing Chen (District Design), and Lina Ellis (Maintenance).

LEGEND:

X - "Indicates that the entire structural component has the indicated property".

* - "Indicates that a limited portion of the structural component has the indicated property, as shown on the plans".

NOTES:

1. For definition of structural components, see the detail drawings.
2. All welds and splice plates to SPCM plates shall be SPCM quality.
3. A blank in "TM/SRM" Column Indicates member does not sustain tension.
4. The "TM/SRM" designation shall apply only to welds which are within 30° of horizontal in their final erected position.
5. At the Contractor's option, it is acceptable to use SPCM/TTP grade steel for panels with lifting lugs in areas where SPCM/TTP is not required per design. (1)

NOTES:

1. For girder splice details, see "Typical Girder Details" sheets.
2. "W" Line floorbeams from PP120.5 through PP124.5, and PP126, PP127.5 and PP128 are radial with respect to "W" Line curve.
3. "E" Line floorbeams from PP120.5 through PP124.5, and PP126, PP127.5 and 128 are aligned with "W" Line floorbeams and radial with respect to "E" Line curve.
4. "W" and "E" Line floorbeams from PP118 through PP120 are parallel.
5. "W" and "E" Line floorbeams from PP125 through PP127 are parallel. At the Contractor's option, 3 "E" line floorbeam at PP127.5 may be parallel to "E" line floorbeam at PP127, subject to review and approval of the engineer.
6. For typical girder details, see "Typical Girder Details" sheets. For girder details and transition at East transition PP118 through PP128, see "Girder at East Transition" and "Girder At Pier E2" sheets.
7. For modular joint details, see "Hinge A Expansion Joint Details" sheets.
8. For Hinge A bulkheads, floorbeams and joint blockouts, see "Hinge A Details" sheets.
9. For "K" and vertical plates, see "Girder At East Transition Details" sheets.
10. For service platform details, see "Road Plans". For girder access details, see "Girder Access Details" sheets.
11. From PP115 through PP128, the distance between center line of girder splice and adjacent floorbeam is 800.
3 12. At the Contractor's option, the girder splice near PP115.2 may be relocated to PP115-700, subject to review and approval of the Engineer.

NOTES:

1. For Details B through D, see "Typical Girder Details No.2" sheet.
2. For details and dimensions not shown, see "Typical Girder Details" sheets.
3. For east transition girder plate type layout and limits, see "Girder At Pier E2" and "Girder At East Transition" sheets.
4. For tapers and limits of girder plates E, F and H between PP38 and PP46, see "Girder Transition Near Tower" sheets.
5. For "Typical Girder Details" sheets all bolts shall be detailed according to the bolt dimension table. All bolts are HS, UNO.
6. For "Typical Girder Details" sheets, UNO all fillet welds shall be 6 mm, for plate sizes not greater than 20 mm. For plates sizes greater than 20 mm fillet welds shall be 8 mm UNO.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

PLANS APPROVAL DATE

REGISTERED PROFESSIONAL ENGINEER — George S. Baker — No. C57112 — Exp. 12/31/05 — CIVIL — STATE OF CALIFORNIA

The State of California or its officers or agents shall not be responsible for the accuracy or completeness of electronic copies of this plan sheet.

T.Y. LIN / MOFFATT & NICHOL
825 BATTERY STREET
SAN FRANCISCO, CA 94111

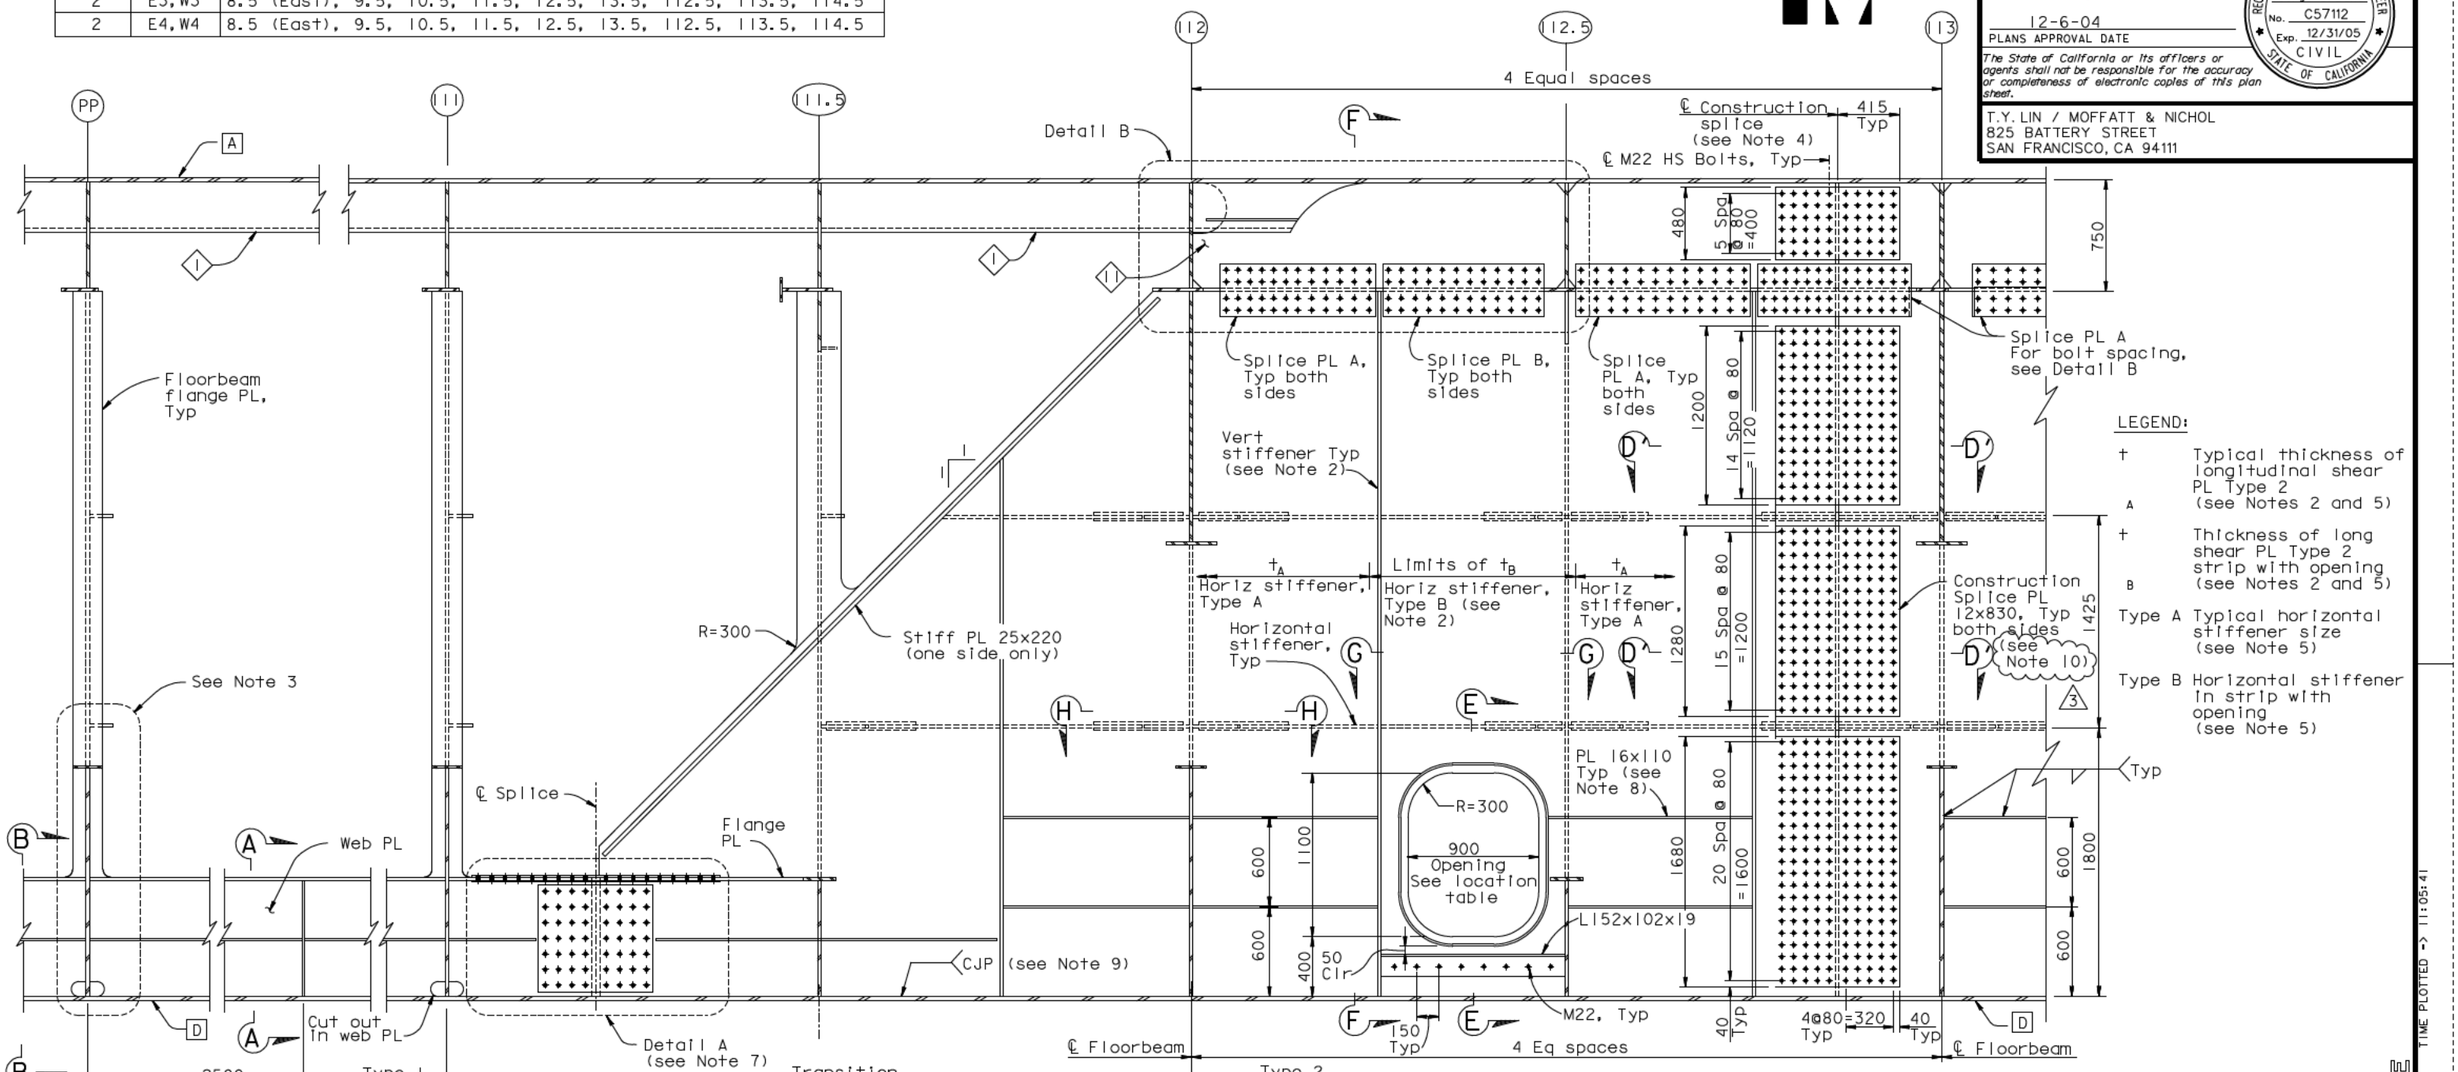
OPENING LOCATION TABLE

SHEAR PLATE TYPE	WORKING LINE	PANEL POINT (see Note 5)
2	E3, W3	8.5 (East), 9.5, 10.5, 11.5, 12.5, 13.5, 112.5, 113.5, 114.5
2	E4, W4	8.5 (East), 9.5, 10.5, 11.5, 12.5, 13.5, 112.5, 113.5, 114.5



Transition @ PP111 to PP112 shown. Transition @ PP14 to PP15 similar
For details @ PP8.5, see "Girder At Pier W2 No.4" sheet.

LONGITUDINAL SHEAR PLATE ELEVATION

1:20

LEGEND:

- t — Typical thickness of longitudinal shear PL Type 2 (see Notes 2 and 5)
- tA — Thickness of long shear PL Type 2 strip with opening (see Notes 2 and 5)
- tB
- Type A Typical horizontal stiffener size (see Note 5)
- Type B Horizontal stiffener in strip with opening (see Note 5)

NOTES:

1. For Sections A-A, B-B and Detail A, see "Typical Girder Details No.8" sheet.
2. For Sections E-E, F-F, G-G, H-H, Detail B and details not shown, see "Typical Girder Details No.9" sheet.
3. For floorbeam details, see "Typical Floorbeam Details" sheets.
4. For location of girder splice, see "Girder Framing Plan" sheets.
5. For plate sizes and openings in east transition, see "Girder At East Transition No.9" sheet.
6. Shear plates at lines W3 and E4shown. W4 and E3 lines are similar.
7. Detail A shall be used to splice the longitudinal shear PL Type 1 at box girder splice locations.
8. Lower panel stiffeners shall be placed as shown in Longitudinal shear PL along E3, E4, W3 and W4 lines from PP111.75 to the E2 floorbeam, and from the E2 floorbeam to PP120. Stiffeners shall also be placed along E4 and W4 lines from PP120 to 127. For details at the E2 floorbeam, see "Girder at Pier E2 No.2" sheet.
9. The longitudinal shear PL to girder face "D" weld shall be a CJP from the CL plice near PP111 to PP128.7.

3 10. The thickness of the construction splice PL shall match the thickness of splice PL A.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

1:5

NOTES:

1. For stiffeners indicated as curved on the Plans, the Contractor may elect to fabricate the ribs as straight segments, subject to review and approval of the Engineer. Rib kinks shall be placed within 50 mm of a floorbeam web or at segment splices. For ribs kinked at a segment splice, reinforcing flanges shall be provided as shown. This reinforcing shall be required for kinks greater than 0.0015 radians in open ribs or 0.005 radians in closed ribs, or as approved by the Engineer.
2. At the Contractor's option, "Alternative Splice Detail No.1" or "Alternative Splice Detail No.2" may be used between PP127 and PP127.5, subject to review and approval of the Engineer.
3. Minimum bolt edge distance: 48 mm.
   Minimum bolt spacing: 82 mm.
4. Dimensions may be reduced by up to 20 mm to accommodate tight space.
5. Flange PL 25x100 may be used in lieu of PL 18x125.
6. Reinforcing flanges shall be ASTM A709M HPS Grade 485W.
7. At the Contractor's option, the web to flange web may be a 12 mm effective PJP, subject to review and approval of the Engineer.

NOTES:

15. At the Contractor's option, oversize holes may be used for the anchor bolt and keeper bolt in the top anchor plates of the seat assemblies, and in the key PL.
16. At the Contractor's option, an equivalent PJP may be used in lieu of a double sided fillet weld.
17. At the Contractor's option, the flange may be placed on the opposite side of the bearing stiffener.
18. At the Contractor's option, the top bearing PL may be detailed to overhang the side stiffener plates by 5 mm, subject to review and approval of the Engineer.
19. At the Contractor's option, the top bearing PL may be detailed to provide 5 mm gap at the floorbeams and abutting longitudinal members.
20. At the Contractor's option, the top bearing PL may be detailed to provide 5 mm gap at the abutting longitudinal members.
21. At the Contractor's option, keeper bolts may be placed in the upper top bearing plate. Oversized holes may be used in the bearing plates and vertical plates at keeper bolt locations, subject to review and approval of the Engineer.
22. At the Contractor's option, double-sided 24 mm fillet may be used on selected stiffener to floorbeam welds, subject to review and approval of the Engineer.

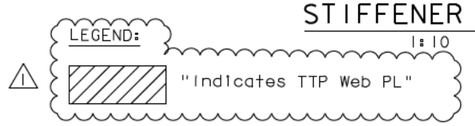
STIFFENER WELD



NOTES:

1. For shear key housing details, see "Pier E2 Shear Key Details" sheet.
2. For opening details, see "Typical Girder Details No.7" sheet.
3. For typical girder details not shown, see "Typical Girder Details" sheets.
4. For anchor bolt, see "Pier E2 Bearing Details" sheets.
5. For transverse limits of girder key PL, see "Girder At Pier E2 No.1" sheet.
6. For shear key details, see "Pier E2 Shear Key Details" sheets.
7. For Pier E2 bearing details, see "Pier E2 Bearing Details" sheets.
8. For bearing stiffeners in faying contact with diaphragms or webs, stiffener corners and welds may be ground to allow fit-up.
9. Leveling PL may be used to compensate for the permissible out-of-flatness of the girder key plate. Leveling plates shall be tapered as required to ensure proper alignment of the bearings and shear keys in both longitudinal and transverse directions.
10. Stiffeners welded to the longitudinal shear PL shall be coped. See stiffener type ⑨ in similar Section D-D on "Typical Crossbeam Details No.6" sheet.
11. At the Contractor's option and subject to review and approval of the Engineer, a 1:2.5 taper may be used in lieu of the 1:10 taper. The overall width of the girder key PL shall remain 5800 mm.
12. For Detail D and Section H-H, see "Girder At Pier E2 No.3A" sheet.
13. The longitudinal shear PL shall have Through Thickness Properties (TTP).

FOR REVISIONS ONLY

NOTES:

1. For typical opening detail, see "Typical Girder Details No.7" sheet.
2. For stiffener penetration details, see "Typical Girder Details No.5" sheet and "Girder At Pier E2, No.6A" sheet. ⚠1
3. Access walkways not shown. For access details, see "Girder Access Details" sheets.
4. For Section U-U, see "Girder At Pier E2 No.8" sheet.
5. For typical diaphragm details, Section M-M shall apply.
6. For shear key stub and shear key housing details, see "Pier E2 Shear Key Details" sheets.
7. For plan of bearing PL, see "Crossbeam at Pier E2 No.7" sheet.
8. Bearing PL is counterbored to accomodate bolt heads. See Detail J on "Crossbeam At Pier E2 No.3" sheet.
9. ⚠1 At web PL taper, provide (8) PJP weld in lieu of fillet weld.

1:5

SECTION B-B (EB shown, WB Section B'-B' similar)
1:5

NOTES:

1. For typical stiffener termination, see "Typical Floorbeam Details No.6" sheet.
2. Extend or trim stiffener Type 2 to meet grillage PL A based on final cable geometry.
3. Trim grillage Plate B and C as shown on "Section C-C" and "Detail A" respectively.
4. Dimensions marked with an asterisk shall be revised based on the final cable geometry.
5. Barrier anchor shall be 310 long if detailing per "Alternative Barrier Connection Detail" on "Typical Girder Details No.14" sheet.
6. At the Contractor's option, stiffener may be offset +/- 5 mm, subject to review and approval of the Engineer.
7. At the Contractor's option, to accommodate updates in the fabrication procedure, a rathole (R=30) in the stiffener is acceptable to allow grillage PL B to Floorbeam web weld.

NOTES:

1. For panel point locations, see "Girder Framing Plan No.4" sheet.
2. For stiffener types, see "Typical Girder Details No.3" sheet.
3. For longitudinal shear PL details, see "Typical Girder Details No.7" sheet.
4. For angle θ dimensions, see superelevation diagram on "Deck Contours No.6" sheet.
5. For layout of stiffeners and girder faces A, B, C, D, E and F, see "Girder At East Transition No.11" through "Girder At East Transition No.14" sheets.
6. For partial section Type 3B, see "Girder At East Transition No.4" sheet.
7. Girder section shown excludes girder at floorbeam E2. For girder section at floorbeam E2, see "Girder At Pier E2" sheets.
8. For layout of working points in east transition, see "Girder At East Transition No.9 and "Girder At East Transition No.10" sheets.

1 9. At the Contractor's option, three equal spaces no greater than 425 may be provided between PP119.3 and PP127. Stiffener lines shall be continuous.

	127	EWP127	5500	14177
	128	EWP128	868	13408

GENERAL LAYOUT OF EAST TRANSITION

All sections through the girder are dimensioned with respect to the "W" and "E" lines, which are determined from the highway drawings. Dimensions shown as horizontal are measured parallel to the roadway deck, and dimensions shown as vertical are measured perpendicular to the deck. Due to the highway curvatures and superelevations, the directions shown as horizontal and vertical vary with the station. The layout of the transition structures may be achieved by performing the following tasks:

1. Determine the "W" and "E" line locations.
2. Determine the spatial orientations of all floorbeams.
3. Determine the spatial locations of the working points given in the table.
4. Determine the locations of all working lines.
5. Determine the intersections of the working lines with the planes of the floorbeams.

The following working lines are straight lines between the defined working points:

Line	Start	End
E17	EWP121	EWP127
E18	EWP118	EWP124
E19	EWP118	EWP121
E19	EWP121	EWP128
E13/E18	EWP124	EWP127
E18	EWP127	EWP128
E13	EWP127	Pt Q
W17	WWP121	WWP127
W18	WWP118	WWP124
W19	WWP118	WWP121
W19	WWP121	WWP128
W13/W18	WWP124	WWP127
W18	WWP127	WWP128
W13	WWP127	Pt Q

Lines E13, E14, W13, W14 shall be straight lines in plan only. They shall be located vertically as shown in the sections.

LEGEND:

t_A Typical thickness of longitudinal shear PL Type 2 (see Note 2)

t_B Thickness of Long shear PL Type 2 strip with opening (see Note 2)

NOTES:

1. Dimension "Y" is measured perpendicular to the slope of girder PL A. Dimension "Z" is measured parallel to the slope of girder PL A.
2. For longitudinal shear PL Type 2 details, see "Girder At East Transition No.15" sheet.
3. The Contractor shall submit geometric layouts to the Engineer for approval prior to producing shop drawings of the East Transition Girders.
1 To simplify fabrication, values in the "Working Point Coordinate Table" may be adjusted, subject to review and approval of the Engineer.
4. At the Contractor's option, PL 20 may be used in lieu of PL 18, subject to review and approval of the Engineer.

- ------ Typical girder stiffener Type 2, 3, 9, 10, 11 or other stiffener
- ––––– Typical girder stiffener Type 1
- ◇ Stiffener Type 1 designation
- R - Radius (see Note 1)
- P†A - Point A
- ------ Floorbeam, unless noted otherwise
- •••••••• Bolted splice (see Note 4)
- "Indicates SPCM shell PL"

NOTES:

1. Plate edges identified with "R" are curved. All other plate edges are straight.
2. For location of east transition, see "Girder Framing Plan No.4" sheet.
3. For saddle cutout limits, see "East Saddle Housing Details No.1" sheet.
4. For PP118 to 124 [G] is an architectural housing. For bolted splice details, see "Girder At East Transition Details No.3" sheet. Housing shall be installed after full cable dead load force is applied to the box girder.
5. At the Contractor's option, non-SPCM material may be provided within these limits.
6. For stiffener Type 18, diaphragm at stiffener termination is not required along line E20.
7. For SPCM shell PL ranges west of PP115 - 700mm, see "Girder Framing Details No.1" sheet.
8. For Detail A, see "Girder At East Transition No.11A" sheet.

Location to match horizontal stiffener spacing in typical girder section Type 2 (see Note 1)

10. The longitudinal shear PL to girder face "D" weld shall be a CJP from the CL splice near PP111 to PP128.7.

11. Horizontal connection detail applies only where existing floorbeam horizontal stiffeners coincide with shear PL stiffeners.

NOTES:

1. Longitudinal shear PL Type 2 from PP115 to PP125 is similar to longitudinal shear PL Type 2 in typical girder section Type 2. For details not shown, see "Typical Girder Details No.7" sheet.
2. For longitudinal shear PL Dimension Table and access opening locations from PP115 to hinge A, see "Girder At East Transition No.9" sheet.
3. For floorbeam details not shown, see "Floorbeam At East Transition" sheets.
4. For horizontal connection PL detail, see "Typical Girder Details No.9" sheet.
5. For detail of longitudinal shear PL Type 2 along "E3" Line from PP125 to PP127, see "Girder At East Transition No.6" sheet.
6. For details of bulkhead PL, see "Floorbeam At Transition No.8" sheet.
7. For details of 11, Modified not shown, see 12 on "Girder At East Transition No.17" sheet.
8. For details of anchor PL, see "East Cable Anchorage "E" Line Layout" and "East Cable Anchorage "W" Line Layout" sheets.
9. For details of end girder PL, see "Floorbeam At East Transition No.10" sheet.

2. Bolt holes in architectural splice plates shall be long slotted in the longitudinal direction of the bridge.
3. Edge beam shall have same dimensions and details as longitudinal shear PL Type 1 UNO. See "Typical Girder Details No. 8" and "Typical Floorbeam Details No. 5" sheets.
4. WT 180x67 A709 Grade 345 may be substituted with grade A992 rolled shape of equivalent Imperial size, subject to review and approval of the Engineer.
5. The long slots shall be in the longitudinal direction of the Bridge. The outer shim PL shall not be slotted.
6. For optional splice details, see "East Anchorage Details" sheets.
7. Handhole centered 150 above girder face H.
8. For Sections F-F, G-G and J-J, see "Girder East Transition Details No. 3A" sheet.

"Indicates SPCM web PL"

NOTES:

1. Floorbeams at PP120.5, PP121 and PP121.5 are similar to typical intermediate floorbeam Type 1 from working lines E3 to E16. For these details, including Section A-A, see "Typical Floorbeam Details No.8" and "Typical Floorbeam Details No.9" sheets. For other details not shown, see "Typical Floorbeam Details" sheets. For girder dimensions not shown, see "Girder At East Transition" sheets.
2. "E" Line girder is shown, "W" Line girder is similar.
3. For saddle housing details, see "East Saddle Housing Details" sheet.
4. For "K" PL and vertical PL details, see "Girder At East Transition Details" sheets.
5. For Details A, B and Section B-B, see "Floorbeam At East Transition Details No.1" sheet. (2)
6. Bikepath bearing stiffeners shall be welded to girder PL using PJP with 80% penetration welds. Girder stiffener plates shall be coped on either side of bikepath stiffener. Bikepath stiffeners shall align with the bottom flanges of the bikepath cantilever beams at PP121, PP123 and PP125. For locations of bikepath cantilever beams, see "Bikepath Details" sheets.
7. Weld of diaphragm PL to girder PL A shall be CJP.
8. Longitudinal stiffeners are welded to each face of transverse stiffener PL. For details, see stiffener Type 9 on "Typical Girder Details No.5" sheet. Also provide tranverse stiffeners around openings at PP121.5, PP122.5, PP123.5 and PP124.5. (2) For stiffener PL size @ PP124.5, see "Girder At East Transition Details No.3" sheet.
9. Girder faces G, H and I are architectural from PP118 to PP125. For bolted splices, see "Girder At East Transition Details No.3" sheet. For splice locations, see "Girder At East Transition Nos.11 to 14" sheet.
10. Web opening similar to Detail E. See "Girder At East Transition Details No.3" sheet.
11. When the access opening edge is within 50 mm of a floorbeam stiffener, the reinforcing flange shall be omitted on the side of that stiffener.
12. For additional details, see "Dehumidification Support Details No.2" sheet.
13. For Detail M, Detail N and Section X-X, see "Floorbeam At East Transition Details No.3" sheet.
14. At the Contractor's option, two PL 25x225 flanges may be used in lieu of the PL 25x460 flange, subject to review and approval of the Engineer. (2)

NOTES:
1. For floorbeam details not shown and Section A-A, see "Typical Floorbeam Details" sheets. For dimensions not shown, see "Girder At East Transition" sheets.
2. "E" Line girder is shown, "W" Line girder is similar.
2 3. When the access opening edge is within 50 mm of a floorbeam stiffener, the reinforcing flange shall be omitted on the side of that stiffener.
4. For vertical PL details, see "Girder At East Transition Details" sheets.
5. For optional field splice details, see "East Anchorage Construction Details" sheets.
6. Bikepath bearing stiffeners shall be welded to girder PL using PJP with 80% penetration welds. Girder stiffener plates shall be coped on either side of bikepath stiffener. Bikepath stiffeners shall align with the bottom flanges of the bikepath cantilever beams at PP123.
7. Weld of diaphragm PL to girder PL A shall be CJP.
8. For Details A, B and C, and Section B-B, see "Floorbeam At East Transition Details No.1" sheet. For Details G & J, 2 see "Floorbeam at East Transition Details No.3" sheet.
9. For Detail E, see "Girder At East Transition Details No.3" sheet.
10. Girder faces G, H and I are architectural from PP118 to PP125. For bolted splices, see "Girder At East Transition Details No.3" sheet. For splice locations, see "Girder At East Transition Nos.11 to 14" sheets.
11. At the Contractor's option, two PL 25x225 may be used in lieu of PL 25x460 at bottom and sides of cable opening only, subject to review and approval of the Engineer.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

1:20

DETAIL D
1:10

NOTES:

1. For details not shown, see "Typical Floorbeam Details" sheets.
2. For horizontal connection PL detail at longitudinal shear PL, see "Typical Girder Details No.9" sheet.
3. For details of top anchorage PL through girder at crossbeam, see "Crossbeam At East Anchorage" sheets.
4. For details of stiffener Type 1, see "Typical Girder Details No.4" sheet.
5. For "Floorbeam At East Transition Details" sheets, all bolts shall be detailed according to the Bolt Dimension Table. See "Typical Girder Details No.1" sheet. All bolts are HS UNO.
6. For "Floorbeam At East Transition Details" sheets UNO, all fillet welds shall be 6 mm for plate sizes not greater than 20 mm. For plates greater than 20 mm, fillet welds shall be 8 mm UNO.
7. In lieu of PL 20x300, two PL 20x145 may be used.
8. For flanges of cable opening, two PL 25x225 may be used in lieu of PL 25x460. In this case, the CJP flange weld in each flange shall be extended 100 mm and the fillet welds for the lower flanges shall overlap the CJP welds in the extension.
9. For stiffener Type 3, see "Floorbeam At East Transition Details No.3" sheet.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

⊕ 76 Dia anchor bolt (A354 Gr. BD)

7. At the Contractor's option, standard oversized holes may be used in the key PL and the temporary bearing PL. For this option, a counterbore diameter of 61 mm and a counterbore depth of 25 mm shall be provided.
8. At the Contractor's option, 100 Dia holes may be used in the key PL and bearing PL, subject to review and approval of the Engineer.
9. At the Contractor's option, the top bearing plates may be detailed to overhang the side stiffener plates by 5 mm, subject to review and approval of the Engineer.
10. At the Contractor's option, keeper bolts may be placed in the upper bearing plate. Oversized holes may be used in the bearing plates and vertical plates at keeper bolt locations, subject to review and approval of the Engineer.

NOTES:

1. No weld to diaphragm this face of stiffener.
2. For details not shown, see "Typical Crossbeam Details" sheets.
3. For Section D-D and E-E callouts, see "Crossbeam At Pier E2 No.7" sheet.
4. Bearing PL is counterbored to accomodate bolt heads.
5. Cope WT460 as required over the key PL.
6. At the Contractor's option and subject to review and approval of the Engineer, it is acceptable to use a taper at 1:2.5 slope at the Key PL. The taper shall end 100 clear of the nearest stiffener. Key PL width shall be 4000 Min.

Stiff PL Type I	PL 30x250x1440

NOTES:

1. For details not shown, see "Typical Crossbeam Details No.8" sheet.
2. For details not shown, see "Typical Crossbeam Details" sheets.
3. At the Contractor's option, the stiffener splice PL length may be reduced to 1740, subject to review and approval of the Engineer.
4. For crossbeam segments which vary in depth within the specified tolerances, the Contractor shall use fill plates in the bottom splice to correct for the variation. Fill plates shown on the plans shall be adjusted as required to bring splice plates into contact.
5. At the Contractor's option, it is acceptable to space the M30 bolts at 90 mm, subject to review and approval of the Engineer.

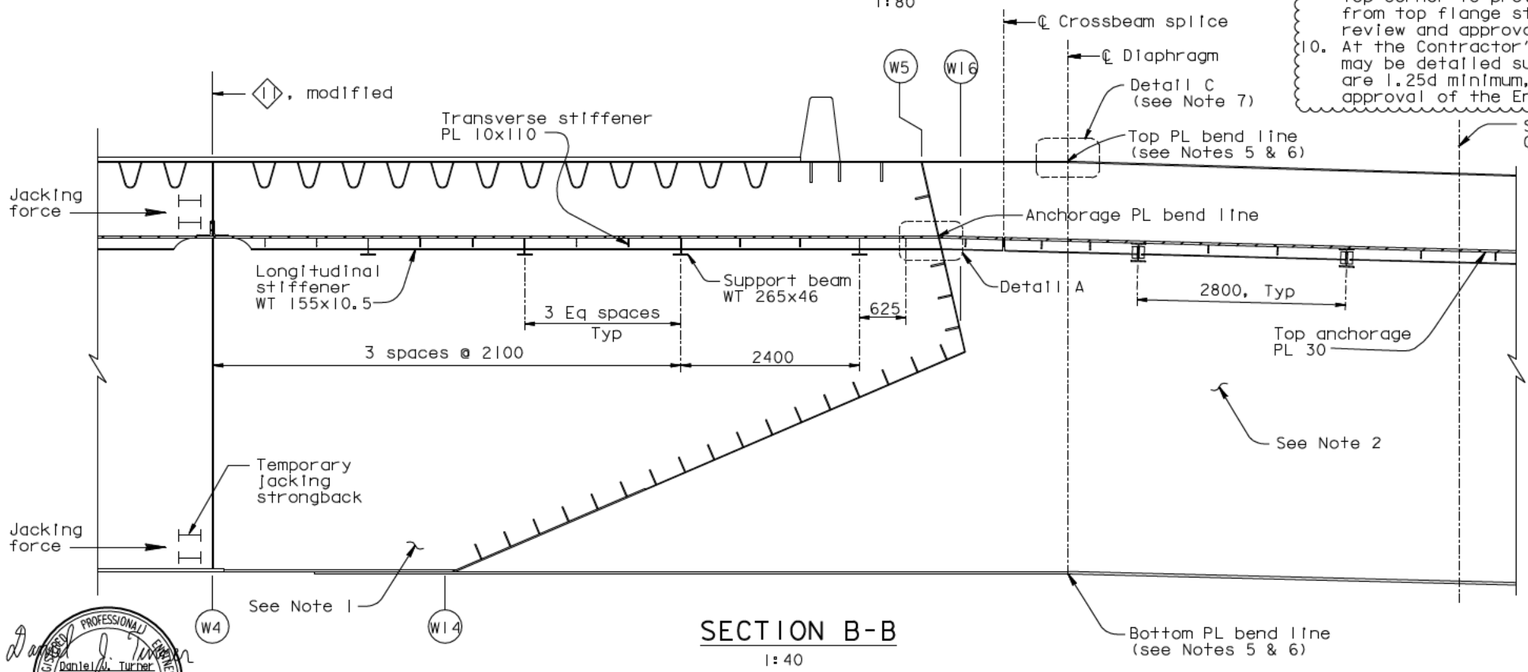
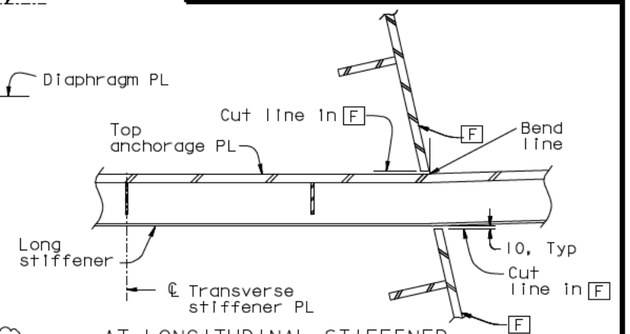
CROSSBEAM PLAN AT TOP ANCHORAGE PLATE LEVEL

1:80

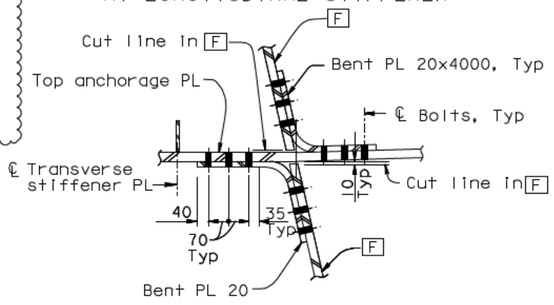


SECTION B-B

1:40



AT LONGITUDINAL STIFFENER



BETWEEN LONGITUDINAL STIFFENERS

DETAIL A (See Note 8) 2

1:10

9. At the Contractor's option, top flange inside splice plates may be chamfered by 4 mm at the top corner to provide additional clearance from top flange stiffener welds, subject to review and approval of the Engineer.
10. At the Contractor's option, the web splice may be detailed such that bolt edge distances are 1.25d minimum, subject to review and approval of the Engineer.

NOTES:

1. For girder details not shown, see "Girder At East Transition" and "Floorbeam At East Transition" sheets.
2. For crossbeam details not shown, see "Crossbeam At Pier E2" sheets.
2. At the Contractor's option, PL 22x200 plate stiffeners at the east anchorage crossbeam webs may be used in lieu of PL 22x205 plate stiffeners, subject to review and approval of the Engineer.
3. For Section A-A and Detail E, see "Crossbeam At East Anchorage No.3" sheet.
4. For Detail B, see "Crossbeam At East Anchorage No.4" sheet.
5. The location of the angular changes to the top and bottom skin plates due to the roadway geometry shall be at the first diaphragm inside the crossbeam field splice, towards the centerline of the bridge.
6. Stiffeners at the angle change, running longitudinal to the crossbeam, shall be interrupted and welded to the diaphragm with a CJP weld. Stiffeners on opposite faces of the diaphragm shall be aligned within the tolerances specified for stiffener splices.
7. For Detail C, see similar Section B-B on "Typical Crossbeam Details No.4" sheet.
2. 8. For alternate Detail A, see "Crossbeam At East Anchorage No.3" sheet.

DETAIL B
1:10

NOTES:

1. For details of longitudinal shear PL between PP125 and PP127, see "Girder At East Transition No.16" sheet.
2. For details of splice connection at girder PL 1 and vertical PL convergence, see "Girder At East Transition Details" sheets.
3. For strand socket and anchor rod details, see "East Cable Anchorage Details" sheet.
4. For Detail C and Sections D-D, E-E and F-F, see "East Cable Anchorage "E" Line Layout No.3" sheet.
5. Machining of bearing stiffener not shown in plan view.
6. The bearing blocks shall be aligned with the bearing stiffener plates. The angle between the bearing block and the anchor rod may vary (up to 90° ± 0.3° Max) due to the averaging of the bearing stiffeners orientation across each row of anchors.
7. For Alternative Detail B, see "East Cable Anchorage "E" Line Layout No.2A" sheet.
8. At the Contractor's option, a PL 25x200 may be used in lieu of a L203x102x12.7.
9. At the Contractor's option, bolts may be moved to 50 mm from the face of the vertical shear PL, and the L203 or PL 25 extended, to provide additional clearance from the strands, subject to review and approval of the Engineer.
10. At the Contractor's option, the anchor rod spherical nut washer may be ground to allow a rotation of up to 2.8 degrees. Corresponding anchor rod angle correction shall not be larger than 1.0 degree.

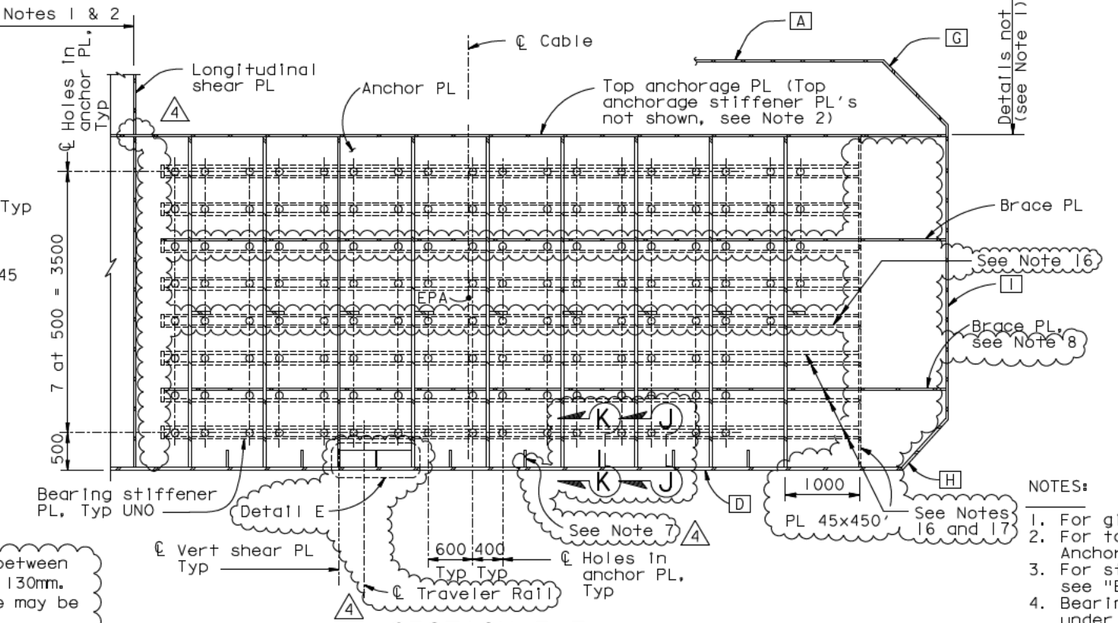
DETAIL C

1:20



SECTION F-F

1:40

SECTION G-G

1:10

4 12. At the Contractor's option, clear spacing between bearing stiffener PL's may be increased to 130mm.
13. At the Contractor's option, anchor rod hole may be increased to 120mm Dia.
14. For Notes 15 and above, see "East Cable Anchorage "E" Line Layout No.3A" sheet.

4 9. For Views J-J and K-K, see "East Cable Anchorage "E" Line Layout No. 2A" sheet.
10. The Contractor may drill the 110 mm Dia holes in the anchor PL normal to the anchor PL instead of along the anchor rod axis.
11. In cases where the top most stiffener PL 20x150 would interfere with bolts in the top anchorage PL, the top most stiffener only shall be relocated to the nearest position that is 60 mm clear of bolt ℄.

NOTES:

1. For girder details not shown, see "Girder At East Transition" sheets.
2. For top anchorage PL details not shown, see "Crossbeam At East Anchorage" and "Girder At East Transition" sheets.
3. For strand socket, transition anchor rod and bearing block details, see "East Cable Anchorage Details" sheet.
4. Bearing stiffener PL shall be machined to level the bearing block under the nut. The installation tolerance for the bearing block/anchor rod angle is ±1°. Also see Note 6 on "East Cable Anchorage "E" Line Layout No.2" sheet.

4 5. For View H-H and Detail E, see "East Cable Anchorage "E" Line Layout No.3B" sheet.
6. Dimensions shown with an asterisk shall be adjusted as necessary to provide 25 mm Min clearance above the strand and 50 mm Min below the strand.
7. Type 13 stiffeners shall terminate at each face of anchor PL with CJP welds.
8. Face 1 stiffeners shall terminate 100 clear of brace PL as required. For stiffener termination details, see "Typical Girder Details No.16" sheet.

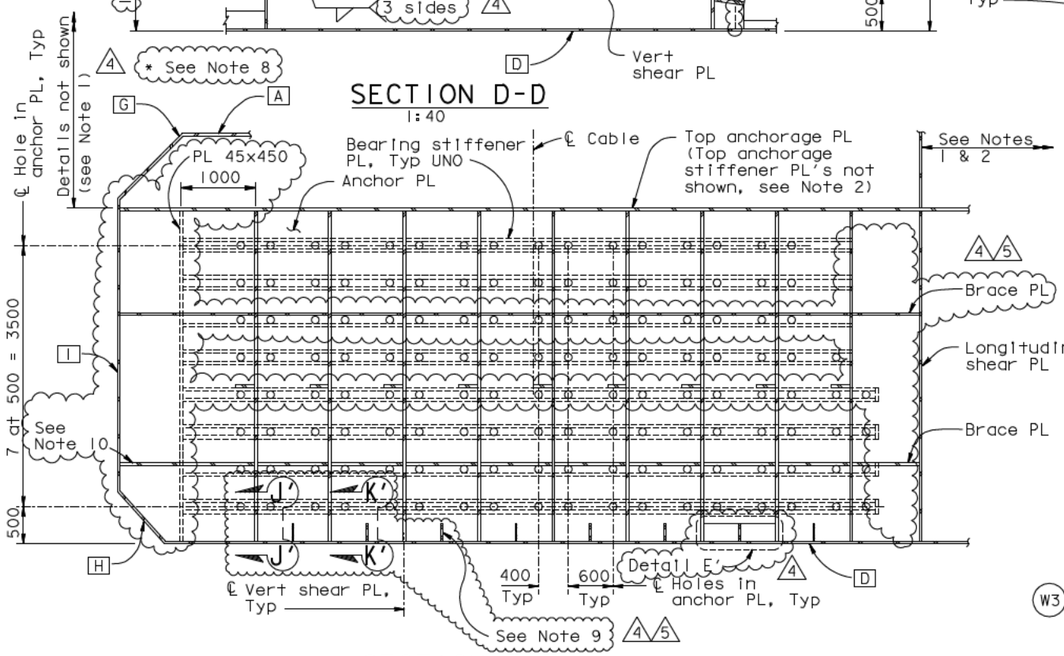
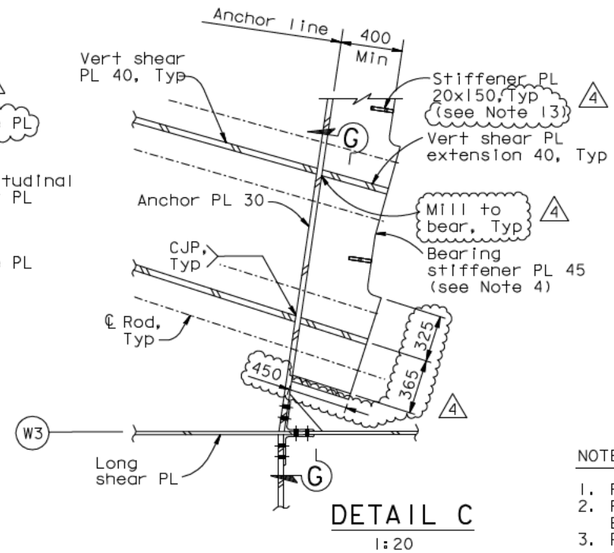
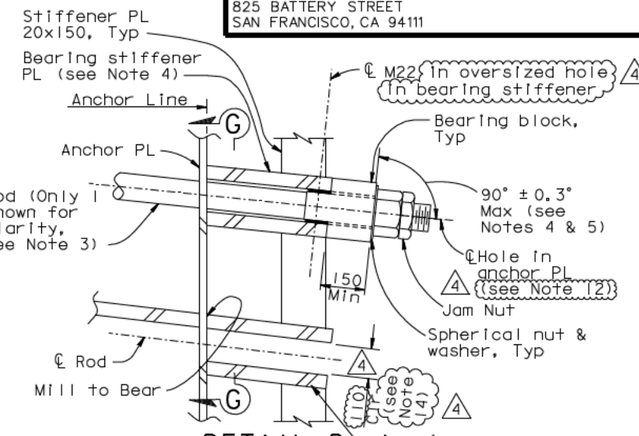
SECTION E-E
1:40



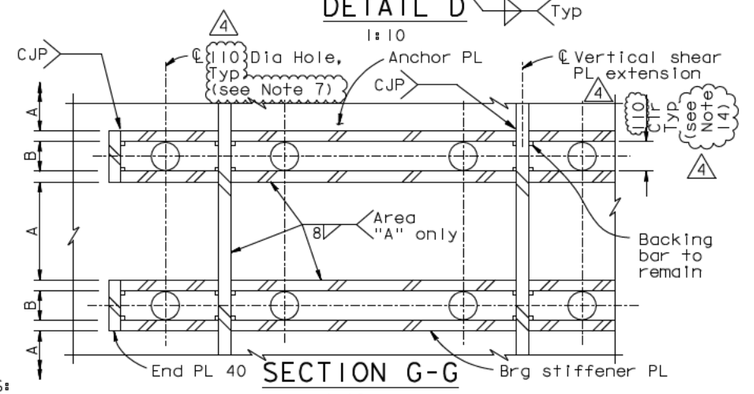
SECTION F-F
1:40



DETAIL C
1:20



DETAIL D
1:10



SECTION G-G
1:10

NOTES:

1. For girder details not shown, see "Girder At East Transition" sheets.
2. For top anchorage PL details not shown, see "Crossbeam At East Anchorage" and "Girder At East Transition" sheets.
3. For strand socket, transition anchor rod and bearing block details, see "East Cable Anchorage Details" sheet.
4. Bearing stiffeners plates shall be machined to level the bearing block under the nut. The installation tolerance for the bearing block/anchor rod angle is ±1°. Also see Note 6 on "East Cable Anchorage "W" Line Layout No.2" sheet.
5. The bearing blocks shall be aligned with the bearing stiffener plates. The angle between the bearing block and the anchor rod may vary (up to 90° ±0.3° Max) due to the averaging of the bearing stiffeners across each row of anchors.
6. For View H-H and Detail E', see "East Cable Anchorage "E" Line Layout No.3B" sheet.
7. At the Contractor's option, anchor rod hole may be increased to 120 mm Dia.
8. Dimensions shown with an asterisk shall be adjusted as necessary to provide 25 mm Min clearance above the strand and 50 mm Min below the strand.
9. All stiffeners shall terminate at each face of anchor PL with CJP welds.
10. Face 1 stiffeners shall terminate 100 clear of brace PL as required. For stiffener termination details, see "Typical Girder Details No.16" sheet.
11. For Views J'-J' and K'-K', see "East Anchorage "E" Line Layout No.2A" sheet.
12. The Contractor may drill the 110 mm Dia holes in the anchor PL normal to the anchor PL instead of along the anchor rod axis.
13. In cases where the top most stiffener PL 20x150 would interfere with bolts in the top anchorage PL, the top most stiffener only shall be relocated to the nearest position that is 60 mm clear of bolt ℄.
14. At the Contractor's option, clear spacing between bearing stiffener PL's may be increased to 130 mm.

ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE SHOWN

NOTES:

1. Coupling nut and socket shall conform to ASTM A194 GR 7, with 4 threads per inch.
2. For main cable strand anchor rod and cable strand socket materials, see "General Notes" sheets.
3. Surface shall be finished to ANSI 500.
4. Provide 16 Dia stainless set screws in threaded hole.
5. All socket dimensions are for information only. The Contractor shall develop socket details consistent with his means and methods and the east cable anchorage geometry, and shall submit them to the Engineer for review and approval. The socket dimensions shall be such that adequate prestressing and erection clearance is provided.
6. Material for bearing blocks shall be ASTM A668 Grade F, or ASTM A148 Grade 550-345.
7. Thread locking compound shall be used to secure the coupling nut set screws.

4 8. Dimension shall be increased to 250 mm in the case when the clear spacing between Bearing stiffener PL's is 130 mm.
9. Dimension shall be increased to 118 mm in the case when the clear spacing between Bearing stiffener PL's is 130 mm.
10. At the Contractor's option, a 26x26 chamfer may be used.

LEGEND:

(A) - Trough level A (Bottom of Trough)

◇3 - Trough segment No. 3

ABBREVIATIONS:

EPC - Point of curvature of "E" Line cable
EPI - Point of intersection of "E" Line cable
EPT - Point of tangency of "E" Line cable
L3 - Length, trough segment 3
LC4 - Length of curve, trough segment 4
NA - Not applicable
PC - Point of curvature
PCC - Point of compound curvature
PT - Point of tangency
RE - Radius for "E" Line cable
RW - Radius for "W" Line cable
RI - Radius for bottom of trough, trough segment 1
SWP - Working point
SWPA - Point of intersection of underside of bearing PL and CL East saddle
SWPB - Point of intersection of underside of bearing PL and CL Pier E2
WPC - Point of curvature of "W" Line cable
WPI - Point of intersection of "W" Line cable
WPT - Point of tangency of "W" Line cable

NOTES:

1. Geometry shown for "E" Line cable and saddle is in plane of cable at EPI. Geometry shown for "W" Line cable and saddle is in plane of cable at WPI.
2. For EPI and WPI control information, see "Suspension Cable Layout No. 3" sheet.
3. For details of trough layout , see "East Saddle Details No. 4" sheet.
4. For dimension "B", see "East Saddle Details No. 3" and "East Saddle Details No. 6" sheets.
5. The location of EPT and WPT can change with the cable profile. The Contractor shall determine EPT and WPT based on the actual constructed weight.

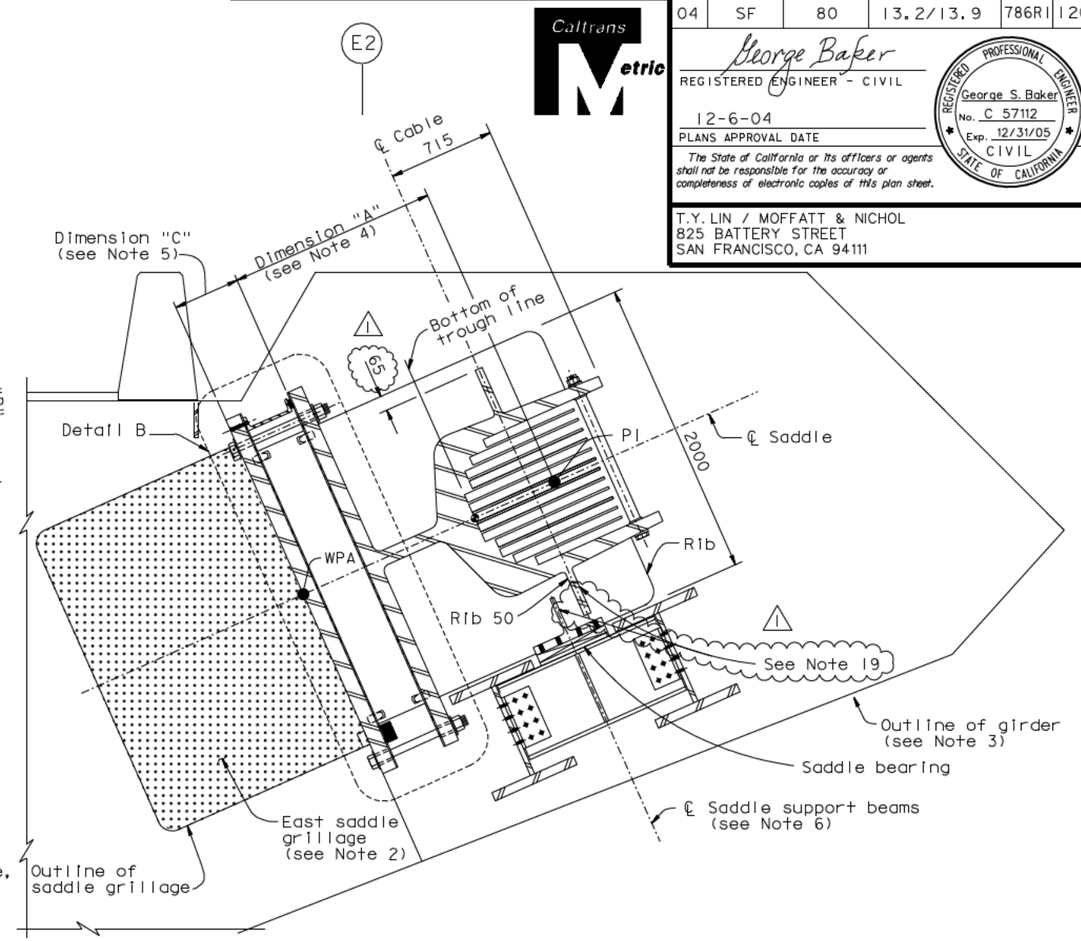
OPTIONAL SPLICE DETAIL

1:20



SECTION A-A

1:20

17. It is acceptable to align the ends of grillage plate A with a projection of the centerline of the outmost saddle ribs, subject to review and approval of the Engineer.
18. Spacing may be adjusted to accomodate jacking, subject to review and approval of the Engineer.
19. It is acceptable to extend the saddle rib to the saddle bearing plate in lieu of the bearing plate web extension subject to review and approval of the Engineer. Where the offset between the saddle rib and the support beam centerlines exceeds 60 mm, the bearing plate shall be thickened to 60 mm.
20. At the Contractor's option, it is acceptable to incorporate permanent diaphragm plates at the end splay plate, subject to review and approval of the Engineer.

10. All surfaces inside the trough shall be machined to ANSI 500 roughness. The geometric tolerance of the surfaces shall not exceed ±1.5 mm per meter of surfaces without sudden kinks.
11. The inside of the troughs shall be metallized with a coating thickness not less than 0.4 mm.
12. All divider plates shall be hot dip galvanized with Class A coating.
13. For detail of Divider PL joint, see "West Deviation Saddle Details No.3" sheet.
14. In the bolted splices the flatness of the faying surfaces shall be ±0.5 mm per meter, and the gap between them shall not exceed 0.5 mm per meter. The perimeters of faying surfaces shall be caulked.
15. Slotted holes may be placed in bearing PL or saddle base PL.
16. The Contractor may propose holes and attachments for erection, subject to review and approval of the Engineer. Upon erection completion, all holes shall be filled with bolts.

NOTES:

1. For Section A'-A', Details B and C, see "East Saddle Details No.6" sheet.
2. For east saddle grillage details, see "Girder At Pier E2 No.5" sheet.
3. For girder details at the east saddle, see "Girder At Pier E2" sheets.
4. For dimension "A", see "East Saddle Details No.2" sheet.
5. For dimension "C", see "East Saddle Details No.6" sheet.
6. For saddle bearings and saddle beam support details, see "East Saddle Details No.7" sheet.
7. For the plane of the cable, see "East Saddle Details No.1" and "East Saddle Details No.2" sheets.
8. End splay plate shall be pressed into place by jacking and bolted to the saddle after completion of cable erection and before load transfer to cable. Total jacking capacity shall be at least 1.9 MN. For end splay PL details, see "East Saddle Details No.5" sheet.
9. Bearing surfaces of rockers shall be finished to ANSI 250 surface roughness. Rocker bearing surfaces shall be finished to ANSI 250 and shall be finished flat to ±0.5 mm per meter of surface length.

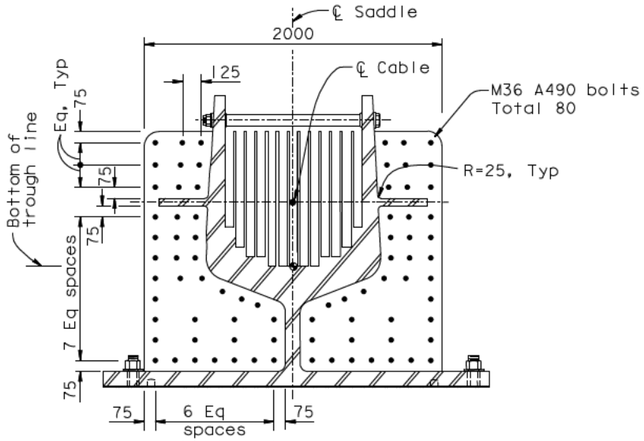
1:20



SECTION A'-A'
1:20

NOTES:

1. Rockers shall be ASTM A668 Class J.
2. Dowels shall be ASTM A276 Type 410 condition T.
1. Dowels of 50 Dia shall be press fit into holes of diameter 0.15 mm smaller than the dowel.
3. Each anchor rod shall hand wrench tightened.
4. 1. The saddle and rockers shall be oriented according to the saddle layout. See "East Saddle Details No.1" and "East Saddle Details No.2" sheets.
1. 5. Slotted holes shall be detailed to accommodate all saddle movements during erection, and after completion of the bridge shall accommodate a range of saddle movement of at least 50 mm in each direction. Slotted holes may be placed in the Bearing PL or the saddle base PL.
6. The shape of the dowel shall be a cycloid consistent with the radius of the rocker.
7. For slotted holes in the saddle base plate option the following shall apply: the anchor rods shall be threaded in both ends; two nuts and one washer shall be installed in the bearing plate to clamp the rod in the standard hole; a nominal gap (0.8 mm), a washer and a jam-nut (or other anti-loosening devise) shall be provided at the slotted holes in the saddle base plate.
8. The MC 330 may be welded, subject to approval of the Engineer.
9. PTFE tape (0.5mm thick), shall be applied to the neoprene compression seal.
10. It is acceptable to shift the MC 330 on the tower side 50 mm towards the east anchorage, subject to review and approval by the Engineer.

100 % PS&E

9. It is acceptable to extend the saddle rib to the saddle bearing PL in lieu of the bearing PL web extension, subject to review and approval of the Engineer. Where the offset between the saddle rib and the support beam centerlines exceeds 60 mm, the bearing PL shall be thickened to 60 mm.
10. It is acceptable to replace the W530x150 crossbeams at the bearing locations with W310x253 or a built-up shape equivalent to a W310x253, subject to review and and approval of the Engineer. The W310x253 connection to the saddle support beam shall consist of L 203x203x19 and 6-M24 bolts at each faying surface (in lieu of 8-M22). At the Contractor's option, it is acceptable to use A992 Gr 345 or A572 Gr 345 in lieu of A709 Br 345 for W310x253.
11. For Section E-E, see "East Saddle Details No.7A" sheet.
12. At the Contractor's option, alternate detail using oversize holes may be used. For acceptable alternate details, see "East Saddle Details No.7B" sheet.
13. At the Contractor's option, longitudinal slotted holes may be provided in the saddle support beam flanges and web to facilitate alignment of the bearing beams with the saddle.
14. At the Contractor's option, elastomeric bearing pad and PL 25 may be reduced to 375x500.

SADDLE SUPPORT BEAM DETAILS

NOTES:

1. For saddle geometry and details, see "East Saddle Details No.1" to "East Saddle Details No.6" sheets.
2. The saddle support beams shall be aligned with respect to the east saddle and shall be positioned so as to support the saddle during construction. For approximate location of saddle support beam connection to floorbeam, see "Floorbeam At East Transition No.2" sheet.
3. The Contractor shall provide temporary supports for the saddles and rockers during installation. The temporary supports shall accommodate all saddle movements during construction. During construction the Contractor shall support the saddle against unseating or uplift due to the cable movements.
4. The saddle support beams and elastomeric bearings shall be permanent. The support beams may be used by the Contractor for temporary support, subject to approval by the Engineer.
5. Angles shall be bent to lie flush against floorbeams webs.
6. The elastomeric bearing pad shall be vulcanized to both the PL 10 and the PL 25. It shall be installed without shear deformation.
7. Dimensions shown for information only. Gap shall be set as recommended by the elastomeric bearing pad manufacturer so that each bearing will be installed with a precompressed force of 500 kN.
8. For Section G-G, see "East Saddle Details No.7A" sheet.

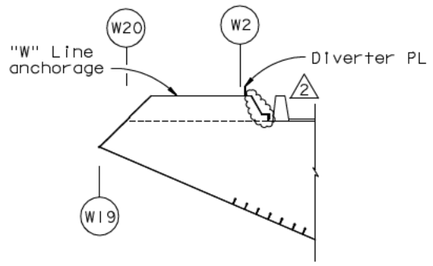
DRAINAGE PLAN AT "W" LINE ANCHORAGE

1:100



SECTION D-D

1:100

NOTES:

1. Drip edge plate shall be continuous along length of typical girder at working lines W1, W6, E1 and E6. For girder transitions at pier W2, tower and east approach, drip edge plate shall be continuous along bottom corner of working line farthest from the center line of girder.
2. Barrier diverter plate shall be continuous along barriers near working lines W2 and E5, unless otherwise shown.
3. For barrier flume details, see "Deck Drainage Details No.3" sheet.
4. For counterweight details, see "Typical Girder Details" sheets.
5. For barrier details, see "Barrier Details" sheets.
6. Use similar detail where diverter PLs meet edge of girder top face at "W" line anchorage and line E5 at PP 8.5.
7. At all drip edge and diverter plate terminations, the end 40 mm of weld shall be CJP.
2 8. Type B flume may be omitted at PP 125 and PP 127 if there is interference with the bikepath structure.

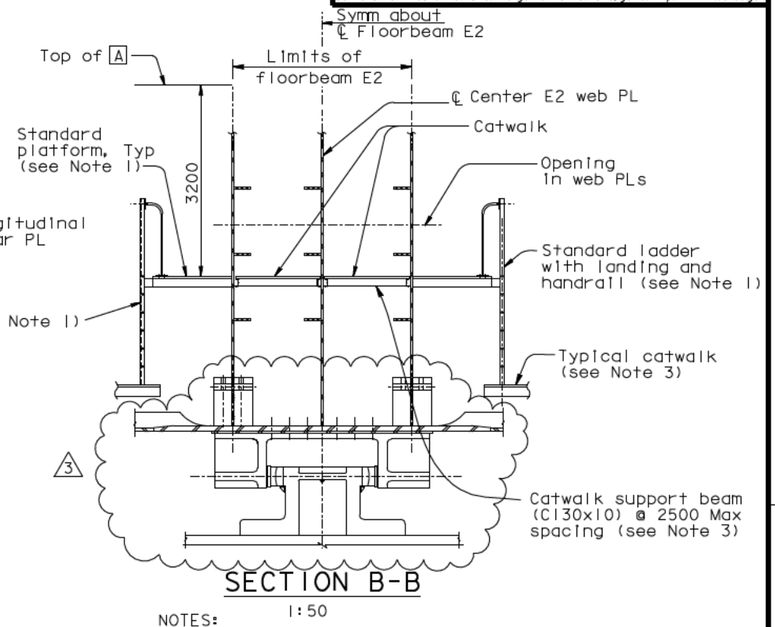
GIRDER PLAN AT EAST APPROACH
1:100



SECTION B-B
1:50

LEGEND:
- Removable grating access
- Direction of main reinforcement of grating
- A Girder Face designation A

NOTES:
1. For standard platform, ladder and railing, see "Tower Access Details" sheets. Channel 75 ladder rails shall be spaced at 500 mm back-to-back. Landing handrails shall be spaced at 500 mm clear or greater. At the contractor's option, it is acceptable to use A992 Gr 345 or A572 Gr 345 in lieu of A709 Gr 345 for channel 75.
2. For access openings and rungs, see "Typical Girder Details No.15", "Crossbeam At Pier E2", and "Girder At Pier E2" sheets.
3. For catwalk details not shown, see "Girder Access Details No.2" sheet.
4. For "K" plate and vertical plate access openings, see "Girder At East Transition Details" sheets.
5. For access openings in longitudinal shear plates, see "Typical Girder Details No.7" and "Girder At East Transition No.9" sheets.
6. For other access openings, see "Floorbeam At East Transition" sheets.
7. Within limits shown, apply non-skid surface to face H and the upper face of longitudinal stiffeners.
8. Locate crossbeam catwalk 1300 west of west side web.

GIRDER SECTIONS (SCHEMATIC)

NTS

LEGEND FOR GIRDER PLATE SCHEMATIC:

——— Actual girder plate (main)

——— Actual girder plate (Closure)

NOTES:

1. Splice locations and patterns are shown for information only. Contractor shall be responsible for the design and detailing of splices suitable to his erection methods. All splices shall develop the full capacity of the connected parts, except for architectural splices shown in the plans. For design criteria see the "General Notes" sheets. The Contractor shall submit his design details for review and approval by the Engineer.

⚠1 Acceptable splice details are shown on "East Anchorage Construction Details No.3" sheet.

2. During field welding the cable strands shall be protected to the satisfaction of the Engineer.

3. For connections containing both welded and bolted parts, bolts shall be designed as "slip critical"

4. Stiffener across web splice may be installed in the field or spliced at web splice location.

NOTES:

1. For stiffener termination details, see "Typical Stiffener Transition Detail" on "Typical Floorbeam Details No.4" sheet.
2. Use fill plate as required when webs do not align.
3. Girder faces G, H and I are architectural from PP118 to PP125. For bolted splices see "Girder At East Transition Details No.3" sheet. For splice locations see "Girder At East Transition Nos.11 to 14" sheets.
4. Splice ℄ may be adjusted.
5. For "K" plate and vertical plate details, see "Girder At East Transition Details" sheets.
6. Bikepath bearing stiffeners shall be welded to girder plate using PJP with 80% penetration welds. Girder stiffener plates shall be coped on either side of bikepath stiffener. Bikepath stiffeners shall align with the bottom flanges of the bikepath cantilever beams at PP121, PP123 and PP125. For locations of bikepath cantilever beams, see "Bikepath Details" sheets.
7. Terminate stiffener as required to access splice.
8. Web opening similar to Detail E, "Girder at East Transition Details No.3" sheet.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO 88	Suppl. No. 0	Contract No. 04 - 0120F4	Road SF-80-13.2/13.9	FED. AID LOC.:

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENT**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

Provide additional project management personnel to identify, coordinate, and propose resolutions to Mechanical, Electrical, and Piping (MEP) issues. Attachment A & B contains a list of MEP issues, from Contractor submitted RFI's, in which this extra work is required. This CCO also fully resolves Notice of Potential Claim 1, dated January 26, 2007.

For this work, the Contractor will be paid the sum of $437,000.00. This agreed lump sum constitutes full compensation including all mark-ups, all direct and indirect costs, all overhead expenses, and all associated project impacts associated with this change.

This agreed lump sum does not provide any payments for contract scope changes related to the resolution of individual MEP issues, from Contractor submitted RFI's. If required, contract scope changes resulting from the resolution of MEP issues including, but not limited to, those in Attachment A & B will be addressed in other change orders.

No extension of contract time is warranted for this change.

Estimated cost of Adjustment of Compensation at Lump Sum $437,000.00

Estimated Cost: Increase ☑ Decrease ☐ **$437,000.00**

By reason of this order the time of completion will be adjusted as follows: 0 days

Submitted by

Gary Pursell	Peter Siegenthaler, Prin. TE	1/28/09

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as may otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

CCO DESCRIPTION:
Electrical Coordination

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	0 Day(s)	30 Day(s)	1 %	5

THIS CHANGE ORDER PROVIDES FOR:

Mitigating potential impacts to the project critical path caused by Mechanical, Electrical and Plumbing (MEP) conflicts in the specifications and plan sheets. Numerous Contractor submitted Requests for Information (RFI's), listed in change order attachment, have identified conflict issues needing immediate resolution so as not to disrupt the timely approval of MEP submittals. These Contractor generated RFI's are in response to deficiencies and conflicts in the contract documentation.

Additional Contractor and electrical subcontractor, Bleyco Incorporated, personnel will be utilized to identify conflicts, coordinate, and expedite conflict resolutions of MEP issues with the Department. This change order does not provide payments for contract scope changes related to the resolution of individual MEP issues. If required, contract scope changes resulting from the resolution of MEP issues will be addressed in other change orders.

This change order also fully resolves NOPC No. 1, which was filed on behalf of electrical subcontractor, Bleyco Incorporated.

This additional Contractor effort could not have been anticipated prior to contract bidding. Numerous RFI's have been generated by the Contractor in an effort to resolve issues in regards to conduit routing, conduit penetrations, electrical panels, light fixtures, seismic sensors, out-of-date specifications and technology, etc. Resolution of MEP issues is resulting in numerous revisions to the contract plans, shop drawings, and quantity take-offs which must be resolved in a timely manner so as not to impact the project critical path.

This additional work is not covered by any contract items. Therefore, payment for this work will be at Adjustment of Compensation at Lump Sum Price for the amount of $437,000.00, which can be financed from the contingency fund. A total of $1,614,000.00 in supplemental funds is allotted for "Electrical/Mechanical Coordination." This agreed lump sum constitutes full compensation, including all mark-ups, for all direct and indirect costs, all overhead expenses, and all associated project impacts. A detailed force account cost analysis is on file with the project records.

No time adjustment is warranted, as this change order does not affect the controlling operation. However, without this additional effort many of these RFI could become critical and potentially delay the project.

This change order was approved by Gary Pursell (Sup.TE) on 1/28/09.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 89 Suppl. No. 0 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

To: AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

This change revises Special Provisions section 10-1.59, "Steel Structures," subsection "Shop Welding," subsection "Welding of Closed Ribs to Box Shell Plate."

Adjustment of Compensation at Lump Sum

Replace section 10-1.59, "Steel Structures," subsection "Shop Welding," subsection "Welding of Closed Ribs to Box Shell Plate," subsection "C. Monitoring of Production Welds," of the Special Provisions as follows:

C. Monitoring of Production Welds – During fabrication, conduct a weld monitoring test (WMT) for each operator and for each welding head to be used on each welding machine at the start of each work shift, or during the shift if the operator changes or the equipment is modified. Each test specimen shall consist of a continuous segment of a production panel sufficient to provide minimum test weld lengths of 500mm at the termination of the weld. Weld the rib to deck test segment with the same procedure as used in production panels including tack welds. Use Run-on and run-off tabs if used in the production panels. If multiple ribs are welded simultaneously in production, then weld the same number of ribs during the test, up to a maximum of three ribs, (six welds).

If a WMT does not meet the following acceptance criteria, the welding operator and equipment producing the failed WMT shall not fabricate panels until the cause of the deficiency has been determined, corrective action taken, and a passing WMT has been accepted by the Engineer. Deck panels fabricated, prior to evaluation of the WMT, will be rejected if the WMT fails to demonstrate the following:

1. Acceptance criteria for Visual Testing (VT) - Perform VT of 100% of each weld in accordance with AWS D1.5, The Special Provisions, and the acceptance criteria as follows:

   a. No Cracks
   b. Overlap $\leq$ 100mm in length.
   c. Undercut $\leq$ 0.25mm, except that undercut greater than 0.25mm but less than 1.0mm is acceptable for a maximum total length of 5mm in each weld.
   d. Undersized fillet reinforcement, up to 2mm undersized, less than 50mm total length in each weld, provided that a minimum of 80% weld penetration is provided locations of undersized reinforcement.
   e. Oversized fillet reinforcement resulting in up to 2mm over the maximum defined reinforcing fillet weld size.
   f. Incomplete fusion at the top of the weld in the welded position (weld toe at rib) for a maximum total length of 25mm in each weld.
   g. Surface porosity per AWS D1.5

   If a WMT is rejected due to failed VT, no further testing of the specimen is required.

2. Acceptance criteria for Ultrasonic Testing (UT) - Perform UT of 100% of each weld in accordance with the approved UT procedure. Each test weld must achieve a minimum joint penetration of 9.6mm, except that for a maximum of 5% of the weld length it is acceptable to achieve a minimum joint penetration of 8.4mm, provided that the effective weld size is at least 9.6mm. UT may begin prior to the completed weld cooling to ambient temperature. Air or Water cooling, (quenching), may be used to facilitate timely performance of UT. If a WMT is rejected due to failed UT, no further testing of the specimen is required.

3. Macro-Etch Testing - Provide five macro-etched samples from each u-rib as determined by the Engineer with samples taken 25 mm from each end of the test weld and at a tack weld, total three (3) on one weld; and two macro-etch samples selected from the other weld on the same rib. Macro-etch samples will be evaluated for lack of penetration and lack of fusion. Macro-etch samples will not to be used to re-evaluate weld profile criteria from VT. The following acceptance criteria apply to macro-etch testing:

    a. No Cracks.
    b. Joint Penetration $\geq$ 8.4 mm, provided the effective weld size is $\geq$ 9.6mm.
    c. No fusion type defect associated with a fusion boundary, i.e. fusions between weld and plate, between tack and root pass (GMAW), or between root pass (GMAW) and cover pass (SAW). No fusion type of discontinuity at the root of the weld may extend into the 9.6 mm depth of penetration.
    d. Inclusions $\leq$ 3mm unless associated with the fusion defects noted above.

Replace Section 10-1.59, "Steel Structures," Subsection "Shop Welding," Subsection "Welding of Closed Ribs to Box Shell Plate," subsection "D. Panel Production," with the following:

D. Panel Production – The dimensions of production panels of box shell plating shall be checked after welding. The welded panel, after straightening, if any, shall be flat within 5 mm in each 5 m length of box panels. Panels may be straightened using a written procedure that is in conformance to AWS D1.5 and is approved by the Engineer.

Ultrasonic technician shall be qualified using a mock-up weld with flaws that is approved by the Engineer.

If the flatness of more than one panel in five exceeds 6 in 1000 after welding, the Contractor shall propose a revised assembly procedure, such as a different amount of pre-bending, and shall demonstrate the revised method by welding a new panel in the presence of the Engineer.

Production panels shall be nondestructively tested at the rate specified in these special provisions except that ultrasonic testing of the first two production panels shall include 100% of the tack welds. Ultrasonic testing of tack weld areas shall continue until no more than one in ten tack welds are rejected, after which random ultrasonic testing shall proceed at the rate indicated in the table specified in these special provisions. In addition to random ultrasonic testing specified, ultrasonic testing shall be performed on 15% of all tack welds. Ultrasonic testing of the PJP weld shall be in accordance with a written procedure that is developed to measure the size of the incomplete joint penetration and approved by the Engineer. Approval of the UT procedure shall be contingent on a satisfactory comparison (+/- 0.2 mm) of the UT results with the measured incomplete joint penetration in the macrosections taken from the weld qualification trials. At a minimum, the UT procedure shall include reference blocks with notches that have depths of 90%, 80%, 70% and 60% of the rib thickness. For the 12 mm thick closed ribs, the notch depths are 1.3 mm (90%), 2.5 mm (80%), 3.8 mm (70%), and 5.0 mm (60%). The reference blocks shall be made available to the Engineer. The NDT reports for the UT testing of the PJP welds shall specify the length and magnitude of the incomplete joint penetration. Each of the Contractor's ultrasonic technicians shall be qualified using a mock-up weld with flaws that is approved by the Engineer.

The acceptance criteria for ultrasonic testing of rib to plate welds shall conform to the following:

1. Joint penetration $\geq$9.6mm except that, for no more than 5% of the length tested of each individual weld, joint penetration $\geq$ 8.4mm is permitted, provided the effective weld size is $\geq$ 9.6mm.
2. If more than 5% of the length tested of an individual weld has a joint penetration less than 9.6mm, UT 100% of that weld.
3. If 100% of the weld length is tested, then joint penetration $\geq$ 8.4mm is permitted for no more than 10% of the weld length, provided the effective weld size is $\geq$ 9.6mm.
4. The following shall be cause for repair:
    a. Any weld with less than a 70% Depth of Penetration (DOP)
    b. Any weld with more than 10% of the weld length that is between 70% and 80% DOP.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 89 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

For production panels associated with a failing WMT, due to lack of penetration (LOP), perform UT on 30% of each weld including 100% of tack weld locations. Acceptance criteria for these panels are the same as indicated above for production panels.

Consideration of a time adjustment will be deferred until completion of the work specified herein. Determination of a commensurate time adjustment will be made in accordance with Section 10-1.13, "PROGRESS SCHEDULE (CRITICAL PATH METHOD)" and Section 10-1.14, "TIME-RELATED OVERHEAD" of the Special Provisions, as well as Section 8-1.07, "LIQUIDATED DAMAGES", of the Standard Specifications.

Cost of Adjustment of Compensation at Lump Sum $0.00

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0.00**

By reason of this order the time of completion will be adjusted as follows: DEF

COST: $0.00 INCREASE ☐ DECREASE ☐	HEADQUARTERS APPROVAL REQUIRED? ☑ YES ☐ NO
SUPPLEMENTAL FUNDS PROVIDED: $0.00	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Deck Panel Acceptance Criteria	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	DEF Day(s)	30 Day(s)	1 %	2

THIS CHANGE ORDER PROVIDES FOR:

Revising Special Provisions section 10-1.59, "Steel Structures," subsection "Shop Welding," subsection "Welding of Closed Ribs to Box Shell Plate," subsection "C. Monitoring of Production Welds," and subsection "D. Panel Production."

The current Special Provisions account for weld quality, in part, by requiring that a test section of the U-rib weld be prepared at the beginning of each shift, referred to as a Weld Monitoring Tests (WMT). The WMT must show a "quality similar to those originally developed" (in the weld trials and mock ups). However, as welding operations began, the weld quality demonstrated during the weld trials, mockups, and early WMT's was found to be inconsistent, and it became evident the definition of "quality similar to those originally develop" was difficult to define, subjective, and impractical to apply as acceptance criteria to WMT's, and hence production panels.

This CCO modifies and clarifies weld acceptance criteria for both the WMT and production panels to provide clear and specific acceptance criteria, rather than referring to "quality originally developed." The clear and specific acceptance criteria provide positive assurance that the weld quality criteria contained in the contract documents is actually achieved in the completed U-rib panels.

Revisions to subsection "C. Monitoring of Production Welds" are included to clarify acceptance criteria for WMTs. This change indicates acceptance criteria for Visual Testing (VT), Ultrasonic Testing (UT) and Macro-etch sampling. These criteria will provide an objective basis for a passing or failing WMT, which currently is not adequately addressed in the specifications.

Revisions to subsection "D. Panel Production" are needed to provide more detailed ultrasonic testing acceptance criteria for deck panels. These additional requirements are included to be consistent with deck panel weld parameters and joint geometry tolerances requirements of the Special Provisions. Revisions also include provisions for performing ultrasonic testing on 15% of tack welds on production panels and acceptance criteria for production panels.

Adjustment of contract time is deferred pending completion of the work specified in this change as the work may impact the controlling operation.

Although there is agreement in concept with this no cost change order, a detailed cost analysis is in the project files, it is anticipated the Contractor will not sign the CCO because his fabricator wishes to reserve their rights. Absent the Contractor's signature, the CCO will be issued unilaterally since a clear and specific deck panel acceptance criteria is required in any event.

This change order received concurrences from Peter Siegenthaler (Principal Construction Engineer), Rick Morrow (Structure Representative), Ken Terpstra (Project Manager), Mike Forner (Principal Construction Engineer) and Jon Tapping (Division of Construction Coordinator), Marwan Nader (Design of Record, TYLin Moffett and Nichol), Design Oversight (Wenyi Long), and Jim Merrill (METS). Maintenance concurrence is not required for his change.

This CCO has received an Issue and Approve (I&A) with Deferred Time Adjustment from the Division of Construction on /08.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 89 Suppl. No. 1 Contract No. 04 – 0120F4 Road SF-80-13.2/13.9 FED. AID LOC.:

To: AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

Replace section 10-1.59, "Steel Structures," subsection "Shop Welding," subsection "Welding of Closed Ribs to Box Shell Plate," subsection "B. Weld Procedure Trials," item 6, of the Special Provisions as follows:

6. Tack welds shall be incorporated into the final weld and shall not result in hard spots; uneven transverse notches; cracks or tears; or excessive thickness that results in local weld thickness variations greater than 3 mm. However, defects identified at tack welds with NDT may be accepted provided the defect is remedied by excavating the weld to the minimum 80% depth of penetration (9.6mm) of the rib thickness, followed by repair of the weld with a repair welding method and procedure approved by the Engineer for the application.
   Hard spots shall be evaluated on the qualification test by Vickers hardness measurements taken at 2 mm centers in the tack weld heat affected zones of both base plate and rib on the tack weld macrosections specified above. Hardness testing of tack welds will be required for production monitoring tests if a macrosection appears to have a hard spot in the opinion of the Engineer. A hard spot shall be defined as a hardness value in the tack weld HAZ that exceeds 300HV.

For this work, the Contractor agrees to perform this work at no additional cost to the Department. This sum constitutes full compensation, including markups, for this change.

Consideration of a time adjustment will be deferred until completion of the work specified herein. Determination of a commensurate time adjustment will be made in accordance with Section 10-1.13, "PROGRESS SCHEDULE (CRITICAL PATH METHOD)" and Section 10-1.14, "TIME-RELATED OVERHEAD" of the Special Provisions, as well as Section 8-1.07, "LIQUIDATED DAMAGES", of the Standard Specifications.

Cost of Adjustment of Compensation at Lump Sum Price.....$0.00

Estimated Cost: Increase ☐ Decrease ☐ $0.00

By reason of this order the time of completion will be adjusted as follows: DEFERRED

CCO DESCRIPTION:
Tack Weld Repair

PROJECT DESCRIPTION:
CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	DEF Day(s)	30 Day(s)	1 %	5

THIS CHANGE ORDER PROVIDES FOR:

Providing repair criteria for U-rib to deck panel tack welds by replacing section 10-1.59, "Steel Structures," subsection "Shop Welding," subsection "Welding of Closed Ribs to Box Shell Plate," subsection "B. Weld Procedure Trials," Item 6 of the Special Provisions.

Non-destructive testing (NDT) indicates some tack welds, which connects the U-rib to the deck panel, develop cracks prior to being incorporated into the final weld. Additional NDT testing of the final weld revealed some tack weld cracks were not being re-melded during production welding. This condition does not meet the requirements of the Special Provisions and must be remedied. An investigation to remedy this condition was performed by the Department and a number of welding specialists, a fatigue and fracture analysis engineer and the project's Seismic Safety Peer Review Panel (SSPRP). The investigation determined that tack weld cracking is not detrimental provided an approved repair procedure achieves the design required 80 inimum weld penetration depth without defects.

Documentation in support of the above recommended acceptance criteria is in the project records.

The Contractor agrees to perform this work at no additional cost to the Department. A detailed cost estimate is in the project records. Cumulative total CCO 89 S0 and this supplement is $0.00.

Adjustment of contract time is deferred pending completion of the work specified in this change as the work may impact the controlling operation.

This change order received concurrences from Brian Maroney (Deputy Toll Program Manager) Peter Siegenthaler (Principal Construction Engineer), Richard Morrow (Structure Rep), Ken Terpstra (Project Manager), and Jon Tapping (Division of Construction Coordinator). Concurrences have also been obtained from Marwan Nader (Design Engineer, TYLin Moffett and Nichol), and Jim Merrill (METS). Maintenance concurrence is not required for his change.

The Resident Engineer received an Issue and Approve (I&A) from the Division of Construction for this change on 1/23/2009 (copy attached).

This change order was approved by the Engineer and processed unilaterally after it was returned unsigned by the Contractor. See attached Department letter dated 7/17/2009 for reference.

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 89 **Suppl. No. 2** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum Price:

This change order shall close the deferred time element of change orders 89S0 and 89S1 excluding Orthotropic Box Girder (OBG) Lifts 12-14. Contract time is addressed in CCO 108S1 for the deferred time adjustments for change orders 89S0 and 89S1.

Adjustment of Compensation at Lump Sum.....$0

Estimated Cost: Increase ☐ Decrease ☐ $0.00

By reason of this order the time of completion will be adjusted as follows: 0 Days

Submitted by

Signature	**Resident Engineer** Kannu Balan, Senior T.E.	**Date**	8/3/10

Approval Recommended by

Signature	**Supervising Bridge Engineer** Richard Morrow, Sup. T.E.	**Date**	8/3/10

Engineer Approval by

Signature	**Supervising Transportation Engineer** for Gary Pursell, Sup. T.E.	**Date**	8/9/10

We the undersigned contractor, have given careful consideration to the change proposed and agree, if this proposal is approved, that we will provide all equipment, furnish the materials, except as otherwise be noted above, and perform all services necessary for the work above specified, and will accept as full payment therefor the prices shown above.

NOTE: If you, the contractor, do not sign acceptance of this order, your attention is directed to the requirements of the specifications as to proceeding with the ordered work and filing a written protest within the time therein specified.

SUPPLEMENTAL FUNDS PROVIDED: **$0.00**	IS THIS REQUEST IN ACCORDANCE WITH ENVIRONMENTAL DOCUMENTS? ☑ YES ☐ NO
CCO DESCRIPTION: Tack Weld Repair OBG Lifts 12-14	**PROJECT DESCRIPTION:** CONSTRUCT SELF-ANCHORED SUSPENSION BRIDGE

Original Contract Time:	Time Adj. This Change:	Previously Approved CCO Time Adjustments:	Percentage Time Adjusted: (including this change)	Total # of Unreconciled Deferred Time CCO(s): (including this change)
2490 Day(s)	**0** Day(s)	**501** Day(s)	**20** %	**3**

THIS CHANGE ORDER PROVIDES FOR:

Repairing tack welds of closed u-ribs to the box shell plates on Orthotropic Box Girder (OBG) Lifts 12 through 14 as specified in CCO 89S1.

Non-destructive testing (NDT) indicated some tack welds that connect the U-rib to the deck panel developed cracks prior to being incorporated into the final weld. Due to the fatigue sensitive issues with these completed welds, the Department solicited several expert recommendations and a thorough investigation was performed. This investigation involved a number of welding specialists, the performance of a fatigue and fracture mechanics analysis, and the consultation of the SFOBB Seismic Safety Peer Review Panel (SSPRP). Based on the results of this investigation along with the expert recommendations including that of the SSPRP, the Department determined that cracks remaining in the root of the tack weld would not be detrimental provided an approved testing and repair procedure achieved an acceptable 80% minimum weld penetration depth and the deposited weld has no defects beyond the root of the tack weld. CCO 89S1 revised Special Provisions Section 10-1.59 "Steel Structures" to accept properly repaired tack welds. The non-destructive testing (NDT) methods for determining the condition of the tack welds were specifically developed for and utilized throughout the project. The NDT methods included the use of Phase Array Ultrasonic Testing (PAUT), Gate-to-Gate Ultrasonic testing and conventional Ultrasonic Testing (UT). CCO 91 provided compensation for the performance of the additional NDT while CCO 108 S1 provided compensation for the deck panel tack weld repairs for OBG Lifts 1-11 resulting from the additional NDT. CCO 89 S3 will provide compensation for the deck panel tack weld repairs for OBG Lifts 12-14.

Originally, the Department issued CCO 89 S1 as a no cost/no credit change order which was processed unilaterally and protested by the Contractor. However, through subsequent negotiations and preparation of a Claims Settlement Report, merit was established with compensation for OBG Lifts 1-11 provided for in CCO 108 S1 as stated above. This supplemental CCO builds on that determination in providing compensation for OBG Lifts 12-14. It is also noted that compensation for this work was not included in CCO 160.

Risk Item #109 "CCO #89 Revised Acceptance Criteria for Welding" has been carried in the Risk Register. The cost of this change is within the ranges carried in the Register.

The total cost of this change order is $573,955.00, which can be financed from the contingency fund. A detailed cost analysis is on file. The cumulative total of CCO 89S0, 89S1, 89S2, and 89S3 is $573,955.00.

No time adjustment is warranted as this change order does not affect the controlling operation.

This change order has concurrence from William Casey (Supervising TE), Ken Terpstra (Proj. Manager), Rich Foley (HQ Oversight), Wenyi Long (Bridge Design), Lina Ellis (Maintenance), and Jing Chen (District Design).

CONTRACT CHANGE ORDER

Change Requested by: Engineer

CCO: 90 **Suppl. No. 0** **Contract No. 04 – 0120F4** **Road** SF-80-13.2/13.9 **FED. AID LOC.:**

To: **AMERICAN BRIDGE/FLUOR ENTERPRISES INC A JOINT VENTURE**

You are directed to make the following changes from the plans and specifications or do the following described work not included in the plans and specifications for this contract. ***NOTE: This change order is not effective until approved by the Engineer.***

Description of work to be done, estimate of quantities and prices to be paid. (Segregate between additional work at contract price, agreed price and force account.) Unless otherwise stated, rates for rental of equipment cover only such time as equipment is actually used and no allowance will be made for idle time. This last percentage shown is the net accumulated increase or decrease from the original quantity in the Engineer's Estimate.

Adjustment of Compensation at Lump Sum:

In Special Provisions Section 10-1.59, "STEEL STRUCTURES," subsection "WEIGHT CONTROL," revise the fourth paragraph as follows:

Weight reports shall be submitted using a format described in the approved weight control procedure. These reports shall include the weight of all installed components including utilities, platform barriers, counter weight and roadway wearing surfaces including the range of uncertainty in the estimated final weight. For Lifts 1 through 12 of the OBG t~~T~~he design weights used in the Contractor's erection analysis shall consist of the nominal weights taken off the fabrication drawings increased by 3%. For Lifts 13 and 14 of the OBG the weights shall be calculated from the contract plans, including known changes at the time that the calculations are prepared, increased by 3%. Upon completion of the fabrication drawings for Lifts 13 and 14 of the OBG, the Contractor shall calculate the final weights off the fabrication drawings and submit the final weights to the Engineer. An erection analysis using the final fabrication weights of Lifts 13 and 14 is not required.

Any additional work or changes that result from variations between the design weights and final weights calculated off the fabrication drawings for Lifts 13 and 14 of the OBG will be addressed in a Supplemental Contract Change Order by the Engineer.

There shall be no change in cost to the Department by reason of this Change Order.

Estimated Cost: **Increase** ☐ **Decrease** ☐ **$0.00**

By reason of this order the time of completion will be adjusted as follows: **0 Days**
