# SUPPLEMENTARY HAZARDOUS WASTE

## INITIAL SITE ASSESSMENT

### HIGH SPEED RAIL ROUTE

#### VICTORVILLE, CALIFORNIA

#### INTRODUCTION

The California Department of Transportation is proposing a modified path for the new High Speed Rail (HSR) system from eastern end of the median where HSR leaves the planned High Desert Corridor (HDC) project limit toward Dale Evens Parkway within the City of Victorville. The HSR pathway is approximately 5.5 miles long as it initially runs along Rancho/Quarry Roads till it reaches Route 15 and then runs just west of it till it reaches Dale Evens Parkway.

This Supplementary Initial Site Assessment was prepared in-house by Environmental Design North. As the proposed project is generally in undeveloped areas, our review was primarily based on review of the existing aerial photos, reference to San Bernardino County Land Management website, Geotacker Database, and field visit of its proposed pathway on the provided HDC SEGMENT 8d HSR, HDC SEGMENT 8c HSR and its HDC SEGMENT 8e HSR plans (Attachment 2).

Based on the review of our sources of information and reconnaissance, the proposed alignment for the HSR is found predominantly on undeveloped vacant properties that have been zoned by the San Bernardino County for the following nine land uses:

Industrial, Administrative/Professional, Commercial, Public Facilities, Single Family Residential, Multiple Family Residential, Agricultural, or Restricted.

Most of the 5.5 miles pathway of the HSR runs through areas that have been set aside for industrial and agricultural land use. Most of these areas except for few small enclaves remain undeveloped. The remaining ones assigned for multiple family residential and administrative/professional purposes have yet to be used for that purpose. The only developed areas consist of a single family residential zone on the western outskirts of Victorville where the HSR begins and the two industrial/commerce areas east of it. There are also the public facilities that consist of railroads Right of Way and State and City roadways. In brief, the proposed pathway of the HSR passes mainly through undeveloped vacant properties except for a three somewhat developed enclaves. Therefore, this supplementary hazardous waste site assessment will focus on the hazardous waste issues that are related to these parts of the HSR project area.

#### HDC SEGMENT 8d HSR

The detailed future land-use as planned by San Bernardino County Land Management is presented in Table 1 of Attachment 1. Most of the partial takes from this part of the route for the

HSR are all from vacant undeveloped open desert properties that are set for, the following future use:

- Commerce and public road,
- Single family residents,
- Mining and, and industry
- Mixture of these uses.

Based on aerial photo study, field visit and inquiries from various County of San Bernardino Agencies, the HSR parts of the pathway that are set for these future developments remains void of potential hazardous waste issues except for the following concerns in the isolated parts of Sheets 1, 2, 3, 5, 6, 9 and 13:

#### **Asbestos and lead based paint**

Based on the data obtained from the aerial photos (Sheets #1-3) and site reconnaissance, the beginning part of the HSR runs through the semi-developed western part of Victorville where a maximum of five single family residential units are located on its pathway. Their potential hazardous waste is limited to presence of asbestos, lead based paint that need to be mitigated before demolition.

#### **Groundwater issue**

Based on the information from the aerial photos and our site reconnaissance, the HSR will be required to cross over a flood control channel, Rancho Road, National Train Highway, (Sheets #1,2,3 and 9), as well as the railroad (Sheet #6). The groundwater in Sheets 1-3 is at an estimated depth of 34 feet bgl. If bridges are needed at these crossings, subsurface investigation may be required for handling the potential excess groundwater issues during construction. The results of the investigation will be used for management of the excess ground water during construction. This issue is especially important for the HSR to cross over the railroad Right of Way and Mohave River where the groundwater may be encountered at shallower depth.

#### **Railroad issue**

Railroad Right of Way has the potential of being impacted by the hazardous material it transports. Therefore, as the HSR requires construction activities on its property, (Sheet #6) the area where a bridge needs to be constructed should be investigated for possible soil as well as groundwater contaminations. The possible contaminants of concern include: volatile hydrocarbons, fuels and toxic metals.

#### **Recycling and Landfill Site**

There is a large active recycling facility on National Trail Highway (Sheets 5 and 6) where construction and roadway waste materials debris are stockpiled and an active Victorville Class III Landfill at Studdard Wells Road on Sheet 13. Based on our visit, the one on National Trail Hwy is located west of Mohave River, and across from Mohave Equipment Company at 17430 National Trail Hwy. It's surface irregularities indicate that it was elevated considerably by the vast volume of waste that it has received. The groundwater, recorded in its proximity in 1957 was at

85-37 feet below its local elevation. The visible waste include: concrete, asphalt, auto tires and soil, (Attachment 3). They are in large piles with truck roads running between them. Based on the information we received from San Bernardino office in charge of landfills, this site is not a recorded landfill. However, as the HSR needs to cut through this area, a detailed site investigation will be required for screening the waste that needs to be removed in its pathway.

The Victorville Class III Landfill at Studdard Wells Road is currently active and receives disposals. It's disposal area is more than 500 feet west of the proposed HSR pathway. Based on the Geotracker Database there are several monitoring wells on its outer edge, and based on the available information it appears that it has not impacted the groundwater of the area where the HSR is to pass.

#### **Truck Repair Facility**

The proposed HSR pathway passes through Mohave Equipment Company, located at 17430 N.D Street (Sheet #6) which is a major truck and tractor repair on National Trail Highway. This property needs to be acquired for this project. The Geotracker Database did not indicate any concern for release of truck related hazardous waste issues to its surface or groundwater. However, as this property is in the pathway of the HSR project, it will be necessary to check it for the various contaminants of concern that are related to large vehicle. These concerns include soil and groundwater being impacted by VOCs, toxic metals and their fuels. Special attention should be placed on testing the groundwater, as it may be a shallower depth due to its close proximity to the Mohave River. Therefore, this site will require site investigation based on more detailed initial site assessment to be carried out during design phase.

#### **HDC SEGMENT 8c HSR**

The HSR pathway on HDC SEGMENT 8c HSR is a proposed alternative route that applies to the easterly half of its pathway on HDC SEGMENT 8d HSR. The detailed future land-use for future land-use as planned by San Bernardino County Land Management is presented in Table 2 in Attachment 1. Almost all of the partial takes from this part of the route of the HSR pathway are from vacant undeveloped open desert properties that are set for, the following future use:

- Commerce and public road,
- Single family residents,
- Mining and, and industry
- Mixture of these uses.

Based on aerial photo study and field visit, based on aerial photo study and field visit, its only developed part consists of the existing road in (Sheet #6) and the Victorville Class III Landfill at Studdard Wells Road on Sheet 10 which was described above under **HDC SEGMENT 8d HSR**.

#### **HDC SEGMENT 8e HSR**

The HSR pathway on HDC SEGMENT 8e HSR is the continuation of where HDC SEGMENT 8d HSR or its alternative HDC SEGMENT 8c terminate and continues till Dale Evens Parkway

within the City of Victorville. The detailed future land-use planned by San Bernardino County Land-Management are presented in Table 3 of Attachment 1. All of the partial takes from this part of the route of the HSR pathway are all from vacant undeveloped open desert or mountainous properties that are set for the following future use:

- Commerce and public road,
- Single family residents,
- Mining and, and industry
- Mixture of these uses.

Based on aerial photo study and field visit, this part of the HSR pathway consist of, undeveloped land and are void of hazardous waste issues.

### **SUMMARY AND CONCLUSION**

The hazardous waste issues related to the proposed pathway in the three segments are limited to the ones in HDC SEGMENT 8d HSR where two isolated parts have been developed, in addition to the railroad, and State and City roadways. These hazardous waste issues consist of: asbestos and lead based paint, groundwater, in the residential area on Sheets 1, 2 and 3 and the railroad, recycling center and a major truck repair facility on Sheets 5 and 6 of HDC SEGMENT 8d H. The most important hazardous waste issues are likely to be related to the railroad, recycling center and a major truck repair facility which are at or next to 17430 National Trail Hwy where Mohave Equipment Company is located. Therefore, further site investigation will be required in these areas in addition to the groundwater investigation in the residential area, to find their impact on the proposed HSR pathway within the City of Victorville. Their remediation cost can be determined by a Phase II Site Investigation based on the hazardous waste issues that will be reported for these sites. It will take up to three month to carry out the assessment and develop the cost estimate for their remediation.

ATTACHMENT 1, TABLE 1

HDC SEGMENT 8d HSR PATHWAY

Sheet # and AIN ID Number	Land Use Partial take from undeveloped open desert, vacant land set for:	Aerial Photo, and Geotracker Database Information and potential Hazardous Waste Issues
Sheet #1 039401124 039401111 039401127	single family residents	None
Sheet #1 039501103 039501104	Single Family Resident	Potential presence of asbestos, lead based paint needs to be mitigated before demolition
Sheet #1 039501139	Flood control channel	The flood control consists of a depressed area between single family residential. The pathway of HSR needs to be bridged over it. Its groundwater needs to be investigated during design phase of the project.
Sheet #1-3 039501109 to 039508306 039508307	Combination of vacant and built Single Family Resident lots.	Potential presence of asbestos, lead based paint needs to be mitigated before demolition. Also there is a high pressured gas pipeline that runs next to Rancho Rd which the HSR crosses over. Crossing over the this road will require groundwater site investigation.
Sheet #3-4 047215102 047214114 047214106	commercial use and back side of a existing burned single family resident	None
Sheet #4-5 047214135 047214118 047214122 047213118	Industrial use.	None

Sheet #5-6 047213113 047213104 047213103 047213105	Partial take of a existing Large recycling center	A large elevated area is being used as a recycling center for construction and roadway waste material. Excavation of this area for clearing the pathway for the HSR will require detailed site investigation for all of contaminants of concern.
Sheet #6 047213106	Hotel and single family residents	none
Sheet #6 047213209	A single Existing large scaled truck stop and truck repair center.	The presence of a major truck repair center will require detailed site investigation for soil as well as groundwater, although Geotracker Database has not recorded past violations. .
Sheet #6 047206162	Existing railroad in depressed valley	The railroad right of way needs to be crossed by the HSR requiring a bridge in this area. The construction of the bridge will require full site investigation for the soil as well as the groundwater for the related contaminants of concern.
Sheet #6-9 047206117 047206155 047206156 047204142	Cement industry mining use	None
Sheet # 9 047206152	Existing road in depressed valley	The road needs to be crossed by the HSR requiring a bridge in this area. The construction of the bridge will require full site investigation for the soil as well as the groundwater for the related contaminants of concern.
Sheet # 9-10 047204142 047204129	Commercial use	None
Sheet #10 047204127 047204128 047204126 047204122	Single family residents	None

Sheet # 11 047204102	industrial use	None
Sheet # 11-15 047203164 047203165 047203160 047201134	commerce and public road	None. Victorville Class III Landfill on Sheet 13, 200-300 feet from where HSR pathway is proposed. Geotracker Database information on several monitoring wells on its edges do not indicate hazardous impact to the groundwater.
Sheet #16-17 047222101 047222102 046916105 046916104	commerce and single family resident	None
