About the Project

This project involves the construction of an elevated two-lane direct HOV connector at the I-5/SR-14 interchange and construction of HOV lanes in both directions of I-5 at the interchange. A direct HOV connector will allow for freeway-to-freeway transfers without exiting the carpool lane.

The project will relieve congestion, improve traffic flow, enhance safety and improve traffic operations on both freeways at the interchange. The work is part of Caltrans' effort to provide motorists with a seamless carpool lane network in California.

Work began in July 2008 and is on track to be completed in summer 2013. Caltrans thanks the motoring public for their patience and understanding during construction.
