Restoration Project

Traffic Management Plan During Construction

During construction, the Traffic Management Plan will accommodate traffic on the existing temporary bypass (Incline Road). The Traffic Management Plan will include:

- **Limited Short-Term Closures and Night and Weekend Work**
- **Construction Staging**
- **Pedestrian and Bicycle Guidance**

Public Notification will be made via Media Releases, Local Cable and News Broadcasts, the Project Web Page, and the Caltrans Public Information Office

- **Message Signs and Special Construction Signs**
- **Highway Advisory Radio**

The Traffic Management Plan will also utilize COZEEP (Construction Zone Enhanced Enforcement Program), a powerful tool that effectively improves project safety through the use of supplemental California Highway Patrol Units to assist in the management of traffic passing through the construction zone. COZEEP involves the presence of the CHP in certain construction zones to serve as a reminder to the motoring public to slow down, observe construction zone signs, and use care while driving through the work zone.
