Subject: Limited Phase II Environmental Site Assessment
Interstate 5 Expansion
Del Mar Heights Road to Birmingham Drive
San Diego, California

Dear Mr. Kloth:

In general accordance with Contract No. 11A1023 and State of California, Department of Transportation (Department) Task Order No. 9, dated March 30, 2005, we have prepared this limited Phase II Environmental Site Assessment of the subject site (Site). The attached report presents our methodology, findings, opinions, conclusions, and recommendations regarding the limited environmental assessment at the Site.

We appreciate the opportunity to provide environmental consulting services to the Department on this important project. If you have questions regarding this report, please contact the undersigned at your convenience.

Sincerely,
NINYO & MOORE

EXECUTIVE SUMMARY

Ninyo & Moore has prepared this limited Phase II Environmental Site Assessment (ESA) report for a soil and groundwater assessment and aerially deposited lead (ADL) survey performed along the Interstate 5 (I-5) corridor from the Carmel Valley Road interchange to the Birmingham Drive interchange (Site), located in San Diego County, California. The limited Phase II ESA was conducted in anticipation of the expansion of I-5 from the Genesee Avenue interchange to the Vandegrift Boulevard interchange, and reconstruction of the interchanges along this corridor.

Previous soil sampling and analysis by the California Department of Transportation (Department) indicated that ADL is present in shallow soil within the median and shoulders of the subject section of I-5. To complement these data, Ninyo & Moore conducted an ADL survey of soil in the unpaved areas along the northbound and southbound shoulder areas, as well as in the unpaved areas within the interchanges, of this segment of I-5. The survey included hand augering 189 borings to depths of between 0.15 meters (0.5 feet) to 1.5 meters (5 feet) below ground surface (bgs) and collecting soil samples at the total depth of each boring. Soil samples were analyzed for total lead and, as appropriate, soluble lead.

Of the 189 soil samples analyzed for lead, 187 samples contained concentrations of lead above the reporting limit, ranging from 1.15 to 246 milligrams per kilogram (mg/kg). The upper 80% confidence level of the mean of total lead concentrations of the 189 soil samples analyzed was 14.26 mg/kg. Fifty individual samples were analyzed for leachability following the California waste extraction test (WET). Of these 50 samples, two exceeded the hazardous waste criterion of 5 milligrams per liter (mg/ℓ). Thirty individual samples were analyzed for leachability following a modified WET procedure using a deionized water extraction. Of these 30 samples, four samples leached lead at concentrations at or above the Department of Toxic Substances Control ADL Variance criterion of 0.5 mg/ℓ. Fifty individual samples were analyzed for leachability following the federal toxicity characteristic leaching procedure. None of these samples leached lead above the federal hazardous waste criterion of 5 mg/ℓ. The pH of the 50 soil samples analyzed ranged from 3.26 to 9.04. Based on the analytical results of the hand auger samples, the soil assessed meets the criteria specified in the ADL variance granted to the Department and could be reused on Site under the provisions set forth in the variance. The data further suggest that the soil as a whole would not be considered a hazardous waste for disposal purposes; however, additional analytical data may be required by local regulators or waste disposal facility prior to off-site disposal.

In addition, according to a representative of the Department, facilities with known unauthorized releases are located adjacent to some of the interchanges along I-5. Based on this information and anticipated reconstruction requirements of the interchanges (e.g., deep foundations, potential construction dewatering), Ninyo & Moore assessed soil and groundwater at the Del Mar Heights, Via de la Valle, Lomas Santa Fe, Manchester, and Birmingham interchanges. The assessment included drilling ten borings by hollow-stem auger to depths ranging from 4.6 meters (15 feet) to 27.7 meters (91 feet) bgs and collecting soil samples from the borings at approximately 1.5 meter (5-foot) intervals to the total depth of the boring. Groundwater samples were collected from the borings, when encountered.

Based on field observations and potential contaminants of concern, select soil samples collected from the hollow-stem auger borings were analyzed for total petroleum hydrocarbons (TPH) in the gasoline range (TPH-g) and diesel range (TPH-d), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), Title 22 metals, and pH. Groundwater samples were collected from seven borings and analyzed for TPH-g, TPH-d, VOCs, SVOCs, PCBs, and Title 22 metals.

Four of the 30 soil samples analyzed for petroleum hydrocarbons contained concentrations of TPH-d above the analytical reporting limit. Three of these were deeper soil samples (7.6 meters/25 feet and 9.2 meters/30 feet) from borings located on the east and west sides of the Via de la Valle interchange, which contained relatively low concentrations (14 to 180 mg/kg) of TPH-d. The fourth was a shallow sample (1.5 meters/5 feet) from a boring located southeast of the Birmingham interchange that contained 1,100 mg/kg of TPH-d. Benzene, toluene, ethylbenzene, xylenes, SVOCs, and PCBs were not detected above the reporting limit in the soil samples containing TPH-d. The relatively low concentrations of TPH-d, isolated occurrence, nature of the site use, and lack of other contaminants of potential concern in the samples suggest that TPH-d in soil at these locations does not represent a significant environmental concern.

Low concentrations of carbon disulfide (8 milligrams per kilograms [ug/kg]) and acetone (12 to 49 ug/kg) were detected in soil samples collected at various depths from borings located on the east side of the Del Mar Heights interchange, and on the east and west sides of the Manchester interchange. The isolated occurrence and concentrations of carbon disulfide, which is man made and naturally occurring, and acetone detected in these samples would likely be considered a *de minimis* environmental condition. Concentrations of Title 22 metals detected in soil samples appear to be within the range typical of background concentrations for this area.

Concentrations of VOCs suggestive of a release of fuel hydrocarbons (e.g., 1,2-dichloropropane, methyl tert butyl ether, tert butanol, diisopropyl ether, tertiary amyl methyl ether) were detected above the reporting limit in groundwater samples collected from borings located northeast and southeast of the Birmingham interchange and the boring located to the west of the Manchester interchange. The presence of these VOCs in groundwater could be related to unauthorized releases from fuel dispensing operations adjacent to the corridor at these locations. Based on the concentrations of the VOCs detected and the non-beneficial use designation of groundwater to the west of the I-5 corridor in this area, it is our opinion that these VOCs in groundwater do not represent a significant threat to human health within the corridor. Bis (2-ethylhexyl) phthalate (BEHP), commonly associated with plastics, was detected in groundwater samples collected from the west side of the Via de la Valle interchange and from the east and west sides of the Manchester interchange. Based on the concentrations of BEHP detected and the non-beneficial use designation of groundwater to the west of the I-5 corridor in this area, it is our opinion that BEHP in groundwater does not represent a significant threat to human health within the corridor. Concentrations of Title 22 metals detected in the groundwater samples appear to be within the range typical of background concentration for this area. PCBs and TPH-g were not detected above the reporting limit.

Based upon the results of the Site assessment activities conducted, current and future uses of the site, and anticipated general construction activities that may associated with proposed widening of the subject corridor, the following recommendations are provided:

- If the soil is subject to export, it should be characterized for the appropriate waste classification and in accordance with the requirements of the permitted disposal facility.

- If the planned road expansion involves construction dewatering, impacted groundwater may require treatment prior to discharge, under a National Pollution Discharge Elimination System (NPDES) or sewer discharge permit.

- Due to the presence of impacted soils, construction activities should be performed in accordance with a Site-specific health and safety plan and a soil management plan.

- If soil that has been impacted by ADL is reused at the Site, the soil should be handled and reused in accordance with the provisions of the DTSC ADL Variance.

1. INTRODUCTION

At the request of the State of California, Department of Transportation, District 11 (Department), Ninyo & Moore has conducted a limited Phase II Environmental Site Assessment (ESA) for the Interstate 5 (I-5) expansion between the Del Mar Heights Road and Birmingham Drive interchanges in San Diego, California (Site). Our scope of work was based upon the Department-requested services as described in Task Order No. 9 (Task Order) dated March 30, 2005, and Amendment No. 1 to Task Order No. 9 dated June 8, 2005. The work was conducted in general accordance with Department Contract No. 11A1023 (Contract) with Ninyo & Moore dated July 2, 2004, and the applicable County of San Diego Department of Environmental Health (DEH) Site Assessment and Mitigation (SAM) guidelines.

2. SITE LOCATION AND DESCRIPTION

The Site encompasses the Department right-of-way along the northbound and southbound shoulders of I-5, where the southern boundary of the Site is the overcrossing of the Del Mar Heights Road interchange (Site, Figure 1). The northern boundary is the northern terminus of the Birmingham Drive interchange, and includes the interchanges at Del Mar Heights Road, Via de la Valle, Lomas Santa Fe Drive, Manchester Avenue, and Birmingham Drive.

3. PROJECT OBJECTIVES

The Department proposes to widen I-5 from the Genesee interchange to the Vandegrift interchange, and reconstruct the interchanges along this corridor. The expansion and reconstruction of the interstate and interchanges will be completed within the Department right-of-way. The project objectives are to generally evaluate potential near surface soil for aerially deposited lead (ADL) and options for on-Site reuse of the soil, and subsurface soil and groundwater contamination from adjacent properties at five interchanges, in preparation for design and construction activities at the interchanges and along the alignment.

4. SCOPE OF WORK

The scope of work was provided to Ninyo & Moore in the Task Order. In general accordance with the Task Order, Ninyo & Moore performed the tasks listed below:

- Provided project management and coordination.
- Reviewed pertinent environmental reports and documents.
- Conducted a Site visit and marked out the proposed boring locations.
- Prepared a Site-specific work plan.
- Prepared a Site-specific health and safety plan (SHSP).
- Contacted Underground Service Alert (USA) for identification and location of nearby subsurface utilities.
- Conducted a geophysical survey at the proposed boring locations to evaluate the potential presence of underlying and/or nearby subsurface utilities.
- Obtained a boring permit from the DEH.
- Advanced ten borings up to 27.7 meters (91 feet) below ground surface (bgs) using hollow-stem auger drilling and 189 shallow (up to 1.5 meters [5 feet] bgs) borings using hand auger methods.
- Logged soil samples according to the Unified Soil Classification System (USCS).
- Analyzed hollow-stem auger soil samples and groundwater samples for total petroleum hydrocarbons in the gasoline and diesel ranges (TPH-g and TPH-d) by United States Environmental Protection Agency (USEPA) test method 8015M and volatile organic compounds (VOCs) by USEPA test method 8260B; analyzed select soil samples for semi-volatile organic compounds (SVOCs) by USEPA test method 8270, metals by USEPA test methods 6010B/7471A, polychlorinated biphenyls (PCBs) by USEPA test method 8082, and pH by USEPA method 9045C.
- Analyzed hand auger soil samples for total lead by USEPA test method 6010B.
- Analyzed select hand auger soil samples for pH by USEPA method 9045C and leachable lead by the waste extraction test (WET), the WET method using deionized water, and the Toxicity Characteristic Leaching Procedure (TCLP).
- Obtained global positioning system (GPS) readings at each boring location.

- Placed soil cuttings and decontamination fluids into separate, properly labeled, 55-gallon drums for transportation and disposal/recycling of the waste at an appropriate facility.
- Provided coordination of transportation and disposal/recycling of the waste.
- Compiled and evaluated analytical data and summarized the data on appropriate figures and tables.
- Prepared this report including a summary of the investigative methods and field observations; data evaluation and discussion; findings; and conclusions and recommendations.

5. PREVIOUS ENVIRONMENTAL WORK

In June 2001, Geocon prepared a report describing assessment activities for lead in shallow soil along the shoulders and center median of I-5 from 0.4 kilometers south of Via de la Valle in San Diego to 0.4 kilometers north of Leucadia Boulevard in Encinitas, California. The purpose of the assessment was to gather data, regarding the presence of ADL, that could be used by the Department for segregating non-hazardous soil from potentially hazardous soil and reduce disposal costs, and to provide data that could be used to evaluate health and safety issues for on-site workers.

Soil samples were collected at depths ranging from 0.15 to 0.6 meters bgs. Along the shoulders, the samples were collected between 1 and 4 meters from the edge of the paved shoulder. According to the Geocon report, the analytical results and statistical analyses indicated that the upper 0.15 meters of soil could not be reused on site, but the soil between 0.15 meters and the total depth assessed, 0.6 meters, could be reused in accordance with the Department's ADL variance. The results also indicated that if the upper 0.6 meters of soil was taken off site for disposal, the soil could potentially be classified as a hazardous waste.

6. AERIALLY DEPOSITED LEAD (ADL) VARIANCE

The Department has been granted a variance from the California Department of Toxic Substances Control (DTSC) for generating, manifesting, transporting, storing, and disposing of soil classified as hazardous due to lead impacts. The findings of the variance indicate that the Department generates large volumes of soil associated with highway construction projects that is

impacted with lead from historical emissions from automobiles. Generally, the upper 0.6 meters (2 feet) of soil has been found to contain concentrations of lead in excess of regulatory thresholds. However, the DTSC has prepared a risk assessment that shows that soil contaminated with certain concentrations of lead can be managed in a way that present an acceptable threat to human health and the environment.

Under the variance, the DTSC has prepared specifications concerning lead concentrations and pH for the management of the soil under certain conditions:

1. Soil containing less than 0.5 milligrams per liter (mg/ℓ) of extractable lead, based on a modified WET method using deionized water as the extractant, and less than 350 milligrams per kilogram (mg/kg) of total lead may be used as fill on the project site provided that the soil is at least 5 feet above the water table and is covered with at least one foot of non-hazardous soil. The total lead limit shall be below the risk based limit of 1,496 mg/kg or the statutory limits in Health and Safety Code Section 25157.8, currently 350 mg/kg, whichever is less.

2. Soil containing between 0.5 and 50 mg/ℓ of extractable lead, based on a modified WET method using deionized water as the extractant, and less than 350 mg/kg of total lead may be used as fill on the project site provided that the soil is at least 5 feet above the water table and is protected from infiltration by a pavement structure, which will be maintained by the Department. The total lead limit shall be below the risk based limit of 1,496 mg/kg or the statutory limits in Health and Safety Code Section 25157.8, currently 350 mg/kg, whichever is less.

3. Soil with a pH of less than 5.0 shall be used only under paved portions of the highway.

Other stipulations and restrictions regarding the location of the reuse and management of the soil that cannot be reused in the right-of-way are presented in the variance.

7. INVESTIGATIVE METHODS

This section of the report provides information regarding procedures and methods associated with conducting the limited Site assessment. Drilling, groundwater and soil sampling, and related field activities were performed in general accordance with applicable portions of the latest version of the DEH SAM manual and the Task Order.

7.1. Permits, Notifications, and Interaction with Regulatory Agency Personnel

Ninyo & Moore prepared and submitted a work plan to the Department for a limited subsurface assessment dated May 13, 2005. The work plan was reviewed and approved by Mr. Joel Kloth, Department representative. A permit for drilling 10 borings at the Site was obtained from the County of San Diego DEH. A copy of the approved boring permit is included in the 60-day report in Appendix A. Ninyo & Moore notified the Department and the DEH a minimum of two days prior to conducting subsurface Site assessment activities.

On May 9, 2005, representatives of Ninyo & Moore and the Department marked out the proposed boring locations at the Site. In addition, a representative of Ninyo & Moore contacted USA, a public utility locator, to evaluate the proposed boring locations for possible underground utility conflicts.

7.2. Site Safety

On-Site work was subject to the procedures outlined in the SHSP. The SHSP provided policies, information, requirements, and guidelines regarding procedures that were to be followed by personnel performing specific tasks at the Site. The plan was prepared in general accordance with Federal Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response (HAZWOPER) Standard (29 CFR 1910.120) and Title 8 CCR Section 5192. The plan was reviewed and approved by a certified industrial hygienist (CIH).

Prior to commencing field activities, the Site workers read and signed the plan, acknowledging their familiarity with its provisions. Each day, prior to beginning fieldwork at the Site, Ninyo & Moore field personnel conducted a tailgate meeting and discussed the key features of the plan.

7.3. Boring Locations

Boring locations were selected in the field and approved by Department personnel based on observed Site conditions and limited historical information. The areas of assessment were

limited by accessibility, utility locations, and personnel safety. Figures 2 through 6 present the drilling locations at each interchange. The target depth for each boring location was selected by a Department representative based on the expected depth to groundwater and the expected depth of drilling or excavation activities anticipated during the reconstruction of the interchanges. Hand auger locations were selected in the field based on accessibility and safety. Sampling locations were generally between 30 and 100 meters (100 to 330 feet) apart along the highway, depending on Site conditions, and between the edge of the paved shoulder and edge of the Department right-of-way (Figure 7). Target depths were randomly selected between 0.1 and 1.5 meters (0.33 to 5 feet) bgs.

7.4. Geophysical Clearance

Southwest Geophysics, Inc. evaluated each proposed exploratory boring location at the Site to evaluate and mark potential buried utilities or other subsurface anomalies. A combination of electromagnetic induction, magnetometry, and ground penetrating radar was utilized. Where utility conflicts were noted, the borings were relocated a minimum of 5 feet from the utility. A copy of the geophysical evaluation report prepared by Southwest Geophysics, Inc. is included in Appendix B.

7.5. Hand Auger Drilling and Soil Sampling

Hand auger borings were completed from May 18, 2005 to June 9, 2005. Borings were advanced using a manually-operated, pre-cleaned, stainless steel hand auger. The target depths of the hand auger borings ranged from 0.15 to 1.5 meters (0.5 to 5 feet) bgs. When the boring location was augered to the desired depth, a sample was collected from the bottom of the auger and placed directly into laboratory supplied glass jars. The jars were labeled with pertinent sample and project information and placed in a cooler in the field.

7.6. Hollow-Stem Auger Drilling and Soil Sampling

Hollow-stem auger drilling was conducted between May 17, 2005 to June 3, 2005. Borings were advanced using a drill rig operated by Tri-County Drilling, a bonded, C-57-licensed,

drilling contractor with appropriate current certificates, experience, and training. The drill rig advanced the borings using hollow-stem, continuous-flight augers to the target depth, groundwater, or refusal, whichever was achieved first. Ten borings were advanced using the hollow-stem auger method to depths ranging from 4.6 to 27.7 meters (15 to 91 feet) bgs. Drilling and sampling activities were performed under the supervision of a California Professional Geologist.

Soil samples were collected at approximate 1.5-meter (5-foot) intervals with a standard penetration test sampler, which was driven approximately 76 centimeters in advance of the hollow-stem auger by a 64-kilogram (140-pound) auto-trip hammer. Upon retrieving the sampler from the borehole, the soil was logged by the on-Site geologist according to the USCS, and the least disturbed soil sample was covered on both ends by Teflon™ sheeting, sealed with plastic end caps, labeled with pertinent information, and placed in a cooler for transport by courier to EMAX Laboratories of Torrance, California, a state-certified laboratory. Copies of the boring logs are included in the 60-day report in Appendix A. Soil cuttings were placed in 55-gallon drums, labeled, and stored on Site pending disposal.

Once the boring reached the target depth or refusal, and groundwater samples were collected, if applicable, the borings were backfilled with granular bentonite and hydrated, and the ground surface was restored to approximate its original condition.

7.7. Groundwater Sampling

Where groundwater was encountered, a groundwater sample was collected from each boring within the hollow portion of the augers. Groundwater was not encountered in borings NM03-B4, NM03-B6, or NM03-B8; therefore, samples were not collected at these locations. At borings that encountered groundwater, the depth to groundwater was measured using an electric water-level sounder prior to sampling. The measurements were recorded from the ground surface to the nearest 3 millimeters (0.01 foot). Sampling data were documented on groundwater sampling summary forms, which include the sampler's name, boring identification, date, and time the sample was collected.

Groundwater samples were collected with new Teflon®-lined disposable bailers and dispensed into appropriate, laboratory-supplied containers. For samples to be analyzed for VOCs, no head space was allowed.

7.8. Trip Blanks and Field Blanks

A trip blank, consisting of deionized water placed into containers by the analytical testing laboratory, accompanied the hollow-stem auger samples collected during each day of fieldwork. The trip blank was used to document sample handling and the potential for cross contamination of samples during sample transport. A field blank, consisting of deionized water poured over the sampling equipment (e.g., brass liners or Teflon bailer for hollow-stem auger drilling and stainless steel auger for hand auger sampling), was collected for each day of field sampling. The field blank was collected to document the condition of sampling equipment. The samples were immediately dispensed into appropriate laboratory-supplied containers, labeled with pertinent information, and placed in a cooler for transport by courier to EMAX Laboratories.

7.9. Analytical Testing Program

Analytical testing was performed in general accordance with the Task Order and was selected by Department personnel based on the contaminants of potential concern at the boring location. Soil and groundwater samples collected from the hollow-stem auger borings were analyzed for multiple contaminants of potential concern depending on location. The analytical protocols are presented in Table 1. Up to five soil samples from each hollow-stem auger boring were submitted for analysis. One soil sample from the total depth of each hand auger boring was submitted for analysis. Hand auger and select hollow-stem auger soil samples were analyzed for lead by USEPA method 6010B. Select hand auger soil samples were also analyzed for leachable lead by the WET method, the WET method using deionized water, and TCLP.

The field blanks for the hollow-stem auger borings were analyzed based on the analytical suite requested for the boring for which the blank was prepared. The field blanks for the hand auger borings were analyzed for lead. The trip blanks were analyzed for VOCs.

Table 1 – Hollow-Stem Auger Sample Analytical Testing

Interchange	TPH g/d		VOCs		SVOCs		Metals		PCBs	
	S	G	S	G	S	G	S	G	S	G
Del Mar Heights	3/b	1/b	3/b	1/b	3/b	1/b	3/b	1/b	3/b	1/b
Via de la Valle	3/b	1/b	3/b	1/b	3/b	1/b	3/b	1/b	3/b	1/b
Lomas Santa Fe	3/b	1/b	3/b	1/b	3/b	1/b	--	Pb only	--	--
Manchester	3/b	1/b	3/b	1/b	--	--	--	Pb only	--	--
Birmingham	3/b	1/b	3/b	1/b	--	--	--	Pb only	--	--

Notes:
1/b = 1 sample per boring
3/b = 3 samples per boring
G = groundwater sample
Title 22 Metals = USEPA test method 6010B/7471A
PCB = polychlorinated biphenyls - USEPA test method 8082
TPH g/d = total petroleum hydrocarbons gas/diesel - USEPA test method 8015
Pb = lead
S = soil sample
SVOCs = semi-volatile organic compounds - USEPA test method 8270
VOCs = volatile organic compounds and fuel oxygenates - USEPA test method 8260B
-- = not applicable

7.10. Sample Labeling, Containers, Preservatives, and Holding Times

Soil and/or groundwater samples collected from each location were placed into appropriate laboratory-supplied containers or clean brass sleeves. The containers and sleeves were labeled with pertinent information, written in indelible ink, and contained the following information:

- project name;
- unique sample identification number;
- project location;
- date and time of collection;
- sampler's initials; and
- sample preservative, if applicable.

Sample identification numbers were designated as follows:

- NM03-B1-5-5.5 = Ninyo and Moore (NM03), boring one (B1), soil sampled at a depth of 1.5 meters to 1.7 meters (5-5.5 feet) bgs.
- NM03-B1-GW = Ninyo and Moore (NM03), boring one (B1), groundwater sample (GW).
- I5SB-DMH-HA145 = Sample collected along the southbound side of I-5 north of the Del Mar Heights interchange, hand auger boring 145.

7.11. Field Documentation

The following documentation was prepared while in the field.

7.11.1. Daily Field Logs

Daily field logs were prepared by the field personnel and included a chronology of field activities performed, deviations from the work plan, if any, visitors to the Site, and other pertinent information.

7.11.2. Boring Logs

Boring logs were prepared in the field under the supervision of a California-Professional Geologist. The information recorded on each field boring log included the following:

- project name and number;
- unique boring identifier and datum;
- drilling equipment;
- drilling method and boring diameter;
- name of sampler, logger, and reviewer;
- depth interval;
- earth material descriptions in general accordance with the USCS;
- approximate depths to strata changes, bedrock, and groundwater, as applicable;
- lithology (if rock or geologic formation material was encountered);
- photoionization detector (PID) readings in parts per million (ppm) at each sample depth;
- number of blows per 15-centimeter (0.5 feet) or partial penetration increment; and,
- boring abandonment summary.

7.11.3. Chain-of-Custody

Sample chain-of-custody procedures were followed through sample collection, transfer, analysis, and disposal to ensure that the integrity of the samples was maintained. A description of sample custody procedures for sample collection is provided below.

Field personnel logged individual samples onto triplicate chain-of-custody forms at the time the sample was collected. Information for each sample recorded on the chain-of-custody form included sample identification number, matrix, date and time of collection, number and type of containers, analytical methods to be performed on the sample, laboratory turn-around time, and added preservatives, if any. Upon relinquishing the samples to the laboratory, the chain-of-custody forms were signed and dated by the field personnel and the condition of the samples was noted on the form by the analytical testing laboratory. The laboratory personnel accepting the samples signed and noted the date and time on the chain-of-custody form upon receipt. The chain-of-custody documentation accompanied the samples from the field to the laboratory. The sampler retained one copy of the chain-of-custody form.

7.12. Decontamination Procedures for Non-Sample Contacting Equipment

Drilling and sampling equipment were decontaminated by the drilling contractor prior to drilling operations and between borings. Applicable drilling equipment was placed in the decontamination area and cleaned using a high temperature, high pressure wash system.

7.13. Soil and Fluid Disposal

Soil cuttings and decontamination fluids generated from field activities were placed into 30 properly labeled 55-gallon drums, and stored in a pre-selected, on-Site location pending disposition. Wastes were disposed of by Ocean Blue Environmental Services at Crosby and Overton of Long Beach, California, as non-hazardous waste based on review of the laboratory analytical results. The non-hazardous waste manifest is included as Appendix C.

7.14. Air Monitoring during Drilling

Ambient air quality was monitored during drilling and sampling activities according to the guidelines established in the SHSP. The frequency of air monitoring intervals was dependent on such factors as type of contaminant(s), weather conditions (e.g., wind direction and velocity), location and proximity of sensitive receptors, and drilling conditions. A PID was used to monitor concentrations of total VOCs in the breathing space at worker chest level. Prior to initiating drilling activities, the PID was calibrated according to the manufacturer's instructions.

7.15. Deviations from the Work Plan

In general, the scope of work for the limited assessment was conducted in accordance with the Task Order and amendment and the May 13, 2005 work plan. The deviations from the work plan included the following:

- Two hand auger boring locations were identified as I5NB-LSF-HA23, one location was sampled at 0.15 meters (0.5 feet) and one was sampled at 0.6 meters (2.0 feet). They were two different sampling locations. In addition, two other hand auger boring locations were identified as I5NB-MAN-HA38, both were sampled at 0.15 meters (0.5 feet), however; they were two different sampling locations. The duplicate samples are reported in the tables with an asterisk (*). The samples are differentiated based on the date and time of sample collection and the GPS locational data for each boring.

- Soil samples collected from NM03-B2, B3, and B7 were analyzed for benzene, toluene, ethylbenzene, xylenes, and fuel oxygenates rather than the full USEPA method 8260B VOC list due to an error at the laboratory.

- Groundwater was not encountered in borings NM03-B4, NM03-B6, and NM03-B8; therefore, groundwater samples were not collected at these locations.

These deviations do not impact the conclusions or recommendations included in this report as stated; however, since groundwater samples were not collected in three locations, conclusions regarding the presence and concentration of potential contaminants cannot be provided. Likewise, since the full list of VOCs was not analyzed for in soil samples collected from NM03-B2, -B3, and B-7, the presence and concentration of potential contaminants not analyzed for cannot be provided.

8. ASSESSMENT RESULTS AND FIELD OBSERVATIONS

The following sections describe the geography, geology, and the hydrogeology of the Site, field observations, and results of this assessment.

8.1. Geography

The Site varies in elevation from approximately 9 to 92 meters (20 to 300 feet) above mean sea level (MSL) along the alignment, according to the United States Geological Survey (USGS) Del Mar and Encinitas Quadrangles (USGS, 1968 and USGS, 1967). Surface drainage for the Site varies throughout the alignment.

8.2. Geology

This section summarizes the regional geologic setting and Site geologic conditions. The information is based on review of the referenced, published, and unpublished reports, and observations made by Ninyo & Moore at the Site.

8.2.1. Regional Geologic Setting

The Site is situated at the western margin of the Peninsular Ranges geomorphic province characterized by northwest-trending mountain ranges separated by subparallel fault zones (Norris and Webb, 1990). In general, the province consists of rugged mountains underlain by Mesozoic-age metamorphic and crystalline rocks to the east, with a dissected coastal plain underlain by Cenozoic-age sedimentary rock sequences to the west.

8.2.2. Site Geologic Conditions

The USGS Geologic Map of the Del Mar Quadrangle (USGS, 1975) and Division of Mines and Geology (DMG), Encinitas Quadrangle (DMG, 1996) were reviewed to obtain Site geological information. The Del Mar Heights interchange is underlain by Torrey Sandstone. Moving northward, the Site is underlain by the Bay Point Formation, and alluvium is prominent throughout the San Dieguito Valley up to the Via de la Valle interchange. The Site north of Via de la Valle is underlain by Bay Point Formation, fol-

lowed by Torrey Sandstone, up to Lomas Santa Fe, which is underlain by Bay Point Formation. Torrey Sandstone and the Del Mar Formation are intertongued northward from Lomas Santa Fe, and alluvium is prominent throughout the San Elijo Lagoon, north to Manchester Avenue. The Torrey Sandstone and Del Mar Formation are intertongued northward toward Birmingham, which is underlain by Torrey Sandstone.

Soils encountered during drilling varied by location and included fill and alluvium underlain by formations including the Torrey Sandstone and Bay Point Formation. Boring logs are provided in Appendix A.

8.3. Hydrogeology

This section summarizes the regional hydrogeologic setting and Site hydrogeologic conditions. The information is based on our review of the referenced published and unpublished reports and observations made by Ninyo & Moore at the Site.

8.3.1. Regional Hydrogeologic Setting

A review of available hydrogeologic data from the Regional Water Quality Control Board (RWQCB) Region 9 Basin Plan provided the information presented in Table 2 regarding the hydrologic units and beneficial uses of groundwater and surface water (RWQCB, 1994).

Table 2 – Hydrologic Setting and Uses

Inter-change	Hydrologic Unit	Hydrologic Area	Hydrologic Subarea	Existing Beneficial Uses* (Groundwater)	Existing Beneficial Uses (Surface Water)
Carmel Valley	Peñasquitos	Miramar Reservoir	--	MUN**, AGR, IND	REC, BIOL, EST, WILD, RARE, MAR, MIGR, SPWN,
Del Mar Heights	Peñasquitos	Miramar Reservoir	--	MUN**, AGR, IND	REC, BIOL, EST, WILD, RARE, MAR, MIGR, SPWN,

Table 2 – Hydrologic Setting and Uses

Inter-change	Hydrologic Unit	Hydrologic Area	Hydrologic Subarea	Existing Beneficial Uses* (Groundwater)	Existing Beneficial Uses (Surface Water)
Via de la Valle	San Dieguito	Solana Beach	Rancho Santa Fe	MUN**, AGR, IND	REC, BIOL, EST, WILD, RARE, MAR, MIGR, SPWN
Lomas Santa Fe	San Dieguito	Solana Beach	Rancho Santa Fe	MUN**, AGR, IND	REC, BIOL, EST, WILD, RARE, MAR, MIGR, SPWN
Manchester	Carlsbad	Escondido Creek	--	MUN**, AGR, IND	MUN, AGR, IND***, POW, REC, WARM, COLD, WILD
Birmingham	Carlsbad	Escondido Creek	--	MUN**, AGR, IND	MUN, AGR, IND***, POW, REC, WARM, COLD, WILD

Notes:
AGR - agricultural supply
BIOL - preservation of biological habitats
COLD - cold freshwater habitat
EST - estuarine habitat
IND - industrial service supply
MAR - marine habitat
MIGR - migratory habitat
MUN - municipal and domestic supply
POW - hydropower generation
REC - water recreation
SPWN - spawning, reproduction, and/or early development
WARM - warm freshwater habitat
WILD - wildlife habitat
* There are no potential beneficial uses for groundwater
**Groundwater is excepted from municipal use westerly of the easterly boundary of the I-5 right-of-way (RWQCB, 1994)
*** Potential beneficial use

8.3.2. Site Hydrogeologic Conditions

During drilling, groundwater was encountered in seven of the boring locations (Table 3). Depth to groundwater ranged from 1.52 meters (5 feet) bgs in boring NM03-B5 to 25.3 meters (83 feet) bgs in boring NM03-B1. Groundwater levels, gradient, and flow direction may fluctuate due to seasonal variations, irrigation, groundwater withdrawal or injection, and other factors.

Table 3 – Depth to Groundwater

Boring ID	Location	Depth to Groundwater
NM03-B1	Del Mar Heights Road (East)	25.3 meters (83 feet)
NM03-B2	Via de la Valle (East)	8.53 meters (28 feet)
NM03-B3	Via de la Valle (West)	7.93 meters (26 feet)

Table 3 – Depth to Groundwater

Boring ID	Location	Depth to Groundwater
NM03-B4	Del Mar Heights Road (West)	not encountered
NM03-B5	Manchester Avenue (East)	1.52 meters (5 feet)
NM03-B6	Loma Santa Fe Drive (West)	not encountered
NM03-B7	Birmingham Drive (South-East)	5.79 meters (19 feet)
NM03-B8	Loma Santa Fe Drive (East)	not encountered
NM03-B9	Manchester Avenue (West)	3.05 meters (10 feet)
NM03-B10	Birmingham Drive (North-East)	7.62 meters (25 feet)

8.4. Analytical Results

Analytical results of soil and water samples collected are presented on Tables 4 through 9. Copies of the laboratory analytical reports, including quality control/quality assurance data and chain-of-custody documentation, are included in Appendix D.

Several constituents were detected in soil and groundwater at concentrations below the reporting limit but above the method detection limit, which allows the laboratory to report the presence of the constituent. However, the laboratory cannot quantify the amount of the constituent with sufficient accuracy, thus the laboratory reports the presence and estimated concentration of the constituent with a qualifier that the concentration presented is an estimate. The concentrations of constituents that were detected and estimated are below regulatory action levels.

8.4.1. Hand Auger Soil Sample Results

The following summarizes the soil sample analytical results for the hand auger borings as presented in Table 4.

- Total lead was detected in 187 of the 189 samples collected at concentrations ranging from 1.15 to 246 mg/kg.
- Soil samples collected from seven hand auger borings contained concentrations of lead that exceeded the 50 mg/kg threshold criterion for leachability. The concentration criterion of 50 mg/kg of lead was selected because leachability, one of the

primary concerns for reuse, off-Site disposal, and waste characterization, is analyzed using a method with a 10 times dilution. Since the soluble hazardous waste criterion, the soluble threshold limit concentration (STLC), is 5 mg/ℓ for lead and the dilution factor is 10, a soil sample containing a concentration of total lead below 50 mg/kg should not leach at concentrations above 5 mg/ℓ.

- The upper 80% confidence level of the mean concentration of lead in the soil samples analyzed was 14.26 mg/kg (Table 10).

- The soil samples I5SB-BIR-HA105 and -HA110 leached lead using the WET method at concentrations of 8.81 and 13.5 mg/ℓ, respectively, above the hazardous waste criteria of 5 mg/ℓ. None of the other samples analyzed using the WET method leached lead at or above 5 mg/ℓ.

- None of the samples analyzed using the TCLP method leached lead at concentrations at or above 5 mg/ℓ.

- Four samples leached lead above the variance criteria of 0.5 mg/ℓ using the modified WET method.

- The pH of the soil samples analyzed ranged from 3.26 to 9.04.

8.4.2. Soil Boring Sample Results

The following summarizes soil sample analytical results as presented in Tables 5 and 6.

- Soil samples collected from borings B-1 through B-10 did not contain detectable concentrations of TPH-g. TPH-d was detected in soil samples collected from NM03-B02, -B03, and -B07 as described below:

    - The soil samples collected from boring NM03-B02 at depths of 7.6 and 9.2 meters (y25 and 30 feet) bgs contained TPH-d at concentrations of 14 and 52 mg/kg, respectively.

    - The soil sample collected from boring NM03-B03 at a depth of 7.6 meters (25 feet) bgs contained TPH-d at a concentration of 180 mg/kg.

    - The soil sample collected from boring NM03-B07 at a depth of 1.5 meters (5 feet) bgs contained TPH-d at a concentration of 1,100 mg/kg.

- VOCs were detected in soil samples collected from borings NM03-B01, B05, and B09 at depths ranging from 1.7 to 6.3 meters (5.5 to 20.5 feet) bgs.

- The soil samples collected from borings NM03-B01 at 1.7 meters (5.5 feet) bgs, NM03-B05 at 1.7 meters (5.5.feet) bgs, and NM03-B09 at 3.2 meters (10.5 feet) bgs contained acetone at concentrations of 12, 49, and 15 µg/kg, respectively.

- Carbon disulfide was detected in the soil sample collected from boring NM03-B09 at 6.3 meters (20.5 feet) bgs at a concentration of 8 µg/kg.

- Concentrations of SVOCs and PCBs were not detected at or above the reporting limit in the soil samples submitted for analysis.

- Concentrations of several Title 22 metals were detected in the samples analyzed, but below threshold criteria that would indicate the soil could leach those metals at concentrations that would classify the soil as a hazardous waste for disposal purposes.

8.4.3. Groundwater Sample Results

The following summarizes the groundwater sample analytical results as presented in Tables 7 and 8.

- The groundwater samples did not contain concentrations of TPH-G or PCBs at or above the reporting limit.

- The groundwater samples did not contain concentrations of TPH-d at or above the reporting limit with the exception of the groundwater sample collected from boring NM03-B9, which contained TPH-d at a concentration of 0.51 micrograms per liter (µg/ℓ).

- VOCs were detected in groundwater samples collected from borings NM03-B1, -B9, and -B10 as summarized below.

  - MTBE was detected at concentrations of 350 and 990 µg/ℓ in groundwater samples collected from borings NM03-B7 and NM03-B10, respectively.

  - A concentration of 2.5 µg/ℓ of 1,2-dichloropropane was detected in the groundwater sample collected from boring NM03-B9.

  - Tert-butanol was detected in the groundwater samples collected from borings NM03-B7 and NM03-B10 at concentrations of 59 and 72 µg/ℓ, respectively.

  - DIPE was detected in the groundwater sample collected from boring NM03-B7 at a concentration of 1.5 µg/ℓ.

  - TAME was detected in the groundwater samples collected from borings NM03-B7 and NM03-B10 at concentrations of 1.1 and 6.7 µg/ℓ, respectively.

- BEHP, an SVOC, was detected in the groundwater samples collected from NM03-B3, NM03-B5, and NM03-B9 at concentrations of 10, 19, and 11 µg/ℓ, respectively.

- Title 22 metals were detected in the groundwater samples analyzed, but below concentrations that would classify the water as hazardous.

- One trip blank, NM03-B4-TRIP, contained methylene chloride at a concentration of 1.8 µg/ℓ. No other VOCs were detected in the trip blanks (Table 9).

- The hollow-stem auger field blanks did not contain detectable concentrations of TPH-g, TPH-d, PCBs, or SVOCs. Zinc was detected at a concentration of 0.0172 mg/ℓ in the sample NM03-B1-EQUIP and acetone was detected at a concentration of 34 µg/ℓ in the sample NM03-B10-EQUIP.

- The hand auger field blanks did not contain lead above the reporting limit.

9. DATA EVALUATION AND DISCUSSION

The following sections describe the nature and extent of soil and groundwater impacts at the Site in the areas evaluated.

9.1. Soil Data Evaluation and Discussion

Based on information obtained from hollow-stem auger borings, petroleum hydrocarbon and/or VOC-impacted soil is present at depths ranging from 1.5 to 9.2 meters (5 to 30 feet) in borings NM03-B1, B2, B3, B7, and B9. Concentrations of some Title 22 metals were detected in all of the soil samples analyzed for metals; however, the concentrations detected were not above threshold criteria that would suggest leachability would be of concern for disposal purposes.

Soil containing concentrations of TPH and VOCs may be considered a waste by the local regulatory agency if the soil is excavated and disposed of. The concentrations of acetone in the soil samples may be a laboratory artifact since acetone is used as an extractant in the

laboratory. Acetone was detected in a field blank at a concentration of 34 µg/ℓ. Carbon disulfide is used in the manufacturing of rayon, cellophane, carbon tetrachloride, and flotation agents, and is also naturally occurring in marshes and coastal or ocean environments.

Based on the analytical results of the hand auger samples, the soil assessed meets the criteria specified in the ADL variance granted to the Department and could be reused on Site under the provisions set forth in the variance. The data further suggest that the soil as a whole would not be considered a hazardous waste for disposal purposes; however, additional analytical data may be required by local regulators or waste disposal facility prior to off-site disposal.

The results of the ADL survey conducted as part of this report indicate that the soil is non-hazardous and meets the criteria for ruse under the variance. The results of the survey conducted by Geocon indicate that some soil is considered a hazardous waste and does not meet the variance criteria for reuse. It should be noted that the soil sampling locations, and therefore the data sets, were different for the two assessments. Data evaluated by Geocon were generated from soil samples collected from the median of the highway and from between 1 and 4 meters (3 and 13 feet) from the paved shoulder of the highway. The soil samples collected during the Ninyo & Moore assessment were collected from approximately 3 meters (10 feet) from the paved shoulder to the edge of the Department right-of-way. The data may be used for evaluating the potential to segregate soil for different disposal/reuse option or may be evaluated as a whole with the understanding that the two data sets were generated form samples collected from different areas of the right-of-way.

9.2. Groundwater Data Evaluation and Discussion

The groundwater samples collected from borings NM03-B3, B5, B7, B9, and B10 contained detectable concentrations of TPH-d, VOCs, and bis (2-ethylhexyl) phthalate (BEHP). PCBs were not detected above the reporting limit in the groundwater samples. Concentrations of some Title 22 metals were detected in each of the groundwater samples, but not at concentrations above regulatory action levels.

The concentrations of TPH, VOCs, BEHP, and some metals may be of concern if dewatering in these areas is proposed. The water may require treatment prior to discharge into the storm sewer or sanitary sewer under the required permit.

The presence of TPH and VOCs in the groundwater samples are likely due to off-Site sources related to petroleum releases adjacent to the highway. BEHP is a suspected laboratory contaminant that can originate from plastics used in the collection or analysis procedures, or from the sample drying process in the laboratory procedures. BEHP is used to increase flexibility in plastics.

10. CONCLUSIONS

Based on the results of this limited Site assessment, the following conclusions are provided at this time.

10.1. Soil

- At locations explored, the Site is generally underlain by fill and alluvial soils, which are underlain by the Torrey Sandstone or the Bay Point Formation.
- Concentrations of TPH-G, SVOCs, and PCBs were not detected above the reporting limit in the soil samples collected from the hollow-stem auger borings.
- Concentrations of TPH-d and VOCs were detected in soil samples collected from borings NM03-B1, B2, B3, B5, B7, and B9. Concentrations of some Title 22 metals were detected in all of the soil samples analyzed for metals, but at concentrations below threshold criteria that would indicate leachability would be of concern for waste disposal.
- Of the 189 soil samples analyzed for lead, 187 samples contained reportable concentrations of lead ranging from 1.15 to 246 mg/kg. The upper 80% confidence level of the mean of total lead concentrations of the 189 soil samples analyzed was 14.26 mg/kg. Fifty individual samples were analyzed for leachability following the California WET procedure. Of these 50 samples, two exceeded the hazardous waste criterion of 5 mg/ℓ. Thirty individual samples were analyzed for leachability following a modified WET procedure using a deionized water extraction. Of these 30 samples, four samples leached lead at concentrations at or above the Department of Toxic Substances Control ADL Variance criterion of 0.5 mg/ℓ. Fifty individual samples were analyzed for leachability following the federal toxicity characteristic leaching procedure. None of these

samples leached lead above the federal hazardous waste criterion of 5 mg/ℓ. The pH of the 50 soil samples analyzed ranged from 3.26 to 9.04.

- Based on the analytical results of the hand auger samples, the soil assessed meets the criteria specified in the ADL variance granted to the Department and could be reused on Site under the provisions set forth in the variance. The data further suggest that the soil as a whole would not be considered a hazardous waste for disposal purposes; however, additional analytical data may be required by local regulators or waste disposal facility prior to off-site disposal.

10.2. Groundwater

- Groundwater was encountered during drilling at seven of ten locations. Depth to groundwater ranged from 1.52 meters (5 feet) bgs in boring NM03-B5 to 25.3 meters (83 feet) bgs in boring NM03-B1.

- Concentrations of TPH-G and PCBs were not detected above the reporting limit in the groundwater samples collected.

- Concentrations of TPH-d, VOCs, and/or SVOCs were detected in five of the seven samples analyzed. Concentrations of some Title 22 metals were detected above the reporting limit.

10.3. Groundwater

- This assessment was limited to evaluating TPH, VOCs, SVOCs, PCBs, and metals in soils and groundwater at specific locations approved by Department personnel. Other areas not evaluated as part of this limited assessment may contain similar types of soil and groundwater impacts. In addition, other types of soil and groundwater impacts, not tested for as part of this limited assessment, may be present in some soil and groundwater as a result of past and/or current Site use and adjacent property uses.

- The limited nature of this assessment did not include delineating the lateral extent of the impacted soil and groundwater, identifying the contaminant source(s), or evaluating other areas of potentially impacted groundwater.

- If the proposed expansion involves construction dewatering, groundwater will likely require pretreatment if discharged to the storm sewer under a NPDES permit. If the dewatering effluent is discharged to the sanitary sewer, it would require a sewer discharge permit through the local municipality, and may require treatment prior to discharge.

11. RECOMMENDATIONS

Based upon the results of the Site assessment activities conducted, current and future uses of the site, and anticipated general construction activities that may associated with proposed widening of the subject corridor, the following recommendations are provided:

- If the soil is subject to export, it should be characterized for the appropriate waste classification and in accordance with the requirements of the permitted disposal facility.
- If the planned road expansion involves construction dewatering, impacted groundwater may require treatment prior to discharge, under a National Pollution Discharge Elimination System (NPDES) or sewer discharge permit.
- Due to the presence of impacted soils, construction activities should be performed in accordance with a Site-specific health and safety plan and a soil management plan.
- If soil that has been impacted by ADL is reused at the Site, the soil should be handled and reused in accordance with the provisions of the DTSC ADL Variance.

12. PROJECT PERSONNEL AND SUBCONTRACTORS

Stephan Beck of Ninyo & Moore was the Task Order manager and provided technical input; assisted in the planning, coordination, and data evaluation; and reviewed this report. Scott Snyder of Ninyo & Moore was the project manager for Department Task Order No. 9 and coordinated all field activities and prepared the report. Matt Fuller of Ninyo & Moore conducted field activities and assisted in report preparation. Peter Clark, Tim Brown, Matt Roe, Lauren Hedges, and Shannon Smith also conducted field activities and provided quality control review of various portions of the report. Stephen Waide of Ninyo & Moore is the CIH who reviewed, approved, and signed the SHSP. Southwest Geophysics, Inc. conducted the geophysical survey. Tri-County Drilling conducted the hollow-stem auger drilling. EMAX Laboratories, Inc. conducted the laboratory analysis. American Barricade provided traffic control services. Ocean Blue Environmental Services transported the soil cuttings and decontamination fluids to an appropriate facility for disposal/recycling.

13. LIMITATIONS

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in Site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analysis. Further assessment of potential adverse environmental impacts from past on-Site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between sampling locations. Variations in soil and/or groundwater conditions will exist beyond the points explored in this evaluation.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the Site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations, and opinions are based on an analysis of the observed Site conditions. It should be understood that the conditions of a Site could change with time as a result of natural processes or the activities of man at the Site or nearby properties. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to

government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions, and/or recommendations of this report by parties other than the client is undertaken at said parties' sole risk.

APPENDIX A

60-DAY REPORT

August 18, 2005
Project No. 105388009

Permit Clerk
County of San Diego
Department of Environmental Health
Site Assessment and Mitigation Division
P.O. Box 129261
San Diego, California 92112-9261

Subject: 60-Day Boring Report
Interstate 5 Right-of-Way
San Diego County, California

Dear Permit Clerk:

Ninyo & Moore is submitting the attached documents in fulfillment of the conditions of boring permit number LMON103106 issued on May 9, 2005, (attached) for the following project:

Property Owner:	California Department of Transportation
Site Address:	Interstate 5 Caltrans Right-Of-Way San Diego County, California
Property Representative:	Mr. Joel Kloth
Address:	2829 Juan Street, MS-46 San Diego, California 92186-5406
Assessor's Parcel No.:	263-292-54-00 (nearest) 298-490-11-00 (nearest) 304-101-21-00 (nearest) 260-324-12-00 (nearest) 261-210-14-00 (nearest)

Between May 17 June 3, 2005, Ninyo & Moore drilled ten soil borings at the site and collected environmental soil and groundwater samples for evaluation. Soil cuttings and decontamination water generated were stored in five 55-gallon drums and subsequently transported by Ocean Blue Environmental to Crosby and Overton in Long Beach, California, for treatment. During the site assessment, groundwater was encountered in seven borings and was measured at depths of between 5 and 83 feet below ground surface.

Soil samples were collected at 5-foot intervals for description. Select soil samples collected from each boring were analyzed for total petroleum hydrocarbons as gasoline (TPH-g) and diesel

(TPH-d) by United States Environmental Protection Agency (USEPA) test method 8015, volatile organic compounds (VOCs) and oxygenates by USEPA test method 8260B, semi-volatile organic compounds (SVOCs) by USEPA test method 8270C, polychlorinated biphenyls (PCBs) by USEPA Method 8082, Title 22 metals by USEPA methods 6010B/7471A, and pH by USEPA method 9045C.

The groundwater samples were analyzed for one or more of the analytes TPH-g and TPH-d, VOCs and oxygenates, SVOCs, PCBs, and Title 22 metals. Once the total drilling depth was achieved, or the boring could not be advanced due to refusal, and the groundwater sample was collected, if applicable, the borings were backfilled with bentonite grout to approximately 5 feet bgs, followed by placement of medium bentonite chips and hydrated with 5 gallons of potable water. The top one foot of each boring was filled with soil to approximate its original condition. The boreholes were backfilled with grout based on the total depth of each boring. The volumes of grout used ranged between 6 and 31.85 cubic feet; the boring abandonment summary presents the volume used for each boring.

The attached documents include a copy of the approved boring permit, boring logs, boring abandonment summary sheets, analytical data, a site location map, and a boring location map. If you have any questions regarding this report, please contact the undersigned.

Respectfully submitted,
NINYO & MOORE

Scott Snyder, P.G., HG.
Senior Hydrogeologist

APPROVED SOIL BORING CONSTRUCTION PERMIT

PERMIT #LMON103106
A.P.N. # 263-292-54-00, 298-490-11-00, 304-101-21-00, 260-324-12-00, 261-210-14-00
EST #NONE

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION

SOIL BORING CONSTRUCTION PERMIT

SITE NAME: CALTRANS I-5 EXPANSION

SITE ADDRESS: I-5 (FROM DEL MAR HEIGHTS RD TO BIRMINGHAM DR), SAN DIEGO, CA

PERMIT FOR: **10 BORINGS**

PERMIT APPROVAL DATE: MAY 9, 2005

PERMIT EXPIRES ON: SEPTEMBER 6, 2005

RESPONSIBLE PARTY: STATE OF CALIFORNIA, DEPT OF TRANSP. DIST II

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**

2. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

3. All borings must be destroyed within 24 hours of drilling.

4. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, E- 4. (**http://www.sdcounty.ca.gov/deh/lwq/sam/manual_guidelines.html**). In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. **This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to DEH.** Within 60 days of completing work, submit a well/boring construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7

6. This office must be given 48-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at 338-2339.

APPROVED BY: M Crystal MARISUE CRYSTAL DATE: 05/09/2005

NOTIFIED: by email 5/9/05 msc

G. FEES (in effect beginning July 1, 2004, through June 30, 2005)

ACTIVITY	FEE SCHEDULE	AMOUNT
Permit for Well Installations Only (Groundwater Monitoring Wells, Vadose, Vapor Extraction Wells)	$175.00 for the first monitoring well	$175.00
Permit for Well Maintenance Inspection (Valid for three years)	$ 95.00 for first well maintenance inspection	$95.00
Each Additional New Well	$150.00 for each additional well installation $30.00 for each additional well maintenance inspection	___ x $150.00 ____ ___ x $30.00 ____
Permit for Borings Only *(CPT's, Hydropunch, Geoprobes, Temporary Well Points, etc.)*	$175.00 for the first boring ..... $45.00 for each additional boring	1 x $175.00 175.00 9 x $45.00 405.00
Permit for Well Destructions Only	$175.00 for the first destruction ..... $115.00 for each additional destruction ...	___ x $175.00 ___ x $115.00
Permit for any Combination of Well Installations, Borings, & Destructions (except UST backfill permit)	The first activity will be $175.00 **Additional activities will be as follows:**	___ x $175.00 ____
	$150.00 for each additional well ..... $ 95.00 for first well maintenance inspection	___ x $150.00 ____ ___ x $ 95.00 ____
	$ 30.00 for each additional well maintenance inspection	___ x $ 30.00 ____
	$ 45.00 for each additional boring $115.00 for each well destruction	___ x $ 45.00 ____ ___ x $115.00 ____
Permit for Underground Storage Tank Monitoring System in Backfill *(i.e. Enhanced Leak Detection)*	$310.00 (Flat Fee)	$310.00
	TOTAL COST OF PERMIT	$ 580.00

H. **QUESTIONNAIRE: Please answer all applicable questions completely. For well destructions, complete only #1 below and submit any required supportive documentation.**

1. If wells are to be destroyed, provide a description of method of destruction N/A

2. What is the purpose of the well/boring investigation?

   ☐ a. Part of an ongoing site assessment case in which DEH or another government regulator is the lead agency.

   ☐ b. Part of a Phase I investigation for property ownership transfer or: _____

   ☐ c. Geotechnical investigation for proposed construction, land stabilization or:

   ☒ d. Other: Site investigation for ~~property transaction~~ hwy expansion

3. What procedures will be used to prevent the well/boring from providing an avenue to contamination during construction? All drilling and sampling equipment will be decontaminated prior to use.

4. What field procedures will be utilized to determine if contamination exists? Soil cuttings and samples will be screened with the photoionization detector (PID) during drilling.

5. What procedures will be used to determine whether samples will be sent for laboratory testing or archiving? Field observations of staining and/or elevated PID readings from soil samples will be utilized to determine samples requiring laboratory testing.

6. What constituents will be monitored and tested (Include EPA Laboratory Test Methods to be used)? Selected soil samples will be collected and analyzed for TPH g/d by USEPA test method 8015M, VOCs and EOs by USEPA test method 8260, and PAHs by USEPA test method 8270.

7. How will samples be transported and preserved? Samples will be placed in an ice chilled cooler and transported under chain-of-custody protocol to a state certified laboratory for chemical analysis.

8. What sampling methods will be used? Soil samples will be collected with a split spoon drive sampler.

9. Are you proposing a variation from the methods and/or procedures presented in the requirements for the construction or destruction of Vadose and Groundwater Monitoring Wells (Current SAM Manual Requirements)? If yes, specify these variations and include a well construction diagram and all required supporting documentation. Refer to the SAM Manual Appendix B for monitoring well guidelines (http://www/sdcounty.ca.gov/deh/lwq/sam/monitoring_well.html). :No.

10. Are you proposing a variation in drilling and destruction of soil borings from the methods and/or procedures specified in the current SAM manual? If yes, specify these variations and include a destruction diagram. No.

11. What procedures will be used to ensure that the drilling equipment will introduce no contamination? Drilling equipment will be decontaminated with a high-pressure steam wash prior to drilling operations between boring locations.

PROPERTY OWNER RESPONSIBILITY ACKNOWLEDGEMENT

Proposed locations for subsurface work:

Property Address: See attached

Assessor's Parcel Number (APN): See attached

I, Joel Kloth, owner of the property/properties listed above, give my permission to Ninyo + Moore (consulting company, contractor) to conduct the following work at the locations stated above.

☐ Install _____ monitoring wells ☐ Destroy _____ monitoring wells ☒ Drill 10 soil borings

The person who causes to have a monitoring well installed or an existing well destroyed on this property is defined as the *Responsible Party*. San Diego County Code, Section 67.424, states that: "Monitoring wells shall be maintained to meet construction or destruction standards. If a monitoring well does not meet construction or destruction standards, the *Responsible Party* must repair, reconstruct or destroy the monitoring well so it meets the standards. The property owner, if different than the *Responsible Party*, must take the necessary actions to repair, reconstruct or destroy the monitoring well so it meets the standards if the *Responsible Party* does not complete the necessary actions."

A soil boring is used specifically to sample soil and, because there are construction and destruction standards, is included in the definition of a monitoring well even though no maintenance is required. These standards are outlined in the County of San Diego Site Assessment and Mitigation (SAM) Manual and the State of California Well Standards Bulletin 74-90.

I understand that Scott Snyder (registered professional) of Ninyo + Moore (consulting company) and authorized signer for Tri-County Drilling (drilling company) have submitted a signed application to the Department of Environmental Health in which they have agreed to complete the above-stated work according the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction.

I also understand that if either the registered professional and/or the licensed drilling company should fail in their responsibilities as defined in San Diego County Code, Section 67.424, I, as the property owner, must take the necessary actions to repair, reconstruct or destroy the monitoring well so it meets the standards if the Responsible Party does not complete the necessary actions.

The scope of work covered by this Acknowledgement will expire one year from the date of the property owner's signature below. If an extension of time beyond one year is required to complete the proposed drilling activities or additional work is proposed, a new Property Owner Responsibility Agreement will be required.

APPENDIX B

GEOPHYSICAL SURVEY REPORT

SOUTHWEST
GEOPHYSICS, INC.
YOUR SUBSURFACE SOLUTION

RECEIVED
MAY 18 2005
NINYO & MOORE
SAN DIEGO OFFICE

May 16, 2005
Project No. 104015h

Mr. Scott Snyder
Ninyo & Moore
5710 Ruffin Road
San Diego, California 92123-1013

Subject: Geophysical Evaluation
Interstate 5 Interchanges
San Diego, California

Dear Mr. Snyder:

In accordance with your authorization, we have performed geophysical surveys at several interchanges along Interstate 5 (I-5) in San Diego, California (Figure 1). Specifically, our surveys were conducted at the Del Mar Heights Road, Via de la Valle, Loma Santa Fe Drive, Manchester Avenue, and Birmingham Drive interchanges. The purpose of the surveys was to assess the presence of utilities at 14 proposed boring locations. This report presents our survey methodology, equipment used, analysis, and findings.

Our scope of services for the project included performance of geophysical surveys in the areas of the proposed borings, analysis of the data obtained, and preparation of this letter-report presenting our findings. The geophysical evaluation included the use of a GSSI SIR 3000 ground penetrating radar (GPR) with a 400 MHz transducer, Geonics EM61 time domain instrument, Schonstedt GA-52C magnetic gradiometer, Fisher M-Scope TW6 pipe and cable locator, and Metrotech 9860 line tracer.

The proposed boring locations were selected by your office and marked in the field with paint and wooden stakes prior to our site visit (Figure 2). The primary scope of our evaluation was to delineate subsurface utilities in roughly a 15-foot radius around each of the proposed soil boring locations. Traverses using the instruments described above were taken over each of the areas on

random profiles, which were oriented to optimally recognize buried structures. In some cases where risers were present, the line tracer was used to trace out the lines. Our interpretation of the collected data took place in real time as the survey progressed, and the findings of our evaluation were marked on the ground surface and reported to you at the completion of the survey. It should also be noted that the depth of GPR penetration at the boring locations was fairly shallow (i.e., less than 3 feet). Therefore, nonmetallic lines at greater depths may not have been detected.

The results of our surveys indicate several utilities are located at or in the near vicinity of the proposed boreholes. As a result, some of the borings were relocated slightly (less than 10 feet) to avoid detected underground utilities. Accordingly, the proposed boring locations, as they are currently marked, are generally clear of underground utilities. Based on our discussion with a technician at the Sewer Lift Station located at the Manchester Avenue interchange, the boring in this area may conflict with an underground forced main sewer line. Apparently the line is several feet deep. Several traverses with our instrumentation were conducted; however, no indication of the line location was obtained. The technician did report, however, that the location of the sewer line would be delineated by facility personnel upon receipt of a "Dig Alert" ticket.

The field evaluation and geophysical analyses presented in this report have been conducted in general accordance with current practice and the standard of care exercised by consultants performing similar tasks in the project area. No warranty, expressed or implied, is made regarding the conclusions presented in this report. There is no evaluation detailed enough to reveal every subsurface condition. Variations may exist and conditions not observed or described in this report may be present. Uncertainties relative to subsurface conditions can be reduced through additional subsurface exploration. Additional subsurface surveying will be performed upon request.

Please note that our evaluation was limited to the assessment of the possible presence of detectable buried utilities, and that "USA" or "Dig Alert" should also be contacted prior to conducting

subsurface exploration activities. In addition, we recommend that available utility plans/drawings of the project site be reviewed as appropriate.

Southwest Geophysics, Inc. should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. This report is intended exclusively for use by the client. Any use or reuse of this report by parties other than the client is undertaken at said parties' sole risk.

We appreciate the opportunity to be of service on this project. Should you have any questions related to this report, please contact the undersigned at your convenience.

Sincerely,
SOUTHWEST GEOPHYSICS, INC.

NOTICE: Turn-around-time (TAT) for samples shall not begin until all discrepancies have been resolved. For samples received and discrepancies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associated with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) water samples were received on 05/18/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd edition.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12 hours interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limits.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   All recoveries were within QC limits.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) soil samples were received on 05/18/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd edition.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12 hours interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limits.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   All recoveries were within QC limits.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS
BY PURGE AND TRAP

SDG#: 05E155

4000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and three (3) soil samples were received on 05/18/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 Mod in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 05/19/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour interval and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water and three (3) soil samples were received on 05/18/05 for Total Petroleum Hydrocarbons by Extraction by Method M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 05/19/05 and completed on 05/20/05. Extraction for soil samples was performed and completed on 05/20/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No sample was designated for MS/MSD.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

SW3520C/3550B/8082
PCBs

Two (2) water and three (3) soil samples were received on 05/18/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Instrument Performance and Calibration

Initial calibration was five points for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12-hour interval and all recoveries were within 85-115%, except the closing DCC of PCB-1260 in column A had high bias, but the associated sample was ND.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit except for DCB for E155-07, but the second surrogate met QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

METALS BY ICP/ MERCURY

SDG#: 05E155

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

METHOD 3010A/3050B/6010B
METALS BY ICP

Two (2) water and three (3) soil samples were received on 05/18/05 for Metals analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit except Barium and Silver in LCD1S but were within QC limit in LCS1S.

4. Serial Dilution / Post-Analytical Spike

Samples F024-03 and E147-01 from other SDGs were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met except as aforementioned.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E155

METHOD 7470A/7471A
MERCURY BY COLD VAPOR

Two (2) water and three (3) soil samples were received on 05/18/05 for Mercury analysis by Method 7470A/7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples E155-03 and E213-07 from other SDGs were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

2000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E172

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Two (2) water samples were received on 05/19/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blank was free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit except 1,2-Dichloroethane-d4 in LCS/LCSD had high recovery but all target analytes met QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E172

SW 3520C/3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

Two (2) water and three (3) soil samples were received on 05/19/05 for Semi Volatile Organic analysis by Method 3520C/3550B/8270C in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CAL TRANS

SDG: 05E172

METHOD5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and three (3) soil samples were received on 05/19/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 05/24/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour intervals and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method Blanks were free of contamination at the Reporting Limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No sample was spiked.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E172

METHOD M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water samples and three (3) soil samples were received on 05/19/05 for Total Petroleum Hydrocarbons by Extraction by Method M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 05/20/05 and completed on 05/21/05. Extraction for soil samples was performed and completed on 05/23/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No sample was designated for MS/MSD.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

Samples E172-07 and –08 displayed heavier hydrocarbon pattern.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E172

SW3520C/3550B/8082
PCBs

Two (2) water and three (3) soil samples were received on 05/19/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Instrument Performance and Calibration

Initial calibration was five points for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12-hour interval and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit except for DCB for water samples but the second surrogate met QC criteria.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E172

METHOD 7470A/7471A
MERCURY BY COLD VAPOR

Two (2) water and three (3) soil samples were received on 05/19/05 for Mercury analysis by Method 7470A/7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Samples from another SDG E173-07 and E080-19 were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   MS/MSD sample was not designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

COURIER/AIRBILL

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E207

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) water samples were received on 05/23/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

PROJECT: CALTRANS

SDG: 05E207

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) soil samples were received on 05/23/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E207

SW 3520C/3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

Two (2) water and three (3) soil samples were received on 05/23/05 for Semi Volatile Organic analysis by Method 3520C/3550B/8270C in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit except four surrogates in E207-08 were slightly below QC limit. Sample was reanalyzed with similar QC deficiency. Both sets of data were reported.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E207

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and three (3) soil samples were received on 05/23/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 05/26/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour interval and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E207

SW3520C/3550B/8082
PCBs

Two (2) water and three (3) soil samples were received on 05/23/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Instrument Performance and Calibration

Initial calibration was five points for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12 hours interval and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit for soil. Both surrogates in E207-12 and DCB in QC samples for water were below limit, but reextraction was not performed since only one bottle of sample was provided.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit except Barium in LCS1S was slightly low at 79%, but was within the limit in LCD1S.

4. Serial Dilution / Post-Analytical Spike

Samples E206-07 and -11 from other SDG were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

MS/MSD sample was not designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedure. All criteria were met with the aforementioned exception.

PROJECT: CALTRANS

SDG: 05E207

METHOD 7471A
MERCURY BY COLD VAPOR

Three (3) soil samples were received on 05/23/05 for Mercury analysis by Method 7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blank was free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Sample E206-20 from another SDG was analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

Subject: RE: COC changes (NM/Caltrans 105388009)

Hi Scott,
I just want to verify with you that we already extracted all samples for PCBs, (05E254, 05F009), so we cann't cancel this method.
For Tittle 22 Metals, we already analyze 05E254. Do you want us to analyze total Lead for sample E254-03 to -06?
F009 we cancel Metals, and analyze Total Lead for samples F009-02, -03 to -07?

Samples with NM03-B5 and B7
Samples were extracted for PCBs and SVOCs 05E233, 05E271. We will analyze these methods.
You want to cancel Metals for samples E233-10 to -12, and analyze total Lead?
COCs did not have any check marked for Metals. Do you want us to analyze total Lead for samples E271-02, -04, -06 ?

Enclosed COCs and please give me advise, thanks
Hanh

Subject: COC changes

Hanh,

I have changes to the following samples:

Samples with NM03-B6 and NM03-B8 and their associated field blanks:
Do not analyze soil or groundwater for PCBs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Samples with NM03-B5, NM03-B7, NM03-B9, and NM03-B10 and their associated field blanks:
Do not analyze soil or groundwater for PCBs or SVOCs

1004

Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Please reply to let me know you have received this and it is OK.

Thanks,
Scott

Subject: RE: Question for samples received on May/25 SDG: 05E232 and 05E233 (NM/Caltrans I5 10538809)

Please hold them pending instructions for additional analyses. We may or may not analyze those samples, but we wanted to make sure you had them in case we need to run something from those samples.

Thanks.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

PROJECT: CALTRANS

SDG: 05E233

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Four (4) water samples were received on 05/25/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blank was free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

PROJECT: CALTRANS

SDG: 05E233

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Six (6) soil samples were received on 05/25/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

SW 3520C/3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

Two (2) water and six (6) soil samples were received on 05/25/05 for Semi Volatile Organic analysis by Method 3520C/3550B/8270C in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit.

6. Matrix Spike/Matrix Spike Duplicate

Sample E233-04 was spiked. All recoveries were within QC limit.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS
BY PURGE AND TRAP

SDG#: 05E233

4000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and six (6) soil samples were received on 05/25/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 05/28/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour intervals and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CALTRANS

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

SDG#: 05E233

5000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water and six (6) soil samples were received on 05/25/05 for Total Petroleum Hydrocarbons by Extraction by Method 3520C/LUFT/M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 05/30/05 and completed on 05/31/05. Extraction for soil samples was performed and completed on 05/27/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

Sample E233-05 was spiked. Recoveries were within QC limits.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

Sample E233-07 displayed heavier hydrocarbon pattern.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

SW3520C/3550B/8082
PCBs

Two (2) water and six (6) soil samples were received on 05/25/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Instrument Performance and Calibration**

   Initial calibration was 5-point for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12-hour interval and all recoveries were within 85-115%.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   All recoveries were within QC limits.

6. **Matrix Spike/Matrix Spike Duplicate**

   Sample E233-05 was spiked. All recoveries were within QC limit.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All QC criteria were met.

   Soil extracts were cleaned up by acid prior to analysis.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

TOTAL AND DISSOLVED METALS BY ICP / MERCURY

SDG#: 05E233

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

METHOD 3010A/3050B/6010B
TOTAL AND DISSOLVED METALS BY ICP

Two (2) water and eight (8) soil samples for Total and Dissolved Metals were received on 05/25/05 to be analyzed by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples F233-07 and -12 were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

Sample E233-12 was spiked. Recoveries were within QC limit.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedure. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E233

METHOD 7470A/7471A
TOTAL AND DISSOLVED MERCURY BY COLD VAPOR

Two (2) water and three (3) soil samples were received on 05/25/05 for Total and Dissolved Mercury analysis by Method 7470A/7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blank was free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Samples E213-07 and E258-01 from other SDGs were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   MS/MSD sample was not designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Subject: RE: COC changes (NM/Caltrans 105388009)

Hi Scott,
I just want to verify with you that we already extracted all samples for PCBs, (05E254, 05F009), so we cann't cancel this method.
For Tittle 22 Metals, we already analyze 05E254. Do you want us to analyze total Lead for sample E254-03 to -06?
5
F009 we cancel Metals, and analyze Total Lead for samples F009-02, -03 to -07?

Samples with NM03-B5 and B7
Samples were extracted for PCBs and SVOCs 05E233, 05E271. We will analyze these methods.
You want to cancel Metals for samples E233-10 to -12, and analyze total Lead?
COCs did not have any check marked for Metals. Do you want us to analyze total Lead for samples E271-02, -04, -06 ?

Enclosed COCs and please give me advise, thanks
Hanh

Subject: COC changes

Hanh,

I have changes to the following samples:

Samples with NM03-B6 and NM03-B8 and their associated field blanks:
Do not analyze soil or groundwater for PCBs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Samples with NM03-B5, NM03-B7, NM03-B9, and NM03-B10 and their associated field blanks:
Do not analyze soil or groundwater for PCBs or SVOCs

1005

Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Please reply to let me know you have received this and it is OK.

Thanks,
Scott

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

SDG#: 05E254

2000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E254

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

One (1) water sample was received on 05/26/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit except 1,2-DCA-d4 in LCS1W/LCD1W was above QC, but all target analytes met QC limits.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Sample was analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E254

SW 3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

Three (3) soil samples were received on 05/26/05 for Semi Volatile Organic analysis by Method 3550B/8270C in accordance with USEPA SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. Method Blank

Method blank was free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries were within QC limit except one analyte was out of QC in LCS but met QC in LCD.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E254

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Three (3) soil samples were received on 05/26/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. Soil samples were extracted with methanol on 05/26/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour interval and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blank was free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

PROJECT: CALTRANS

SDG: 05E254

METHOD LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Three (3) soil samples were received on 05/26/05 for Total Petroleum Hydrocarbons by Extraction by Method M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction was performed and completed on 05/27/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blank was free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample

Recovery was within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

METALS BY ICP / MERCURY

SDG#: 05E254

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E254

METHOD 3050B/6010B
METALS BY ICP

Four (4) soil samples were received on 05/26/05 for Metals analysis by Method 3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Sample E253-01 from another SDG was analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

MS/MSD sample was not designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedure. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E254

METHOD 7471A
MERCURY BY COLD VAPOR

Three (3) soil samples were received on 05/26/05 for Mercury analysis by Method 7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Sample E147-01 from another SDG was analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Subject: RE: COC changes (NM/Caltrans 105388009)

Hi Scott,
I just want to verify with you that we already extracted all samples for PCBs, (05E254, 05F009), so we cann't cancel this method.
For Tittle 22 Metals, we already analyze 05E254. Do you want us to analyze total Lead for sample E254-03 to -06?
F009 we cancel Metals, and analyze Total Lead for samples F009-02, -03 to -07?

Samples with NM03-B5 and B7
Samples were extracted for PCBs and SVOCs 05E233, 05E271. We will analyze these methods.
You want to cancel Metals for samples E233-10 to -12, and analyze total Lead?
COCs did not have any check marked for Metals. Do you want us to analyze total Lead for samples E271-02, -04, -06 ?

Enclosed COCs and please give me advise, thanks
Hanh

Subject: COC changes

Hanh,

I have changes to the following samples:

Samples with NM03-B6 and NM03-B8 and their associated field blanks:
Do not analyze soil or groundwater for PCBs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Samples with NM03-B5, NM03-B7, NM03-B9, and NM03-B10 and their associated field blanks:
Do not analyze soil or groundwater for PCBs or SVOCs

1005

Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Please reply to let me know you have received this and it is OK.

Thanks,
Scott

Subject: RE: Question for samples received on May/28 SDG: 05E271 (NM/Caltrans)

We do not need to analyze for PCBs or SVOCs on this field blank and water sample. Please also note that we are only requesting lead not the full Title 22 metals.

Thanks

Shipping Label: Your shipment is complete

1. Use the 'Print' feature from your browser to send this page to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E271

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) water samples were received on 05/28/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E271

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) soil samples were received on 05/28/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E271

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and three (3) soil samples were received on 05/28/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 06/02/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour intervals and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method Blanks were free of contamination at the Reporting Limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No sample was designated for MS/MSD.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water samples and three (3) soil samples were received on 05/28/05 for Total Petroleum Hydrocarbons by Extraction by Method 3520C/LUFT/M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 06/01/05 and completed on 06/02/05. Extraction for soil samples was performed and completed on 06/01/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

Recoveries in sample E271-02 could not be evaluated due to dilution. All others were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No sample was designated for MS/MSD.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

Sample E271-02 displayed motor oil-like fuel pattern.

Sample E271-10 displayed mixed fuel pattern.

PROJECT: CALTRANS

SDG: 05E271

METHOD 3010A/3050B/6010B
LEAD BY TRACE ICP

Two (2) water and four (4) soil samples were received on 05/28/05 for Lead analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Samples from another SDGs E232-09, F196-06 and E233-07 were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Subject: RE: Question for samples received on June/1 (NM/ Caltrans)

For 05F009: Yes hold the extra tubes and change the turn around time to standard 5 days.
For 05F006: Yes analyze the samples for total lead, sorry for the oversight. Standard turn around time, 5 days.
For 05F012: Total lead was checked on all samples on the COC. Standard turn around time, 5 days.

Thanks

Subject: Question for samples received on June/1 (NM/ Caltrans)

Hi Scott,
Please find the attached of COCs and SRF of SDGs:
1/ 05F009
Can we hold some extra tubes we received ?
3 days TAT will changed to 5 days TAT?

2/ 05F006
We will analyze total Lead for samples F006-11 to -18 (No check marked on COC) ?
Still 3 days TAT ? (not project 105388009, please check COCs)

3/ 05F012
Total Lead requested for samples F012-08 and F012-09? (No check marked on COC)?
3 days TAT changed to 5 days TAT?
Please give me advise, thanks.
Hanh

Subject: RE: COC changes (NM/Caltrans 105388009)

Yes cancel the Title 22 metals for what ever has not been analyzed and instead analyze for total lead only E254-03 to -06 and F009-02, 03, 07.

Yes cancel the Title 22 metals (to) for what ever has not been analyzed and instead analyze for total lead only E233-10 to 12 and E271-02, 04, 06.

Subject: RE: COC changes (NM/Caltrans 105388009)

Hi Scott,
I just want to verify with you that we already extracted all samples for PCBs, (05E254, 05F009), so we cann't cancel this method.
For Tittle 22 Metals, we already analyze 05E254. Do you want us to analyze total Lead for sample E254-03 to -06?
F009 we cancel Metals, and analyze Total Lead for samples F009-02, -03 to -07?

Samples with NM03-B5 and B7
Samples were extracted for PCBs and SVOCs 05E233, 05E271. We will analyze these methods.
You want to cancel Metals for samples E233-10 to -12, and analyze total Lead?
COCs did not have any check marked for Metals. Do you want us to analyze total Lead for samples E271-02, -04, -06 ?

Enclosed COCs and please give me advise, thanks
Hanh

Subject: COC changes

Hanh,

I have changes to the following samples:

Samples with NM03-B6 and NM03-B8 and their associated field blanks:
Do not analyze soil or groundwater for PCBs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Samples with NM03-B5, NM03-B7, NM03-B9, and NM03-B10 and their associated field blanks:
Do not analyze soil or groundwater for PCBs or SVOCs

1004

Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Please reply to let me know you have received this and it is OK.

Thanks,
Scott

Note: Cancel Metals, analyze Total lead #2 → 7 per Scott's email 6/6/05

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F009

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Two (2) water samples were received on 06/01/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

Four (4) soil samples were received on 06/01/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F009

SW 3520C/3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

One (1) water and four (4) soil samples were received on 06/01/05 for Semi Volatile Organic analysis by Method 3520C/3550B/8270C in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS
BY PURGE AND TRAP

SDG#: 05F009

4000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F009

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

One (1) water and four (4) soil samples were received on 06/01/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 06/02/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour intervals and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD ample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F009

SW3520C/3550B/8082
PCBs

One (1) water and four (4) soil samples were received on 06/01/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Instrument Performance and Calibration**

   Initial calibration was five-point for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12-hour interval and all recoveries were within 85-115%.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   All recoveries were within QC limits.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All QC criteria were met.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

METHOD 3010A/3050B/6010B
LEAD BY TRACE ICP

SDG#: 05F009

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F009

METHOD 3010A/3050B/6010B
LEAD METALS BY TRACE ICP

One (1) water and five (5) soil samples were received on 06/01/05 for Lead analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples F009-03 and F024-03 from another SDG were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedure. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Shipping Label: Your shipment is complete

1. Use the 'Print' feature from your browser to send this page to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) water samples were received on 05/28/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

2012

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Four (4) soil samples were received on 05/28/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

SW 3520C/3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

Two (2) water and four (4) soil samples were received on 05/28/05 for Semi Volatile Organic analysis by Method 3520C/3550B/8270C in accordance with USEPA SW846, 3rd edition.

1. Holding Time

Analytical holding time was met.

2. Tuning and Calibration

Tuning and calibration were carried out at 12 hours interval. All QC requirements were met.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC criteria except in LCS1W.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits except two analytes in LCS1W and 2,4-Dinitrotoluene in both LCS1W/LCD1W. Samples were not reextracted because only one bottle was provided. RPDs of five analytes were above QC.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met with the aforementioned exception.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and four (4) soil samples were received on 05/28/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 05/30/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour interval and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water and four (4) soil samples were received on 05/28/05 for Total Petroleum Hydrocarbons by Extraction by Method 3520C/LUFT/M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 05/31/05 and completed on 06/01/05. Extraction for soil samples was performed and completed on 05/31/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (TOTAL) calibration factors.

Samples E273-09 displayed heavier hydrocarbon pattern.

SDG#: 05E273

5009

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

SW3520C/3550B/8082
PCBs

Two (2) water and four (4) soil samples were received on 05/28/05 for PCBs analysis by Method 3520C/3550B/8082 in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd ed.

1. Holding Time

Analytical holding time was met.

2. Instrument Performance and Calibration

Initial calibration was five points for PCB-1016 and PCB-1260, all RSDs were within 20%. All continue calibrations were analyzed at 12-hour interval and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limit.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

LABORATORY REPORT FOR

NINYO & MOORE

CALTRANS

TOTAL AND DISSOLVED METALS BY ICP / MERCURY

SDG#: 05E273

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

METHOD 3010A/3050B/6010B
TOTAL AND DISSOLVED METALS BY ICP

Two (2) water and six (6) soil samples were received on 05/28/05 for Total and Dissolved Metals analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples E272-05 and -11 from another SDG were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E273

METHOD 7470A/7471A
TOTAL AND DISSOLVED MERCURY BY COLD VAPOR

Two (2) water and four (4) soil samples were received on 05/28/05 for Total and Dissolved Mercury analysis by Method 7470A/7471A in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples E273-08 and E272-11 from other SDGs were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin until all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Subject: COC changes NKM/ Caltrans 105388009

05F060

Hanh,

I have changes to the following samples:

Samples with NM03-B6 and NM03-B8 and their associated field blanks:
Do not analyze soil or groundwater for PCBs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Samples with NM03-B5, NM03-B7, NM03-B9, and NM03-B10 and their associated field blanks:
Do not analyze soil or groundwater for PCBs or SVOCs
Analyze soil and groundwater for lead only, not Title 22 metals
All the rest is OK

Please reply to let me know you have received this and it is OK.

Thanks,
Scott

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F060

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) water samples were received on 06/06/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

SDG#: 05F060

2013

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F060

SW 5030B/8260B
VOLATILE ORGANICS BY GC/MS

Three (3) soil samples were received on 06/06/05 for Volatile Organic analysis by Method 5030B/8260B in accordance with USEPA SW846, 3rd ed.

1. **Holding Time**

   Analytical holding time was met.

2. **Tuning and Calibration**

   Tuning and calibration were carried out at 12-hour interval. All QC requirements were met.

3. **Method Blank**

   Method blank was free of contamination at the reporting limit.

4. **Surrogate Recovery**

   Recoveries were within QC limit.

5. **Lab Control Sample/Lab Control Sample Duplicate**

   Recoveries were within QC limit.

6. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

7. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE & TRAP

SDG#: 05F060

4000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F060

METHOD 5030B/M8015
TOTAL PETROLEUM HYDROCARBONS BY PURGE AND TRAP

Two (2) water and three (3) soil samples were received on 06/05/05 for Total Petroleum Hydrocarbons by Purge and Trap analysis by Method 5030B/M8015 in accordance with SW846 3rd Edition.

1. Holding Time

Analytical holding time was met. All water samples were preserved. Soil samples were extracted with methanol on 06/08/05.

2. Calibration

Initial calibration was seven points. %RSD was within 20%. Continuing calibrations were carried out every 12-hour interval and at the end of the analytical sequence. All recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

Recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

Sample F060-03 was spiked. Recoveries were within QC limits.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Samples were quantitated from C6 to C10 using GRO (C6-C10) calibration factor.

CALTRANS

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

SDG#: 05F060

5000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05F060

METHOD 3520C/LUFT/M8015
TOTAL PETROLEUM HYDROCARBONS BY EXTRACTION

Two (2) water samples and three (3) soil samples were received on 06/06/05 for Total Petroleum Hydrocarbons by Extraction by Method 3520C/LUFT/M8015 in accordance with SW846 3RD Edition.

1. Holding Time

Analytical holding time was met. Extraction for water samples was performed on 06/07/05 and completed on 06/08/05. Extraction for soil samples was performed and completed on 06/08/05.

2. Calibration

Initial calibration was seven points for Diesel. %RSDs were within 20%. Continuing calibrations were carried out at 12-hour intervals and all recoveries were within 85-115%.

3. Method Blank

Method blanks were free of contamination at the reporting limit.

4. Surrogate Recovery

All recoveries were within QC limits.

5. Lab Control Sample/Lab Control Sample Duplicate

All recoveries were within QC limits.

6. Matrix Spike/Matrix Spike Duplicate

No MS/MSD sample was designated in this SDG.

7. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met. Quantitation was done full pattern using the Diesel (Total) calibration factors.

Sample F060-07 displayed a mixed fuel pattern.

METHOD 3010A/3050B/6010B
LEAD BY TRACE ICP

Two (2) water and four (4) soil samples were received on 06/06/05 for Lead analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. **Holding Time**

   Analysis met holding time criteria.

2. **Method Blank**

   Method blanks were free of contamination at the reporting limit.

3. **Lab Control Sample/Lab Control Sample Duplicate**

   Lab control results were within QC limit.

4. **Serial Dilution / Post-Analytical Spike**

   Sample F060-07 and sample F059-14 from another SDG were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. **Matrix Spike/Matrix Spike Duplicate**

   No MS/MSD sample was designated in this SDG.

6. **Sample Analysis**

   Samples were analyzed according to the prescribed QC procedures. All criteria were met.

Matt Fall	5-20-05	1240	Phil Haden
Phil Haden	5-20-05	1500	

NOTICE: Turn-around-time (TAT) for samples shall not begin until all discrepancies have been resolved. For samples received and discrepancies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associated with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

To: Hanh Bui
Cc: Scott Snyder
Subject: RE: Question for samples I5NB received on May/20 SDG: 05E190 (NM/Catrans)

Hi Hanh,
Please follow the COC to correct differences in times and dates. As far as the field blank that came in unpreserved, please preserve in the lab after filtration. Feel free to contact me with any other questions. Thanks,

Lauren

Subject: Question for samples I5NB received on May/20 SDG: 05E190 (NM/Catrans)

Hi Lauren,
Please find the attached of COCs and SRF, and give me advise for discrepency.
Also, I already add PCB for samples E154-08, -09 and -10. Hopefully, we try to get the result on 5/24.
Thanks

Subject: RE: Review Login Sheets SDGs : 05E154 (N&M/8663 N Magnolia)

Hi Hanh,
Please also analyze B-6 (1.0', 3.5', and 5.5') for PCBs. Thanks,

Lauren

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

7000

CASE NARRATIVE

CLIENT: NINYO & MOORE

PROJECT: CALTRANS

SDG: 05E190

METHOD 3010A/3050B/6010B
LEAD BY TRACE ICP

Two (2) water and twenty-three (23) soil samples were received on 05/20/05 for Lead analysis by Method 3010A/3050B/6010B in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW846, 3rd edition.

1. Holding Time

Analysis met holding time criteria.

2. Method Blank

Method blanks were free of contamination at the reporting limit.

3. Lab Control Sample/Lab Control Sample Duplicate

Lab control results were within QC limit.

4. Serial Dilution / Post-Analytical Spike

Samples E190-20 and 21 and sample E172-13 from another SDG were analyzed for serial dilution and post-analytical spike. All QC requirements were met.

5. Matrix Spike/Matrix Spike Duplicate

Sample E190-20 was spiked. All recoveries were within QC limit.

6. Sample Analysis

Samples were analyzed according to the prescribed QC procedures. All criteria were met.
