BACKGROUND
Represented by the bull's-eye on the map, the Grapevine is a steep portion of Interstate 5 (I-5) that winds through Tejon Pass at the southern end of the San Joaquin Valley. Full closures of I-5, due to snow and icy conditions, occur during the winter months an average of 3-5 times between October and April. Typically, closures last from 4-6 hours, however some may last longer than 24 hours.

In response to these emergency closures, the California Department of Transportation (Caltrans), the California Highway Patrol (CHP) and Local Partner Agencies developed “Operation Snowflake.”

There are three major ‘phases’ to Operation Snowflake, in addition to four sub-phases in Phase 3.

NOTE: Motorists should be aware that Winter Weather Conditions can change quickly and that Operation Snowflake Phases will adjust as conditions require. Due to unexpected and unpredictable driving conditions, estimated times for re-opening the Grapevine (I-5) are not forecasted by the CHP or Caltrans.

Before Winter Travel, motorists are encouraged to visit our website at: http://ca511.dot.ca.gov and download and print our Weathering the Storm-Winter Driving Tips brochure. For an electronic copy of this Operation Snowflake brochure, go to: http://www.dot.ca.gov/dist6/opsnowflake/guide.pdf

Also, check the Caltrans Highway Information Network (CHIN) voice activated hotline at 1-800-427-ROAD (7623).

PHASE 1: REPORTS OF SNOW FALLING ON THE GRAPEVINE
Snow is actually falling but may not be sticking to the roadway. The CHP is not pacing or escorting convoys.

PHASE 2: INCIDENT COMMAND POST (ICP-Lebec) FULLY OPERATIONAL
Snow is falling and sticking to the roadway. The CHP is pacing or escorting groups of motorists over the pass.

PHASE 3A: I-5 CLOSED - HWY 58 AND HWY 166 OPEN
Detours around the Grapevine are possible using Highway 58 and Highway 166.

PHASE 3B: I-5 AND HWY 58 CLOSED - HWY 166 OPEN
Detours around the Grapevine are possible using Highway 166.

PHASE 3C: I-5 AND HWY 58 AND HWY 166 CLOSED
Detours around the Grapevine are possible using Highway 46 and Highway 41 to US 101.

PHASE 3D: I-5 AND HWY 58 AND HWY 166 AND US 101 CLOSED
No detours are available around the Grapevine.
Who decides when to close I-5?
The California Highway Patrol (CHP) with concurrence from the California Department of Transportation (Caltrans) makes this decision. Closures on the Grapevine as well as other mountain roads are designed to avoid a worst-case scenario and are based on road conditions as opposed to the experience level of individual drivers.

Why are chains not allowed on the Grapevine, as is the case on I-80 over Donner Pass?
Since the snow and icy conditions are often limited to the summit, a location for the removal of chains would have to be made available and this is not viable due to the traffic volumes. This can make driving all the more dangerous when it does snow because drivers who don't travel through the Grapevine regularly would not be carrying chains, not expect snow, nor have much experience driving in it.

Other differences between the two passes are the grades and traffic volumes. The Grapevine is 6% grade for 5 miles, while Donner Pass is 3-6% grade for 30 miles. The graph illustrates the steepness of the Grapevine, over a shorter stretch of roadway as compared to Donner Pass, in addition to greater than double traffic volumes.*

Where can I find updated information?
Caltrans, the CHP, the National Weather Service, along with commercial broadcasting services (TV and Radio) provide various methods to monitor the status of winter closures.

Highway Advisory Radios (HAR) / Changeable Message Signs (CMS)
Caltrans broadcasts road condition information on low frequency radio transmitters. Watch for flashing road signs and tune to the frequency listed. In addition, closure information is displayed on CMS along I-5 and other impacted routes.

California Highway Information Network (CHIN) - Road Conditions via Phone or Internet
Caltrans provides voice-activated up-to-date information on any California Highway by calling: 1-800-427-ROAD (7623).
This information is also available on the Internet at:
http://www.dot.ca.gov/hq/roadinfo

National Weather Service – Internet
http://www.weather.gov

How long after it stops snowing, will the roadway be reopened?
Your safety is our top priority. Caltrans Maintenance Supervisors, along with the CHP, monitor the weather and highway conditions. If inclement weather is forecasted, a snow removal crew is activated to monitor and observe the actual conditions. If there is a high probability that a storm will pass through the Grapevine area, a base crew will be mobilized. After the storm, the crews conduct “clean-up” operations, in order to re-open the roadway and make certain that it is safe for motorists, including, plowing, sanding, and de-icing.

There are a number of factors that preclude the start of these operations, such as the surface temperature. It does not have to feel particularly cold for the roads to freeze, road surface temperatures can be as much as 4 to 10 degrees colder than the air temperature. Other factors include the overnight temperatures, which dictate how quickly the snow and ice will melt, along with the available personnel and the severity of the storm.
