

Modifying Adobe Reader or Adobe Acrobat Pro Security Settings

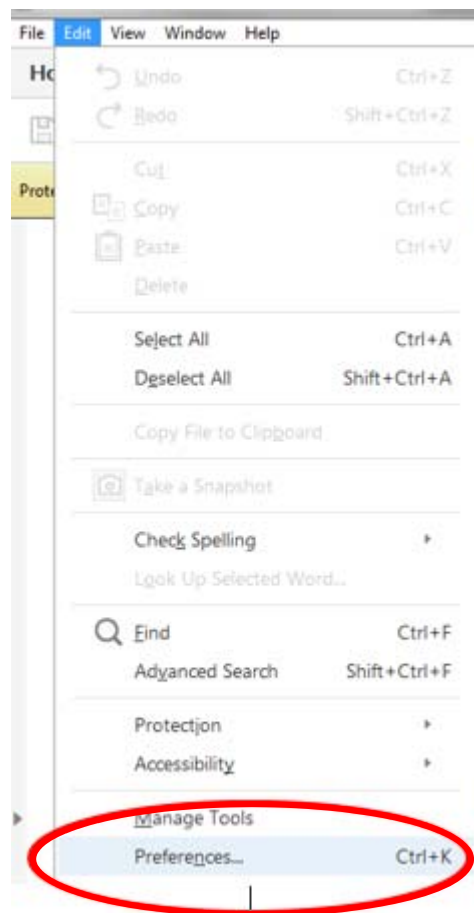

If you are unable to open a PDF file and see the message below (it will be at the top of your browser window or Adobe application), you need to adjust your security settings in your Adobe product.

The process to correct this is the same for both Adobe Reader and Adobe Acrobat.

1. Open either Adobe Reader or Adobe Acrobat Pro (whichever you will use to complete the application). (Sample images are from Adobe Acrobat Reader DC)

2. From the "Edit" menu option, select "Preferences"

3. Select the “Security (Enhanced)” option from the “Categories” list.
4. Change the “Protected View” option to “Off”
5. Click “OK”
6. Close your Adobe product.
7. Form should now open as expected (below).
