The Webinar will be recorded and posted for viewing by those who cannot attend.

Many contractors and resident engineers are now starting to work on contracts under the Caltrans 2010 Standards and have discovered that the specifications are not in the format they are used to.

This Webinar on the Caltrans 2010 Construction Contract Standards, followed by questions and answers, will provide an overview of the 2010 Standards. Topics will include:

- Why did Caltrans create the 2010 Construction Contract Standards?
- Brief review on the specifications style and format.
- Review of the 2010 *Standard Specifications* and associated Standard Special Provisions.
- Frequently asked questions, such as, "What happened to the Order of Work?"

You will have the opportunity to participate by submitting online questions to the presentation team.

The Webinar should be attended by Caltrans, contractors, and local agency construction field staff using or going to be using the Caltrans 2010 Standards.
