# Rock Slope Engineering

---

Civil and mining  
4th edition

Duncan C. Wyllie and  
Christopher W. Mah

Spon Press  
Taylor & Francis Group

LONDON AND NEW YORK

First published 1974 by the Institute of Mining and Metallurgy  
Second edition published 1977  
Third edition published 1981

Reprinted 1991, 1994 (twice), 1996, 1997, 1999, 2001  
© The Institute of Mining and Metallurgy and E. Hoek and J. W. Bray  
2 Park Square, Milton Park, Abingdon, Oxon, OX14 4RN

Simultaneously published in the USA and Canada  
by Spon Press  
270 Madison Avenue, New York, NY 10016

<i>Introduction</i>	xviii
<i>Foreword</i>	xxi
<i>Notation</i>	xxii
<i>Note</i>	xxiv
1 Principles of rock slope design	1
1.1 <i>Introduction</i> 1	
1.1.1 <i>Scope of book</i> 2	
1.1.2 <i>Socioeconomic consequences of slope failures</i> 3	
1.2 <i>Principles of rock slope engineering</i> 4	
1.2.1 <i>Civil engineering</i> 4	
1.2.2 <i>Open pit mining slope stability</i> 5	
1.3 <i>Slope features and dimensions</i> 8	
1.4 <i>Rock slope design methods</i> 8	
1.4.1 <i>Summary of design methods</i> 8	
1.4.2 <i>Limit equilibrium analysis (deterministic)</i> 11	
1.4.3 <i>Sensitivity analysis</i> 14	
1.4.4 <i>Probabilistic design methods</i> 15	
1.4.5 <i>Load and Resistance Factor Design</i> 20	
2 Structural geology and data interpretation	22
2.1 <i>Objectives of geological investigations</i> 22	
2.2 <i>Mechanism of joint formation</i> 24	
2.3 <i>Effects of discontinuities on slope stability</i> 25	
2.4 <i>Orientation of discontinuities</i> 25	
2.5 <i>Stereographic analysis of structural geology</i> 27	
2.5.1 <i>Stereographic projection</i> 27	
2.5.2 <i>Pole plots and contour plots</i> 29	
2.5.3 <i>Pole density</i> 31	

---

2.5.4	Great circles	32	
2.5.5	Lines of intersection	34	
2.6	Identification of modes of slope instability	35	
2.6.1	Kinematic analysis	37	
2.6.2	Plane failure	38	
2.6.3	Wedge failure	38	
2.6.4	Toppling failure	39	
2.6.5	Friction cone	39	
2.6.6	Applications of kinematic analysis	40	
2.7	Example Problem 2.1: stereo plots of structural geology data	43	
2.8	Example Problem 2.2: slope stability evaluation related to structural geology	44	
3	Site investigation and geological data collection		46
3.1	Planning an investigation program	46	
3.1.1	Geology	47	
3.1.2	Rock strength	48	
3.1.3	Ground water	48	
3.2	Site reconnaissance	48	
3.2.1	Aerial and terrestrial photography	49	
3.2.2	Geophysics	49	
3.3	Geologic mapping	52	
3.3.1	Line and window mapping	53	
3.3.2	Stereogrammetric mapping of discontinuities	53	
3.3.3	Types of discontinuity	53	
3.3.4	Definition of geological terms	54	
3.4	Spacing, persistence and roughness measurements	59	
3.4.1	Spacing of discontinuities	60	
3.4.2	Persistence of discontinuity sets	61	
3.4.3	Roughness of rock surfaces	62	
3.5	Probabilistic analysis of structural geology	64	
3.5.1	Discontinuity orientation	64	
3.5.2	Discontinuity length and spacing	65	
3.6	Diamond drilling	67	
3.6.1	Diamond drilling equipment	67	
3.6.2	Diamond drilling operations	68	
3.6.3	Core logging	69	
3.6.4	Core orientation	71	
4	Rock strength properties and their measurement		74
4.1	Introduction	74	
4.1.1	Scale effects and rock strength	74	

- 4.1.2 *Examples of rock masses* 75
- 4.1.3 *Classes of rock strength* 77
- 4.2 *Shear strength of discontinuities* 79
  - 4.2.1 *Definition of cohesion and friction* 79
  - 4.2.2 *Friction angle of rock surfaces* 81
  - 4.2.3 *Shearing on an inclined plane* 81
  - 4.2.4 *Surface roughness* 82
  - 4.2.5 *Discontinuity infilling* 85
  - 4.2.6 *Influence of water on shear strength of discontinuities* 88
- 4.3 *Laboratory testing of shear strength* 88
- 4.4 *Shear strength of rock masses by back analysis of slope failures* 90
- 4.5 *Hoek–Brown strength criterion for fractured rock masses* 92
  - 4.5.1 *Generalized Hoek–Brown strength criterion* 95
  - 4.5.2 *Modulus of deformation* 99
  - 4.5.3 *Mohr–Coulomb criterion* 99
  - 4.5.4 *Rock mass strength* 100
  - 4.5.5 *Determination of  $\sigma'_{3\max}$*  100
  - 4.5.6 *Estimation of disturbance factor D* 101
- 4.6 *Rock durability and compressive strength* 102
  - 4.6.1 *Slake durability* 102
  - 4.6.2 *Compressive strength* 104
- 4.7 *Example Problem 4.1: analysis of direct shear strength test results* 106
- 4.8 *Example Problem 4.2: analysis of point load test results* 107

## 5 Ground water

109

- 5.1 *Introduction* 109
- 5.2 *The hydrologic cycle* 110
- 5.3 *Hydraulic conductivity and flow nets* 111
  - 5.3.1 *Hydraulic conductivity* 111
  - 5.3.2 *Porosity* 113
  - 5.3.3 *Flow nets* 113
- 5.4 *Ground water flow in fractured rock* 114
  - 5.4.1 *Flow in clean, smooth discontinuities* 115
  - 5.4.2 *Flow in filled discontinuities* 116
  - 5.4.3 *Heterogeneous rock* 117
  - 5.4.4 *Anisotropic rock* 118
  - 5.4.5 *Ground water in rock slopes* 118
- 5.5 *Measurement of water pressure* 120
- 5.6 *Field measurement of hydraulic conductivity* 123
  - 5.6.1 *Variable head tests* 124
  - 5.6.2 *Pumping test* 126

5.7	<i>Example Problem 5.1: Influence of geology and weather conditions on ground water levels</i>	127
<b>6</b>	<b>Plane failure</b>	<b>129</b>
6.1	<i>Introduction</i>	129
6.2	<i>General conditions for plane failure</i>	129
6.3	<i>Plane failure analysis</i>	129
6.3.1	<i>Influence of ground water on stability</i>	133
6.3.2	<i>Critical tension crack depth and location</i>	134
6.3.3	<i>The tension crack as an indicator of instability</i>	134
6.3.4	<i>Critical slide plane inclination</i>	136
6.3.5	<i>Analysis of failure on a rough plane</i>	137
6.4	<i>Reinforcement of a slope</i>	138
6.4.1	<i>Reinforcement with tensioned anchors</i>	138
6.4.2	<i>Reinforcement with fully grouted untensioned dowels</i>	139
6.4.3	<i>Reinforcement with buttresses</i>	140
6.5	<i>Seismic analysis of rock slopes</i>	141
6.5.1	<i>Performance of rock slopes during earthquakes</i>	141
6.5.2	<i>Seismic hazard analysis</i>	142
6.5.3	<i>Ground motion characterization</i>	143
6.5.4	<i>Pseudo-static stability analysis</i>	144
6.5.5	<i>Newmark analysis</i>	145
6.6	<i>Example of probabilistic design</i>	148
6.7	<i>Example Problem 6.1: plane failure—analysis and stabilization</i>	150
<b>7</b>	<b>Wedge failure</b>	<b>153</b>
7.1	<i>Introduction</i>	153
7.2	<i>Definition of wedge geometry</i>	154
7.3	<i>Analysis of wedge failure</i>	156
7.4	<i>Wedge analysis including cohesion, friction and water pressure</i>	157
7.5	<i>Wedge stability charts for friction only</i>	160
7.5.1	<i>Example of wedge analysis using friction-only charts</i>	170
7.6	<i>Comprehensive wedge analysis</i>	171
7.6.1	<i>Data for comprehensive analysis</i>	171
7.6.2	<i>Computer programs for comprehensive analysis</i>	174
7.6.3	<i>Example of comprehensive wedge analysis</i>	175
<b>8</b>	<b>Circular failure</b>	<b>176</b>
8.1	<i>Introduction</i>	176

- 8.2 *Conditions for circular failure and methods of analysis* 176
    - 8.2.1 *Shape of slide surface* 177
    - 8.2.2 *Stability analysis procedure* 178
  - 8.3 *Derivation of circular failure charts* 180
    - 8.3.1 *Ground water flow assumptions* 180
    - 8.3.2 *Production of circular failure charts* 181
    - 8.3.3 *Use of the circular failure charts* 182
  - 8.4 *Location of critical slide surface and tension crack* 184
  - 8.5 *Examples of circular failure analysis* 185
    - 8.5.1 *Example 1—China clay pit slope* 185
    - 8.5.2 *Example 2—highway slope* 186
  - 8.6 *Detailed stability analysis of circular failures* 187
    - 8.6.1 *Bishop's and Janbu's method of slices* 188
    - 8.6.2 *Use of non-linear failure criterion in Bishop stability analysis* 193
    - 8.6.3 *Example of Bishop's and Janbu's methods of analysis* 193
    - 8.6.4 *Circular failure stability analysis computer programs* 195
    - 8.6.5 *Three-dimensional circular failure analysis* 196
    - 8.6.6 *Numerical slope stability analysis* 196
  - 8.7 *Example Problem 8.1: circular failure analysis* 197
- 9 *Toppling failure* 200
- 9.1 *Introduction* 200
  - 9.2 *Types of toppling failure* 200
    - 9.2.1 *Block toppling* 200
    - 9.2.2 *Flexural toppling* 201
    - 9.2.3 *Block-flexure toppling* 202
    - 9.2.4 *Secondary toppling modes* 202
  - 9.3 *Kinematics of block toppling failure* 204
    - 9.3.1 *Block shape test* 204
    - 9.3.2 *Inter-layer slip test* 204
    - 9.3.3 *Block alignment test* 205
  - 9.4 *Limit equilibrium analysis of toppling on a stepped base* 205
    - 9.4.1 *Block geometry* 206
    - 9.4.2 *Block stability* 208
    - 9.4.3 *Calculation procedure for toppling stability of a system of blocks* 210
    - 9.4.4 *Cable force required to stabilize a slope* 210
    - 9.4.5 *Factor of safety for limiting equilibrium analysis of toppling failures* 211
    - 9.4.6 *Example of limit equilibrium analysis of toppling* 211
    - 9.4.7 *Application of external forces to toppling slopes* 213

9.5	<i>Stability analysis of flexural toppling</i>	214
9.6	<i>Example Problem 9.1: toppling failure analysis</i>	216
10	<b>Numerical analysis</b>	<b>218</b>
10.1	<i>Introduction</i>	218
10.2	<i>Numerical models</i>	220
10.2.1	<i>Joint material models</i>	221
10.2.2	<i>Rock mass material models</i>	221
10.3	<i>Modeling issues</i>	223
10.3.1	<i>Two-dimensional analysis versus three-dimensional analysis</i>	223
10.3.2	<i>Continuum versus discontinuum models</i>	225
10.3.3	<i>Selecting appropriate zone size</i>	226
10.3.4	<i>Initial conditions</i>	226
10.3.5	<i>Boundary conditions</i>	228
10.3.6	<i>Incorporating water pressure</i>	229
10.3.7	<i>Excavation sequence</i>	230
10.3.8	<i>Interpretation of results</i>	230
10.4	<i>Typical stability analysis</i>	231
10.4.1	<i>Rock mass failure</i>	231
10.4.2	<i>Plane failure—daylighting and non-daylighting</i>	233
10.4.3	<i>Wedge failure—daylighting and non-daylighting</i>	234
10.4.4	<i>Toppling failure—block and flexural</i>	234
10.4.5	<i>Flexural buckling failure</i>	237
10.5	<i>Special topics</i>	237
10.5.1	<i>Reinforcement</i>	237
10.5.2	<i>Time-dependent behavior</i>	239
10.5.3	<i>Dynamic analysis</i>	244
11	<b>Blasting</b>	<b>245</b>
11.1	<i>Introduction</i>	245
11.2	<i>Mechanism of rock fracturing by explosives</i>	246
11.3	<i>Production blasting</i>	247
11.3.1	<i>Explosive properties</i>	248
11.3.2	<i>Bench height</i>	249
11.3.3	<i>Burden</i>	250
11.3.4	<i>Blast hole diameter</i>	251
11.3.5	<i>Nature of the rock</i>	251
11.3.6	<i>Sub-drill depth</i>	252
11.3.7	<i>Stemming</i>	252
11.3.8	<i>Hole spacing</i>	253

- 11.3.9 Hole detonation sequence 253
- 11.3.10 Fragmentation 255
- 11.3.11 Evaluation of a blast 256
- 11.4 Controlled blasting to improve stability 257
  - 11.4.1 Pre-shearing and cushion blasting 257
  - 11.4.2 Drilling 259
  - 11.4.3 Explosive load 259
  - 11.4.4 Stemming 260
  - 11.4.5 Spacing and burden 261
  - 11.4.6 Hole detonation sequence 261
- 11.5 Blast damage and its control 262
  - 11.5.1 Damage from ground vibration 262
  - 11.5.2 Control of flyrock 270
  - 11.5.3 Control of air blast and noise 270
- 11.6 Example Problem 11.1: blast design 273
- 11.7 Example Problem 11.2: controlled blasting design 274
- 11.8 Example Problem 11.3: blast damage control 275

## 12 Stabilization of rock slopes

276

- 12.1 Introduction 276
- 12.2 Causes of rock falls 277
- 12.3 Rock slope stabilization programs 279
  - 12.3.1 Planning stabilization programs 279
  - 12.3.2 Rock slope inventory systems 279
  - 12.3.3 Hazard rating criteria 280
  - 12.3.4 Database analysis of slope inventory 282
  - 12.3.5 Selection of high priority sites 282
  - 12.3.6 Selection of stabilization measures 283
- 12.4 Stabilization by rock reinforcement 286
  - 12.4.1 Shear keys 287
  - 12.4.2 Rock anchors 287
  - 12.4.3 Reaction wall 301
  - 12.4.4 Shotcrete 301
  - 12.4.5 Buttresses 304
  - 12.4.6 Drainage 304
  - 12.4.7 "Shot-in-place" buttress 306
- 12.5 Stabilization by rock removal 307
  - 12.5.1 Resloping and unloading 308
  - 12.5.2 Trimming 308
  - 12.5.3 Scaling 308
  - 12.5.4 Rock removal operations 309
- 12.6 Protection measures against rock falls 309

- 12.6.1 *Rock fall modeling* 310
- 12.6.2 *Ditches* 312
- 12.6.3 *Barriers* 313
- 12.6.4 *Rock catch fences and attenuators* 316
- 12.6.5 *Draped mesh* 317
- 12.6.6 *Warning fences* 317
- 12.6.7 *Rock sheds and tunnels* 318

### 13 Movement monitoring

320

- 13.1 *Introduction* 320
- 13.2 *Types of slope movement* 322
  - 13.2.1 *Initial response* 322
  - 13.2.2 *Regressive and progressive movement* 322
  - 13.2.3 *Long-term creep* 324
- 13.3 *Surface monitoring methods* 324
  - 13.3.1 *Crack width monitors* 325
  - 13.3.2 *Surveying* 326
  - 13.3.3 *Laser imaging* 327
  - 13.3.4 *Tiltmeters* 327
  - 13.3.5 *Global positioning system* 327
  - 13.3.6 *Synthetic aperture radar* 327
- 13.4 *Sub-surface monitoring methods* 327
  - 13.4.1 *Borehole probes* 328
  - 13.4.2 *Time-domain reflectometry* 328
  - 13.4.3 *Inclinometers* 328
- 13.5 *Data interpretation* 328
  - 13.5.1 *Time-movement and time-velocity plots* 329
  - 13.5.2 *Slope failure mechanisms* 332

### 14 Civil engineering applications

334

- 14.1 *Introduction* 334
- 14.2 *Case Study I—Hong Kong: choice of remedial measures for plane failure* 334
  - 14.2.1 *Site description* 334
  - 14.2.2 *Geology* 334
  - 14.2.3 *Rock shear strength* 335
  - 14.2.4 *Ground water* 335
  - 14.2.5 *Stability analysis* 335
  - 14.2.6 *Stabilization options* 339
- 14.3 *Case Study II—Cable anchoring of plane failure* 341
  - 14.3.1 *Site description* 341

---

14.3.2	Geology	342
14.3.3	Rock shear strength	342
14.3.4	Ground water	343
14.3.5	Earthquakes	344
14.3.6	Stability analysis	344
14.3.7	Stabilization method	345
14.3.8	Construction issues	347
14.4	Case Study III—Stability of wedge in bridge abutment	348
14.4.1	Site description	348
14.4.2	Geology	348
14.4.3	Rock strength	349
14.4.4	Ground water	349
14.4.5	Seismicity	350
14.4.6	External forces	350
14.4.7	Stability analysis	350
14.5	Case Study IV—Circular failure analysis of excavation for rock fall ditch	352
14.5.1	Site description	352
14.5.2	Geology	353
14.5.3	Ground water	353
14.5.4	Rock shear strength	353
14.5.5	Ditch and slope design	354
14.5.6	Construction issues	354
14.6	Case Study V—Stabilization of toppling failure	354
14.6.1	Site description	354
14.6.2	Geology	355
14.6.3	Rock strength	355
14.6.4	Ground water	355
14.6.5	Stability conditions	355
14.6.6	Stabilization method	356
15	Mining applications	357
15.1	Introduction	357
15.2	Example 1—porphyry deposits	357
15.2.1	Design issues	358
15.2.2	Engineering geology	358
15.2.3	Rock strength and competency	358
15.2.4	Hydrogeology	359
15.2.5	Slope stability analyses and slope design	359
15.3	Example 2—stratigraphically controlled deposits	361
15.3.1	Design issues	361
15.3.2	Engineering geology	361
15.3.3	Rock strength and competency	362

15.3.4	Hydrogeology	363	
15.3.5	Structural domains	363	
15.3.6	Kinematic analyses	363	II
15.3.7	Stability analyses	364	II
15.3.8	Slope design concepts	365	II
15.3.9	Preliminary design	367	II
15.4	Example 3—deep-seated deformation in a weak rock mass	368	II
15.4.1	Design and operational issues	368	II
15.4.2	Engineering geology	369	
15.4.3	Rock strength and rock mass competency	370	Appe
15.4.4	Hydrogeology and slope depressurization measures	370	
15.4.5	Slope stability analyses	371	
15.4.6	Slope design and operational management	372	F
15.5	Example 4—overall slope design in a competent rock mass	372	I
15.5.1	Design aspects and issues	372	
15.5.2	Engineering geology	373	
15.5.3	Rock strength and competency	373	
15.5.4	Hydrogeology	373	
15.5.5	Slope performance	374	
15.5.6	Slope stability analyses	375	
15.5.7	Implementation and ongoing evaluation	375	
15.6	Conclusions	376	
Appendix I Stereonets for hand plotting of structural geology data			377
