### **ATTENTION ESTIMATING**

**RE: KLAMATH RIVER BRIDGE REPAIR CONTRACT 01-476904**

**SUBJECT: HYDROACOUSTIC MONITORING.**

**1.00** There is a Bid Item # 24 "HYDROACOUSTIC MONITORING.

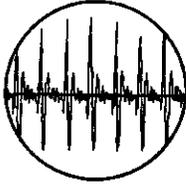

**2.00** Specification Section 10-1.02 "UNDERWATER SOUND MEASUREMENT REQUIREMENTS calls for:

"Underwater sound measurements shall be **conducted ...**" and "Equipment, hydroacoustic **monitoring** and hydroacoustic monitoring data reports shall comply with "**United States (actually State) Route 101 Klamath River Bridge Hinge Repair Project, Hydroacoustic Monitoring Plan dated October 1, 2012**"

Said plan states that "...**hydroacoustic monitoring be conducted during demolition of the first half width removal of Hinge 8...**" and further that "**Measurements will be made....**" (By whom?) And that "Hydroacoustic monitoring will be conducted by **at least two technical staff from the project acoustical consulting team.**" "A final written hydroacoustic monitoring report will be prepared by **the consulting acoustician ...**"

According to these documents it appears that Caltrans' consulting acoustician will be conducting the hydroacoustic monitoring and that the contractor should not be required to conduct the hydroacoustic monitoring.

The author of the subject document fails to use the imperative voice in the document leading to ambiguity. Ambiguity in contract documents i.e. specifications is normally construed to favor the party who did not create those documents. However, we strongly recommend that you make allowance for Hydroacoustic Monitoring in your bid.

### **3.00 OUR PRIOR HYDROACOUSTIC MONITORING EXPERIENCE.**

#### **3.01. San Francisco Oakland Bay Bridge East Span Test Piles, Oakland California.**

Owner: Caltrans

Client: Manson/Dutra JV

We provided, deployed, maintained and monitored in-water pile driving noise generated by the driving of 8' diameter steel shell test piles to 400 feet long in connection with the San Francisco Oakland Bay Bridge East Span Test Pile project for Manson/Dutra JV. At the time, these were the largest bridge piles ever driven. We did this with high frequency capable hydrophones at eleven locations in order to develop attenuation characteristics of the site and in order to evaluate the effectiveness of a noise reducing bubble curtain which was new technology in 2000. We did this work on water from our fleet of small boats.

#### **3.02. I-880 x Lake Merritt Outlet Channel, Oakland California.**

Owner: Caltrans

Client: MCM Construction.

For MCM Construction. We monitored in-water pile driving noise generated by the contractor driving 12" "H" piles for a temporary trestle and 72" steel shell bridge support piles. We monitored in-water noise from the adjacent channel shore. Caltrans project subject to a Bay Conservation and Development Commission environmental compliance permit.

#### **3.03. Pier 43 Seawall Renovation Improvements, San Francisco, California.**

Owner: Port of San Francisco

Client: Vortex Construction.

We monitored in water pile driving vibrations for Vortex Construction for the Port of San Francisco pursuant to a California Fish & Game permit.

#### **3.04. Pier 3 Improvements, San Francisco, California.**

Owner: Port of San Francisco

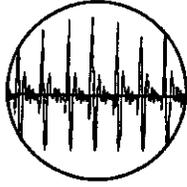

Client: American Civil Constructors

We deployed multiple hydrophones and set up for live (real time) display of both in-water pile driving noise and noise generated by tugs and motorized barges as well as by passing marine traffic. We monitored at multiple locations simultaneously from an adjacent pier.

#### **3.05. Piers 30/32 Temporary docks for the Louis Vuitton Series races, San Francisco, CA**

Owner: The America's Cup Event Authority Client: Dutra Construction.

We monitored in-water pile driving noise from one of our small boats at two temporary dock locations approximately two miles apart simultaneously.

### **3.06. Brannon Street Promenade Construction, San Francisco, CA.**

Owner: Port of San Francisco

Client: Dutra Construction.

We monitored in-water pile driving generated noise at two fixed locations off of adjacent piers and one on-water nearer the work from one of our small boats.

### **3.07. Energia Costa Azul LNG Facilities Channel Blasting, Ensenada, Mexico.**

Owner: Semptra Energy

Client: China Harbor/Costain Mexico

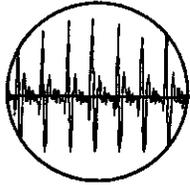

We monitored blast generated vibrations from underwater blasting to deepen an approach channel for its effects on LNG handling wharf, storage tanks, regasification facilities, gas fired power turbines and other miscellaneous facilities. Designed by CHEC (China Harbor Engineering Corp.) Costain and built by a JV of Black & Veach/Mitsubishi/Vinci/Techint for Semptra Energy.

### **3.08. Colorado River Bridge Replacement, near Earp on the California/Arizona border.**

Owner: Caltrans

Client: MCM Construction.

We monitored pile driving vibrations on an adjacent active railroad bridge generated by nearby driving of 10' diameter steel shells in the Colorado River.

### **4.00 KLAMATH RIVER BRIDGE REPAIR CALTRANS 01-476904.**

#### **4.10 DURATION OF WORK REQUIRING HYDROACOUSTIC MONITORING.**

We offer to perform the hydroacoustic monitoring and serve as your hydroacoustic consulting team. We will send two of our experienced technical staff with prior experience in hydroacoustic monitoring including on Caltrans projects, to the job site.

We assume that you will need no more than ten (10) days to complete your demolition of the first half width removal of Hinge 8. We assume that you will do this demolition work more or less continuously for no more than eight (8) hours per day.

#### **4.20 BOAT USE.**

We will utilize one of our small outboard powered RIBs. Our boats are currently registered and insured. We are insured for on-water work.

#### **4.30 GENERAL PROCEDURE.**

We will provide and deploy our buoys with our anchors (probably multiple anchors for each buoy) and tie off our small dinghies to the buoys. We will hang our hydrophones at mid depth in the water from our dinghies. Calibration of the hydrophones does not need to be done each day. We will connect our hydrophones to our SLMs(Sound Level Meters). We will deploy our SLMs inside of our Pelican Cases in our dinghies. We may set up our datalogging SLMs to relay data to an onshore location via our cellular modems.

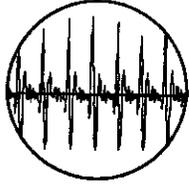

#### **4.40 REPORTS.**

We will provide you with demolition generated in-water noise data on a daily basis. We will prepare and provide you with a final Demolition Acoustic Monitoring Report on the recorded in-water noise.

#### **4.50 PROPOSAL.**

Based on the assumptions herein, we suggest you allow for this assignment ..... **\$50,000.**
