RE: I-880 OVERCROSSINGS AT 23rd and 29th AVENUES, OAKLAND, CALIFORNIA, CDOT CONTRACT 04-0A7104

SUBJECT: PROPOSAL FOR PHOTO DOCUMENTATION AND SOUND MONITORING DURING CONSTRUCTION

Please find herein our proposal for photo surveys, vibration monitoring and settlement monitoring in connection with the **Construction On State Highway From 0.2 Mile South of 29th Avenue Overcrossing To 0.3 Mile North of 23rd Avenue Overcrossing.** With extensive experience in various forms of geotechnical instrumentation and vibration monitoring, we are uniquely qualified to handle this assignment. With eighty (80) seismographs, fifty (50) high-end sound level meters, ninety (90) in-situ inclinometer sensors, multiple vibrating wire joint meters and dataloggers in service, we do more of this work than any firm west of the Mississippi. In addition:

** *We are Reliable* **

Over 22 years experience and a strong record of repeat clients/business.

** *We are Experienced* **

We have conducted more pre-construction photo surveys and performed more vibration monitoring than anyone on the West Coast.

** *We are Safety Conscious* **

We hold regular weekly "toolbox" safety meetings as our personnel are regularly tending our equipment on or adjacent to contractor heavy construction sites. Our personnel have been given orientation and training for work adjacent to active railroad lines, on freeways, and inside of tunnels. **Our personnel are e-railsafe certified.**

* * *We are experienced in Community Relations* * *

We have conducted extensive large scale pre-construction photo survey projects and have successfully coordinated with public agencies and local Police/Sheriff organizations.

Municon Consultants
Vibration Monitoring, Construction Instrumentation, Photo Surveys

PRECONSTRUCTION PHOTO SURVEYS

Municon specializes in pre-construction photo surveys with large numbers of buildings (as many as 350) and the document control of data. Municon has completed preconstruction surveys for blasting projects throughout California and Nevada, for highway and road improvement projects in San Francisco, Oakland, Fremont, San Jose, and elsewhere throughout the Bay Area. We have performed photo surveys for the seismic retrofit of the historic San Francisco City Hall, the Richmond Transport Tunnel, the New Irvington Tunnel, and multiple projects at the San Francisco International Airport.

SOUND MONITORING

We have monitored construction generated noise with sound level meters during multiple contracts on the San Francisco Oakland Bay Bridge East Span replacement, for the Oakland Airport Connector project. We have recorded air overpressure on numerous blasts in Reno and the Sierra foothills. We have been remotely monitoring sound at the Doyle Drive project in San Francisco for the past 3 years, are concluding two years of remote sound monitoring at the New Irvington Tunnel Jobsites, are currently monitoring at the I-10/I-605 flyover in Baldwin Park, at the Warm Springs BART Extension in Fremont, and the Cathedral Hill Hospital project in San Francisco.

PROJECT DESRIPTION

We reviewed the project plans and specifications, and Addenda 1 through 7, available on the CalTrans website, to determine which photo/video documentation, noise monitoring, vibration monitoring and geotechnical instrumentation would be required for the Project.

Our review finds a requirement for a pre-construction and post-construction photo/video survey of four (4) adjacent properties, along with crack monitoring at those properties, and vaguely-specified sound level monitoring. A Sound Control Plan is required to be submitted by the contractor. There are no requirements for vibration monitoring for this project.

Our proposal for pre construction photo/video surveys and sound monitoring at the 23rd and 29th Avenue Bridge Replacement project follows. Please call me at 415-641-2570 with any questions or email me at anthony@municon.net. Thank you for your consideration – we look forward to working with you on this and other projects!

1.30 CRACK GAUGES

Special Provision 10-1.39, under the section "**Crack Monitoring**", requires that: ***"Crack monitoring shall be performed on all existing cracks in each of the properties included in this survey and shall be performed concurrent with the photo survey. The gage installation shall be done concurrent with the preconstruction photo survey. Crack monitoring shall be performed using a calibrated crack monitoring device approved by the Engineer. The crack gage shall be capable of measuring cracks to the nearest 0.05 inch. The location of the crack gages shall be identified in the pre-construction survey report."***

We will provide industry-standard crack gauges capable of measuring cracks to the nearest 0.04 inch, which we will epoxy to the face of the buildings at significant cracks. We will provide you with blank monitoring records. **It will be more cost-effective for you to monitor crack gauges with your own forces.** We will install up to two crack gauges per building during our photo survey:

2.00 SOUND MONITORING

Special Provisions section 5-1.15 "Noise Control" states *"This work includes monitoring and control of noise resulting from construction activities and equipment used on the project or associated with the project, including trucks, transit mixers, stationary equipment, and transient equipment. Do not exceed 86 dBA LMax at 50 feet from the job site activities from 9:00 p.m. to 6:00 a.m. except you may perform the following activities during the hours and for the days shown in the following table:"*, and lists *"Concrete Removal and Sawcutting"*, *"Bridge Removal"*, *"Cold Plane AC Pavement" and "CIDH Piling Installations"* as activities allowed from 9:00pm to 6:00am every day.

The Special Provision requires that the General Contractor *"Engage an independent qualified engineer or Geo Physicist, who has an engineering or related degree with an emphasis in acoustic, noise and vibration control, and has two years of experience in noise control on construction projects, to prepare the Sound Control Plan and perform the continuous ambient sound measurements during the nighttime operations.*

Submit 3 copies of the Sound Control Plan (SCP), for review and approval by the Engineer prior to beginning construction. Include the following information for nighttime operations in the SCP:

1. List of work to be performed along with planned work durations.

2. Type and location of construction equipment and facilities.

3. Type and quantity of noise generating construction equipments or activity, grouped by equipment operating at any one time.

4. Operating sound level of all construction equipment.

5. List of sound control measures to be implemented to ensure that all nighttime operations minimize the nighttime sound level to the extent possible.

6. Calculations that demonstrate the expected nighttime sound level from operations utilizing the equipment and methods identified in this SCP to satisfy the nighttime sound level requirements.

7. List of contingency measures to be implemented in the event that sound levels exceed the calculated nighttime sound level.

8. Exact locations of sound level meters pursuant to the requirements specified in this special provision.

9. Detailed information on proposed procedures for monitoring and recording of the sound level at the monitoring locations pursuant to the requirements specified in this special provision. "

The Special Provision further requires that the General Contractor *"Under direct control of the approved acoustical engineer, provide, maintain, and continuously monitor sound level meters for the activities and hours specified. ... Keep a copy of all sound data and submit one copy to the Engineer by 1 p.m. each day for the previous night. If requested, make hourly data from the sound monitors available to the Engineer within 2 hours of recording to address any complaints regarding construction sound levels."*

There is also a requirement for the General Contractor to *"Provide one Type 1 sound level meter and one acoustic calibrator to be used by the Department until contract acceptance. Provide training by a person trained in noise monitoring to two Department employees designated by the Engineer. The sound level meter must be calibrated and certified by the manufacturer or other independent acoustical laboratory before delivery to the Department. Provide annual recalibration by the manufacturer or other independent acoustical laboratory. The sound level meter must be capable of taking measurements using the A-weighting network and the slow response settings. The measurement microphone must be fitted with a windscreen.*

2.01 General

Our interpretation of the Special Provision is that work performed at night (9:00pm to 6:00am) which may exceed 86 dBA at 50 feet from the jobsite must have sound level monitoring during those operations, with daily reporting of sound monitoring data. No guidance is provided for where sound monitoring should be performed (and how many locations); this will be determined in the Sound Control Plan.

Municon Consultants is an **"independent qualified engineer"** with over 10 **"years of experience in noise control on construction projects"**, and will prepare the Sound Control Plan and provide **"sound measurements during nighttime operations"**.

Based on our review of the plans, we anticipate that night work on the 29th Avenue Overcrossing will require up to three (3) sound monitoring locations, and night work on the 23rd Avenue Overcrossing will require up to two (2) sound monitoring locations. We anticipate that night work to be monitored will require up to two (2) months at each overcrossing.

Municon Consultants
Vibration Monitoring, Construction Instrumentation, Photo Surveys

2.02 Provide Sound Level Meter

Municon Consultants will not provide a sound level meter nor training to CalTrans to enable them to perform our work. We recommend that you request a change order to remove this requirement.

2.03 Sound Control Plan

We will prepare a Sound Control Plan in consultation with you to meet the requirements of the Special Provisions, including information regarding the work to be performed and equipment to be used at night (as provided by you), expected sound levels generated during nighttime work, contingency measures to reduce sound levels in the event of exceedence of expected sound levels (in consultation with you), and including a detailed sound monitoring plan with monitoring locations and descriptions of equipment and procedures to be used during monitoring.

We will submit a statement of our qualifications for a **LUMP SUM** of .....**$1,500.**

We will prepare the Sound Control Plan for a **LUMP SUM** of .....**$12,000.**

2.10 Furnish use of sound level meters

We will furnish for our use up to three (3) Type I Integrating Sound Level Meters (SLMs) at any one time, over an anticipated period of two (2) months for each of five (5) installations. We will furnish the SLMs in weatherproof NEMA enclosures with cell modems and batteries. We will mount SLMs on poles attached to existing features or set in concrete in the ground. We will install our solar panels to keep the batteries charged. We will charge use charges for an anticipated two (2) months or fractions thereof for each Sound Level Meter.

Five (5) SLM installations @ $700/month @ 2 months.....**$7,000.**

2.20 Installation and Set Up of Sound Monitoring Stations.

We will install the sound level meter systems at each of five (5) anticipated monitoring stations. We will remove our SLMs at the completion of work. Removal of mounting poles set into concrete shall be by General Contractor.

Deploy at five (5) monitoring locations @ $800 each.....**$4,000.**

Remove five (5) SLMs at end of work @ $300 each.....**$1,500**

2.30 Maintenance Services During Construction.

We will maintain sound level meters, clean solar panels, and change batteries as required. We include here a monthly allowance for maintenance of $1,000/month for as many SLMs are installed.

Maintenance: $1,000/month x 4 months.....**$4,000.**

2.40 Professional Services for Sound Monitoring

We will download data and prepare and transmit daily sound monitoring reports to you.

Daily reports $300/report @ 80 days = ...**$24,000.**

If CalTrans requests that we **"make hourly data from the sound monitors available to the Engineer within 2 hours of recording to address any complaints"**, there will be an additional charge of $1,000/night to have our personnel available for the duration of night work.

TOTAL SOUND MONITORING ALLOWANCE.....$63,000.

3.00 SETTLEMENT MONITORING

Special Provisions section 5-1.15 **"Bridge Settlement Monitoring"** states ***"Settlement devices shall be constructed where shown on the plans at the 29th Avenue Off-Ramp Abutment 1 embankment to monitor embankment vertical movements. Prior to constructing settlement devices their locations shall be approved by the Engineer.***

Settlement monitoring and settlement devices shall conform to the requirements of California Test 112.

In addition to California Test 112 requirements that the distances from the tops of pipe couplings to the tops of wood platforms be measured and recorded, the elevations of the tops of wood platforms prior to the placement of any embankment material shall be established by survey accurate to within 0.01 foot and recorded.".

It is clear from the special provision that "Pipe Riser" settlement monitors are required rather than "Hydraulic Settlement Platforms", even though there is no explicit statement to that effect. As monitoring of pipe riser settlement monuments is work which should be performed by a surveyor, we do not offer to perform this work.
