S.A.M. Rhodes will provide profilograph testing services utilizing the High Speed Inertial Profiler (HSIP). The Inertial Profiler is equipped with the FHWA's engineering software ProVal which will be used to collect profiling data under AASHTO R56. Per the specifications we will perform inertial profiling for each lane except areas as dictated by the specifications which require a 12 foot straightedge. The shifts for HSIP have been determined based on an 8-hour shift for prepave, post-grind, post pave, and final profile with an additional technician to mark sections that do not comply with the specification time per shift.
