Subject: RE: Water Availability

15 working days are on Route 166, 35 working days are on Route 178. The water need for Route 166 is $(15/50) \times 99.6$ ac-ft=29.88 ac-ft. It is good enough.

Subject: RE: Water Availability

Good morning George,

The email below from Larry Davis of Wheeler Ridge-Maricopa Water Storage District, says his district can supply approximate 30 ac-ft of water for this project, and from your calculation of water needed for this project you have it stands at 99.6 ac-ft. Please confirm for this location Route 166, the amount needed since the other location Route 178 is not experiencing any shortage of water.

Thanks.

George;

As a result of our conversation today, and after consulting with our Water Resources Manager, Sheridan Nicholas, it has been determined that the District can supply approximately 30 ac-ft of water for your Project.

Hello,

My Name is Debbie Loseth, I manage Erskine Creek Water Company, Lake Isabella Community Services District Water Company and Kernvale Mutual Water Company. Our water companies are not experiencing any shortage of water. We can provide construction water in the Lake Isabella/Bodfish area.

Thank you
Debbie Loseth
