Manny,

We have a process that customers like you would go through to pump water out of canal system. As of this time, we do allow contractors to pump water from our canal system as long as they contact us prior to pumping and fill out the appropriate paper work. I do not know what the policy may be next year if we are in the fifth year drought. But as of right now I could tell you yes we would have water available for your projects.

If you have any further questions, please do not hesitate to contact me.

Good morning Mike,  
Just an added information below that the project calculated water usage(non potable) will be 10,000 gallons.  
I would greatly appreciate if you can respond to this email today so I can include it to the PS&E package.

Again, Thank you

Manny

**Subject:** water availability source

Hello Mike,

My name is Manuel Palatino and working as a Project Engineer with Caltrans. I am working on project with EA 10-0Y1001 that will start Construction by June 2016 and completed by December 2016. The project proposes to install Highway Lighting along the median on SR-99 in the City of Ceres, Stanislaus County. The project begins North Street Undercrossing to Tuolumne River bridge.

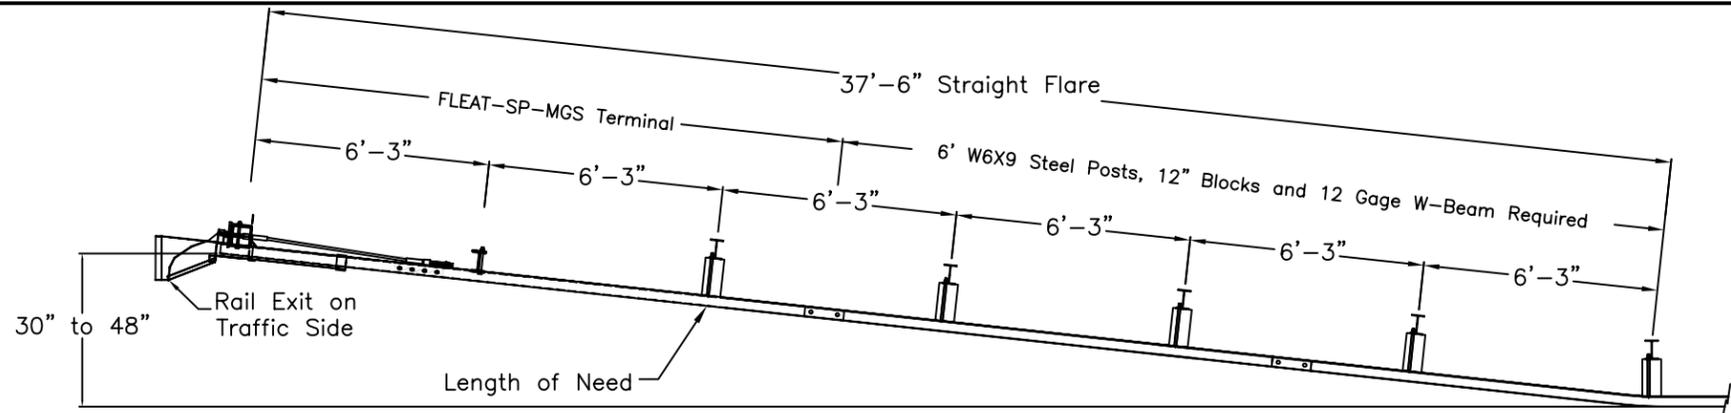

One of the requirement is to provide in each of our projects a non- potable water source in an information handout as part of our Plan, Specification, and Estimate (PS&E) package. I would like to know if the Turlock Irrigation District have either non-potable or potable water (if there's no non -potable )available that could be listed as a potential water source for this project. We understand that if the source is available, the contractor would contact TID to apply for permit prior to start of construction.

I would greatly appreciate if you could email me back to let me know if you do have a source.

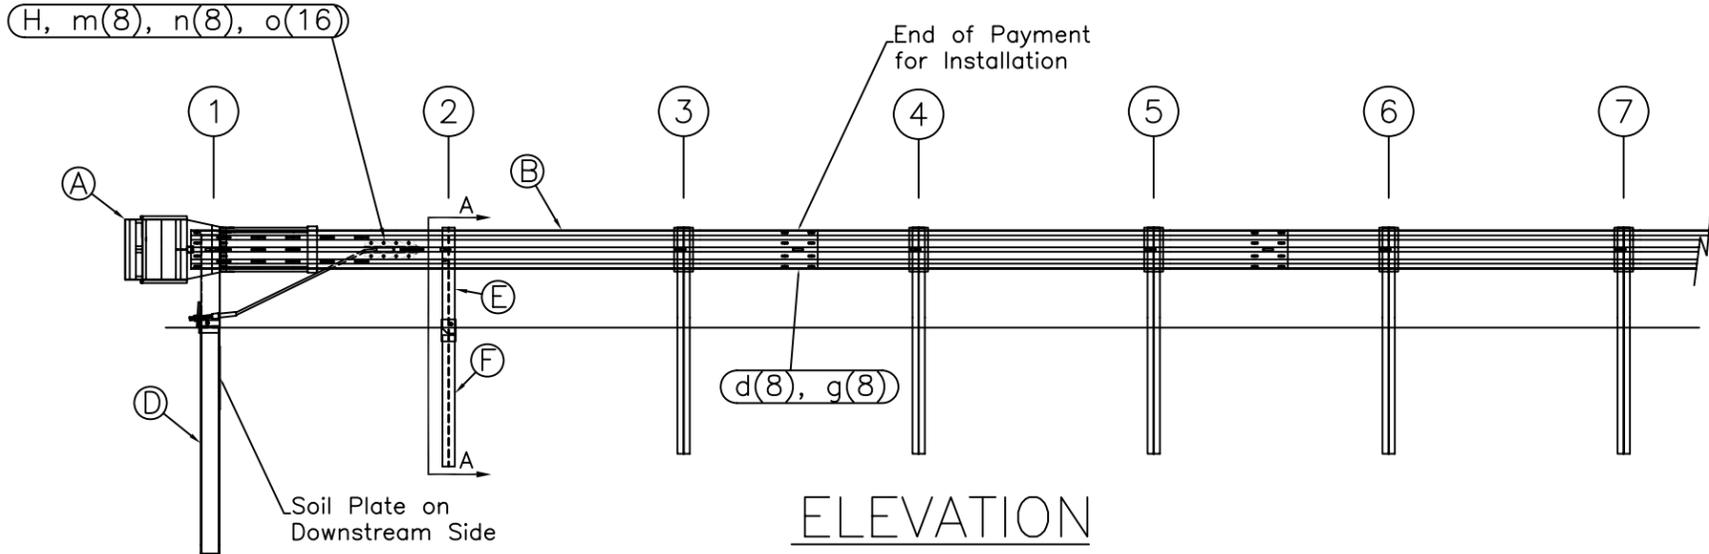

Please let me know If you have any questions or need of additional information about the project.

Thank You

GENERAL NOTES:

- All bolts, nuts, cable assemblies, cable anchors and bearing plates shall be galvanized.
- The lower sections of the Posts 1&2 shall not protrude more than 4 in above the ground (measured along a 5' cord). Site grading may be necessary to meet this requirement.
- The lower sections of the hinged posts should not be driven with the upper post attached. If the post is placed in a drilled hole, the backfill material must be satisfactorily compacted to prevent settlement.
- When competent rock is encountered, a 12"  $\varnothing$  post hole, 20 in. deep cored into the rock surface may be used if approved by the engineer for post 1. Granular material will be placed in the bottom of the hole, approximately 2.5" deep to provide drainage. The first post can be field cut to length, placed in the hole and backfilled with suitable backfill. The soil plate may be trimmed if required.
- The breakaway cable assembly must be taut. A locking device (vice grips or channel lock pliers) should be used to prevent the cable from twisting when tightening nuts.

AERIALY DEPOSITED LEAD SITE INVESTIGATION REPORT

Dear Mr. Doran:

In accordance with Caltrans Contract No. 43A0199 and Expenditure Authorization 10-0L640, Geocon performed environmental engineering services for the subject project. The Site consists of Caltrans right-of-way planned for roadway improvements along State Route 99 from Post Miles 10.3 to 12.0 in Stanislaus County, California. The accompanying report summarizes the services performed, including the advancement of 20 hand-auger borings for aerially deposited lead sampling and laboratory testing.

*The contents of this report reflect the views of the author, who is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the State of California or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation.*

Please contact us if there are any questions concerning the contents of this report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

# **AERIALY DEPOSITED LEAD SITE INVESTIGATION REPORT**

## **1.0 INTRODUCTION**

Geocon prepared this aerially deposited lead (ADL) site investigation report for the State Route 99 (SR99) Mitchell Road Median Barrier project under Caltrans Contract No. 43A0199 and Expenditure Authorization (EA) 10-0L640.

### **1.1 Project Location**

The project area consists of the unpaved median area of SR99 between Post Miles (PM) 10.3 and 12.0 in Stanislaus County, California (the Site). The approximate project location is depicted on the Vicinity Map, Figure 1, and Site Plan, Figure 2.

### **1.2 General Objectives**

The purpose of the scope of services was to evaluate whether impacts due to aerial lead deposition from motor vehicle exhaust exist in the surface and near surface soils within the project boundaries. The investigative results will be used by Caltrans to inform the construction contractor(s) if lead-impacted soil is present within the project boundaries for health, safety, management, and disposal evaluation purposes.

## **2.0 BACKGROUND**

### **2.1 Potential Lead Soil Impacts**

Ongoing testing by Caltrans throughout California has indicated that ADL exists along major freeway routes due to emissions from vehicles powered by leaded gasoline.

### **2.2 Hazardous Waste Determination Criteria**

Regulatory criteria to classify a waste as “California hazardous” for handling and disposal purposes are contained in the *CCR*, Title 22, Division 4.5, Chapter 11, Article 3, § 66261.24. Criteria to classify a waste as “Resource, Conservation, and Recovery Act (RCRA) hazardous” are contained in Chapter 40 of the Code of Federal Regulations (40 CFR), Section 261.

For waste containing metals, the waste is classified as California hazardous when: 1) the total metal content exceeds the respective Total Threshold Limit Concentration (TTLC); or 2) the soluble metal content exceeds the respective Soluble Threshold Limit Concentration (STLC) based on the standard Waste Extraction Test (WET). A waste may have the potential of exceeding the STLC when the waste’s total metal content is greater than or equal to ten times the respective STLC value, since the WET uses a 1:10 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to ten times the respective STLC, and assuming that 100 percent of the total metals are soluble,

soluble metal analysis is required. A material is classified as RCRA hazardous, or Federal hazardous, when the soluble metal content exceeds the Federal regulatory level based on the Toxicity Characteristic Leaching Procedure (TCLP). The TTLC value for lead is 1,000 mg/kg. The STLC and TCLP values for lead are both 5.0 milligrams per liter (mg/l).

The above regulatory criteria are based on chemical concentrations. Wastes may also be classified as hazardous based on other criteria such as ignitability and corrosivity; however, for the purposes of this investigation, toxicity (i.e., lead concentrations) is the primary factor considered for waste classification since waste generated during the construction activities would not likely warrant testing for ignitability or corrosivity. Waste that is classified as either California hazardous or RCRA hazardous requires management as a hazardous waste.

The Department of Toxic Substances Control (DTSC) regulates and interprets hazardous waste laws in California. DTSC generally considers excavated or transported materials that exhibit “hazardous waste” characteristics to be a “waste” requiring proper management, treatment and disposal. Soil that contains lead above hazardous waste thresholds and is left in-place would not be necessarily classified by DTSC as a “waste.” The DTSC has provided site-specific determinations that “movement of wastes within an area of contamination does not constitute “land disposal” and, thus, does not trigger hazardous waste disposal requirements.” Therefore, lead-impacted soil that is scarified in-place, moisture-conditioned, and recompacted during roadway improvement activities might not be considered a “waste.” DTSC should be consulted to confirm waste classification. It is noted that in addition to DTSC regulations, health and safety requirements and other local agency requirements may also apply to the handling and disposal of lead-impacted soil.

### **3.0 SCOPE OF SERVICES**

We performed the following scope of services as requested by Caltrans:

#### **3.1 Pre-field Activities**

- Prepared a *Health and Safety Plan* dated April, 2008, to provide guidelines on the use of personal protective equipment and the health and safety procedures implemented during the field activities.
- Retained the services of Advanced Technology Laboratories (ATL) to perform the chemical analysis of soil samples.

### **3.2 Field Activities**

Field activities consisted of collecting soil samples along the unpaved median areas of SR-99 between PM 10.3 and 12.0. On April 28, 2008, we collected a total of 40 soil samples at general depths of 0.0 to 0.5 foot (ft), and 0.5 to 1.0 ft below ground surface (bgs) from 20 hand-auger borings (NHA1 through NHA-10 and SHA11 through SHA20).

## **4.0 INVESTIGATIVE METHODS**

### **4.1 Boring Location Rationale**

The soil boring locations were designated by Caltrans. The approximate soil boring locations are depicted on the Site Plan (Figure 2). The coordinates of each boring were determined using a differential global positioning system (GPS). The GPS equipment was used to locate the position of each boring with an error of no more than 3.3 feet. The boring coordinates are summarized in Table 1.

### **4.2 Aerially Deposited Lead Sampling Procedures**

We used hand auger equipment to advance the borings and obtain the soil samples. The soil samples were transferred directly from the hand auger bucket into Ziploc<sup>®</sup> re-sealable plastic bags, field-homogenized, and labeled. The soil samples were delivered to ATL for analytical testing under chain-of-custody (COC) documentation.

Quality assurance/quality control (QA/QC) procedures performed during the field activities included decontamination of sampling equipment before each boring was advanced and providing COC documentation for each sample submitted to the laboratory. The soil sampling equipment was cleansed between each boring by washing the equipment with an Alconox<sup>™</sup> solution followed by a double rinse with deionized water. The field sampling activities were performed under the supervision of Geocon's field manager.

The hand-auger borings were backfilled with the soil cuttings generated at each boring. The decontamination water was discharged to the ground surface away from surface water bodies or storm drain inlets.

### **4.3 Laboratory Analyses**

The soil samples collected at the Site were submitted to ATL for the following analyses under an expedited 24-hour turn-around-time (TAT).

- Thirty-two soil samples were analyzed for total lead following United States Environmental Protection Agency (EPA) Test Method 6010B.
- Twelve soil samples were re-analyzed to confirm initial total lead results.
- Eight randomly selected soil samples were analyzed for Title 22 (CAM 17) metals using EPA Test Methods 6010B/7471A.
- Ten soil samples with total lead concentrations greater than or equal to 50 mg/kg (ten times the STLC value for lead of 5.0 mg/l) were further analyzed for soluble (WET) lead by EPA Test Method 6010B.
- Four randomly selected soil samples were analyzed for soil pH by EPA Test Method 9045.

QA/QC procedures were performed for each method of analysis with specificity for each analyte listed in the test method's QA/QC. The laboratory QA/QC procedures included the following:

- One method blank for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One sample analyzed in duplicate for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One spiked sample for every ten samples, batch of samples or type of matrix, whichever was more frequent, with the spike made at ten times the detection limit or at the analyte level.

Prior to submitting the soil samples to the laboratory, the COC documentation was reviewed for accuracy and completeness. Reproductions of the laboratory reports and chain-of-custody documentation are presented in Appendix A.

## **5.0 FIELD OBSERVATIONS AND INVESTIGATIVE RESULTS**

### **5.1 Site Conditions**

Soil encountered during the excavation of borings generally consisted of shoulder backing at the surface underlain by sand to the maximum depth explored of approximately 1.0 ft. Groundwater was not encountered during advancement of the soil borings.

## 5.2 Soil Analytical Results

The soil analytical results are summarized in Tables 2 and 3. The laboratory reports and COC documentation are presented in Appendix A.

Total lead was detected in the 40 soil samples analyzed at concentrations ranging from less than the laboratory reporting limit of 5.0 (<5.0 mg/kg) to 600 mg/kg. Lead was the only metal detected at total concentrations greater than ten times its corresponding STLC value.

Soluble (WET) lead concentrations reported for the ten soil samples analyzed ranged from 1.1 mg/l to 96 mg/l, with eight of the results exceeding the lead STLC value of 5.0 mg/l.

Antimony, beryllium, selenium, silver, thallium, and mercury were not detected above their respective laboratory reporting limits in the eight soil samples analyzed for CAM17 metals. Other CAM17 metals, exclusive of lead, were not detected in the soil samples at concentrations above ten times their respective STLC values.

Soil pH values ranged from 6.0 to 7.2.

## 5.3 Laboratory Quality Assurance/Quality Control

We reviewed the analytical laboratory QA/QC data provided with the laboratory report. These data show acceptable non-detect results and surrogate recoveries for the method blanks and acceptable recoveries and relative percent differences (RPDs) for the matrix spikes and matrix spike duplicates (MS/MSDs) except for the following:

- Matrix Spike (MS) and/or MS Duplicate (MSD) were outside recovery criteria for four of the analyses; however, the analytical batch was validated by the Laboratory Control Sample (LCS).
- The RPD for Duplicate (DUP), MS/MSD was outside criteria for six of the analyses; however, the analytical batch was validated by the Laboratory Control Sample (LCS).
- Dilution was necessary for eight of soil samples due to sample matrix; however, analytical results and detection limits were not affected.

Based on the laboratory QA/QC data, no additional qualification of the data presented herein is necessary, and the data are of sufficient quality for the purposes of this report.

## 5.4 Statistical Evaluation for Lead Detected in Soil Samples

Statistical methods were applied to the total lead data to evaluate: 1) the upper confidence limits (UCLs) of the arithmetic means of the total lead concentrations for each sampling depth; and 2) if an acceptable correlation between total and soluble lead concentrations exists that would allow the prediction of soluble lead concentrations based on calculated UCLs. The statistical methods used are discussed in a book entitled *Statistical Methods for Environmental Pollution Monitoring*, by Richard

Gilbert (1987); in an EPA *Technology Support Center Issue* document entitled, *The Lognormal Distribution in Environmental Applications*, by Ashok Singh et. al., (December 1997); and in a book entitled *An Introduction to the Bootstrap*, by Bradley Efron and Robert J. Tibshirani (1993).

#### **5.4.1 Calculating the UCLs for the Arithmetic Mean**

The upper one-sided 90% and 95% UCLs of the arithmetic mean are defined as the values that, when calculated repeatedly for randomly drawn subsets of site data, equal or exceed the true mean 90% and 95% of the time, respectively. Statistical confidence limits are the classical tool for addressing uncertainties of a distribution mean. The UCLs of the arithmetic mean concentration are used as the mean concentrations because it is not possible to know the true mean due to the essentially infinite number of soil samples that could be collected from a site. The UCLs therefore account for uncertainties due to limited sampling data. As data become less limited at a site, uncertainties decrease, and the UCLs move closer to the true mean.

Non-parametric bootstrap techniques used to calculate the UCLs are discussed in the previously referenced EPA document and in *An Introduction to the Bootstrap*. For those samples in which total lead was not detected at concentrations exceeding the laboratory test method detection limit (MDL), a value equal to one-half of the detection limit was used in the UCL calculation. In addition to the computation of 90% and 95% UCLs, an outlier test was performed on the total lead results for the samples collected from the 0.5 ft to 1.0 ft depth interval. The outlier tests indicated that the total lead analytical result reported for sample NHA7-1 was determined to be an outlier. We calculated UCLs for the 0.5 to 1.0 depth interval both including and excluding the outlier. The bootstrap and outlier test results are included in Appendix B. The following table presents the calculated UCLs and statistics for the full data set and excluding the outlier.

**Borings NHA1 through NHA10 and SHA11 through SHA20**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	426	456	239	11	910
0.5 to 1.0	97	109	54	1.1	680
Excluding Outlier Sample NHA7-1					
0.5 to 1.0	38	42	21	1.1	250

#### **5.4.2 Correlation of Total and Soluble Lead**

Total and corresponding soluble (WET) lead concentrations are bivariate data with a linear structure. This linear structure should allow for the prediction of soluble lead (WET) concentrations based on the UCLs calculated above in Section 5.4.1.

To estimate the degree of interrelation between total and corresponding soluble (WET) lead values ( $x$  and  $y$ , respectively), the *correlation coefficient* [ $r$ ] is used. The correlation coefficient is a ratio that ranges from +1 to -1. A *correlation coefficient* of +1 indicates a perfect direct relationship between two variables; a *correlation coefficient* of -1 indicates that one variable changes inversely with relation to the other. Between the two extremes is a spectrum of less-than-perfect relationships, including zero, which indicates the lack of any sort of linear relationship at all. The *correlation coefficient* was calculated for the ten ( $x$ ,  $y$ ) data points (i.e., soil samples analyzed for both total lead [ $x$ ] and soluble [WET] lead [ $y$ ]), with a calculated value of [ $r$ ] = 0.96. A *correlation coefficient* greater than or equal to 0.8 is an acceptable indicator that a correlation exists.

For the *correlation coefficient* that indicates a linear relationship between total and soluble (WET) lead concentrations, it is possible to compute the line of dependence or a best-fit line between the two variables. A least squares method was used to find the equation of a best-fit line (regression line) by forcing the y-intercept equal to zero since that is a known point. The equation of the regression line was determined to be  $y = 0.1102(x)$  for the data set, where  $x$  represents total lead concentrations and  $y$  represents predicted soluble lead (WET) concentrations. The regression line slope exceeds the theoretical maximum of 0.1; therefore, the equation  $y = 0.1(x)$  was used to calculate predicted soluble (WET) lead concentrations.

This equation was used to estimate the expected WET soluble lead concentrations for the 90% and 95% UCLs calculated in Section 5.4.2. We include the regression analysis results and a scatter plot depicting the ( $x$ ,  $y$ ) data points along the regression line in Appendix B. The predicted WET soluble lead concentrations for the data are summarized in Section 6.1.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

Waste classifications are evaluated based on the 90% UCL of the lead content for the relevant excavation depths; this has historically been considered sufficient to satisfy a good faith effort by the EPA as discussed in SW-846. Risk assessment characterization is based on the 95% UCL of the lead content in the waste for the relevant depths; this is in accordance with the Risk Assessment Guidance for Superfund (RAGS) Volume 1 Documentation for Exposure Assessment. Per Caltrans, the 90% UCLs are to be used to evaluate onsite reuse and the 95% UCLs are to be used to evaluate offsite disposal.

### 6.1 Predicted Soluble Lead Results

The following table summarizes the predicted soluble (WET) lead concentrations and the waste classification for excavated soil based on the calculated total lead UCLs and the relationship between total and soluble (WET) lead. The total and soluble (WET) lead calculations are summarized in Table 4a.

Excavation Depth	90% UCL Total Lead (mg/kg)	90% UCL Predicted WET Lead (mg/l)	95% UCL Total Lead (mg/kg)	95% UCL Predicted WET Lead (mg/l)
0 to 0.5 ft	426	43	456	46
0.5 to 1.0 ft	97	9.7	109	11
0 to 1.0 ft	262	26	283	28

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Based on the data presented in the above table, if soil from the surface to a depth of 1.0 ft is excavated and generated for offsite disposal, it would be classified as a California hazardous waste since the 90% UCL-predicted soluble (WET) lead concentration is greater than the lead STLC of 5.0 mg/l. Based on the TCLP results and a comparison with the calculated UCLs, excavated soil would not be classified as a RCRA hazardous waste.

### 6.2 Predicted Soluble Lead Results Excluding Outlier Sample NHA7-1

The following table summarizes the predicted soluble (WET) lead concentrations and the waste classification for excavated soil based on the calculated total lead UCLs and the relationship between total and soluble (WET) lead based on the replicate analytical results. The total and soluble (WET) lead calculations are summarized in Table 4b.

<b>Excavation Depth</b>	<b>90% UCL Total Lead (mg/kg)</b>	<b>90% UCL Predicted WET Lead (mg/l)</b>	<b>95% UCL Total Lead (mg/kg)</b>	<b>95% UCL Predicted WET Lead (mg/l)</b>
0 to 0.5 ft	<b>426</b>	<b>30</b>	<b>456</b>	<b>46</b>
0.5 to 1.0 ft	38	3.8	42	4.2
0 to 1.0 ft	<b>232</b>	<b>23</b>	<b>249</b>	<b>25</b>

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Based on the data presented in the above table, if soil from the surface to a depth of 0.5 ft is excavated and generated for offsite disposal, it would be classified as a California hazardous waste since the 90% UCL-predicted soluble (WET) lead concentration is greater than the lead STLC of 5.0 mg/l. Based on the TCLP results and a comparison with the calculated UCLs, excavated soil would not be classified as a RCRA hazardous waste.

With the outlier (sample NHA7-1) removed from the dataset, underlying soil would not be classified as a hazardous waste. Consequently, soil excavated from a depth of 0.5 ft or greater could be reused or disposed as non-hazardous with respect to lead content. If Caltrans desires to manage the lower sample interval (0.5 to 1 ft) as non-hazardous, we recommend that:

- 1) the material be stockpiled onsite and re-sampled prior to disposal to confirm waste classification; or
- 2) supplemental field sampling be performed at the outlier locations to confirm or refute the outlier results.

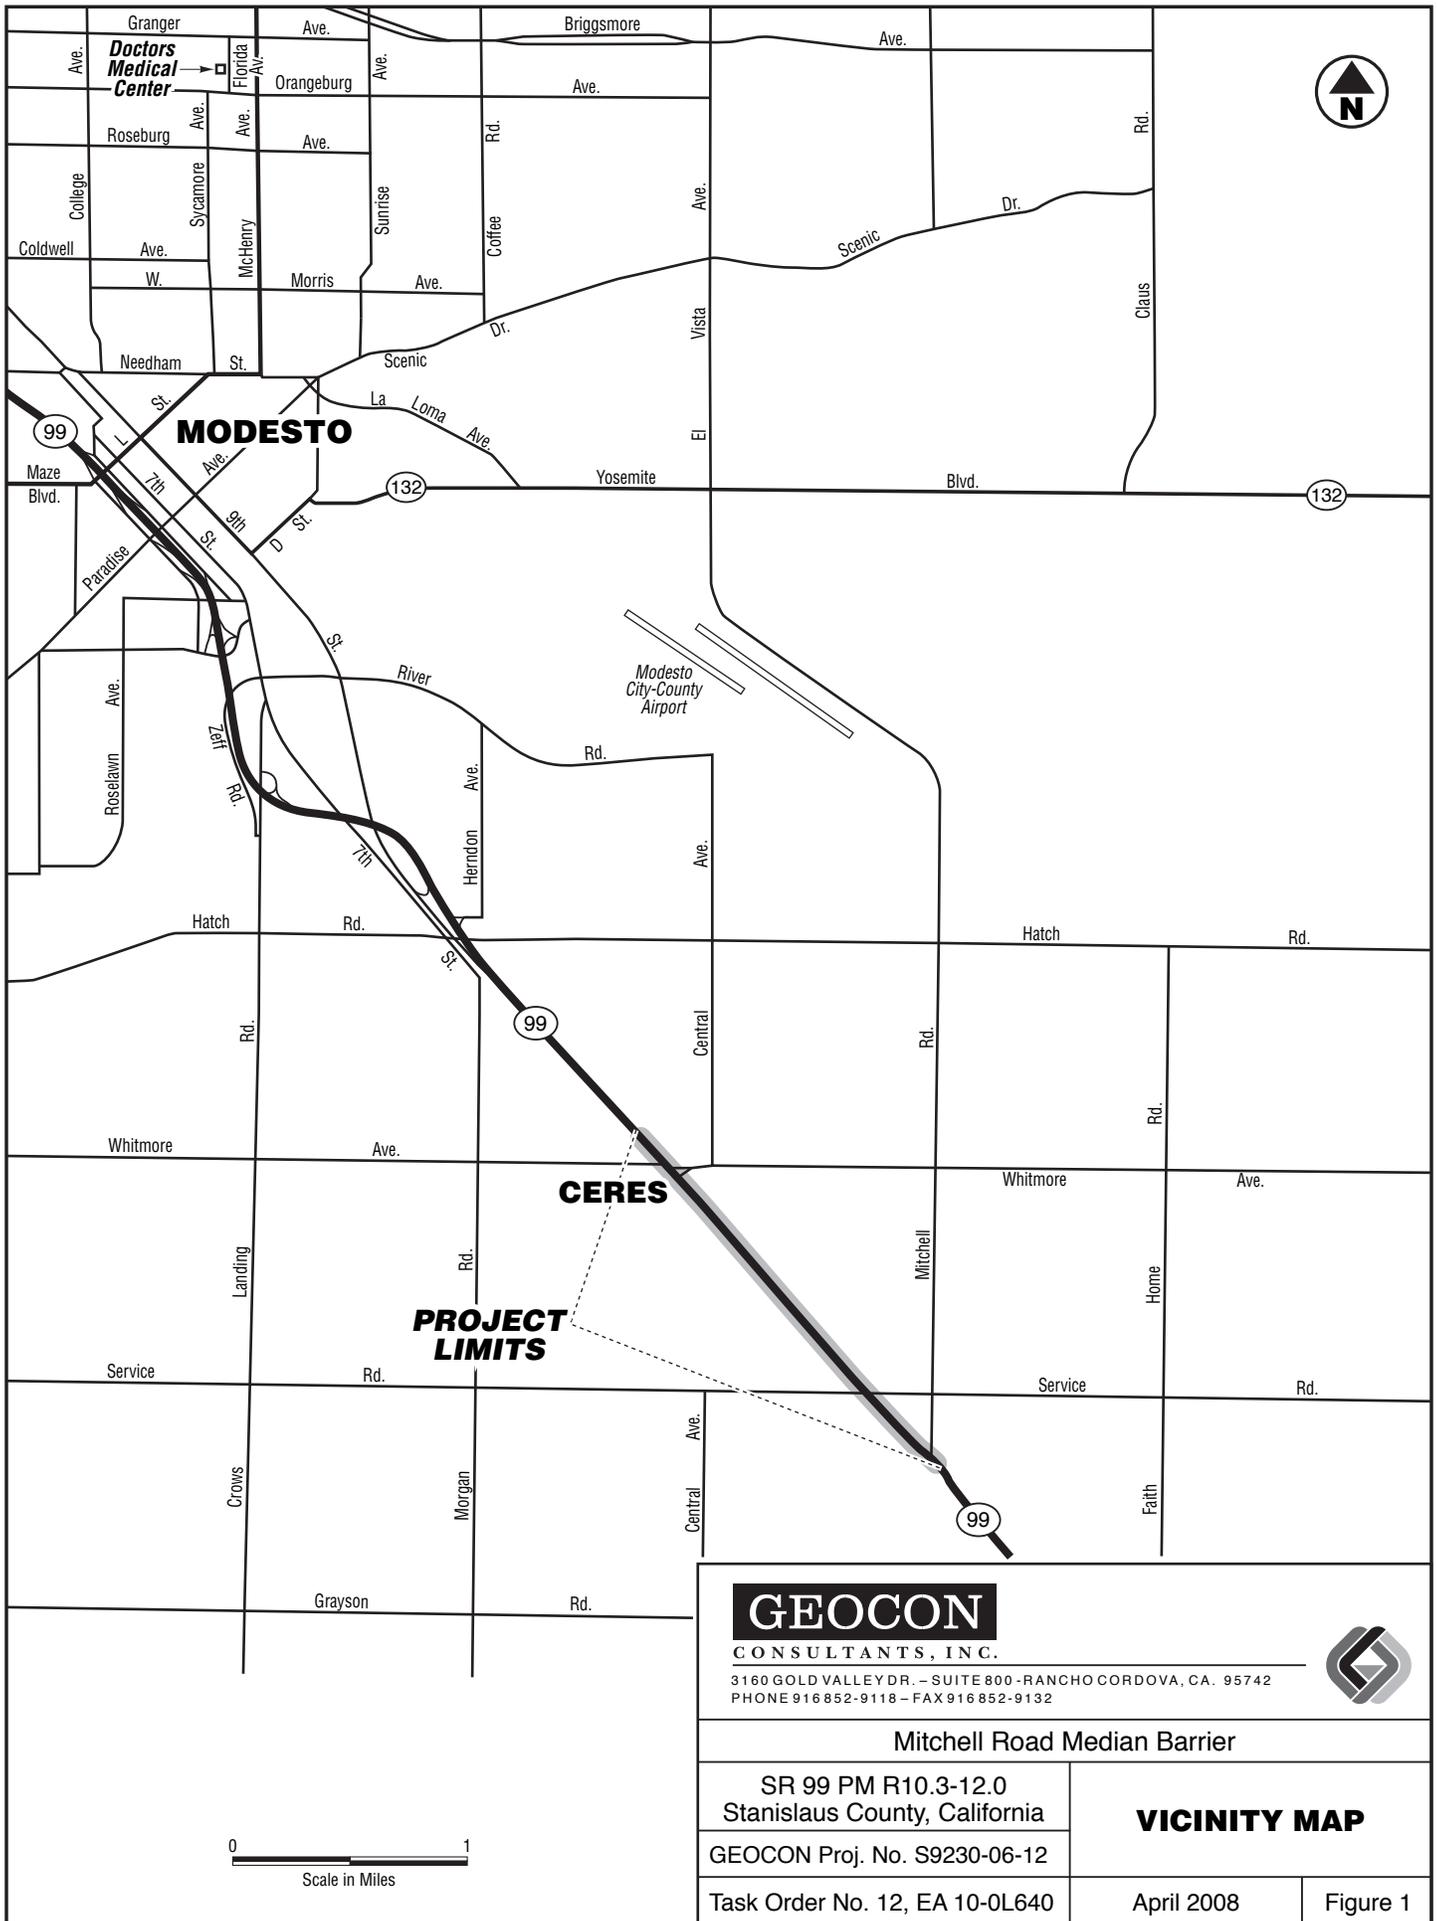

### **6.3 Worker Protection**

Per Caltrans' requirements, the contractor(s) should prepare a project-specific Lead Compliance Plan (CCR Title 8, Section 1532.1, the "Lead in Construction" standard) to minimize worker exposure to lead-impacted soil. The plan should include protocols for environmental and personnel monitoring, requirements for personal protective equipment, and other health and safety protocols and procedures for the handling of lead-impacted soil.

## **7.0 REPORT LIMITATIONS**

This report has been prepared exclusively for Caltrans. The information contained herein is only valid as of the date of the report and will require an update to reflect additional information obtained.

This report is not a comprehensive site characterization and should not be construed as such. The findings as presented in this report are predicated on the results of the limited sampling and laboratory testing performed. In addition, the information obtained is not intended to address potential impacts related to sources other than those specified herein. Therefore, the report should be deemed conclusive with respect to only the information obtained. We make no warranty, express or implied, with respect to the content of this report or any subsequent reports, correspondence or consultation. We strived to perform the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

RE: S.R.99 Ceres ADL, S9230-06-12

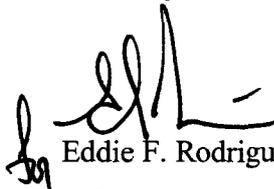

Attention: John Juhrend

Enclosed are the results for sample(s) received on April 30, 2008 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

  
Eddie F. Rodriguez  
Laboratory Director

RE: S.R.99 Ceres ADL, S9230-06-12

Attention: John Juhrend

Enclosed are the results for sample(s) received on April 30, 2008 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie F. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

**CASE NARRATIVE**

---

Analytical Comments for Method 6010

Matrix Spike (MS) and /or Matrix Spike Duplicate (MSD) are/is outside recovery criteria for samples 098521-031AMSD and 098521-040AMSD; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

RPD for Duplicate (DUP) and/or Matrix Spike (MS)/Matrix Spike Duplicate (MSD) is outside criteria for samples 098521-026AMSD, 098521-031AMSD and 098521-037ADUP; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

Analytical Comments for Method 7420

Dilution was necessary for samples 098521-001A, 098521-005A, 098521-009A, 098521-013A, 098521-014A, 098521-017A, 098521-027A and 098521-029A, due to sample matrix.

Matrix Spike (MS) and /or Matrix Spike Duplicate (MSD) are/is outside recovery criteria for samples 098521-031AMSD and 098521-031AMSD; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

RPD for Matrix Spike (MS)/Matrix Spike Duplicate (MSD) is outside criteria for sample 098521-031AMSD; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

**Subject:** RE: Results - S.R.99 Ceres ADL (098521)

Diane – forgot to ask to have totals rerun with each soluble sample – OK?

Sincerely,

John

**Subject:** RE: Results - S.R.99 Ceres ADL (098521)

Hi Diane – please analyze the following soil samples for soluble lead under rush 72-hour TAT:

ATL# 098521 WET Soluble Lead:

-001A  
-005A  
-009A  
-013A  
-014A  
-017A  
-019A  
-023A  
-027A  
-029A

ATL# 098521 TCLP Soluble Lead:

-025A  
-031A

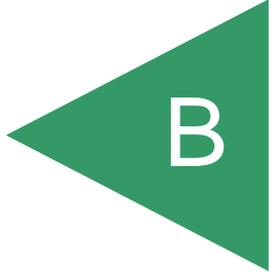

Please reply and confirm. Thanks,

Mr. Shawn Ogletree  
California Department of Transportation – District 6  
Hazardous Waste Branch  
2015 E. Shields Avenue, Suite 100  
Fresno, California 93726

Subject: STATE ROUTE 99 KANSAS AVENUE TO TUOLUMNE BOULEVARD  
MODESTO, STANISLAUS COUNTY, CALIFORNIA  
CONTRACT NO. 06A1141  
TASK ORDER NO. 72, EA 10-0A6711  
AERIALY DEPOSITED LEAD SITE INVESTIGATION REPORT

Dear Mr. Ogletree:

In accordance with California Department of Transportation (Caltrans) Contract No. 06A1141, Task Order Number 72, and Expense Authorization No. 10-0A6711, we have performed environmental engineering services for the subject project. The Site consists of Caltrans right-of-way planned for roadway improvements along State Route 99 from Kansas Avenue to Tuolumne Boulevard in Modesto, Stanislaus County, California. The accompanying report summarizes the services performed including the advancement of 32 direct-push and 116 hand-auger borings for shallow soil sampling and laboratory testing for aerially deposited lead.

*The contents of this report reflect the views of the author, who is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of the State of California or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation.*

Please contact us if there are any questions concerning the contents of this report or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

  
Gemma G. Reblando  
Project Geologist

# AERIALY DEPOSITED LEAD SITE INVESTIGATION REPORT

## 1.0 INTRODUCTION

This Aerially Deposited Lead (ADL) Site Investigation report for the State Route 99 (SR-99) Kansas Avenue to Tuolumne Boulevard project was prepared by Geocon Consultants, Inc. under California Department of Transportation (Caltrans) Contract No. 06A1141, Task Order (TO) No. 72, and Expense Authorization (EA) 10-0A6711.

### 1.1 Project Description and Proposed Improvements

The project area consists of SR-99 from Kansas Avenue to Tuolumne Boulevard (the Site) in Modesto, Stanislaus County, California. Caltrans proposes to rehabilitate/reconstruct five existing on- and/or offramps along SR-99 from Tuolumne River Bridge (Post Mile [PM] 15.1) to Kansas Avenue (PM R17.0). The approximate project location is depicted on the Vicinity Map, Figure 1, and Site Plans, Figures 2-1 through 2-5.

### 1.2 General Objectives

The purpose of the scope of services outlined in TO No. 72 was to determine whether impacts due to aerial lead deposition from motor vehicle exhaust exist in the surface and near surface soils within the project boundaries. The investigative results will be used by Caltrans for preliminary planning purposes and to inform the construction contractor(s) if lead-impacted soil is present within the project boundaries for health, safety, management and disposal evaluation purposes.

## 2.0 BACKGROUND

### 2.1 Potential Lead Soil Impacts

Ongoing testing by Caltrans throughout California has indicated that ADL exists along major freeway routes due to emissions from vehicles powered by leaded gasoline.

### 2.2 Hazardous Waste Determination Criteria

Regulatory criteria to classify a waste as "California hazardous" for handling and disposal purposes are contained in the California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 11, Article 3, §66261.24. Criteria to classify a waste as "Resource, Conservation, and Recovery Act (RCRA) hazardous" are contained in Chapter 40 of the Code of Federal Regulations (40 CFR), Section 261.

For waste containing metals, the waste is classified as California hazardous when: 1) the total metal content exceeds the respective Total Threshold Limit Concentration (TTLC); or 2) the soluble metal content exceeds the respective Soluble Threshold Limit Concentration (STLC) based on the standard Waste Extraction Test (WET). A waste may have the potential of exceeding the STLC when the

waste's total metal content is greater than or equal to ten times the respective STLC value, since the WET uses a 1:10 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to ten times the respective STLC, and assuming that 100 percent of the total metals are soluble, soluble metal analysis is required. A material is classified as RCRA hazardous, or Federal hazardous, when the soluble metal content exceeds the Federal regulatory level based on the Toxicity Characteristic Leaching Procedure (TCLP). The TTLC value for lead is 1,000 milligrams per kilogram (mg/kg). The STLC and TCLP values for lead are both 5.0 milligrams per liter (mg/l).

The above regulatory criteria are based on chemical concentrations. Wastes may also be classified as hazardous based on other criteria such as ignitability and corrosivity; however, for the purposes of this investigation, toxicity (i.e., lead concentrations) is the primary factor considered for waste classification since waste generated during the construction activities would not likely warrant testing for ignitability or corrosivity. Waste that is classified as either California-hazardous or RCRA-hazardous requires management as a hazardous waste.

The Department of Toxic Substances Control (DTSC) regulates and interprets hazardous waste laws in California. DTSC generally considers excavated or transported materials that exhibit "hazardous waste" characteristics to be a "waste" requiring proper management, treatment and disposal. Soil that contains lead above hazardous waste thresholds and is left in-place would not be necessarily classified by DTSC as a "waste." The DTSC has provided site-specific determinations that "movement of wastes within an area of contamination does not constitute "land disposal" and, thus, does not trigger hazardous waste disposal requirements." Therefore, lead-impacted soil that is scarified in-place, moisture-conditioned, and recompacted during roadway improvement activities might not be considered a "waste." DTSC should be consulted to confirm waste classification. It is noted that in addition to DTSC regulations, health and safety requirements and other local agency requirements may also apply to the handling and disposal of lead-impacted soil.

### **3.0 SCOPE OF SERVICES**

We performed the following scope of services as requested by Caltrans in TO No. 72:

#### **3.1 Pre-field Activities**

- Conducted a TO meeting on April 3, 2009, to discuss the TO scope of services. Caltrans representative Shawn Ogletree and Geocon representative Gemma Reblando attended the meeting. The purpose of the TO meeting was to identify and observe the project boundaries and conditions. The proposed boring locations were further marked out with white paint for subsequent utility clearance.
- Prepared a *Workplan* dated April 7, 2009, which described the requested scope of services and quality assurance/quality control (QA/QC) sampling and laboratory procedures.

- Prepared a *Health and Safety Plan* dated April 9, 2009, to provide guidelines on the use of personal protective equipment and the health and safety procedures implemented during the field activities.
- Provided at least 48-hour notification to Underground Service Alert (Ticket Nos. 94833, 95146, 95053, 95071 and 95093) prior to job site mobilization.
- Retained the services of Advanced Technology Laboratories (ATL) to perform the chemical analysis of soil samples.

### **3.2 Field Activities**

The field activities consisted of collecting soil samples along the SR-99 on- and/or offramp at Kansas Avenue, L Street, I Street and Tuolumne Boulevard. On April 14 through 16, 2009, 369 soil samples were collected from 32 direct-push and 116 hand-auger borings at the Caltrans designated soil sampling locations. The soil borings were excavated to an approximate maximum sampling depth of 2.0 feet. The soil samples were collected at general depths of 0.0 to 0.5 foot and 0.5 to 1.0 foot at the southbound (SB) SR-99 off-ramp at L Street and I Street locations. The soil samples were collected at general depths of 0.0 to 0.5 foot, 0.5 to 1.0 foot and 1.5 to 2.0 feet at the SB SR-99 onramp at Kansas Avenue, northbound (NB) SR-99 onramp at Kansas Avenue and SB SR-99 onramp at Tuolumne Boulevard.

## **4.0 INVESTIGATIVE METHODS**

### **4.1 Boring Location Rationale**

The following soil boring locations were designated by Caltrans in the vicinity of proposed SR-99 improvements. The soil borings were advanced at approximate 25-foot intervals at each location. The approximate boring locations are depicted on Figures 2-1 through 2-5.

- Borings NBK1 through NBK16 were advanced along the NB SR-99 onramp at Kansas Avenue. The boring locations were staggered within 1.0 and 4.0 feet from the edge of pavement (Figure 2-1).
- Borings KB1 through KB20 were advanced along the SB SR-99 onramp at Kansas Avenue. The boring locations were advanced within 3.0 feet from the edge of pavement (Figure 2-2).
- Borings LB1 through LB30 were advanced along the SB SR-99 offramp at L Street. The boring locations were staggered within 5.0, 10.0 and/or 15.0 feet from the edge of pavement (Figure 2-3).
- Borings IB1 through IB45 were advanced along the SB SR-99 offramp at I Street. The boring locations were advanced within 2.0 feet from the edge of pavement (Figure 2-4).
- Borings TB1 through TB37 were advanced along the SB SR-99 onramp at Tuolumne Boulevard. The boring locations were staggered within 5.0 and 15.0 feet from the edge of pavement (Figure 2-5).

The boring location coordinates were determined using a differential global positioning system (GPS). The GPS was utilized during the field activities to locate the horizontal position with an error of no more than 3.3 feet. The latitude and longitude boring coordinates are summarized on Table 1.

## **4.2 Soil Sampling Procedures**

A total of 369 soil samples were collected from 148 borings excavated at the Site to maximum depths of 1.0 and 2.0 feet. Soil samples obtained from the direct-push borings were collected in cellulose thermoplastic (acetate) liners driven by the direct-push rig. The acetate liners were cut to separate the sample by depth, then the sample from a particular interval was opened and the soil sample was transferred to a Ziploc® re-sealable plastic bag. Soil samples collected using a hand-auger were transferred directly into re-sealable plastic bags. The soil samples were field homogenized within the sample bags and subsequently labeled, placed in an ice chest, and delivered to ATL for analytical testing under chain-of-custody (COC) documentation.

QA/QC procedures were performed during the field exploration activities. These procedures included decontamination of sampling equipment before each boring was advanced and providing COC documentation for each sample submitted to the laboratory. The soil sampling equipment was cleansed between each boring by washing the equipment with an Alconox™ solution followed by a double rinse with deionized water.

The borings were backfilled with the excess soil cuttings generated at each boring. The decontamination water was discharged to the ground surface away from surface water bodies or storm drain inlets.

## **4.3 Traffic Control**

Caltrans maintenance provided an attenuator truck for traffic control during the field work.

## **4.4 Laboratory Analyses**

The soil samples collected within the project boundaries were submitted to ATL for the following analyses under standard ten-day turn-around-time (TAT). The laboratory was instructed to homogenize the soil samples prior to analysis in accordance with Contract 06A1141 requirements.

- Three hundred sixty-nine soil samples were analyzed for total lead following United States Environmental Protection Agency (EPA) Test Method 6010B.
- Eighty-nine soil samples with total lead concentrations greater than or equal to 50 mg/kg (ten times the STLC value for lead of 5.0 mg/l) were further analyzed for soluble (WET) lead by EPA Test Method 7420.

- Sixty-one soil samples with soluble (WET) lead concentrations greater than or equal to the STLC value for lead of 5.0 mg/l were further analyzed for soluble lead using de-ionized water as extractant (DI-WET) by EPA Test Method 7420.
- Soil sample NBK13-0.0 with the highest total lead level was further analyzed for TCLP soluble lead following EPA Test Methods 1311 and 7420.
- Thirty-eight soil samples, selected at random, were analyzed for soil pH by EPA Test Method 9045C.

#### **4.5 Quality Assurance/Quality Control**

QA/QC procedures were performed for each method of analysis with specificity for each analyte listed in the test method's QA/QC. The laboratory QA/QC procedures included the following:

- One method blank for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One sample analyzed in duplicate for every ten samples, batch of samples or type of matrix, whichever was more frequent.
- One spiked sample for every ten samples, batch of samples or type of matrix, whichever was more frequent, with the spike made at ten times the detection limit or at the analyte level.

Prior to submitting the soil samples to the laboratory, the COC documentation was reviewed for accuracy and completeness. Reproductions of the laboratory reports and COC documentation are presented in Appendix A.

### **5.0 FIELD OBSERVATIONS AND INVESTIGATIVE RESULTS**

#### **5.1 Site Conditions**

Soil encountered during the excavation of borings was generally comprised of sandy silt and silty clay to the maximum sampling depth of 2.0 feet. Groundwater was not encountered during the excavation of the soil borings.

#### **5.2 Soil Analytical Results**

A summary of the soil analytical results is presented on Table 1. The laboratory reports and COC documentation are presented in Appendix A.

Total lead was detected in 220 of 369 soil samples analyzed at concentrations ranging from 5.0 to 540 mg/kg. Eighty-nine of the 369 soil samples had reported total lead concentrations greater than or equal to 50 mg/kg (ten times the STLC value for lead of 5.0 mg/l) and were further analyzed for WET soluble lead.

WET soluble lead was reported for each of the 89 soil samples analyzed at concentrations ranging from 0.78 to 24 mg/l. Sixty-one of the 89 soil samples had soluble (WET) lead concentrations greater than or equal to the STLC value for lead of 5.0 mg/l and were further analyzed for DI-WET soluble lead. DI-WET soluble lead was reported for only one of the 61 soil samples analyzed at 0.95 mg/l.

TCLP soluble was detected in one soil sample analyzed at 0.31 mg/l, less than the federal RCRA hazardous waste threshold for lead of 5.0 mg/l.

Soil pH values ranged from 6.9 to 9.1.

### **5.3 Laboratory Quality Assurance/Quality Control**

We reviewed the laboratory QA/QC provided with the laboratory reports. Duplicates, matrix spikes, and matrix spike duplicates were outside criteria for several samples. The case narrative additionally states that dilution was necessary for a number of samples due to sample matrix. However, the analytical batch was validated by the Laboratory Control Sample. Based on this limited data review, no additional qualifications of the soil data are necessary, and the data are of sufficient quality for the purposes of this report.

### **5.4 Statistical Evaluation for Lead Detected in Soil Samples**

The total lead data were separated into five sample populations for statistical evaluation as described below:

- Sample population 'A' consists of soil samples collected from borings NBK1 through NBK16 located along the Kansas Avenue NB SR-99 onramp.
- Sample population 'B' consists of soil samples collected from borings KB1 through KB20 located along the Kansas Avenue SB SR-99 onramp.
- Sample population 'C' consists of soil samples collected from borings LB1 through LB30 located along the L Street SB SR-99 offramp.
- Sample population 'D' consists of soil samples collected from borings IB1 through IB45 located along the I Street SB SR-99 offramp.
- Sample population 'E' consists of soil samples collected from borings TB1 through TB37 located along the Tuolumne Boulevard SB SR-99 onramp.

Statistical methods were applied to the total lead data to evaluate: 1) the upper confidence limits (UCLs) of the arithmetic means of the total lead concentrations for each sampling depth; and 2) if an acceptable correlation between total and soluble lead concentrations exists that would allow the prediction of soluble lead concentrations based on calculated UCLs. The statistical methods used are discussed in a book entitled *Statistical Methods for Environmental Pollution Monitoring*, by Richard Gilbert; in an EPA *Technology Support Center Issue* document entitled, *The Lognormal Distribution in*

*Environmental Applications*, by Ashok Singh et. al., dated December 1997; and in a book entitled *An Introduction to the Bootstrap*, by Bradley Efron and Robert J. Tibshirani.

#### **5.4.1 Calculating the UCLs for the Arithmetic Mean**

The upper one-sided 90% and 95% UCLs of the arithmetic mean are defined as the values that, when calculated repeatedly for randomly drawn subsets of site data, equal or exceed the true mean 90% and 95% of the time, respectively. Statistical confidence limits are the classical tool for addressing uncertainties of a distribution mean. The UCLs of the arithmetic mean concentration are used as the mean concentrations because it is not possible to know the true mean due to the essentially infinite number of soil samples that could be collected from a site. The UCLs therefore account for uncertainties due to limited sampling data. As data become less limited at a site, uncertainties decrease, and the UCLs move closer to the true mean.

Non-parametric bootstrap techniques used to calculate the UCLs are discussed in the previously referenced EPA document and in *An Introduction to the Bootstrap*. For those samples in which total lead was not detected at concentrations exceeding the laboratory MRL, a value equal to one-half of the detection limit was used in the UCL calculation. The bootstrap results are included in Appendix B. The calculated UCLs and statistical results for each location are summarized in the tables below:

**Sample Population 'A'**  
**(Kansas Avenue NB SR-99 Onramp - Borings NBK1 through NBK16)**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	147.0	157.2	107.6	11	540
0.5 to 1.0	53.4	57.8	35.9	2.5	210
1.5 to 2.0	7.5	8.2	4.7	2.5	38

**Sample Population 'B'**  
**(Kansas Avenue SB SR-99 Onramp - Borings KB1 through KB20)**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	35.3	36.4	31.9	13	57
0.5 to 1.0	3.8	4.0	3.33	2.5	9.1
1.5 to 2.0	2.8	2.9	2.6	2.5	5.4

**Sample Population 'C'**  
**(L Street SB SR-99 Offramp - Borings LB1 through LB30)**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	48.5	50.3	42.0	9.0	140
0.5 to 1.0	18.5	20.1	13.2	2.5	110

**Sample Population 'D'**  
**(I Street SB SR-99 Offramp - Borings IB1 through IB45)**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	131.4	135.3	119.0	19	310
0.5 to 1.0	19.8	20.8	15.9	2.5	82

**Sample Population 'E'**  
**(Tuolumne Boulevard SB SR-99 Onramp - Borings TB1 through TB37)**

SAMPLE INTERVAL (feet)	90% TOTAL LEAD UCL (mg/kg)	95% TOTAL LEAD UCL (mg/kg)	TOTAL LEAD MEAN (mg/kg)	MINIMUM VALUE (mg/kg)	MAXIMUM VALUE (mg/kg)
0 to 0.5	55.9	57.8	48.7	6.6	140
0.5 to 1.0	6.9	7.4	5.4	2.5	37
1.5 to 2.0	4.2	4.5	3.4	2.5	26

**5.4.2 Correlation of Total and Soluble Lead**

Total and corresponding soluble (WET) lead concentrations are bivariate data with a linear structure. This linear structure should allow for the prediction of soluble lead (WET) concentrations based on the UCLs calculated above in Section 5.4.1.

To estimate the degree of interrelation between total and corresponding soluble (WET) lead values ( $x$  and  $y$ , respectively), the *correlation coefficient* [ $r$ ] is used. The correlation coefficient is a ratio that ranges from +1 to -1. A *correlation coefficient* of +1 indicates a perfect direct relationship between two variables; a *correlation coefficient* of -1 indicates that one variable changes inversely with relation to the other. Between the two extremes is a spectrum of less-than-perfect relationships, including zero, which indicates the lack of any sort of linear relationship at all.

The *correlation coefficient* was calculated for the 89 ( $x$ ,  $y$ ) data points (i.e., soil samples analyzed for both total lead [ $x$ ] and soluble [WET] lead [ $y$ ]) and equaled 0.466. A *correlation coefficient* greater

than or equal to 0.8 is an acceptable indicator that a correlation exists. Consequently, an acceptable correlation between total and soluble lead concentrations could not be established for the data points since the *correlation coefficient* is less than 0.8. To achieve an acceptable correlation, the total and soluble (WET) lead data from three of the 89 data points were excluded from the regression analysis (three data points with the lowest ratio of soluble (WET) lead to total lead) and the *correlation coefficient* equaled 0.8.

For the *correlation coefficient* that indicates a linear relationship between total and soluble (WET) lead concentrations, it is possible to compute the line of dependence or a best-fit line between the two variables. A least squares method was used to find the equation of a best-fit line (regression line) by forcing the y-intercept equal to zero since that is a known point. The equation of the regression line was determined to be  $y = 0.0729(x)$ , where  $x$  represents total lead concentrations and  $y$  represents predicted soluble lead (WET) concentrations.

This equation was used to estimate the expected WET soluble lead concentrations for the UCLs calculated in Section 5.4.1. Regression analysis results and a scatter plot depicting the  $(x, y)$  data points along with the regression line are included in Appendix B. The 90% and 95% UCL-predicted WET soluble lead concentrations are summarized in Section 6.0.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

Waste classifications based on the 90% UCL of the lead content for the relevant excavation depths has historically been considered sufficient to satisfy a good faith effort by the EPA as discussed in SW-846. Risk assessment characterization is typically based on the 95% UCL of the lead content in the waste for the relevant depths; this is in accordance with the Risk Assessment Guidance for Superfund (RAGS) Volume 1 Documentation for Exposure Assessment. Per Caltrans, the 90% UCLs are to be used to evaluate onsite reuse and the 95% UCLs are to be used to evaluate offsite disposal.

Based on the TCLP soluble lead result of less than 5.0 mg/l, soil generated at the Site will not require disposal as a RCRA hazardous waste. If soil within the project limits is scarified in-place, moisture-conditioned, and recompacted during roadway improvement activities, it may not be considered a “waste.”

### 6.1 Sample Population ‘A’ – Kansas Avenue NB SR-99 Onramp

The following table summarizes the predicted soluble WET lead concentrations and the waste classification for excavated soil within this area based on the calculated total lead UCLs and the relationship between total and soluble WET lead for data collected.

Excavation Depth	90% UCL Total Lead (mg/kg)	90% UCL Predicted WET Lead (mg/l)	95% UCL Total Lead (mg/kg)	95% UCL Predicted WET Lead (mg/l)	Waste Classification
0 to 0.5 foot	147.0	10.7	157.2	11.5	Hazardous
<i>Underlying soil (0.5 to 2.0 feet)</i>	38.1	2.8	41.3	3.0	<i>Non-hazardous</i>
0 to 1.0 foot	100.2	7.3	107.5	7.8	Hazardous
<i>Underlying soil (1.0 to 2.0 feet)</i>	30.5	2.2	33.0	2.4	<i>Non-hazardous</i>
0 to 1.5 feet	84.6	6.2	90.9	6.6	Hazardous
<i>Underlying soil (1.5 to 2.0 feet)</i>	7.5	0.5	8.2	0.6	<i>Non-hazardous</i>
0 to 2.0 feet	65.3	4.8	70.3	5.1	Hazardous

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Based on the above table, soil generated from excavations to 1.5 feet or shallower would be classified as a California hazardous waste since the 90% and 95% UCL-predicted soluble (WET) lead concentrations are greater than the lead STLC of 5.0 mg/l. Consequently, soil generated from excavations to 1.5 feet or shallower would require offsite disposal as a hazardous waste.

## 6.2 Sample Population 'B' – Kansas Avenue SB SR-99 Onramp

Soil materials excavated to the maximum sampling depth of 2.0 feet in the vicinity of borings KB1 through KB20 can be reused onsite or disposed as non-hazardous soil since the calculated 90% and 95% total lead UCLs are less than 50 mg/kg.

## 6.3 Sample Population 'C' – L Street SB SR-99 Offramp

The following table summarizes the predicted soluble WET lead concentrations and the waste classification for excavated soil within this area based on the calculated total lead UCLs and the relationship between total and soluble WET lead for data collected.

Excavation Depth	90% UCL Total Lead (mg/kg)	90% UCL Predicted WET Lead (mg/l)	95% UCL Total Lead (mg/kg)	95% UCL Predicted WET Lead (mg/l)	Waste Classification
0 to 0.5 foot	48.5	3.5	50.3	3.7	Non-hazardous
<i>Underlying soil (0.5 to 1.0 foot)</i>	<i>18.5</i>	<i>1.3</i>	<i>20.1</i>	<i>1.5</i>	<i>Non-hazardous</i>
0 to 1.0 foot	33.5	2.4	35.2	2.6	Non-hazardous

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Soil materials excavated to the maximum sampling depth of 1.0 foot within this area will not require special soil handling and disposal procedures based on lead content and can be reused or disposed as non-hazardous soil since the predicted 90% and 95% UCL-predicted WET soluble lead concentrations are less than 5.0 mg/l.

## 6.4 Sample Population 'D' – I Street SB SR-99 Offramp

The following table summarizes the predicted soluble WET lead concentrations and the waste classification for excavated soil within this area based on the calculated total lead UCLs and the relationship between total and soluble WET lead for data collected.

Excavation Depth	90% UCL Total Lead (mg/kg)	90% UCL Predicted WET Lead (mg/l)	95% UCL Total Lead (mg/kg)	95% UCL Predicted WET Lead (mg/l)	Waste Classification
0 to 0.5 foot	131.4	<b>9.6</b>	135.3	<b>9.9</b>	<b>Hazardous</b>
<i>Underlying soil (0.5 to 1.0 foot)</i>	<i>19.8</i>	<i>1.4</i>	<i>20.8</i>	<i>1.5</i>	<i>Non-hazardous</i>
0 to 1.0 foot	75.6	<b>5.5</b>	78.1	<b>5.7</b>	<b>Hazardous</b>

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Based on the above table, soil generated from excavations to 0.5 foot would be classified as a California hazardous waste since the 90% and 95% UCL-predicted soluble (WET) lead concentrations are greater than the lead STLC of 5.0 mg/l. Consequently, the top 0.5 foot of excavated soil would require offsite disposal as a hazardous waste.

### 6.5 Sample Population ‘E’ – Tuolumne Boulevard SB SR-99 Onramp

The following table summarizes the predicted soluble WET lead concentrations and the waste classification for excavated soil within this area based on the calculated total lead UCLs and the relationship between total and soluble WET lead for data collected.

<b>Excavation Depth</b>	<b>90% UCL Total Lead (mg/kg)</b>	<b>90% UCL Predicted WET Lead (mg/l)</b>	<b>95% UCL Total Lead (mg/kg)</b>	<b>95% UCL Predicted WET Lead (mg/l)</b>	<b>Waste Classification</b>
0 to 0.5 foot	55.9	4.1	57.8	4.2	Non-hazardous
<i>Underlying soil (0.5 to 2.0 feet)</i>	<i>6.0</i>	<i>0.4</i>	<i>6.4</i>	<i>0.5</i>	<i>Non-hazardous</i>
0 to 1.0 foot	31.4	2.3	32.6	2.4	Non-hazardous
<i>Underlying soil (1.0 to 2.0 feet)</i>	<i>5.6</i>	<i>0.4</i>	<i>6.0</i>	<i>0.4</i>	<i>Non-hazardous</i>
0 to 1.5 feet	23.2	1.7	24.2	1.8	Non-hazardous
<i>Underlying soil (1.5 to 2.0 feet)</i>	<i>4.2</i>	<i>0.3</i>	<i>4.5</i>	<i>0.3</i>	<i>Non-hazardous</i>
0 to 2.0 feet	18.5	1.3	19.3	1.4	Non-hazardous

90% UCL applicable for waste classification and onsite reuse; 95% UCL applicable for risk assessment and offsite disposal

Based on the above table, soil generated from the top 2.0 feet would not be classified as a California hazardous waste since the 90% and 95% UCL-predicted soluble (WET) lead concentrations are less than the lead STLC of 5.0 mg/l. Consequently, excavated soil within the top 2.0 feet could be reused or disposed as non-hazardous soil with respect to lead content.

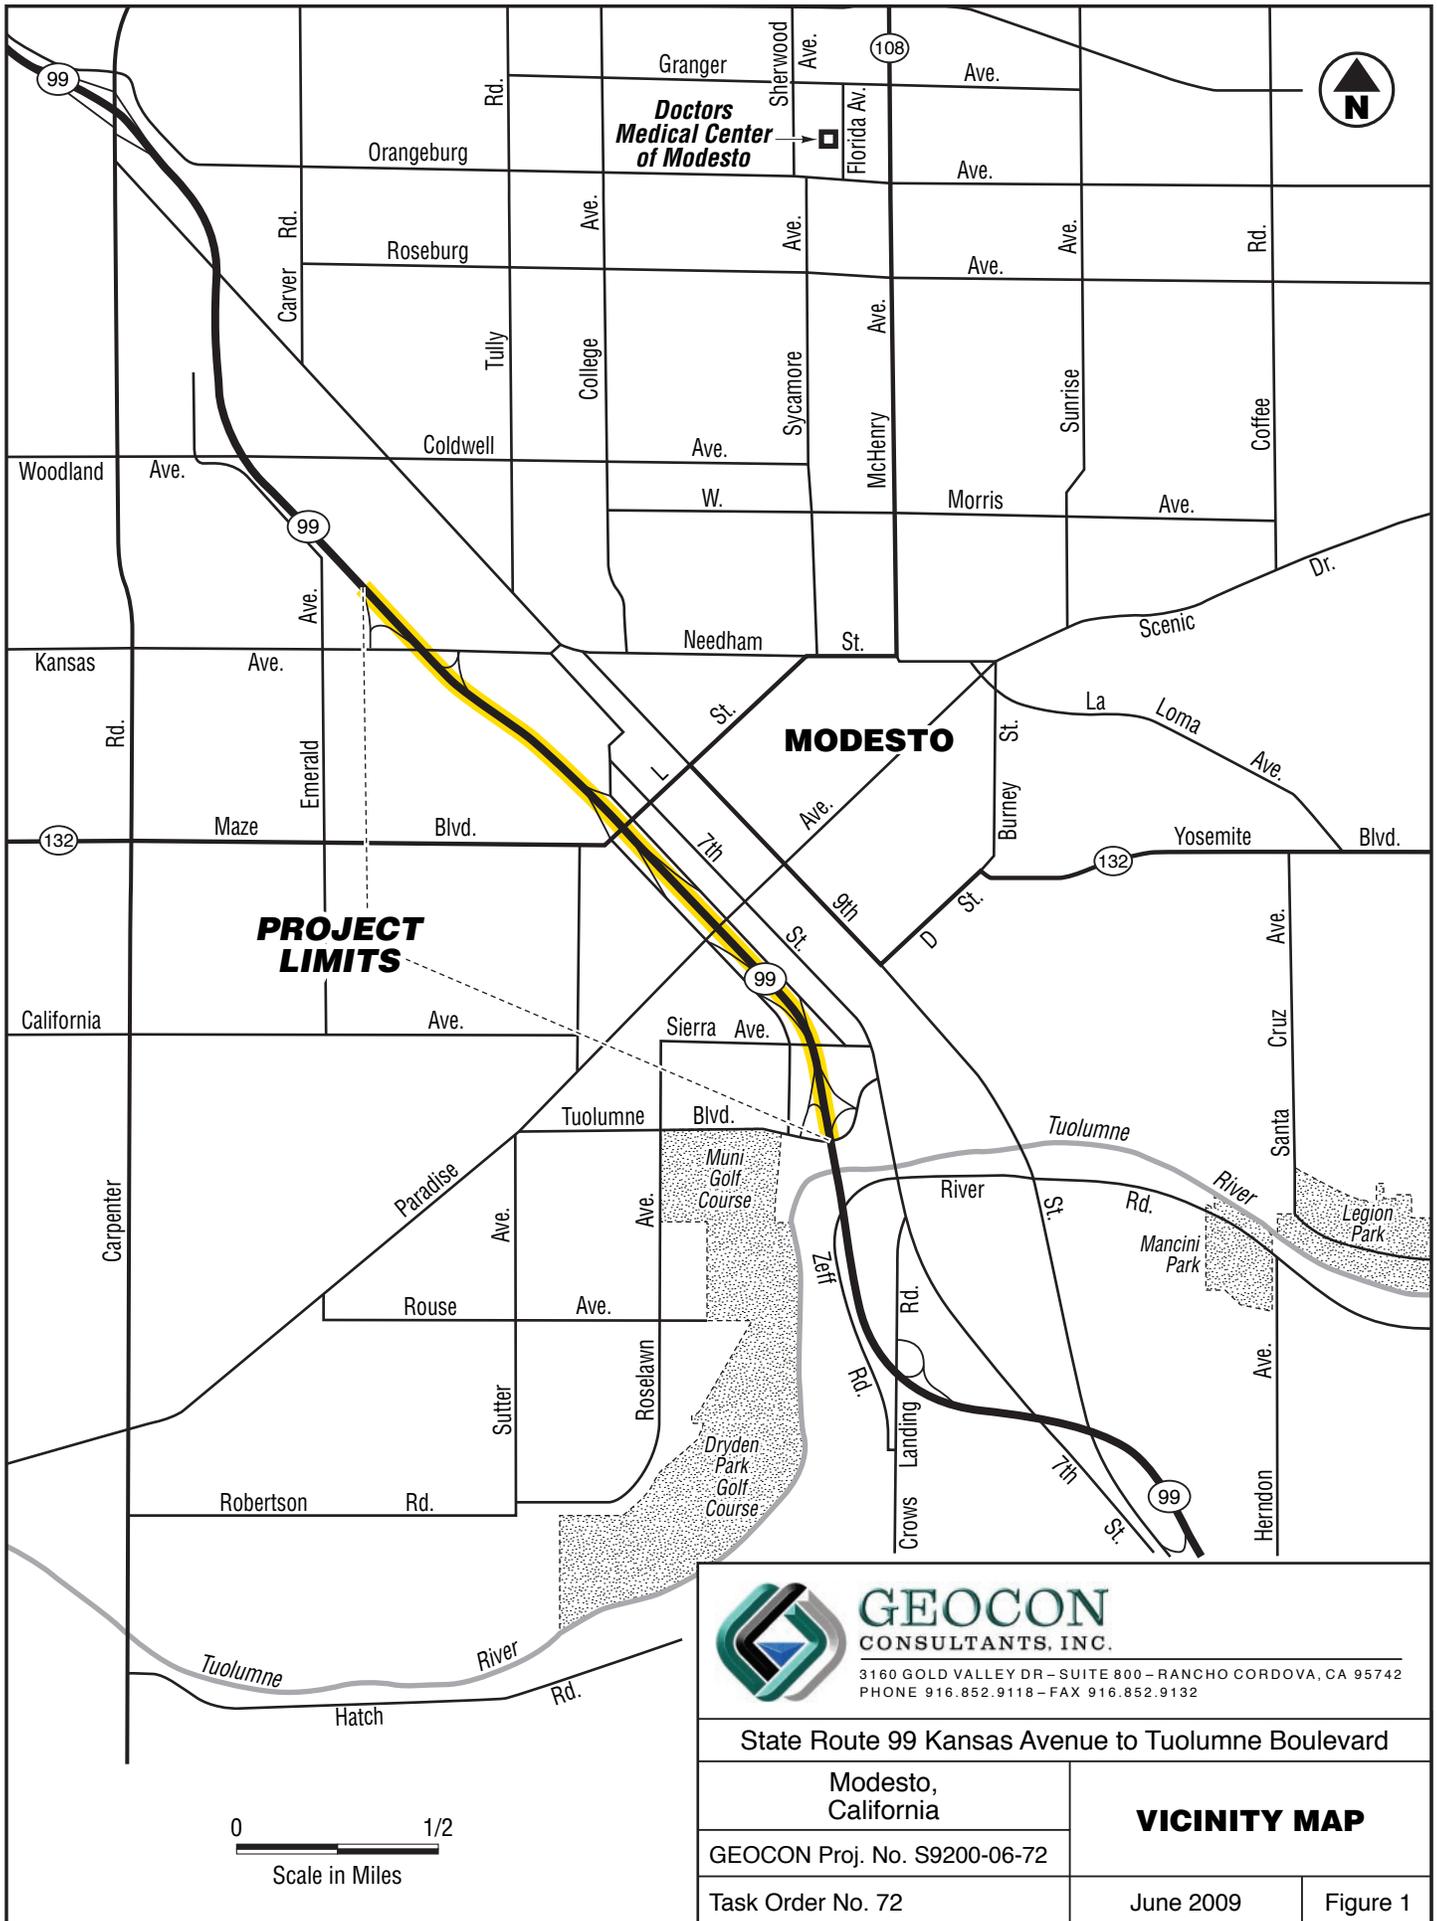

### 6.6 Worker Protection

Per Caltrans’ requirements, the contractor(s) should prepare a project-specific Lead Compliance Plan (CCR Title 8, Section 1532.1, the “Lead in Construction” standard) to minimize worker exposure to lead-impacted soil. The plan should include protocols for environmental and personnel monitoring, requirements for personal protective equipment, and other health and safety protocols and procedures for the handling of lead-impacted soil.

## 7.0 REPORT LIMITATIONS

This report has been prepared exclusively for Caltrans. The information contained herein is only valid as of the date of the report and will require an update to reflect additional information obtained.

This report is not a comprehensive site characterization and should not be construed as such. The findings as presented in this report are predicated on the results of the limited sampling and laboratory testing performed. In addition, the information obtained is not intended to address potential impacts related to sources other than those specified herein. Therefore, the report should be deemed conclusive with respect to only the information obtained. We make no warranty, express or implied, with respect to the content of this report or any subsequent reports, correspondence or consultation. We strived to perform the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

Notes:

NBK1-0.0

mg/kg = Milligrams per kilogram

mg/l = Milligrams per liter

< = Less than the laboratory test method reporting limits

NA = Not available

--- = Not analyzed

WET = Waste Extraction Test using citric acid as extractant following EPA Method 7420

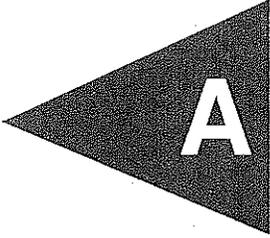

DI-WET = Waste Extraction Test using de-ionized water as extractant following EPA Method 7420

STLC = Soluble Threshold Limit Concentration

TCLP = Toxicity Characteristic Leaching Procedure

Concentrations in **bold** type are greater than or equal to the lead STLC of 5.0 mg/l

APPENDIX

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 15, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "E. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

**CASE NARRATIVE**

---

Analytical Comments for Method 6010

RPD for Duplicate (DUP) is outside criteria for samples 105035-040ADUP, 105035-070ADUP and 105035-080ADUP; however, the Laboratory Control Sample (LCS) validated the analytical batch.

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 16, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez  
Laboratory Director

**Lab Order:** 105058

**CASE NARRATIVE**

---

Analytical Comments for Method 6010

RPD for Duplicate (DUP) is outside criteria for samples 105058-010ADUP, 105058-040ADUP, 105058-080ADUP and 105058-090ADUP; however, the Laboratory Control Sample (LCS) validated the analytical batch.

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 17, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie F. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 15, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez  
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 16, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "E. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

**CASE NARRATIVE**

Analytical Comments for Method 7420

Dilution was necessary for samples 105058-003A, 105058-007A, 105058-015A, 105058-017A, 105058-019A, 105058-023A, 105058-025A, 105058-027A, 105058-049A, 105058-051A, 105058-053A, 105058-063A, 105058-069A, 105058-071A, 105058-073A, 105058-083A, 105058-118A, 105058-121A, 105058-122A, 105058-124A, 105058-127A, 105058-133A and 105058-136A, due to sample matrix.

RPD for Duplicate (DUP) is outside criteria for sample 104528-004ADUP; however, the Laboratory Control Sample (LCS) validated the analytical batch.

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 17, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie F. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 15, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "Eddie F. Rodriguez".

Hi Diane – please analyze the following soil samples for DI-WET soluble lead under 5-day TAT.

105035-065A  
105035-073A  
105035-081A  
105035-089A  
105035-093A  
105035-097A  
105035-102A  
105035-107A  
105035-119A

105058-003A  
105058-005A  
105058-007A  
105058-010A  
105058-011A  
105058-013A  
105058-015A  
105058-017A  
105058-019A  
105058-021A  
105058-023A  
105058-025A  
105058-027A  
105058-029A  
105058-031A  
105058-033A  
105058-035A  
105058-037A  
105058-043A  
105058-045A  
105058-047A  
105058-049A  
105058-051A  
105058-053A  
105058-055A  
105058-061A  
105058-063A  
105058-067A  
105058-069A  
105058-071A  
105058-081A  
105058-083A  
105058-085A  
105058-089A

RE: SR-99 Modesto ADL, S9200-06-72

Attention: Gemma Reblando

Enclosed are the results for sample(s) received on April 17, 2009 by Advanced Technology Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

A handwritten signature in black ink, appearing to read "E. Rodriguez".

Eddie F. Rodriguez  
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.
