

## Information to the Department of Fish and Game

In general, the State laws provide that the Department of Fish and Game shall control the construction operations within certain salmon and trout spawning areas. Any agency which proposes to divert or obstruct the natural flow on any body of water shall submit general plans and other pertinent information to the Department of Fish and Game.

For structures crossing over or under any body of water, design engineers are to fill out standard Form DS-D0011 and forward it to the Planning Coordination Section along with the General Plan distribution. Forms are available from the floor clerks. See attachment for copy of form.

The Office of Structure Design will furnish the District with the completed form. The Districts will transmit all information to the Department of Fish and Game.
