EXECUTIVE SUMMARY

The California Department of Transportation (Department) manages the nation's largest and most complex multi-modal transportation system. Administration of such a system requires extensive planning and a comprehensive long-term financial forecast. This document presents, in annual increments, the State Transportation Improvement Program (STIP) Fund Estimate (FE) resources available at the state level for the State's transportation infrastructure over the five-year period from 2004-05 through 2008-09.

Statutes require the Department to present a FE to the California Transportation Commission (Commission) by July 15, and the Commission to adopt a FE by August 15 of each odd-numbered year. Each even-numbered year, the Commission is required to adopt a STIP based on funding identified in the adopted FE. Statutes also allow for the delay of the FE if there is legislation before the Legislature or Congress that may have a significant effect on the FE. Because of the decision to delay adoption of the 2004 FE, the proposed FE will be presented to the Commission in November 2003. The final FE will be presented to the Commission in December 2003 for adoption.

The Commission adopted a set of assumptions on September 24, 2003 that is the basis for generating the numbers underlying the FE. Following the September meeting, minor changes were made to certain assumptions. The assumptions are detailed throughout the FE book, and the details of the changes to the assumptions are provided in the in Appendix I, Fund Estimate Assumption Changes.

The 2004 State Highway Account (SHA) & Federal FE forecasts a need for deprogramming an estimated \$2.6 billion of projects from the STIP and the State Highway Operation Protection Program (SHOPP) in 2004-05. Additional programming becomes available in 2007-08, with an estimated net \$2.8 billion in deprogramming necessary over the FE period. Including funds from the Public Transportation Account (PTA), Transportation Investment Fund (TIF), and Transportation Deferred Investment Fund (TDIF), \$693 million of additional programming becomes available over the five-year FE period. The chart on page 4 displays the programming capacity for all funds in the STIP FE. The initial deprogramming is made necessary by a number of factors, including the poor condition of the State's General Fund, reduced weight fee revenue, delay in receipt of expected revenue, and a lower anticipated federal revenue.

The largest single element of uncertainty in funding is in federal funding. There is an anticipated decline in federal gasoline excise tax revenue under current federal law because of California's conversion to ethanol-blended gasoline. California's

conversion will reduce the State's contribution to the federal Highway Trust Fund, and likely reduce the amount of federal revenue received by California. The impact from ethanol is expected to affect federal revenue beginning in 2005-06, and this element alone could result in a \$2.7 billion decline in federal revenues during the Fund Estimate period.

While the 2004 FE estimates that deprogramming must occur against the SHA, programming is made available from the PTA, the TIF, and the TDIF. Because of the major decline in the SHA and federal funds available in 2002-03 through 2004-05, a large number of projects currently programmed in those three years will have to be deprogrammed or rescheduled to later years of the STIP. Unallocated projects from 2002-03 and 2003-04 have been moved to 2004-05 in the FE, in advance of the deprogramming. In some instances environmental and/or design work will have to be redone resulting in added cost.

Total resources identified for the SHA 2004 FE are approximately \$25.4 billion, a decline of over \$4.5 billion from the 2002 FE. These resources are generated primarily from Federal and State excise taxes on gasoline and diesel fuel and State weight fees. Significant differences include reduced weight fees collections due to SB 2084 (Chapter 861, Statutes of 2000), as modified by SB 1050 (Statutes of 2003) and uncertainties regarding Federal revenue. The SHA is the prime funding source for the State's Highway Transportation System and pays for the operations of the Department, capacity improvements, rehabilitation, safety, maintenance, and traffic operations on both Local and State Highway Systems. The SHA also funds Article XIX eligible projects, such as urban, commuter, and intercity rail and capital improvements.

The FE identifies resources for the PTA totaling about \$2.5 billion through the five-year period, an increase of about \$230 million over the 2002 FE. Resources for the 2004 FE include repayment of loans from the Traffic Congestion Relief Fund (TCRF) and the General Fund (through TIF). Ongoing revenues in the account are derived from the State sales tax on gasoline and diesel fuel. The PTA funds the State Transit Assistance Program, supports costs for the Department's Mass Transportation and Rail programs, provides funding for the State's Intercity Rail services operated by Amtrak, and funds STIP projects.

Resources for the TIF are estimated at \$1.7 billion over the five-year period, an increase of about \$800 million over the 2002 FE. The TIF was created by the Traffic Congestion Relief Act of 2000 and reaffirmed by voters with a constitutional amendment to dedicate the sales tax on gasoline and diesel fuel to transportation purposes, but resources have been diverted to the General Fund since the TIF's creation. This fund commits major resources to 141 designated transportation projects (known as the Traffic Congestion Relief Program) that will

relieve traffic congestion and to repair and maintain local streets and roads. Funds are also made available to the PTA and for programming in the STIP.

Resources for the TDIF are estimated at \$208 million over the five-year period. The TDIF is a new fund established by AB 1751 (Chapter 224, Statutes of 2003). The Legislature created the TDIF to facilitate the repayment of funds from the General Fund that were not transferred from the General Fund to the TIF in 2003-04. The funds shall be transferred to the TDIF by June 30, 2009.

The FE for the Aeronautics Account identifies a total of \$29 million in resources, primarily from State excise taxes on aviation gasoline and jet fuel. This is a decrease of about \$23 million under the 2002 FE due to a decrease in Aviation fuel sales and transfers to the General Fund. The Aeronautics account provides grants to local agencies, supports the acquisition and development of new airports, and contributes matching funds to federal monies given directly to local agencies through the Airport Improvement Program.

The FE is required by law to include County Share estimates. Of the funds available for the STIP, seventy-five percent are committed to the RIP (Regional) and twenty-five percent to the IIP (Inter-regional). The RIP portion is divided into County Shares. The RIP funds are first divided into northern and southern county shares at 40/60 percent. Then each group is divided into individual county shares using a formula including population and state highway mileage to distribute resources between counties. Annual programming targets are provided separately for Transportation Enhancement (TE) and non-TE projects. Due to the estimated programming capacity included in the 2004 FE, County Shares in this FE include amounts that must be reprogrammed in later years. For a more detailed description of the process, see the County Shares section in the book.

The following table outlines the resources and the amounts available for programming by the Commission for each fund over the FE period. It is important to note that over \$3 billion of programming capacity in this estimate is supported by TIF, TDIF, and PTA funding. Given the General Fund budget problems that are expected to continue into 2004-05, there is significant risk that these funds will be redirected to help solve the General Fund problem. Additionally, the FE assumes that California will lose \$2.7 billion in federal funding because of the state conversion to ethanol-blended gasoline. If Congress acts to make the tax rate for ethanol blended gasoline the same as or closer to the rate for gasoline without ethanol, the decline in federal funding would not occur and more funds would be available for programming.

DRAFT

Available for Programming, All Funds
Fund Estimate Five-Year Period
(\$ in millions)

Existing Program	2003-04	2004-05	2005-06	2006-07	2007-08	2008-09	5-Year Total	6-Year Total

All Funds	-\$278	-\$2,274	\$673	-\$399	\$1,299	\$1,394	\$693	\$416

Note: Numbers may not add due to rounding.

¹ The PTA includes revenue from TIF. If TIF funding is redirected over the FE period, not only will TIF funding be lost, but also an additional \$417 million in programming will be lost from the PTA. Total programming for all Funds falls to -\$1.928 billion.

INTRODUCTION

The California Department of Transportation is required by Government Code Sections 14524 and 14525 to develop a State Transportation Improvement Program (STIP) Fund Estimate (FE). The purpose of the FE is to provide an estimate in annual increments of all Federal and State funds reasonably expected to be available for programming in the subsequent STIP.

The Department is required to present a FE to the Commission by July 15, and the Commission to adopt a FE by August 15 of each odd-numbered year. Each even number year, the Commission is required to adopt a STIP based on funding identified in the adopted FE.

Due to uncertainty in both State and Federal budgets, and pending reauthorization of the federal transportation programs, the Commission delayed adoption of the Fund Estimate until December 2003.

Economy

According to the latest UCLA Anderson Forecast, moderate growth in taxable sales is the best that can be expected through 2004. It is unlikely that this moderate growth will be enough, however, to offset the continued statewide budget shortfalls. Although fuel tax revenues are relatively inelastic, and are not affected by economic conditions as much as other state revenue, statewide economic influences manifest in other ways. In 2002-03, the State Highway Account (SHA) loaned \$173 million to the General Fund, and a total of \$563 million to the Traffic Congestion Relief Fund (TCRF). While the \$173 million General Fund loan and \$100 million of the TCRF loan, will be paid back this year, the remainder of the loan is not expected to be repaid until 2006-07. The SHA was forced to take short-term loans from both the TCRF and the Public Transportation Account (PTA) during 2003-04 to meet monthly operating commitments.

Methodology

The methodology and assumptions used for the FE is determined by the Commission in consultation with the Department, Regional Transportation Planning Agencies (RTPA), and county transportation commissions. The Commission approved the assumptions utilized to build the FE at its September 2003 meeting.

Since the 1996 FE, the Commission has directed the Department to base the SHA FE on a "Cash Flow Allocation Basis" model. This methodology schedules funding capacity based upon cash flow requirements and is reflective of the method used to manage the allocation of capital projects. The "Cash Flow Allocation Basis"

continues in the 2004 SHA FE, although Federal Local Assistance and Local STIP expenditures are not cash flowed. Other Fund Estimates are on a modified accrual basis.

State law requires the FE to be based on current statutes for estimating revenues and the most recent enacted Budget Act adjusted for the annual inflation rate for State Operations. Revenue estimates are developed based on historical trends, the economic outlook, and in consultation with the California Department of Finance (DOF). State Operations costs are escalated at the rate established by DOF, which is 2.0 percent for the 2004 FE. The escalation rate for capital projects contained in the 2004 STIP is set at 3.0 percent, based on the historical California Highway Construction Cost Index (CHCCI) performance. Expenditure estimates for each program were developed by working with the applicable Department Divisions.

The FE is required to identify funds available for programming by county. The level of programming by county is identified by the county share system established by Senate Bill (SB) 45 (Chapter 622, Statutes of 1997).

Current Law Assumed

The FE is based on existing statute, including the 2003-04 Budget Act (Chapter 157, Statutes of 2003). Another significant piece of legislation that was recently signed into law is SB 1055, which contains increases in weight fees to correct revenue neutrality issues with SB 2084 (Chapter 861, Statutes of 2000).

County Shares

The FE is required by law to include County Share estimates. The STIP consists of two broad programs, the regional program funded from 75 percent of new STIP funding and the interregional program funded from 25 percent of new STIP funding. The 75 percent regional program is further subdivided by formula into County Shares. County Shares are available solely for projects nominated by regions in their Regional Transportation Improvement Programs (RTIP). A detailed explanation of this methodology is included in the County Share portion of the FE book.

Federal Transportation Act Impacts

Federal resources are generated primarily from the Federal tax on gasoline and diesel fuel, which is reflected in the Obligational Authority (OA) level expected under the Transportation Equity Act for the 21st Century (TEA-21).

TEA-21 expired on September 30, 2003. Congress extended its provision through February 29, 2004, but has not passed an expected five-year reauthorization at this time. Because the outcome of the new Act cannot be predicted, the

Commission directed the Department to use, in preparing the FE, the mid-point between the House and Senate appropriations proposals pending before Congress and an escalation factor of 2 percent annually. The Department, in consultation with the Commission, has modified this assumption. The 2003-04 OA now matches the actual OA received in 2002-03, and the mid-point of the House and Senate is used beginning in 2004-05. In addition, beginning in FY 2005-06, it assumes that California will receive less federal revenue returned to the state because more than 80% of the gasoline consumed in California will be an ethanol blend. Current federal law provides a lower tax rate for ethanol-blended gasoline. It is estimated this will affect California's federal funds by \$2.7 billion during the FE period.

STATE HIGHWAY ACCOUNT

The State Highway Account is the main funding source for California's Highway Transportation program. The principle sources of funds are the excise taxes on motor vehicle fuels, truck weight fees, and Federal Highway Trust Funds. This program commits major resources for improving highway safety, rehabilitation of existing system, improving the interregional road system, and ensuring the efficient operation of the State Highway System.

Resources Available for Programming

The table below summarizes the programming and deprogramming amounts available per year for the SHA FE. These figures are derived by applying the estimated expenditure rates against the projected cash balance if all projects approved in the 2002 STIP were allocated, and determining the amount of program that can be added (or that must be subtracted) to achieve a target cash balance. Constraints for the conversion included the requirements that the FE rolling cash balance remain as close to the prudent cash balance as possible, and that the annual program levels not fluctuate significantly year to year. Further details of the resources, expenditures and funds available for programming are presented in the following pages and in Appendix A.

State Highway Account								
	2003-04	2004-05	2005-06	2006-07	2007-08	2008-09	5-Year Total	6-Year Total
Available For Programming/ (Deprogramming) (\$ in millions)	(\$278)	(\$2,591)	\$67	(\$1,126)	\$487	\$375	(\$2,787)	(\$3,065)

Highlights

- The cash balance on July 1, 2003 was \$293 million.
- Because TEA-21 has expired, the 2004 FE assumes in 2003-04 an OA level equal to the 2002-03 year, and the average of the House (HR 2989) and Senate (SR 1589) proposals for 2004-05, escalated at 2 percent annually thereafter. The impact of California's conversion to ethanol use on OA receipts is also estimated beginning in 2005-06. This impact is significant, reducing federal OA by \$2.7 billion over the 5 year FE period.
- The FE proposes to reduce Advanced Construction (AC) by \$1 billion over the FE period.
- Fuel excise tax revenues are estimated to grow at an average annual rate of 2.3 percent for the five-year FE period, based on historical growth patterns.

- Weight Fee growth in the 2004 FE is estimated at 1.0 percent annually over the five year FE period. The impact of SB 2084 to Weight Fees is assumed to be a one-time drop in revenue. SB 1055 signed on October 12, 2003 seeks to correct this drop by increasing weight fees on vehicles over 10,000 pounds by approximately 20 percent in 2003-04, and through a second increase in the fee schedule if a revenue target is not met.
- State Highway Operation Protection Program (SHOPP) expenditure levels for the first three years of the 2004 FE (2004-05 through 2006-07) are consistent with the levels identified in the 2002 FE. Expenditures for the final two years of the 2004 FE (2007-08 and 2008-09) are equivalent to the 2006-07 year as displayed in the 2002 FE.
- STIP expenditure levels reflect a continuation of all projects authorized under the current program and all amendments, based on Commission allocations through September 2003.
- For the 2004 FE Advanced Project Development Element (APDE) is not utilized. APDE allows dollars to be brought forward from later years to be spent on project development. Dollars available for advancement are up to 25 percent of the amount available for programming in the two years following the FE period.

Note: Numbers may not add due to rounding.

Conversion from Cash to Programming

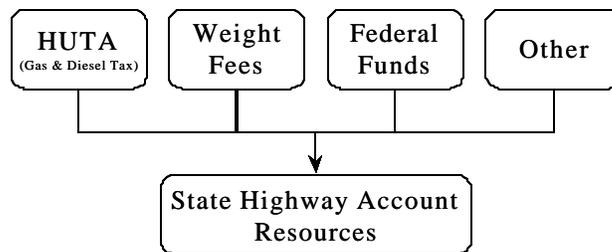

The Department converts the ending cash balance for each year to a programming level. This corresponds to an amount that can be committed each year. Each program spends at a different rate, over a different number of years. In aggregate, the Department assumes that a given program level will spend at percentage rates of 20/50/30 over a three year period. It is not enough for one year to show a positive cash balance for there to be program, as the major expenditure will be in the second year. If there is a positive cash balance, program is added (see above, Programming (Deprogramming and Program Adjustments) and the corresponding expenditures (see above, Cash Flow of Program Adjustments) are added to the cash balance.

SHA FUND ESTIMATE ASSUMPTIONS

The State Highway Account is the main funding source for the State's highway transportation program. Excise tax on motor vehicle fuels, motor vehicle weight fees, and reimbursements from the Federal Trust Fund for Federal-aid highway projects are the three major funding sources.

The Department receives the Federal funds from the Federal fuel taxes deposited in the Federal Highway Trust Fund. Through the Federal Transportation Act and the Federal budget, the fuel taxes are apportioned and allocated back to California. Before the funds can flow back to California, the Federal Highway Administration (FHWA) must authorize each Federal-aid highway project in advance, and Federal funds must be obligated. After this formal authorization process and obligation of funds, Federal funds are reimbursed based on the monthly expenditure of work accomplished on each authorized Federal-aid project.

The Commission approved the assumptions used to develop the SHA FE at its September 2003 meeting.

Resources

- The enacted 2003-04 Budget is used as the base for developing the FE.

SHA 1 The beginning balance of the FE is \$293 million.

SHA 2 The 2004 FE includes a prudent cash balance of \$330 million for the FE period. Based on historical cash fluctuations, the prudent cash balance will cover 96 percent of monthly volatility in the cash balance.

State Revenues

SHA 3 Fuel excise tax revenues are estimated to grow at an average annual rate of 2.3 percent for the five year FE period. This average growth rate is consistent with the DOF forecast for motor vehicle fuel consumption and corresponding growth in fuel tax revenues in the 2003-04 Budget.

- SHA 4 Revenue from the excise tax on liquefied petroleum gas, natural gas, ethanol and methanol is projected to remain constant at \$5 million throughout the FE.
- SHA 5 The impact of SB 2084 to weight fees is assumed to be a one-time drop in revenue. SB 2084, also known as the Commercial Vehicle Registration Act, was enacted to bring the State's weight fee tax structure in compliance with the Federal Intermodal Surface Transportation Efficiency Act of 1991. SB 2084 made significant changes to the weight fee structure for commercial vehicles, but was intended to be revenue neutral. Immediately after implementation of the act, weight fees experience a marked decline. SB 1055, which was signed by the Governor on October 12, 2003, contains increases in weight fees to correct revenue neutrality issues with SB 2084. SB 1055 includes language that would allow the DOF to direct the Department of Motor Vehicles to increase weight fees if the revenues in 2003-04 do not reach at least \$789 million.
- SHA 6 Weight fee growth in the 2004 FE is assumed to be approximately 1.0 percent annually over the five year FE period.
- SHA 7 Surplus Money Investment Fund (SMIF) income is based on the projected year ending cash balances and the current SMIF rate of 1.859 percent. The SMIF is an interest-bearing fund where cash not immediately needed for expenditure is deposited to generate revenue.

Risk Issues

- There appears to be little or no risk in assuming the growth trend in Highway Users Tax Account (HUTA) revenues. Historical trends are very consistent.

Transfers

Major transfers from the SHA to other funds include: to the PTA for Planning (Section 194 of the Streets and Highways Code) and revenue not subject to Article XIX of the California Constitution (Section 183.1 of the Streets and Highways Code). Other transfers include: Motor Vehicle Account (Section 1675 of the Government Code) and the Equipment Service Fund (Item 2660-031-0608, Budget Act of 2003).

- SHA 8 Historical growth trends are used to forecast rental income as well as other miscellaneous income. Rental and miscellaneous income deposited in the SHA are transferred to the PTA per Section 183.1 of the Streets and Highways Code the year after they are received.
- SHA 9 The transfer to PTA for planning pursuant to Streets and Highways Code Section 194 is determined by formula and is based on the forecast of PTA State Operations expenditures.

SHA 10 Pursuant to Section 42273 of the Vehicle Code, the Motor Vehicle Account must transfer by the 10th day of each calendar month the balance remaining at the close of business on the last day of the preceding calendar month that is not needed for immediate use, to the credit of the SHA. The SHA will not receive this transfer in the FE period.

Toll Bridge Seismic Retrofit Contribution

The 2002 FE included transfers, per SB 60 (Chapter 327, Statutes of 1997) from the SHA to the Toll Bridge Seismic Retrofit Account (TBSRA) scheduled as \$342 million in 2001-02, and \$8.3 million in 2002-03. These transfers did not occur as planned. The schedule for the cash transfers from the SHA to the TBSRA has been changed per the Plan of Finance developed to meet the requirements of AB 1171 (Chapter 907, Statutes of 2001). See Appendix F for more detail on the TBSRP.

Toll Bridge Seismic Retrofit SHA Contribution Transfers				
2004-05	2005-06	2006-07	2007-08	2008-09
\$-	\$342M	\$8.3M	\$-	\$-

Loans

Loans have been directed by the Legislature from the SHA over the past several fiscal years. Actions taken by the Legislature in 2003-04 Budget have modified these loans but have not specified the repayment schedules for all of these loans.

- A loan to the General Fund from the SHA, in the amount of \$173 million was made pursuant to Chapter 445, Statutes of 2002. This loan was repaid early in 2003-04.
- The SHA made a loan of \$474 million to the TCRF in 2002-03. A partial repayment of \$100 million is scheduled to occur in 2003-04. The balance of the loan must be repaid by June 30, 2007; however, an exact repayment schedule has not been specified.

SHA 11 A loan of \$35 million was made from the SHA to the California Highway Patrol (CHP) pursuant to the Budget Act of 1997 (Chapter 282 Statutes of 1997). The 2004 FE assumes no repayment during the FE period.

SHA 12 DOF has not yet developed a repayment schedule for the remaining \$463 million loaned from the SHA to the TCRF. This loan includes the \$89 million the SHA paid in Capital Outlay Support (COS) costs for the TCRF from 2000-01 through 2002-03, and the \$474 million, loaned to the TCRF in 2002-03, for a total of \$563 million. \$100 million will be repaid in 2003-04, leaving the balance of \$463 million.

Actual data is now available for the COS costs paid by the SHA for the TCRF for 2002-03. The actual amount was \$46 million, \$14 million below the forecast of \$60 million. The total amount owed is actually \$463 million.

The Commission directed the Department to include estimated revenue from rental fees as specified in AB 487 as partial payback of funds loaned to the TCRF from the SHA. However, the Governor vetoed AB 487. Therefore, the FE assumes payback of the loan in 2006-07, as specified in AB 438 (Chapter 113, Statutes of 2001).

Federal Revenues

- TEA-21 expired September 30, 2003. Congress is currently considering a new transportation bill along with funding levels for the next several years.
- Revenue Aligned Budget Authority (RABA) is included in both the President and Senate's proposals for SAFTEA beginning federal fiscal year 2006.

SHA 13 The 2004 FE assumes an August Redistribution of \$29 million in each year based on the average amount received over the last six years. The FHWA, through the August Redistribution process, allows States to compete for any unused OA. Those States unable to fully use their OA relinquish the authority and the FHWA distributes the anticipated unused OA by formula to those States asking for more. This distribution of unused OA is commonly referred to as August Redistribution.

SHA 14 Existing federal programs currently authorized are assumed to continue into the next federal transportation act.

SHA 15 The FHWA provides the Department OA that represents the total amount of funds that can be obligated in a year.

The Commission directed the Department to use, for the purpose of preparing the proposed FE for November, the mid-point between the House and Senate appropriations proposals in 2003-04 and an escalation factor of 2 percent annually beginning in 2004-05.

The Department has since changed the assumption to set the OA level in 2003-04 equal to the actual received in 2002-03, and to use the mid-point between the House and Senate appropriations proposals in 2004-05, and an escalation factor of 2 percent annually beginning in 2005-06. This issue must be addressed based on any subsequent action taken by Congress.

The federal tax structure for motor vehicle fuels taxes ethanol-gasoline blends at a lower tax rate than gasoline with MTBE. In addition, a portion of the tax goes to the Federal General Fund, thereby reducing the amount of federal excise tax received by the Federal Highway Trust

Fund. Under current federal law, California’s switch from gasoline with MTBE to gasohol with a 5.7 percent ethanol blend could reduce California’s contribution to the Federal Highway Trust Fund – Highway Account by as much as \$850 million per year, if changes in the tax structure are not made. A Departmental analysis indicates that if 50 percent of the gasoline consumed in California is blended, and 90 percent of the federal fuel tax revenues are returned to California, the State would receive about \$385 million less in apportionment than the amount it would have received from gasoline tax. With 100 percent ethanol-blended gasohol, the amount of the federal fuel tax loss to California would amount to \$775 million annually given the same level of gasoline/gasohol consumption. The Department’s assumption of \$560 million impact in 2005-06 is based on 80 percent ethanol usage.

The Commission directed the Department to factor in the impact of ethanol use to OA receipts. Due to the lag between the collection and distribution of the fuel tax revenue, the reduction in the state share of OA due to the lower taxes on ethanol is expected to begin in 2005-06. The impact in 2005-06, with no fix to the tax on ethanol, is projected to be \$560 million.

SHA 16 The Department exercised a provision in federal law to authorize project expenditures against future federal funds. This provision is known as Advanced Construction (AC). If expenditures on these projects materialize before federal funding is available, State resources support the expenditures and future federal revenues will reimburse the SHA. As of September 2003, there was approximately \$3.9 billion worth of projects authorized under AC. The Department’s goal is to reduce AC to a manageable level over the FE period.

The Commission adopted the assumption to dedicate \$200 million of OA per year beginning in 2004-05 to apply against the AC balance in order to reduce the AC balance by \$1 billion in the FE period.

Toll Bridge Seismic Retrofit Contribution

- Over the term of the 2004 FE, \$392 million of the authorized \$642 million Federal Highway Bridge Replacement and Rehabilitation (HBRR) funds will be used to fund the Toll Bridge Seismic Retrofit Program (TBSRP) as outlined in AB 1171. See Appendix F for details on the TBSRP.

Toll Bridge Seismic Retrofit HBRR Contribution Levels						
2002-03	2003-04	2004-05	2005-06	2006-07	2007-08	2008-09
\$250M	\$0	\$50M	\$100M	\$100M	\$100M	\$42M

Expenditures

SHA 17 The 2004 FE displays existing commitments as currently programmed for the purposes of calculating the proposed FE.

The Department has changed the display of existing commitments so that the program aligns with the current allocation plan.

Escalation Rates

SHA 18 The Department will use the average growth of the California Highway Construction Cost Index (CHCCI) over the last ten years for estimating future capital construction costs. The CHCCI has grown by an average of 3.0 percent annually.

SHA 19 The Department will use DOF's California Construction Cost Index (CCCI) escalation rate for the estimating construction of office buildings. The CCCI is 2.02 percent annually.

State Operations

Section 163 of the Streets and Highways Code requires that the FE incorporate “the most recent Budget Act” as the base in projecting future State Operations expenditures.

State Operations includes expenses for the operation of the Department such as Maintenance, Program Development, Traffic Operations, Administration, Legal, Equipment Service Center, Transportation Planning, Mass Transportation, and Local Assistance support.

SHA 20 The Commission directed the Department not to include a reservation for Budget Change Proposals and Finance letters in the 2004 FE.

SHA 21 The Commission directed the Department to use the 2003-04 enacted Budget and all post-budget reductions to estimate State Operations expenditures, which are escalated at 2 percent annually over the FE period. Currently, \$132 million in reductions have been approved and removed from SHA State Operations costs.

State Highway Operation and Protection Program (SHOPP)

SHA 22 The Commission directed the Department to assign 85 percent of the annual funding to the four categories of Safety, Bridge Preservation, Roadway Preservation and Mobility, which is an increase of 5 percent from what the Department proposed. The Department was directed to come back to the October meeting with a revised SHOPP funding allocation by categories with revised performance outcomes. These

performance outcomes would then be used to review the Department's progress towards their achievement on an annual basis.

SHOPP Expenditure Levels (millions)				
2004-05	2005-06	2006-07	2007-08	2008-09
\$1,482	\$1,641	\$1,718	\$1,718	\$1,718

In addition, the following assumptions were also made:

- o Capital Outlay Support will be based on workload.
- o Annual amounts for Stormwater will be shown.

SHA 23 SHOPP funded minor safety projects are not included in minor, but instead are part of the forecast for the SHOPP.

SHA 24 A review of the 2002 SHOPP indicated that Right of Way costs are about 3 percent of total SHOPP capital. Right of Way costs are programmed through 2005-06.

SHOPP Right of Way costs have been adjusted to reflect the estimated level necessary to deliver the SHOPP program.

SHA 25 The TBSRP contingency is assumed to equal the full amount of the \$448 million authorized by AB 1171, although not all of this amount will spend in the five-year FE period. The cash flow of the contingency is based on the Department's TBSRP cash flow projections, developed to meet the requirements of AB 1171. Though expenditures are expected to occur late in the FE period and beyond the FE period, due to the long-term nature of the TBSRP, allocation could be required as early as 2004-05 to allow contract award. See Appendix F for details on the TBSRP.

Toll Bridge Seismic Retrofit Contingency Funding Levels				
2004-05	2005-06	2006-07	2007-08	2008-09
\$-	\$-	\$-	\$-	\$180M

SHA 26 The Commission directed the Department to use annual levels for SHOPP Capital Outlay Support (COS) expenditures such that the total SHOPP program expenditures would match the 2002 FE.

SHA 27 The Commission directed the Department to use annual levels for SHOPP facilities expenditures for State owned office buildings such that the total SHOPP program expenditures would match the 2002 FE.

SHA 28 The Commission directed the Department to use specific annual levels for SHOPP for stormwater treatment projects required by regulatory

agencies, such that the total SHOPP program expenditures would match the 2002 FE. The 201.335 Stormwater Fund in the SHOPP is for “stand alone” Stormwater projects that have no parent highway project that could include the Stormwater improvements. These projects arise primarily because of lawsuit settlements or from an enforcement order from a Regional Water Quality Control Board.

SHA 29 Award savings factors are used to reduce the allocation levels to estimated contract award values. These factors are based on actual experience for the individual fiscal years. For 2003-04 and beyond, award savings are based on actual levels for 1995-96 through 2001-02.

Local Assistance

SHA 30 Local Assistance project delivery is 100 percent over the FE period.

SHA 31 Any OA borrowed from locals in the 2003-04 year will be paid back within the 2003-04 fiscal year. There is no long-term impact to the SHA balance. OA borrowed from locals before 2003-04 is, identified in the FE with a proposed payback timeline of \$50 million per year for four years beginning in 2005-06.

SHA 32 Federal lump sum allocations are not cash flowed. Previously, the lump sum amount was treated as a program level and cash flowed using a multi-year percentage spread. The methodology has changed to reflect the fact that the State no longer has use of that OA, regardless of how the actual cash expenditures occur.

SHA 33 The State and Local percentage split for allocation of federal funds is estimated at 60 percent and 40 percent respectively. The 60/40 split is the result of federal regulation, State statutes, and Commission resolutions regarding apportionment divisions.

SHA 34 No State funds are set aside for Local Seismic Retrofit projects in the 2003-04 Governor’s Budget. This is based on current State policy, and the FE will not include the match for this item for the entire FE period.

SHA 35 The STIP match is assumed to be fully expended within one year. Expenditure levels reflected continuation of all programs authorized under current statutes.

SHA 36 Expenditures for Safe Routes to School assume that funding for this program ends in January 2005.

- The FE reflects the Retrofit Soundwalls program based upon the statutory commitment to fund a specific list of specific soundwall projects (Streets & Highways Code Section 215.5).

Reservations

SHA 37 The amount held for the Prudent Cash Balance is assumed to encompass any need for a reservation for economic uncertainties over the FE period. No additional amount is held for economic uncertainties.

Prior STIP Commitments

SHA 38 STIP expenditure levels reflect a continuation of all projects authorized under the current program and all amendments, based on Commission allocations through September 2003. Unvoted program for 2002-03 and 2003-04 has been shifted to 2004-05.

SHA 39 Since cash expenditures for State Highway Projects are based on contract values, it is necessary to use award savings factors to reduce allocation levels to contract award values. Award savings factors are based on actual experience for the individual fiscal years. For 2003-04 and beyond, award savings are based on actual levels from 1995-96 through 2001-02.

GARVEE Bonds

Grant Anticipation Revenue Vehicles (GARVEE bonds or GARVEEs) are tax-exempt anticipation notes, bonds or other debt instrument financing mechanisms involving the payment of future federal-aid highway funds to retire debt. GARVEEs can be used to finance right of way and/or construction costs to advance critical transportation projects sooner than through traditional funding mechanisms.

SHA 40 Three GARVEE projects are currently programmed. Revenue from the sale of bonds for these projects, if approved, will be dedicated to those projects, and cannot be used for any other purpose. The sale of these GARVEE bonds requires that payment of debt service receive first call against annual federal OA.

- The Commission has programmed three projects for GARVEE funding, totaling \$556.1 million in bond sales.
 - SD-15 Managed Lanes
 - Programmed into the STIP - Included in the Adoption of the 2002 STIP, April 17, 2002
 - Funds from Bond \$178.0 million (10-year bond)
 - Estimated annual debt service \$22.8 million beginning 2004-05
 - Total cost of financing: \$227.7 million
 - SCL-880, 87 Coleman Interchange and Route 87 HOV Lanes
 - Amended into the STIP May 22, 2003

- Funds from Bond \$143.4 million (11-year bond)
 - Estimated annual debt service \$16.1 million beginning 2003-04 (first year \$2.868 million)
 - Total cost of financing: \$187.4 million
 - RIV-215, 60, 91 Interchange
 - Amended into the STIP June 26, 2003
 - Funds from Bond \$238.8 million (two bonds: \$139.3 million in Jan. 2004 and \$100 million in Jan. 2006)
 - Estimated annual debt service \$17.6 million beginning 2004-05 increasing to \$30.4 million in 2006-07
 - Total cost of financing: \$305.5 million
 - Debt service for these projects is included in the STIP expenditures. It is also an obligation against future federal OA. The debt service for these projects is projected at approximately 10 percent of OA available for capital projects for each year of the FE.
- SHA 41 Any plans to use GARVEE, or any project utilizing GARVEE funding, that was approved by the Commission through September 2003, is included as part of the 2004 FE.
- SHA 42 Project costs assume a 1 percent cost of issuance.
- SHA 43 The interest rate for bond debt service used to calculate payments is approximately 4.75 percent.
- SHA 44 The FE assumes that any new GARVEE project(s) is programmed within the identified resources for programming.

Contingency for Delivery Shortfall

A contingency for delivery shortfall would assume that a certain number of projects that are programmed are not delivered, and makes the funds otherwise used by those projects available for additional programming.

SHA 45 The FE does not include a contingency for delivery shortfall.

AB 3090 Projects

Under Government Code Section 14529.7, as amended by AB 3090 (Chapter 1243, Statutes of 1992), the Commission, Department, region, and local agency may enter into either one of two types of arrangements whereby a local agency pays for the delivery of a STIP project with its own funds earlier than the year in which the project is programmed.

SHA 46 The FE assumes that replacement or reimbursement projects for any new AB 3090 projects are within the identified resources for programming.

SHA 47 At the April 3, 2003 Commission meeting, the Commission established an annual statewide AB 3090 cap of \$200 million and a \$50 million cap for any regional agency. The following amounts for cash reimbursements are already programmed, and are included as commitments in the 2004 FE:

AB 3090 Cash Reimbursement Commitment Levels				
2004-05	2005-06	2006-07	2007-08	2008-09
\$18 M	\$44 M	\$75 M	\$44 M	\$44 M

Advanced Project Development Element

SHA 48-50 Dollars available for advancement are up to 25 percent of the amount available for programming in the two years following the FE period. Any funds brought forward for APDE must be considered as part of the programming costs and would therefore further reduce programming in earlier years. Due to low cash balances and the future revenue outlook, the Commission has adopted the assumption that APDE authority will not be used for the 2004 STIP.

PUBLIC TRANSPORTATION ACCOUNT

The Public Transportation Account trust fund supports the costs for the Department's transportation planning, mass transportation and Rail programs and also provides funding for the State's Intercity Rail services operated by Amtrak and STIP projects. Revenues in the account are derived from the sales taxes on gasoline and diesel fuels estimated by the Board of Equalization, with the concurrence of DOF, and transferred quarterly into the account. Funds are also transferred into the account from the SHA and the Aeronautics Account to pay for the Department's highway and airport planning activities that are not payable from sales tax revenue in the PTA. Additionally, the PTA receives a transfer from the SHA of funds not subject to Article XIX of the California Constitution.

Resources Available for Programming

The table below summarizes the programming amounts available per year for the PTA FE. These figures are derived by applying the estimated expenditure rates against the projected cash balance if all program were allocated, and determining the amount of program that can be added (or that must be subtracted) to achieve a target cash balance. Constraints for the conversion included the requirement that the FE rolling cash balance remains as close to the prudent cash balance as possible. Further details of the resources and funds available for programming are presented in the following pages.

Public Transportation Account						
	2004-05	2005-06	2006-07	2007-08	2008-09	Total
Available For Programming (\$ in millions)	\$0	\$215	\$258	\$297	\$297	\$1,068

Highlights

- The beginning balance for 2003-04 of \$9.7 million is calculated on an accrual basis.
- DOF forecasts gasoline and diesel fuel sales tax revenues for 2003-04. Future years reflect the average annual growth of past transfers at an escalation rate of 1.25 percent on gasoline and 4.8 percent on diesel fuel.
- AB 438 authorized the TCRF to borrow \$280 million from the PTA to fund transit projects. The actual loan authorized through the 2001-02 and 2002-03 Budget Acts was \$275 million, which must be repaid to the PTA by 2007-08.
- AB 1750 (Chapter 223, Statutes of 2003) suspends the TIF transfer in 2003-04. The TIF transfer will resume in 2004-05. The 2003-04 suspended transfer of

\$93.4 million will be repaid to PTA from the TDIF by 2008-09 according to AB 1751. Proposition 42 added Article XIXB to the California Constitution. This Article made permanent the transfer of the sales tax on gasoline to the TIF. Of the gasoline sales tax revenue transferred to the TIF, 20 percent of the amount remaining after funds are transferred to the TCRF is allocated to the PTA.

- Due to the fiscal condition of the General Fund, a 20 percent General Fund reduction plan has been proposed by the Administration. If adopted, this plan would reduce the TIF transfer to the PTA in 2004-05 by \$18 million. By statute, TIF revenue is considered a General Fund expenditure.
- AB 1751 eliminates the transfer of spillover in 2003-04 and instead transfers the funds to the General Fund.
- PTA share of the Toll Bridge Seismic Retrofit Program costs per AB 1171 is \$70 million during the FE period.
- The TIF revenue accounts for approximately \$326 million of the available PTA resources over the FE period, and \$46 million in 2004-05 (available resources are one-half of the resources received, since half goes to the STA). If the TIF transfer is redirected, these resources would be lost.

PTA FUND ESTIMATE ASSUMPTIONS

The Public Transportation Account trust fund supports the costs for the Department's transportation planning, mass transportation and Rail programs and also provides funding for the State's Intercity Rail services operated by Amtrak and STIP projects. Revenues in the account are derived from the sales taxes on gasoline and diesel fuels as estimated by the Board of Equalization, with the concurrence of DOF, and transferred quarterly into the account. The retail sales tax on diesel fuel and gasoline sales is transferred to the PTA pursuant to Revenue and Taxation Code (R & T Code) Sections 7102(a)(2) and 7102(a)(3).

Fifty percent of the annual tax revenues and the TIF transfers are appropriated to the State Controller for allocation to local transit operations under the State Transit Assistance (STA) Program. The remaining funds are appropriated to staff and support for mass transportation responsibilities and transportation planning for bus and passenger rail services; STIP projects; planning activities not payable from the SHA; the Commission's activities not payable from the SHA; the Public Utilities Commission's passenger rail safety responsibilities on commuter rail, intercity rail and urban rail transit lines; and the Institute for Transportation Studies of the University of California.

In 2003, the general sales tax in California is 7.25 percent and is allocated to various uses by formula. The 7.25 percent current sales tax is distributed accordingly:

- 0.25 percent flows to the Local Transportation Trust Fund
- 2.0 percent to Local Governments
 - 1.0 percent Cities and Counties General Fund
 - 0.5 percent to Local Revenue Fund
 - 0.5 percent to Local Public Safety Fund
- 4.75 percent to State Retail Sales Tax Fund and a portion of the sales tax goes to the PTA:
 - 4.75 percent tax on the 9 cents Gasoline Excise Tax (R & T Code, Section 7102(a)(2)); and
 - 4.75 percent tax on diesel fuel sales, (R & T Code, Sections 7102(a)(3)) are transferred to the PTA. AB 426 (Chapter 156, Statutes of 2001) exempts diesel fuel from 4.75 percent sales taxes when used in farming activities and food processing, including the transportation and delivery of farm products to the marketplace.

- Remaining 0.25 percent is transferred to the General Fund.
- An amount equal to the Sales Tax on gasoline deposited in the General Fund is transferred to the TIF.

A spillover formula (R & T Code, Section 7102(a)(1)) was added to the law when gasoline was made subject to the sales tax base. At the same time, the General Fund sales tax rate was reduced by 1/4 percent. The concept was that adding gasoline to the sales tax base should not increase General Fund revenues; the revenue loss from the 1/4 percent reduction was supposed to offset the additional revenue from taxing gasoline. To ensure that the General Fund would not benefit from taxing gasoline, the spillover formula was added. The spillover formula essentially states that when the revenue from gasoline sales is greater than 1/4 percent of all other sales, the additional revenue goes to the PTA. AB 1751 eliminates the transfer of spillover in 2003-04 and instead transfers the funds to the General Fund.

Resources

- Proposition 42 added Article XIXB to the California Constitution. This Article also made permanent the transfer of the sales tax on gasoline to the TIF. Of the gasoline sales tax revenue transferred to the TIF, 20 percent of the amount remaining after funds are transferred to the TCRF is allocated to the PTA.
- AB 438 authorized the TCRF to borrow \$280 million from the PTA to fund transit projects. The actual loan authorized through the 2001-02 and 2002-03 Budget Acts was \$275 million, which must be repaid to the PTA by 2007-08.
- Interest income is projected using the SMIF interest rate of 1.859 percent determined by the SCO as of June 30, 2003.

- PTA 1 The beginning balance for 2003-04 of \$9.7 million is calculated on an accrual basis.
- PTA 2 DOF forecasts gasoline and diesel fuel sales tax revenues for 2003-04. Future years reflect the average annual growth of past transfers at an escalation rate of 1.25 percent on gasoline and 4.8 percent on diesel fuel.
- PTA 3 AB 1751 eliminates the transfer of spillover in 2003-04 and instead transfers the funds to the General Fund.
- PTA 4 Federal Trust Funds are matching resources for support functions of eligible mass transit and planning expenditures within State Operations.
- PTA 5 Transfer from the Aeronautics Account per Public Utilities Code, Section 21682.5 is \$30,000 per fiscal year.
- PTA 6 AB 2928 (Chapter 91, Statutes of 2000) mandates the transfer of non-Article XIX revenues from the SHA into the PTA under Streets and

Highways Code Section 183.1. Transfers are based on previous year revenues.

- PTA 7 AB 1750 suspends the TIF transfer in 2003-04. The TIF transfer will resume in 2004-05. The 2003-04 suspended transfer of \$93.4 million will be repaid to PTA from the TDIF by 2008-09 according to AB 1751.
- PTA 8 Streets & Highways Code Section 194 requires the transfer of SHA funds into the PTA to fund planning activities attributable to highways and mass transit guideways. The transfer is determined by formula based on a breakdown of PTA state operations expenditures.
- PTA 9 The Commission adopted the assumption that the PTA transfer to the TBSRA is scheduled as \$30 million in 2005-06 and \$40 million in 2006-07.

The Richmond-San Rafael Bridge replacement is primarily funded with Federal HBRR funds. Federal funds are received on a reimbursement basis, so expenditures are first paid from the TBSRA. Because of the tax-free status of the revenue bonds recently sold for the Toll Bridge Seismic Retrofit Program, the revenue bond funds cannot be used to fund the bridge in anticipation of federal reimbursement. Consequently, the non-bond portion of the TBSRA must fund expenditures on the bridge until federal OA becomes available for reimbursement.

Due to a lower than expected non-bond portion of the TBSRA, the Department recommends an earlier transfer from PTA. The PTA would transfer \$50 million in 2004-05 and \$20 million in 2005-06. The PTA has an adequate balance to support an earlier transfer

Toll Bridge Seismic Retrofit PTA Contribution Transfers				
2004-05	2005-06	2006-07	2007-08	2008-09
\$50M	\$20M	\$-	\$-	\$-

- PTA 10 Based on the monthly fluctuations in the PTA cash balance, the proposed prudent cash balance is \$52 million. This amount is based on analysis of the greatest monthly draw on cash from receipts minus disbursements.

Expenditures

- High-Speed Rail Authority (HSRA) expenditures have increased by \$3.8 million, of which \$1.2 million was federally funded. The remaining \$2.6 million will be expended from the PTA per the Budget Act of 2003.
- In 2001-02, \$91 million was allocated for capital outlay for Intercity rail track improvements on the Pacific Surfliner (\$41 million), the San Joaquin (\$29.4

million), and Capitol Corridor (\$20.6 million) lines. In 2003-04, \$26 million of capital outlay reflects the remaining unencumbered funds.

- PTA 11 Intercity Rail is a part of the State Operations expenditures in the PTA (see Appendix C). In the FE, Intercity Rail is separated to present program expenditures.
- Intercity rail and bus operations base expenditures represent existing services. The base reflects the assumption that increased costs will be offset by higher revenue from ridership gains and fare increases. The base is \$73.1 million for each year of the FE.
 - The Commission directed the Department to hold operations expenditures constant at the 2003-04 level for the five years of the FE. Pending the presentation of proposed funding levels and resulting performance outcomes.
 - Intercity Rail Equipment – Heavy Overhaul. The Department is responsible for a fleet of 17 locomotives and 88 passenger rail cars used in state-supported train service in California. As presented to the Commission in October, the equipment, valued in excess of \$250 million was purchased with rail bond funds approved by California voters. The equipment is subject to a lease/lease-back agreement, which requires the Department to maintain the railcars at full service levels. Most car systems and components are no longer under warranty, and while all car systems undergo regular maintenance, inspection, and repairs, many of them are due for overhaul or rebuild based on their mileage and years of service. The Rail Program provided estimates for the Fund Estimate. Funding for heavy maintenance/overhaul will insure that the equipment lasts its entire forty year design life, reduce life-cycle costs, improve the availability of the equipment, enhance passenger and crew safety and conform with Federal maintenance and safety requirements
 - The Commission accepted the numbers presented by the Department for heavy equipment overhaul. The total estimated amount needed for overhaul over the FE period is \$61.7 million. Funding for 2004-05 would start at \$13.5 million and increase to \$14.0 million by 2006-07 and then decrease over the next two fiscal years to \$8.1 million.
- PTA 12 \$2.8 million is authorized for Bay Area Ferry operations. Future expenditures are escalated by 1.01 percent based on historical expenditures.
- PTA 13 State operations expenditures includes staff and support for mass transportation responsibilities and transportation planning for bus and passenger rail services; planning activities not payable from the SHA; the Commission's activities not payable from the SHA; the Public

Utilities Commission's passenger rail safety responsibilities on commuter rail, intercity rail and urban rail transit lines; and the Institute for Transportation Studies of the University of California.

Pro rata is the amount of administrative costs chargeable to the PTA. An estimated \$1 million of pro rata expenditures was included in 2004-05.

The Commission directed the Department to use the 2003-04 enacted Budget with all post-budget reductions and executive orders to estimate State Operations expenditures, which are escalated at 2 percent annually over the FE period.

TRANSPORTATION INVESTMENT FUND

The Transportation Investment Fund provides new transportation funding as a result of the passage of the Traffic Congestion Relief Act of 2000 established through Chapter 91, Statutes of 2000 (AB 2928) and Chapter 656, Statutes of 2000 (SB 1662). The source of funds is General Fund transfers derived from state sales tax on motor vehicle fuel. This fund commits major resources to 141 designated transportation projects that relieve traffic congestion (the Traffic Congestion Relief Fund), to the STIP to the repair and maintenance of local streets and roads, and to the PTA. The transfers were originally scheduled to begin in 2001-02. The transfers were postponed in 2001-02 and 2002-03, while the 2003-04 Budget Act only provides a partial transfer of \$289 million for transfer to the TCRF. TIF funding for STIP projects is expected to begin in 2004-05.

Resources Available for Programming

The table below summarizes the programming and deprogramming amounts available per year for the TIF FE. These figures are derived by applying the estimated expenditure rates against the projected cash balance if all program were allocated, and determining the amount of program that can be added (or that must be subtracted) to achieve a target cash balance. Constraints for the conversion included the requirement that the FE rolling cash balance remains as close to \$50 million as possible. Further details of the resources and funds available for programming are presented in the following pages.

Transportation Investment Fund						
	2004-05	2005-06	2006-07	2007-08	2008-09	Total
Available For Programming (\$ in millions)	\$324	\$389	\$467	\$512	\$512	\$2,204

Highlights

- Proposition 42 added Article XIXB to the California Constitution. This Article made permanent the transfer of the sales tax on gasoline to the TIF. The measure requires that the gasoline sales tax revenue transferred to the TIF to be used for State and local transportation purposes and the revenues would be allocated as follows:
 - Fixed transfers to the TCRF (\$678 million in 2004-05 through 2006-07, and \$602 million in 2007-08)
 - 20 percent of the remaining revenue to the PTA.
 - 40 percent of the remaining revenue to transportation improvement projects funded in the STIP.

- 40 percent of the remaining revenue to local streets and roads improvements; with half of the amount (20 percent) allocated to counties and half to cities.
- AB 1750 authorizes a partial suspension of the 2003-04 fiscal year General Fund revenue transfer to the TIF.
- The 2004 FE period provides a total of \$1,738 million in the TIF for new programming.
- Due to the fiscal condition of the General Fund, a 20 percent General Fund reduction plan has been proposed by the Administration. If adopted, this plan would reduce the TIF transfer by \$228 million in 2004-05.

TIF FUND ESTIMATE ASSUMPTIONS

The 2003-04 Budget Act partially suspends the General Fund transfer of sales tax on motor vehicle fuel to the TIF in 2003-04. The 2004 FE adjusts for current revenue estimates from DOF. The Commission approved the assumptions used to develop the TIF FE at its September 2003 meeting.

Resources

- The 2003-04 Budget Act provides a partial transfer of \$289 million in revenue, to fund TCRP projects, from the General Fund to the TIF in 2003-04. The remaining \$856 million in revenue will not be transferred, but rather kept by the General Fund in 2003-04. These funds are considered a loan to the General Fund and will be repaid to the TDIF by 2008-09. AB 1750 authorizes a partial suspension of the transfer.
- The level of TIF funding will fluctuate depending on both the price and the amount of gasoline consumed in the state. Revenue estimates are provided by DOF.

TIF 1. TIF revenue is assumed to continue in 2004-05.

TIF 2. There is no need for a TIF prudent cash balance until the 2006 Fund Estimate, because the resources have not been programmed and expenditures are not expected until 2004-05.

Transfers Out

Traffic Congestion Relief Fund

- Statutory quarterly transfers to the TCRF, per Revenue and Taxation Code Section 7104 (c)(1), begin in 2003-04, and end in fiscal year 2007-08.

Local Street and Road Repairs

- Beginning in fiscal year 2004-05, forty percent of TIF revenue remaining after the quarterly transfer to the TCRF will be distributed to cities and counties for transportation purposes pursuant to per Revenue and Taxation Code Section 7104 (c)(4)(5). No transfers will be made in 2006-07 and 2007-08. Effective 2008-09, 40 percent of the total TIF revenue will be transferred annually.

Public Transportation Account

- Twenty percent of TIF revenue remaining after the quarterly transfer to the TCRF will be transferred to the PTA, beginning in fiscal year 2004-05 and ending in fiscal year 2007-08. Beginning in fiscal year 2008-09 twenty percent of the total TIF revenue will be continuously appropriated to the PTA. The

funds will be appropriated by the Legislature, with fifty percent staying in the PTA for transit capital purposes. The Controller will allocate the remaining fifty-percent for State Transit Assistance.

State Highway Account

- The SHA funded apportionments for local roads in the amount of \$354 million (\$154 million in fiscal year 2001-02 and \$200 million in fiscal year 2002-03). This loan eliminated any adverse fiscal impact to cities and counties during the two-year gasoline sales tax revenue deferral period. Cities and counties will not receive allocations during 2006-07 and 2007-08, the two-year extension period of the Transportation Refinancing Plan. The SHA will not be reimbursed directly for its \$354 million loan to local roads. Instead, there will be increased STIP funding in the TIF.

Total Resources

- The amount of resources remaining in the fund after all the statutory quarterly transfers are made, represents the amount of TIF funding available for STIP programming. Because cities and counties will not be participating in the plan during 2006-07 and 2007-08 fiscal year, the amount of funding available to the STIP represents eighty percent of TIF remaining resources in those years. These funds are available for programming for transportation capital improvement projects subject to all of the provisions governed by the STIP. TIF revenues for the STIP will be available beginning in fiscal year 2004-05 and continue annually.

TRANSPORTATION DEFERRED INVESTMENT FUND

The Transportation Deferred Investment Fund was established by AB 1751. The Legislature created the TDIF to facilitate the repayment of funds from the General Fund not transferred from the General Fund to the TIF in 2003-04. The funds shall be transferred to the TDIF by June 30, 2009.

Resources Available for Programming

The table below summarizes the resources available for additional programming in the TDIF. Further details of the resources and funds available for programming are presented in the following pages.

Transportation Deferred Investment Fund						
	2004-05	2005-06	2006-07	2007-08	2008-09	Total
Available For Programming (\$ in millions)	\$0	\$0	\$0	\$0	\$208	\$208

Highlights

- AB 1750 added Section 14557 to the Government Code. This section, pursuant to Article XIX B of the California Constitution, partially suspends the transfer of motor vehicle fuel sales tax revenues from the General Fund to the TIF for the 2003-04.
- AB 1751 added Section 7105 to the Revenue and Taxation Code that requires the General Fund to transfer \$856 million (the amount not transferred to the TIF in 2003-04) to the TDIF by June 30, 2009. The \$856 million is to be transferred in the same manner and amounts that would have been made in 2003-04 from the TIF pursuant to Revenue and Taxation Code 7104 (Chapter 113, Statutes of 2001).

TDIF FUND ESTIMATE ASSUMPTIONS

The Transportation Deferred Investment Fund was established by AB 1751. The Legislature created the TDIF to facilitate the repayment of funds from the General Fund not transferred from the General Fund to the TIF in 2003-04 due to the partial suspension of the transfer pursuant to AB 1750. The funds shall be transferred to the TDIF by June 30, 2009.

Resources

- TDIF funds will be distributed similarly to the TIF distribution: 40 percent of the funds remaining in the TDIF after funds are transferred to the TCRF will be available for STIP programming.

TDIF 1 The General Fund, per AB 1751, must also transfer interest calculated at the Pooled Money Investment Account (PMIA) rate into the TDIF. The current PMIA rate is 2.2 percent. The interest deposited into the TDIF will be allocated to each program element based on the amount that each program did not receive in 2003-04.

TDIF 2 The repayment of the \$856 million is assumed to occur in 2008-09.

Transfers Out

Traffic Congestion Relief Fund

- In fiscal year 2008-09 \$433 million will be transferred to the TCRF, per Revenue and Taxation Code Section 7104 (c)(1).

Local Street and Road Repairs

- In fiscal year 2008-09 \$208 million will be distributed to cities and counties for transportation purposes pursuant to Revenue and Taxation Code Section 7104 (c)(4)(5).

Public Transportation Account

- In fiscal year 2008-09 \$104 million will be transferred to the PTA. The funds will be appropriated by the Legislature, with fifty percent staying in the PTA for transit capital purposes. The Controller will allocate the remaining fifty-percent for State Transit Assistance.

Total Resources

- The amount of resources remaining in the fund after all the statutory quarterly transfers are made, represents the amount of TDIF funding available for STIP programming. These funds are available for programming for transportation

capital improvement projects subject to all of the provisions governed by the STIP. TDIF revenues for the STIP will be available beginning in fiscal year 2008-09.

AERONAUTICS ACCOUNT

The Division of Aeronautics promotes optimum use of existing airports. This is achieved by overseeing a statewide system of safe and environmentally compatible airports that are integrated with surface transportation systems. The majority of the revenues supporting the Division of Aeronautics come from an eighteen-cent per-gallon excise tax on aviation gasoline and a two-cent per-gallon tax on jet fuel. The tax is levied on general aviation aircraft only.

The Division of Aeronautics allocates funds through three programs. The Grants to Local Agencies program provides \$10,000 grants to qualifying airports and is projected to remain at the same level through the FE period. The Acquisition and Development (A&D) program provides grants for eligible projects subject to programming and allocation. The Airport Improvement Program (AIP) matches Federal funds given directly to local agencies.

Resources Available for Programming

The table below summarizes the resources available for additional programming and deprogramming in the Aeronautics Account. Further details of the resources and funds available for programming are presented in the following pages.

Aeronautics Account						
	2004-05	2005-06	2006-07	2007-08	2008-09	FE Total
Available for Programming (\$ in thousands)	-\$7,079	\$1,414	\$1,634	\$1,897	\$2,204	\$69

Highlights

- The Budget Act of 2002 (Chapter 379, Statutes of 2002) contained a transfer of \$6 million to the General Fund, which decreased the amount available for programming in the Aeronautics Account. The Budget Act of 2003 (Chapter 157, Statutes of 2003) contains a \$4.8 million transfer to the General Fund, which also decreased programming.

AERONAUTICS ACCOUNT ASSUMPTIONS

The majority of the revenues supporting the Division of Aeronautics come from an eighteen-cent per-gallon excise tax on aviation gasoline and a two-cent per-gallon tax on jet fuel. The tax is levied on general aviation aircraft only.

Revenues

- Interest on revenues is projected using the SMIF interest rate of 1.859 percent based on the SCO as of June 30, 2003.
- Miscellaneous revenue projections were based on the average of historical sales of documents.

AERO 1 The beginning balance for 2003-04 of \$3.3 million is calculated on an accrual basis.

AERO 2 Revenues generated from the excise tax on aviation gasoline are expected to continue to decline slightly at a rate of 3.2 percent per year, as the industry continues to move toward jet fuel-powered aircraft. Conversely, revenue from the tax on jet fuel is forecast to increase at a rate of 10.9 percent per year. Aviation and jet fuel excise tax revenues for current and future years reflect the average annual growth/decline of past transfers.

AERO 3 Transfer to the PTA per Public Utilities Code Section 21682.5 is \$30,000 per fiscal year.

Expenditures

- Grants to Local Agencies are assumed to be \$1.48 million per year based on current qualifying airports and is projected to remain at the same level through the FE period.
- Federal Trust Funds are matching funds against State Operations for support functions of eligible aeronautics program expenditures. Federal Trust Funds are escalated at the state and local government price deflator for purchases of 2 percent annually over the FE period.

AERO 4 The AIP is based on the Aeronautic Program adopted in 2002. The remainder of the STIP period is shown without AIP spending. The AIP match for these years will be determined when the Commission adopts the next three-year Aeronautics program.

AERO 5 The A&D is based on the Aeronautic Program adopted in 2002. The remainder of the STIP period is shown without A&D spending. The A&D match for these years will be determined when the Commission adopts the next three-year Aeronautics program.

- AERO 6 The President's reauthorization proposal (Flight 100) puts forward the same level of funding for the federal program, with the share for small airports increasing by 3 percent. The FE assumes the President's proposal, and no significant changes to existing programs.
- AERO 7 State Operations include support staff for aeronautics, and planning activities. The Commission directed the Department to use the 2003-04 enacted Budget and all post-budget reductions to estimate State Operations expenditures, which are escalated at the state and local government price deflator for purchases of 2 percent annually over the FE period.

RAIL BOND ACCOUNT

The Clean Air and Transportation Improvement Bond Act of 1990 (Proposition 116) has commonly been referred to as the Rail Bond Account. This voter initiative provided \$1.99 billion for passenger and commuter rail systems, with limited funds available for public mass transit guideways, paratransit vehicles, bicycle and ferry facilities, and a railroad technology museum. This portion of the FE is provided for informational use only. These funds are not available for STIP programming.

- As of June 2003 the Clean Air and Transportation Improvement Bond Act of 1990 (Proposition 116) had \$183 million available for programming.
- Of the \$1.99 billion available from the sales of bonds, 1.8 billion has been committed to projects and support.

Pursuant to Public Utilities Code (PUC), Section 99684 (a), if funds allocated to an agency in Proposition 116 are not expended or allocated by July 1, 2000, the Legislature may, by a two-thirds vote, reallocate those funds for another rail project within that agency's jurisdiction. Additionally, if any of the funds are not expended or encumbered prior to July 1, 2010, the Legislature may, in the same manner, reallocate the funds for any other passenger rail project in the state (PUC 99684 (b)).

CLEAN AIR AND TRANSPORTATION IMPROVEMENT BOND FUND
Proposition 116
(\$ in millions)
As of June, 2003

	STIP TOTAL
Resources	
Bond Authorization	\$1,990.00
Support Costs	
Administrative Support	\$10.00
Committed Program	
Rail Projects	\$1,674.85
Non-Urban County	\$72.73
Competitive Bicycle	\$20.00
Waterborne Ferry Program	\$29.41
<i>Approved Applications*</i>	\$1,796.99
Total Committed Program	\$1,806.99
AVAILABLE FOR PROGRAMMING	\$183.01

* Of this amount, approximately \$1,780.1 million has been allocated.

COUNTY AND INTERREGIONAL SHARE ESTIMATES

The charts on the following pages display STIP county and interregional shares and targets for the 2004 STIP. The share estimates include separate calculations for (1) the 4-year county share period from FY 2004-05 through FY 2007-08 and (2) FY 2008-09, the first year of a new 4-year share period. Annual programming targets are provided separately for Transportation Enhancement (TE) and non-TE projects.

Page 1, Calculation of STIP Shares, FY 2004-05 through FY 2007-08

Unprogrammed Balance (Balance Advanced). These 2 columns identify the current county and interregional share balances being carried forward. These balances include allocations and STIP amendments through November 2003.

FY 2007-08 Committed. This column lists commitments already made in the 2002 STIP for FY 2007-08, including an AB 3090 cash reimbursement for Los Angeles and programmed GARVEE debt service payments for Riverside, San Diego, and Santa Clara counties.

Carryover Balance. This is the net of the first 3 columns.

Formula Distribution. The amounts in this column are distributed among counties and the interregional share in accordance with the formula in statute. The statewide total is calculated so that the sum of the Carryover Balance and the Formula Distribution equals the statewide amount to be deleted for the 4-year period, which is in the next column.

4-Year Share. This is the sum of the Carryover Balance and the Formula Distribution for each county and the interregional share. It includes all estimated funding, including Transportation Enhancement (TE) funds.

4-Year TE Target. This is each share's target for TE programming, distributed among the shares according to the statutory formula for STIP shares.

STIP Share Less TE. This is the full 4-Year Share less the 4-Year TE Target.

Page 2, Calculation of STIP Shares, FY 2008-09

Projects Lapsed. This is the amount of projects lapsed from the STIP during FY 2001-02, FY 2002-03, and to date during FY 2003-04. These amounts are returned to the appropriate share for the following share period.

FY 2008-09 Committed. This column lists commitments already made in the 2002 STIP for FY 2008-09, including an AB 3090 cash reimbursement for Los Angeles

and programmed GARVEE debt service payments for Riverside, San Diego, and Santa Clara counties.

Carryover Balance. This is the sum of the first 2 columns.

Formula Distribution. The amounts in this column are distributed among counties and the interregional share in accordance with the formula in statute. The statewide total is calculated so that the sum of the Carryover Balance and the Formula Distribution equals the statewide amount available for FY 2008-09, which is in the next column.

5th Year STIP Share. This is the sum of the Carryover Balance and the Formula Distribution for each county and the interregional share. It includes all estimated funding, including Transportation Enhancement (TE) funds.

5th Year TE Target. This is each share's FY 2008-09 target for TE programming, distributed among the shares according to the statutory formula for STIP shares.

STIP Share Less TE. This is the full 5th Year STIP Share less the 5th Year TE Target.

Page 3, Summary of Overall Share Balances and Programming Targets

STIP Share Balances, by Share Period. The first 2 columns carryover the shares from the first 2 pages, the 4-Year Share for FY 2004-05 through FY 2007-08 and the 5th Year STIP Share for FY 2008-09.

STIP Share Balances, Total Unprogrammed Share (Share Advanced). These 2 columns represent the sum of share balances for the two periods.

Overall Targets. The next 3 columns represent programming targets for the full 5 years.

- 5-Year TE Target. This is the sum of the TE targets from the first two pages.
- Non-TE Add Share. This share for adding non-TE projects is calculated as the total unprogrammed share (from column 3) less the 5-year TE target (column 5). Where the 5-year TE target exceeds the unprogrammed share, share for adding non-TE is zero.
- Non-TE Add Target. This target for each share is calculated as a proportion of the share in the prior column, so that the statewide sum is equal to the statewide new capacity less the 5-year TE target.

Shift Projects to beyond FY 2007-08. The last 2 columns represent programming targets for shifting current 2002 STIP programming out of the first 4 years, either by programming in FY 2008-09 or by deletion from the STIP altogether.

- Base. For each share, this base is the share advance, less TE, for the period ending FY 2007-08 (see the last column of page 1). The base is zero if there is no share advance.

Target. This target for each share is calculated as a proportion of the base in the prior column, so that the statewide sum is equal to the statewide share advance for the period ending FY 2007-08 (from the last column of page 1).

Page 4, Calculation of Planning, Programming, and Monitoring (PPM) Limitations

Base County Share, FY 2004-05 through FY 2007-08. The first 3 columns display the calculation of the base against which PPM limitations are calculated for this period. The first column lists the formula distribution for the first 3 years of the period from the 2002 STIP. The second column is formula distribution (negative) for the 4-year period from page 1. The third column is the sum of the first two.

Base County Share, FY 2008-09. The 4th column is the formula distribution for FY 2008-09, from page 2.

PPM Percentage. The 5th column is the applicable percentage in statute that applies to each county.

PPM Limitations. The last 2 columns display the limitations for the 4-year period (FY 2004-05 through FY 2007-08) and for FY 2008-09, respectively. They are calculated by applying the PPM percentage to the base shares in the 3rd and 4th columns.

Page 5, Annual Transportation Enhancement (TE) Programming Targets

This table displays the year-by-year STIP targets for projects eligible for Federal Transportation Enhancement (TE) funds. The targets are derived by applying the STIP share formula to the estimated annual amounts of California's Federal TE apportionment.

As described in the STIP guidelines, each target represents a portion of the total county or interregional share. The targets do not limit the amount that may be programmed for TE projects from any particular share in any particular year. At a minimum, the CTC must assure that the statewide TE apportionment is programmed for TE-eligible projects.

Page 6, Annual Programming Targets (Excluding TE)

Programmed in 2002 STIP. The first 4 columns display the amounts programmed in the 2002 STIP that are subject to rescheduling in the 2004 STIP. These amounts exclude projects already allocated, prior cash commitments for GARVEE debt service and AB 3090 cash reimbursements, and amounts programmed for Caltrans project development or right-of-way prior to FY 2003-04. The 4 columns display the total and the amounts for each of the three overlapping fiscal years, FY 2004-05 through FY 2006-07. The amount for FY 2004-05 includes projects programmed for earlier years.

Respread of 2002 STIP Programming. The next 5 columns display year-by-year targets for the respreading of the total from the first column. The statewide target for FY 2008-09 is equal to the statewide amount by which shares are overprogrammed for the period ending FY 2007-08 (the last column on page 1). Each county's target for respreading to FY 2008-09 is then calculated as a proportion of the amount by which the county's share is overprogrammed for the period ending FY 2007-08 (see the last 2 columns of page 3). Counties with no share advance are assigned a zero target for respreading current projects to FY 2008-09. The statewide targets for FY 2004-05 through FY 2007-08 are the amounts of statewide programming capacity available less the annual TE targets. For each county, the year-by-year targets for respreading 2002 STIP projects are calculated as a proportion of the statewide target.

New, FY 2008-09. The far right column represents a target for new capacity. The statewide target is the statewide new programming capacity less the TE target. The target for each share is calculated as proportion of the unprogrammed balance less the TE target (see page 3).

DRAFT 2004 STIP FUND ESTIMATE COUNTY AND INTERREGIONAL SHARES

Calculation of STIP Shares, 2004-05 through 2007-08
(\$1,000's)

County	2002 STIP Carryover, FY 2004/05 - FY 2007/08				2004 STIP, FY 2004/05 - FY 2007/08

DRAFT

APPENDIX D – STATUTES REGARDING THE STIP FUND ESTIMATE

California Government Code

§14524. (a) Not later than July 15, 2001, and July 15 of each odd-numbered year thereafter, the department shall submit to the commission a five-year estimate pursuant to Section 164 of the Streets and Highways Code, in annual increments, of all federal and state funds reasonably expected to be available during the following five fiscal years.

(b) The estimate shall specify the amount that may be programmed in each county for regional improvement programs pursuant to paragraph (2) of subdivision (a) of Section 164 of the Streets and Highways Code and shall identify any statutory restriction on the use of particular funds.

(c) For the purpose of estimating revenues, the department shall assume that there will be no changes in existing state and federal statutes. Federal funds available for demonstration projects that are not subject to federal obligational authority, or are accompanied with their own dedicated obligational authority, shall not be considered funds that would otherwise be available to the state and shall not be included in the fund estimate.

(d) The method by which the estimate is determined shall be determined by the commission, in consultation with the department, transportation planning agencies, and county transportation commissions.

§14525. (a) Not later than August 15, 2001, and August 15 of each odd-numbered year thereafter, the commission shall adopt a five-year estimate pursuant to Section 164 of the Streets and Highways Code, in annual increments, of all state and federal funds reasonably expected to be available during the following five fiscal years.

(b) The estimate shall specify the amount that may be programmed in each county for regional improvement programs under paragraph (2) of subdivision (a) of Section 164 of the Streets and Highways Code and shall identify any statutory restriction on the use of particular funds.

(c) For the purpose of estimating revenues, the commission shall assume that there will be no change in existing state and federal statutes. Federal funds available for demonstration projects that are not subject to federal obligational authority, or are accompanied with their own dedicated obligational authority, shall not be considered funds that would otherwise be available to the state and shall not be included in the fund estimate.

(d) If the commission finds that legislation pending before the Legislature or the United States Congress may have a significant impact on the fund estimate, the

commission may postpone the adoption of the fund estimate for no more than 90 days. Prior to March 1 of each even-numbered year, the commission may amend the estimate following consultation with the department, transportation planning agencies, and county transportation commissions to account for unexpected revenues or other unforeseen circumstances. In the event the fund estimate is amended, the commission shall extend the dates for the submittal of improvement programs as specified in Sections 14526 and 14527 and for the adoption of the state transportation improvement program pursuant to Section 14529.

§14525.1. The department and the commission shall use an inflation rate that has been established by the Department of Finance. The Department of Finance shall consult with the Legislative Analyst and the Department of Transportation when calculating the inflation rate for this purpose.

§14529. (a) The state transportation improvement program shall include a listing of all capital improvement projects that are expected to receive an allocation of state transportation funds under Section 164 of the Streets and Highways Code, including revenues from transportation bond acts, from the commission during the following five fiscal years. It shall include, and be limited to, the projects to be funded with the following:

- (1) Interregional improvement funds.
- (2) Regional improvement funds.

(b) For each project, the program shall specify the allocation or expenditure amount and the allocation or expenditure year for each of the following project components:

- (1) Completion of all permits and environmental studies.
- (2) Preparation of plans, specifications, and estimates.
- (3) The acquisition of rights-of-way, including, but not limited to, support activities.
- (4) Construction and construction management and engineering, including surveys and inspection.

(c) Funding for right-of-way acquisition and construction for a project may be included in the program only if the commission makes a finding that the sponsoring agency will complete the environmental process and can proceed with right-of-way acquisition or construction within the five-year period. No allocation for right-of-way acquisition or construction shall be made until the completion of the environmental studies and the selection of a preferred alternative.

(d) The commission shall adopt and submit to the Legislature and the Governor, not later than April 1 of each even-numbered year thereafter, a state transportation improvement program. The program shall cover a period of five years, beginning July 1 of the year it is adopted, and shall be a statement of intent

by the commission for the allocation or expenditure of funds during those five years. The program shall include projects which are expected to receive funds prior to July 1 of the year of adoption, but for which the commission has not yet allocated funds.

(e) The projects included in the adopted state transportation improvement program shall be limited to those projects submitted or recommended pursuant to Sections 14526 and 14527. The total amount programmed in each fiscal year for each program category shall not exceed the amount specified in the fund estimate adopted under Section 14525.

§14529.01. (a) It is the intent of the Legislature to facilitate project development work on needed transportation projects to produce a steady flow of construction projects by adding an advance project development element to the state transportation improvement program, beginning with the 2000 State Transportation Improvement Program.

(b) The advance project development element shall include only project development activities for projects that are eligible for inclusion in a state transportation improvement program.

(c) The fund estimate for each state transportation improvement program shall designate an amount to be available for the advance project development element, which shall be not more than 25 percent of the programmable resources estimated to be available for the first and second years following the period of the state transportation improvement program, subject to the formulas in Sections 164, 188 and 188.8 of the Streets and Highways Code.

(d) The department, transportation planning agencies, and county transportation commissions may nominate projects to the commission for inclusion in the advance project development element through submission of the regional transportation improvement program and the interregional transportation improvement program.

(e) The funds programmed in the advance project development element may be allocated within the period of the state transportation improvement program without regard to fiscal year.

(f) Not later than September 1, 2002, the commission shall report to the Governor and the Legislature on the impact of adding the advance project development element described in subdivision (a) with the funding level described in subdivision (c). The report shall evaluate whether the element has proven effective in producing a steady, deliverable stream of projects and whether addition of the element has resulted in any detrimental effects on the state's transportation system.

(g) The commission may develop guidelines to implement this section.

Streets and Highways Code

§163. The Legislature, through the enactment of this section, intends to establish a policy for the use of all transportation funds that are available to the state, including the State Highway Account, the Public Transportation Account, and federal funds. For the purposes of this section, "federal funds" means any obligational authority to be provided under annual federal transportation appropriations acts. The department and the commission shall prepare fund estimates pursuant to Sections 14524 and 14525 of the Government Code based on the following:

(a) Annual expenditures for the administration of the department shall be the same as the most recent Budget Act, adjusted for inflation.

(b) Annual expenditures for the maintenance and operation of the state highway system shall be the same as the most recent Budget Act, adjusted for inflation and inventory.

(c) Annual expenditure for the rehabilitation of the state highway system shall be the same as the most recent Budget Act, or, if a long-range rehabilitation plan has been enacted pursuant to Section 164.6, it shall be based on planned expenditures in a long-range rehabilitation plan prepared by the department pursuant to Section 164.6.

(d) Annual expenditures for local assistance shall be the amount required to fund local assistance programs required by state or federal law or regulations, including, but not limited to, railroad grade crossing maintenance, bicycle transportation account, congestion mitigation and air quality, regional surface transportation programs, local highway bridge replacement and rehabilitation, local seismic retrofit, local hazard elimination and safety, and local emergency relief.

(e) After deducting expenditures for administration, operation, maintenance, local assistance, safety, and rehabilitation pursuant to subdivisions (a), (b), (c), and (d), and for expenditures pursuant to Section 164.56, the remaining funds shall be available for capital improvement projects to be programmed in the state transportation improvement program.

§164. (a) Funds made available for transportation capital improvement projects under subdivision (e) of Section 163 shall be programmed and expended for the following program categories:

(1) Twenty-five percent for interregional improvements.

(2) Seventy-five percent for regional improvements.

(b) Sixty percent of the funds available for interregional improvements under paragraph (1) of subdivision (a) shall be programmed and expended for improvements to state highways that are specified in Sections 164.10 to 164.20,

DRAFT

inclusive, and that are outside the boundaries of an urbanized area with a population of more than 50,000, and for intercity rail improvements.

(c) Not less than 15 percent of the amount of funds programmed under subdivision (b) shall be programmed for intercity rail improvement projects, including separation of grade projects.

(d) Funds made available under paragraph (1) of subdivision (a) shall be used for transportation improvement projects that are needed to facilitate interregional movement of people and goods. The projects may include state highway, intercity passenger rail, mass transit guideway, or grade separation projects.

(e) Funds made available under paragraph (2) of subdivision (a) shall be used for transportation improvement projects that are needed to improve transportation within the region. The projects may include, but shall not be limited to, improving state highways, local roads, public transit, intercity rail, pedestrian, and bicycle facilities, and grade separation, transportation system management, transportation demand management, soundwall projects, intermodal facilities, safety, and providing funds to match federal funds.

APPENDIX E – PTA STATE OPERATIONS DETAILS

State Operations expenditures in the PTA includes Rail and Mass Transportation Staff and Support; Planning Staff and support; and Administration and Technical Services. Intercity Rail is part of Rail and Mass Transportation Staff and Support Expenditures but in the Fund Estimate, Intercity Rail are separated to present program expenditures.

The Commission directed the Department to use the 2003-04 enacted Budget with all post-budget reductions and executive orders to estimate State Operations expenditures, which are escalated at the state and local government price deflator for purchases of 2 percent annually over the FE period.

- 2003-04 - The Budget Act of 2003 allocated \$123.3 million for State Operations expenditures. Recent actions have reduced the amount of State Operations for the PTA. Pursuant to the provision of Control Section 4.10 of the Budget Act of 2003, appropriations for State Operations were reduced by \$2.6 million in the PTA.
- 2004-05 - Pro rata is the amount of administrative costs chargeable to the PTA. An estimated \$1 million of pro rata expenditures was included in 2004-05.

APPENDIX F – TOLL BRIDGE SEISMIC RETROFIT

In response to the Department’s 2001 Toll Bridge Seismic Retrofit Annual Report, the Legislature passed AB 1171 (Chapter 907, Statutes of 2001) which provided additional expenditure authority for the Department. AB 1171 established the State-Owned Toll Bridge Seismic Retrofit Financing Act of 2001, recognizing the increased cost of the bridges and provided the authority to finance additional capital through bonds and/or direct federal loans. The bill provides new funding sources to meet the new program cost of \$4.637 billion. The funding includes the \$2.620 billion originally provided in statute, and new sources totaling \$2.017 billion. AB 1171 recognized the potential for increased project costs and included an additional contingency of \$448 million. The funding provided in AB 1171 is as follows:

Funding Provided in AB 1171 for TBSRP (Dollars in millions)	
Fund Source	Amount
Seismic Bond Act of 1996	\$650
Surplus from Phase II (Seismic Bond Act of 1996)	\$140
Vincent Thomas TBRA	\$15
San Diego-Coronado TBRF	\$33
Seismic Surcharge (Bond principal amount)	\$2,282
State Highway Account	\$1,437
- State: \$795	
- Federal (HBRR): \$642	
Public Transportation Account	\$80
Total	\$4,637
ITIP/SHOPP/Federal Contingency	\$448
Total with Contingency	\$5,085

Major Fund Sources and Contributions from Other Funds

Bond Financing

AB 1171 authorized the Department to use financing mechanisms such as bonds, loans, and commercial paper to meet the cash flow needs of the program. AB 1171 authorized a principal amount of \$2.282 billion to be financed with the Seismic Surcharge (\$1 per toll paying vehicle). Some of the Seismic Surcharge has and will be spent directly on construction, and a portion will be used for financing. Based on current and projected expenditure schedules, \$1.160 billion in Toll Revenue Bonds were issued in August 2003. The bond proceeds will fund a portion of the project’s capital expenditures needs for the ensuing 18 months. The pricing and sale of the Toll Bridge Seismic Retrofit Revenue Bonds were completed on August 5, 2003. The bonds were assigned the following ratings: Aa3, AA and AA- by Moody's, Fitch and Standard and Poor's respectively. Bond insurance, which

provided an Aaa/AAA/AAA rating, was used to further reduce the net interest cost on all but two maturities, which were more economic to leave uninsured.

The sale generated \$1.062 billion of net proceeds for the Project. The bond issue settled on August 20th, 2003 at which time the net proceeds of the transaction were deposited in the TBSRA Construction Fund. To complete the financing plan, another interim financing in the form of either Toll Revenue Bonds or Commercial Paper is planned during the 2004-05 fiscal year. This sale will generate about \$500 million from bond proceeds to complete construction of the Seismic Retrofit projects. The Department retains the option of selling long-term Toll Revenue Bonds to retire the interim financing.

SHA and PTA

AB 1171 required the use of funds from the PTA and SHA. The amounts for SHA and PTA were somewhat flexible in AB 1171, provided that the two funds contributed a total of \$875 million. The Department has determined that the SHA will contribute \$795 million, and \$80 million will come from the PTA.

- The 2002 FE included the full impact of the SHA transfer to the TBSRA. However, since adoption of the 2002 FE the transfer of approximately \$350 million has been moved from 2001-02 and 2002-03 to 2005-06 and 2006-07. The new transfer schedule is included in the 2004 FE.
- The 2002 FE included the full impact of the PTA. However, since adoption of the 2002 FE the transfer of approximately \$70 million has been moved from 2001-02 and 2002-03 to 2005-06 and 2006-07. The new transfer schedule is included in the 2004 FE.

Federal HBRR Funds

AB 1171 required the use of \$642 million in HBRR funds. HBRR funds have been fully allocated by the Commission, and to date \$250 million has been expended. The schedule for utilization of the HBRR funds is shown below, as detailed in the Department's latest financing plan.

- HBRR used for the TBSRP is included in the 2004 Fund Estimate as a reduction to available OA.

Contingency Funds

AB 1171 authorized an additional \$448 million in federal or state funds, if necessary for completion of the San Francisco-Oakland Bay Bridge. The 2004 FE assumes that the contingency used will be to equal the full amount of the \$448 million authorized by AB 1171. The schedule and cash flow of the contingency is based on the Department's TBSRP Plan of Finance. Because of the large size and

DRAFT

length of the TBSRP projects, allocation of the contingency could be required as early as 2003-04 to allow award of retrofit contracts.

The table below shows the current schedule of contributions of all funds authorized by AB 1171, including the contingency.

Schedule of Contributions to the Toll Bridge Seismic Retrofit Program
(\$ in millions)

	02-03 and Prior	03-04	04-05	05-06	06-07	07-08	08-09	09-10	10-11	11-12	Total
Toll Revenue (Principal)	\$663	\$1,062	\$500	\$57							\$2,282
Proposition 192	\$779	\$6	\$5								\$790
San Deigo Coronado TRA	\$33										\$33
Vincent Thomas TRA								\$15			\$15
SHA	\$445			\$342	\$8						\$795
PTA	\$10		\$50	\$20							\$80
HBRR	\$250		\$50	\$100	\$100	\$100	\$42				\$642
Contingency							\$180	\$85	\$115	\$68	\$448
Total	\$2,180	\$1,068	\$605	\$519	\$108	\$100	\$222	\$100	\$115	\$68	\$5,085

Current Status

The table below shows the historical TBSRP expenditures by year and by bridge.

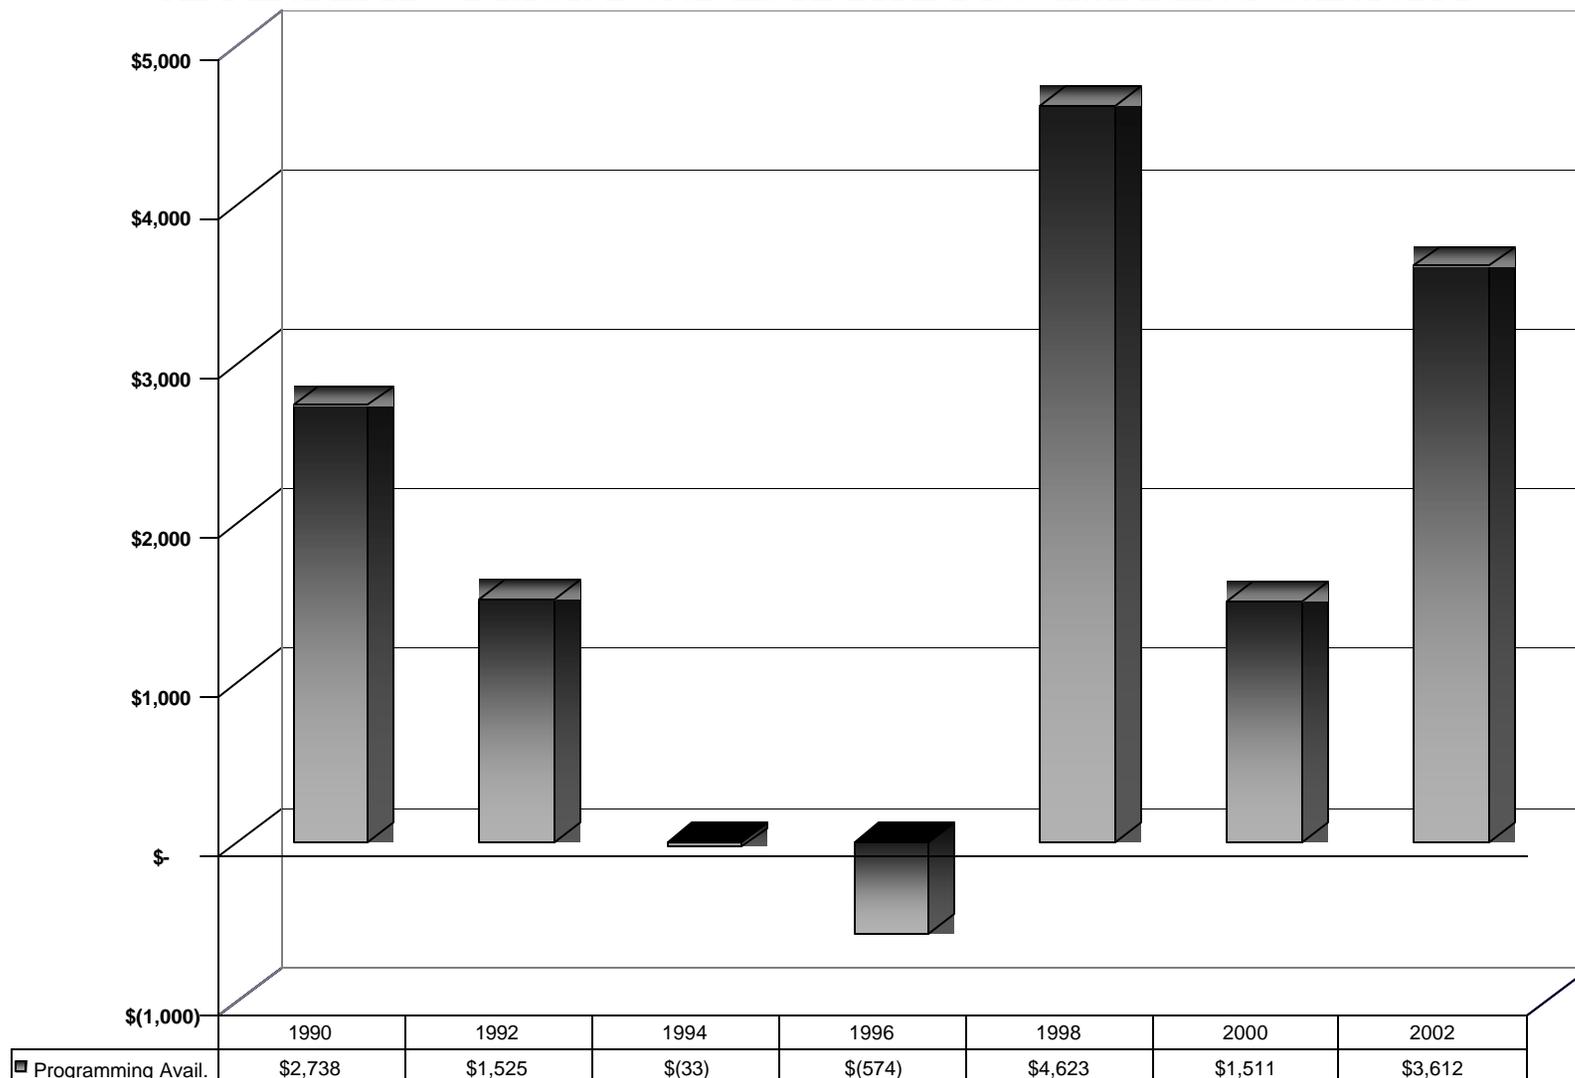

TBSRP Annual Expenditure Detail through 2002-03
(\$ in millions)

Bridge	93-94	94-95	95-96	96-97	97-98	98-99	99-00	00-01	01-02	02-03	Total
SFOBB - East	\$1.6	\$5.1	\$14.8	\$24.5	\$25.7	\$54.3	\$47.4	\$44.4	\$69.6	\$366.2	\$653.0

DRAFT

APPENDIX H - PRIOR FUND ESTIMATE PROGRAMMING CAPACITY

APPENDIX I – FUND ESTIMATE ASSUMPTION CHANGES

Following the adoption of the 2004 FE Assumptions by the Commission at the September meeting, minor changes were made to certain assumptions. Details of each change made are provided below.

SHA 12 - TCRF Loan Repayment

Adopted Assumption:

- DOF has not yet developed a repayment schedule for the remaining \$477 million loaned from the SHA to the TCRF. Assume repayment in the last year outlined in statute.
- The Commission directed the Department to include estimated revenue from AB 487 as partial payback.

Change:

- The SHA paid \$46 million in 2002-03 for TCRF Capital Outlay Support, \$14 million below the forecast of \$60 million. Therefore, the total loan amount is \$563 million, not \$577 million.
- The SHA is scheduled to receive \$100 million payment on the loan in 2003-04, leaving a balance of \$463 million.
- AB 487 was vetoed, and so is not included in the FE.

SHA 15 - Federal Revenues

Adopted Assumption:

- Use the mid-point between the House and Senate appropriations proposals in 2003-04 and an escalation factor of 2 percent annually beginning in 2004-05.

Change:

- This assumption has been changed due to the extension of TEA-21. OA for 2003-04 has been set equal to the actual received in 2002-03.
- The FE uses the mid-point between the House and Senate appropriations proposals in 2004-05, and an escalation factor of 2 percent annually beginning in 2005-06.

Adopted Assumption:

- The Commission directed the Department to factor in the impact of ethanol use to OA receipts.

Change:

- The reduction in the state share of OA due to lower taxes on ethanol is expected to begin in 2005-06.

SHA 16 - Advanced Construction

Adopted Assumption:

- The Commission adopted the assumption to dedicate \$200 million of OA per year beginning in 2004-05 to apply against the AC balance in order to reduce the balance by \$1 billion in the FE period.

Change:

- Instead of reserving \$200 million off the top, the Department will accomplish this by aligning new program with the projected State and federal revenue capacity.
- The methodology adjusts the level of federalization of new projects to ensure that new federal commitments remain within the level of federal authority necessary to reduce AC by the desired amount.

SHA 24 - SHOPP Right of Way

Adopted Assumption:

- A review of the 2002 SHOPP indicated that Right of Way costs are about 3 percent of total SHOPP capital. Right of Way costs are programmed through 2005-06. For later years, it is assumed that Right of Way will be 3 percent of the accepted SHOPP level.

Change:

- SHOPP Right of Way costs have been adjusted to reflect the estimated level necessary to deliver the SHOPP program.

Payback of Local OA Borrowed Before 2003-04

Adopted Assumption:

- No assumption was adopted, however, the September Book Item stated that payback of OA borrowed in prior years would be considered in the 2006 FE.

Change:

- Any OA borrowed from locals before 2003-04 is scheduled to be repaid at \$50 million per year over four years beginning in 2005-06.

Cash Flow of Existing CommitmentsAdopted Assumption:

- Previously, the SHOPP and STIP program levels were converted to cash expenditures using the following annual percentages:
 - SHOPP: 36%, 40%, 15%, 6%, and 3%
 - STIP: 17%, 40%, 24%, 14%, and 5%.

Change:

- Consistent with the cash forecast, the cash flow for voted projects has been developed based on going and pending contract information from the Office Engineer.

PTA 9 - PTA Transfer to TBSRAAdopted Assumption:

- The Commission adopted the assumption that the PTA transfer to the TBSRA would be scheduled as \$30 million in 2005-06 and \$40 million in 2006-07.

Change:

- The Richmond-San Rafael Bridge replacement is primarily funded with Federal HBRR funds. Federal funds are received on a reimbursement basis, so expenditures are first paid from the TBSRA. Because of the tax-free status of the revenue bonds recently sold for the Toll Bridge Seismic Retrofit Program, they cannot be used to fund the bridge in anticipation of federal reimbursement. Consequently, the non-bond portion of the TBSRA must fund expenditures on the bridge until federal OA becomes available for reimbursement.

Due to a lower than expected non-bond portion of the TBSRA, the Department adjusted the assumption for an earlier transfer from PTA. The FE now assumes the PTA would transfer \$50 million in 2004-05 and \$20 million in 2005-06. The PTA has an adequate balance to support an earlier transfer.

PTA 11 - Intercity Rail Equipment - Heavy OverhaulAdopted Assumption:

- The adopted assumption presented expenditures at the budget level in the 2003-04 base year and escalated by 2 percent per year. This assumption would under-fund this program by \$8.3 million during the FE period and the Rail Program would be unable to meet existing rebuild commitments.

Change:

- The Rail Program, per the Commission Staff recommendation provided new Heavy Overhaul estimates for the FE. These estimates will provide funding for heavy maintenance/overhaul and insure the equipment lasts its entire forty year design life, reduce life-cycle costs, improve the availability of the equipment, enhance passenger and crew safety and conform with Federal maintenance and safety requirements.
