On February 18, 2010, a culvert at this location separated causing the failure of the embankment and loss of the roadway shoulder. This project is to install a lining inside the 48-inch culvert, reconstruct the embankment, repair the shoulder and damaged portion of the travel way, and provide traffic control as necessary. Initial G-11 Allocation 02/26/10: \$290,000. (Additional \$10,000 was allocated for right of way purposes.)	0A0001 01-2295 SHOPP Emergency	2009-10 302-0042 SHA 20.20.201.130	\$290,000

Due to heavy rain in early 2010, a large slide occurred at this location covering the entire roadway with rock and soil debris up to 40 feet high causing roadway closure. This project is to remove rock and debris, provide traffic control, construct a rock catchment area, and reconstruct the damaged roadway. Initial G-11 Allocation 03/02/10: \$990,000. Due to heavy rain in January 2010, a slide movement occurred at this location causing settlement in the roadway. In February 2010, the slide movement began to accelerate as a result of high ocean waves. This project is to re-pave the roadway and shift traffic lanes away from the slide area as an interim solution. A programmed project (EA 04-4S570) to build a retaining wall at this location is expected to begin construction in 2011. Initial G-11 Allocation 03/02/10: \$750,000. Due to early 2010 heavy rain, increased flows at Pocket Canyon Creek scoured the toe of a concrete retaining wall causing it to fail. As a result, the side slope supporting the roadway also failed leaving a void that is undermining the highway pavement. This project is to reconstruct the roadway embankment as an interim repair. 6 \$75,000 Santa Barbara 05U-SB-135 10.5	Near Santa Maria, at approximately 1 mile south of Route 1. On January 21, 2010, following a series of heavy rainstorms, an existing 12-foot diameter structural steel plate pipe culvert failed causing storm water to flow underneath it leading to the undermining of the roadway and collapse of the two northbound lanes. Initial allocation was to replace the culvert and repair the roadway. This supplemental is due to the use of slurry cement backfill instead of native soil to cover the new 14-foot structural steel plate pipe culvert. Initial G-11 Allocation 01/26/10: \$895,000. Heavy rain in early 2010 saturated coastal mountain slopes causing erosion and resulting in an increasing volume of debris clogging catch basins, drainage systems, and roadway shoulders. This project is to remove and haul debris to approved disposal sites, repair small slides and slip-outs, and clear and repair damaged debris basins and drainage systems in order to create debris storage capacity before continuing winter storms cause additional mud and debris runoffs. The slide debris reached 40 feet high and over 100 feet long and closed both transition roadways. This project is to remove slide debris, grade back the failed slope to prevent additional slide expansion, and repair damaged roadway facilities. Initial G-11 Allocation 03/02/10: \$3,250,000. Theft of copper wiring from highway lighting, ramp metering, sign illumination, and sprinkler systems has recently accelerated causing loss of electrical power at various highway locations and interchanges and resulting in nighttime disruptions of safe and efficient traffic flow. This project is to replace the equivalent of 180,000 feet of stolen copper wire, and implement wire theft deterrent measures at the various affected sites. Recent high ocean surf conditions have dislodged and washed away several sections of heavy rock slope shore protection along this segment of highway. The high surf also destroyed the outlet sections of an existing 36-inch corrugated metal pipe drainage system, washed out the exposed roadway support slope, and undermined more than 500 feet of the adjacent roadway at three locations. This project is to repair the eroding shore by placing additional rock slope protection, and repair drainage system and roadway support slope.
