1 \$2,100,000 Humboldt 01-Hum-96 27.0	Near Somes Bar, 1.1 miles west of Aiken Creek Bridge (Bridge # 004-0059). Heavy rain in late March 2012 resulted in a slipout at this location. The slipout caused a complete loss of both travel lanes. Temporary repairs with gravel were made to re-establish the travel lanes. The initial allocation was to construct a 100-foot retaining structure, de-water the roadway slope, place erosion control measures, and provide traffic control as necessary. This supplemental is due to the finding that the slipout is nearly as three times as originally observed and will require a 266-foot long retaining structure to stabilize the roadway. Storm events on March 17, 2012 accelerated the failure of more than 200 Portland cement concrete (PCC) pavement slabs which became destabilized, settled and broken resulting in loose debris and large potholes. The initial allocation was to replace the worst damaged slabs. This supplemental allocation is due to heavy rain during construction that caused additional pavement damage. This location is within the limits of a future roadway rehabilitation project expected to begin construction in 2015 (EA: 06-0P1401). Improvements along this street corridor will also help to revitalize disadvantaged neighborhoods adjacent to protect limits by reducing blight.
