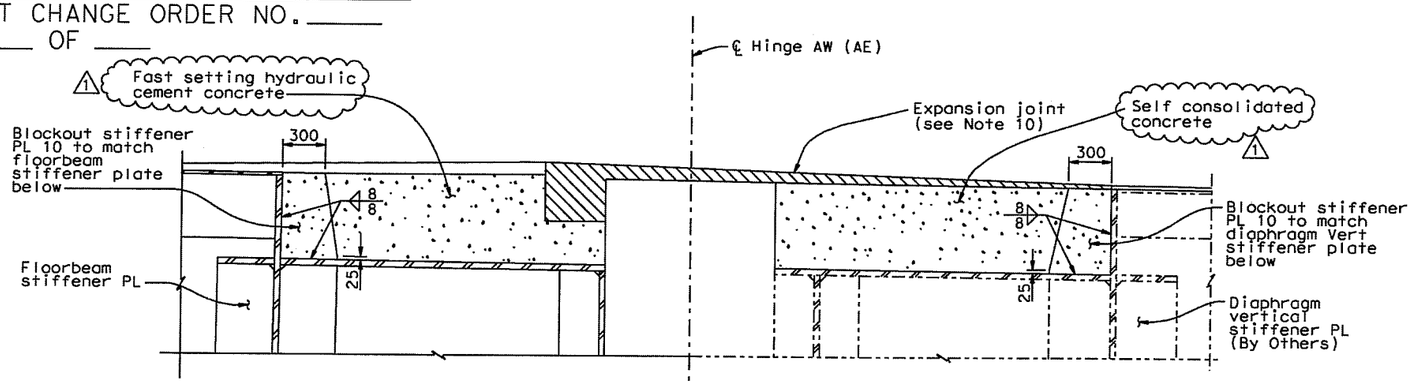
SECTION A-A (Orientation of Expansion Joint shown for Eastbound, see Note 10)
1:40



DETAIL A
1:20

NOTES:

1. For locations and alignment of floor beams at PP127, PP127.5 and PP128, see "Girder Framing Plan No.4" sheet.
2. Bulkhead at PP127.3 is parallel to the floor beam at PP 127.
3. Floorbeam at PP 128.3 is parallel to ℄ Hinge A. For locations, see "Hinge A Geometry Layout" sheets.
4. For expansion joint details, see "Hinge A Expansion Joint Details" sheets.
5. Pipe sleeve shall be parallel to pipe beam.
6. For restraint bracket details, see "Hinge A Details No.9" sheet.
7. For girder details east of PP 128.3, see "Girder At East Transition No.8" and "Floorbeam At East Transition No.10" sheets.
8. For hinge bearing support location, see "Hinge A Geometry Layout" sheets.
9. For "Hinge A Details" sheets, the Contractor shall verify all controlling field dimensions before ordering or fabricating any material.
10. For orientation of expansion joints, see "Seismic Joint" plans.

CONTRACT CHANGE ORDER NO. 25
SHEET ___ OF ___

NOTES: 1

1. Install Seismic Joint after erecting bike path, placing deck overlay up to the limit of the blockout, utilities and barrier.
2. Use caulking or sealant between gutter and concrete.
3. Seismic Joint to be used in conjunction with closure pour. Closure pour shall not be placed until final deck surface is within the tolerance specified.
4. Thirty-Seven mm holes in neoprene sheets shall be drilled or punched so that the neoprene is not distorted at the time of installation. See "CHANNEL ASSEMBLY DETAILS NO. 2" sheet.
5. For deck plate details see " DECK PLATE DETAILS NO. 1" and " DECK PLATE DETAILS NO. 2" sheets.
6. For mild reinforcement in blockout areas, see "REINFORCMENT DETAILS" sheet. (Not all mild reinforcement is shown for clarity.
7. For channel assembly details, see "CHANNEL ASSEMBLY DETAILS NO 1" and "CHANNEL ASSEMBLY DETAILS NO 2".
8. Place deck plate, support plate and channel assembly so that full bearing is achieved between i) deck and support plates and ii)deck plate and channel assembly.
9. Self-consolidating concrete shall be used in (support) plate blockout.
10. Fast setting hydraulic cement concrete shall be used in channel assembly blockout.
11. Catwalk for maintenance crew within seismic gap not shown.
12. Gutter shall be placed on the same side as the support plate, (75 mm minimum from the deck plate, at a 2% slope).
13. Lo is the length of ground deck overlay and is equal to d/(Support & slope - Profile grade).
14. For support plate details see "SUPPORT PLATE DETAILS" sheet.

SCHEMATIC CONSTRUCTION SEQUENCE
NO SCALE

- Place anchor studs and mild reinforcement in blockout areas.
- Install temporary steel frame.
- For each joint module, place support plate at elevations and locations shown on plans.
- Align all joint modules together and secure them.
- Pour self consolidating concrete (SCC) below support plate.
- Let SCC set and reach 14 MPa strength min.
- Remove stand pipes and clean top surface of support plates.

- Steel frame supports are changed so frame is tied down on channel assembly side and is free to move on support plate side.
- For each joint module, place channel assembly and deck plate at elevations and locations shown on plans. Channel assembly sits suspended from steel frame. Deck plate sits on support plate and channel assembly. Make adjustments so full bearing between deck and support plates is achieved.
- Align all joint modules together and secure them.
- Pour Fast Setting Hydraulic Cement Concrete (FSHCC) in the channel assembly blockout area.
- Let FSHCC set for at least 3 hours minimum.
- Tighten bolts and place cotter pins.
- Install gutter.
- Place deck overlay.
- Seal joint with silicone seal.

NOTES:

1. Not all reinforcement and joint details are shown for clarity.

THE CONTRACTOR SHALL VERIFY ALL CONTROLLING FIELD DIMENSIONS BEFORE ORDERING OR FABRICATING ANY MATERIAL.
