Subject: Brief Report-May 23, 2007

- Visited fabrication plant in the afternoon to watch ZPMC's welders working on tower mock-ups for ABF. Three mock-ups are at elevations 77m, 89m, and 114m. A lot of activities, welding, pre-heating, and lifting. I did not get too close to all the mock-ups because they are ABF's mock-ups.
- Visited an outdoor area to look at steel plates that are designated for SAS. Steel plates are identified at one end, one corner of the same end, and one side. Steel plates are varied in thickness, from 18mm to 70mm. Width and length are also varied. Most of the steel plates at 3m wide by 10m long. It seems like ZPMC was moving the plates to other location for storage.

Next (today): Discussion with ABF on WQCP at ZPMC's main office
