Week of 10/15/12-10/19/12
04-0120F4

10/15/2012 Monday Fine

I attended staff meeting and checked details on skirting around base of tower. Mohammad and I went to the tower to join Dan McNichol of ABF to check on items on punch list on lift 4 worked by ZPMC. I checked the façade with two openings. It confirms that vertical reinforcing stiffeners were installed per shop drawings and only about 1/2 inches available for locking.

10/16/2012 Tuesday Fine

I continued checking details on skirting around base of tower.

10/17/2012 Wednesday Fine

I continued checking details on skirting around base of tower.

10/18/2012 Thursday Fine

I attended safety meeting and started working on tower saddle ladder that will address SM&I's comments. I told Dan McNole that paint on holes of access doors is too thick and shafts of cam locks cannot be installed. Dan told me that he talked to Michelle Chui about the issue couple months ago.

10/19/2012 Friday Fine

I continued working on possible modification of tower saddle ladder. Michelle told me that she went out with Dan to check out the installation cam lock problem. She just took some pictures and recorded the situation but no solution was discussed.
