<b>Diary:</b>	Dispute
<b>General Comments</b>	<input type="checkbox"/>
<p>Around 3 in the afternoon, ABF called an emergency meeting regarding the closure pour at W2. They were trying to brainstorm how to address the thermal expansion/contraction difference between the top flange and bottom flange of the OBG. According to their surveys, the difference between the top and bottom flange are upwards to a quarter inch.</p> <p>They are trying to find a way to 'lock-in' a zero-thermal-moment with the closure pour, because it is speculated that the closure pour in it's plastic state, will conform to the OBG as it expands and contracts throughout the day.</p> <p>They are also trying to determine if such a difference of a quarter inch will have a moment.</p> <p>Throughout the day, I tracked bolt test locations and documentation.          I also completed and submitted most of my diaries.</p>
