On this date, Quality Assurance Inspector (QAI) Robert A. DeArmond was present at the San Francisco Oakland Bay Bridge job site at Yerba Buena Island to observe and perform Non-Destructive testing for the San Francisco Oakland Bay Bridge (SFOBB) project. This Quality Assurance Inspector (QAI) observed the following work performed by American Bridge/Fluor Enterprises (AB/F) personnel at the locations noted below:

This QAI performed ultrasonic testing in tandem with ABF-QC personnel; during a joint venture pulse echo ultrasonic testing (PEUT) and indirect pitch catch ultrasonic testing (PCUT) of Electroslag welds. The purpose of this additional non-destructive weld evaluation is to further evaluate previously documented planar indications, therefore PEUT and PCUT test methods were utilized. All test locations were selected by ABF personnel, it should be noted; no specific PEUT and /or PCUT rejection, acceptance, and calibration criteria was specified, therefore this testing is for informational purposes only.

The following locations were scanned utilizing the PEUT and PCUT scanning technique, See Ultrasonic Test Reports for additional information

Location: M

Weld No.: W-042 Face A and B

Y Location: 6500

WELDING INSPECTION REPORT
