PART 3
MARKINGS

CHAPTER 3A. GENERAL

Section 3A.01 Functions and Limitations

Support:
01 Markings on highways and on private roads open to public travel (see definition in Section 1A.13) have important functions in providing guidance and information for the road user. Major marking types include pavement and curb markings, delineators, colored pavements, channelizing devices, and islands. In some cases, markings are used to supplement other traffic control devices such as signs, signals, and other markings. In other instances, markings are used alone to effectively convey regulations, guidance, or warnings in ways not obtainable by the use of other devices.

02 Markings have limitations. Visibility of the markings can be limited by snow, debris, and water on or adjacent to the markings. Marking durability is affected by material characteristics, traffic volumes, weather, and location. However, under most highway conditions, markings provide important information while allowing minimal diversion of attention from the roadway.

Section 3A.02 Standardization of Application

Standard:
01 Each standard marking shall be used only to convey the meaning prescribed for that marking in this Manual. When used for applications not described in this Manual, markings shall conform in all respects to the principles and standards set forth in this Manual.

Guidance:
02 Before any new highway, private road open to public travel (see definition in Section 1A.13), paved detour, or temporary route is opened to public travel, all necessary markings should be in place.

Standard:
03 Markings that must be visible at night shall be retroreflective unless ambient illumination assures that the markings are adequately visible. All markings on Interstate highways shall be retroreflective.

03a All longitudinal pavement markings shall be retroreflective except non-reflective pavement markers and directional markings for tourists. Refer to CVC 21374.

04 Markings that are no longer applicable for roadway conditions or restrictions and that might cause confusion for the road user shall be removed or obliterated to be unidentifiable as a marking as soon as practical.

Option:
05 Until they can be removed or obliterated, markings may be temporarily masked with tape that is approximately the same color as the pavement.

Guidance:
06 If used, the masking tape should match the pavement surface color and not provide undue contrast.

Support:
07 Use of black tape for temporary “masking” is effective for new Asphalt Concrete pavement. However, for faded Asphalt Concrete pavement or Portland Cement Concrete pavements, black “masking” pavement markings could appear as a stripe in low light conditions and result in confusion to road users.

Section 3A.03 Maintaining Minimum Pavement Marking Retroreflectivity

(This Section is reserved for future text based on FHWA rulemaking.)
Section 3A.04 Materials
Support:
01 Pavement and curb markings are commonly placed by using paints or thermoplastics; however, other suitable marking materials, including raised pavement markers and colored pavements, are also used. Delineators and channelizing devices are visibly placed in a vertical position similar to signs above the roadway.
02 Some marking systems consist of clumps or droplets of material with visible open spaces of bare pavement between the material droplets. These marking systems can function in a manner that is similar to the marking systems that completely cover the pavement surface and are suitable for use as pavement markings if they meet the other pavement marking requirements of the highway agency.

Guidance:
03 The materials used for markings should provide the specified color throughout their useful life.
04 Consideration should be given to selecting pavement marking materials that will minimize tripping or loss of traction for road users, including pedestrians, bicyclists, and motorcyclists.
05 Delineators should not present a vertical or horizontal clearance obstacle for pedestrians.

Section 3A.05 Colors
Standard:
01 Markings shall be yellow, white, red, blue, green or purple. The colors for markings shall conform to the standard highway colors. Black in conjunction with one of the colors mentioned in the first sentence of this paragraph shall be a usable color.
01a The color of curb markings shall conform to CVC 21458. Refer to CVC 21374 for exceptions.
02 When used, white markings for longitudinal lines shall delineate:
   A. The separation of traffic flows in the same direction, or
   B. The right-hand edge of the roadway.
03 When used, yellow markings for longitudinal lines shall delineate:
   A. The separation of traffic traveling in opposite directions,
   B. The left-hand edge of the roadways of divided highways and one-way streets or ramps, or
   C. The separation of two-way left-turn lanes and reversible lanes from other lanes.
04 When used, red raised pavement markers or delineators shall delineate:
   A. Truck escape ramps, or
   B. One-way roadways, ramps, or travel lanes that shall not be entered or used in the direction from which the markers are visible.

Support:
04a Red pavement markers are used to alert possible wrong way drivers on freeways as shown in Figure 3A-102(CA), Details 14 and 14A.
05 When used, blue markings shall supplement white markings for parking spaces for persons with disabilities.
06 When used, purple markings shall supplement lane line or edge line markings for toll plaza approach lanes that are restricted to use only by vehicles with registered electronic toll collection accounts.

Option:
07 Colors used for official route shield signs (see Section 2D.11) may be used as colors of symbol markings to simulate route shields on the pavement (see Section 3B.20.)
08 Black may be used in combination with the colors mentioned in the first sentence of Paragraph 1 where a light-colored pavement does not provide sufficient contrast with the markings.
08a If the material used for centerline marking is paint, a 3-inch wide black line may be placed between the 4-inch wide yellow lines on streets and highways under local jurisdiction.

Standard:
08b If the material used for centerline marking is paint, a 3-inch wide black line shall be placed between the 4-inch wide yellow lines on State highways.

Support:
09 When used in combination with other colors, black is not considered a marking color, but only a contrast-enhancing system for the markings.
Section 3A.06 Functions, Widths, and Patterns of Longitudinal Pavement Markings

Standard:
01 The general functions of longitudinal lines shall be:
   A. A double line indicates maximum or special restrictions,
   B. A solid line discourages or prohibits crossing (depending on the specific application),
   C. A broken line indicates a permissive condition, and
   D. A dotted line provides guidance or warning of a downstream change in lane function.
02 The widths and patterns of longitudinal lines shall be as follows:
   A. Normal line—4 to 6 inches wide.
   B. Wide line—at least twice the width of a normal line.
   C. Double line—two parallel lines separated by a discernible space.
   D. Broken line—normal line segments separated by gaps.
   E. Dotted line—noticeably shorter line segments separated by shorter gaps than used for a broken line.

Support:
03 The width of the line indicates the degree of emphasis.

Guidance:
04 Broken lines should consist of 10-foot line segments and 30-foot gaps, or dimensions in a similar ratio of line segments to gaps as appropriate for traffic speeds and need for delineation.

Support:
05 Patterns for dotted lines depend on the application (see Sections 3B.04 and 3B.08.)

Guidance:
06 A dotted line for line extensions within an intersection or taper area should consist of 2-foot line segments and 2- to 6-foot gaps. A dotted line used as a lane line should consist of 3-foot line segments and 9-foot gaps.

Standard:
07 The widths and patterns of longitudinal lines shall conform to the details shown in Figures 3A-101(CA) through 3A-113(CA).
**Figure 3A-101 (CA). Centerlines - 2 Lane Highways**

Figure 3A-102 (CA). Lane Lines - Multilane Highways

**FOR SPEEDS 40 mph OR LESS**

**DETAIL 8**

Lane Line pattern for use on multilane streets and highways (normally used on local streets and highways).

**DETAIL 9**

Lane Line pattern with pavement markers for use on multilane streets, highways and freeway ramps.

**DETAIL 10**

Lane Line pattern with pavement markers for use on multilane streets, highways and freeway ramps.

**FOR SPEEDS 45 mph OR MORE**

**DETAIL 11**

Lane Line pattern for use on multilane streets and highways (normally used on local streets and highways).

**DETAIL 12**

Lane Line pattern with pavement markers for use on multilane conventional streets and highways, State freeways, expressways, freeway ramps, freeway to freeway connectors and collector roads. See Detail 14A.

**DETAIL 13**

Lane Line pattern with pavement markers for use on State freeways, expressways, freeway ramps, freeway to freeway connectors and collector roads. See Detail 14.

**DETAIL 14**

Lane Line pattern with red-clear pavement markers shall be used on freeways approaching exit ramps. Detail 14 is used with Detail 13 and Detail 14A is used with Detail 12, in a pattern of four red-clear pavement markers, at intervals as shown.
