PREFACE

Traffic Trend

A comparison of the 2004 and 2003 annual traffic volume data shows that state highway travel increased in 2004. This year's increase in vehicle-miles of travel on California highways compares with prior years as follows:

2004 over 2003	1.6%*
2003 over 2002	2.1%
2002 over 2001	+2.8%
2001 over 2000	+2.6%
2000 over 1999	+3.2%
1999 over 1998	+1.9%
Annual Average Rate	+2.3%

* Preliminary

Traffic Profile

This booklet lists 2004 traffic volumes for all count locations on the California state highway system. Peak hours, peak month ADTs and annual ADTs are shown at each count location. Significant volume changes (breakpoints) in the traffic profile along each route are counted and identified by name and milepost value. In addition to the profile breakpoints, the booklet lists county lines and well-known landmarks to aid in orientation.

The figures shown in the booklet above each profile breakpoint apply to the highway immediately back of the breakpoint and the figures shown below apply immediately ahead of the breakpoint. Therefore, between any two successive breakpoints along the route it may be assumed that traffic volumes will vary from one breakpoint to the next at a reasonably uniform rate of increase or decrease. Where only a single set of figures appears between two breakpoints, a constant volume of traffic may be assumed for the intervening section of highway.

All traffic volume figures listed in this booklet include traffic in both directions unless otherwise indicated.

Route Number

All California state highways are listed in this booklet in order of Legislative Route number.

Milepost

Each profile breakpoint is identified by the milepost value corresponding to that point on the highway. The milepost values increase from the beginning of a route within a county to the next county line. The milepost values start over again at each county line. Milepost values usually increase from south to north or west to east depending upon the general direction the route follows within the state.

The milepost at a given location will remain the same year after year. When a section of road is relocated, new mileposts (usually noted by an alphabetical prefix such as "R" or "M") are established for it. If relocation results in a change in length, "milepost equations" are introduced at the end of each relocated portion so that mileposts on the remainder of the route within the county will remain unchanged.

Annual Average Daily Traffic (Annual ADT)

Annual average daily traffic is the total traffic volume for the year divided by 365 * days. The traffic count year is from October 1st through September 30th. Very few locations in California are actually counted continuously. Traffic counting is generally performed by electronic counting instruments moved from location to location throughout the State in a program of continuous traffic count sampling. The resulting counts are adjusted to an estimate of annual average daily traffic by

* The routes listed on page iv were closed during the year for one month or more. The locations are listed in three groups: A. Regular Winter Closure, B. Closure Due to Flooding, Mudslide or Washout, and C. Closure Due to Construction. The ADT shown reflects travel while the route is open.

compensating for seasonal influence, weekly variation and other variables which may be present. Annual ADT is necessary for presenting a statewide picture of traffic flow, evaluating traffic trends, computing accident rates, planning and designing highways and other purposes.

Peak Month ADT

The peak month ADT is the average daily traffic for the month of heaviest traffic flow. This data is obtained because on many routes, high traffic volumes which occur during a certain season of the year are more representative of traffic conditions than the annual ADT.

Peak Hour

This publication includes an estimate of the "peak hour" traffic at all points on the state highway system. This value is useful to traffic engineers in estimating the amount of congestion experienced, and shows how near to capacity the highway is operating. Unless otherwise indicated, peak hour values indicate the volume in both directions.

A few hours each year are higher than the "peak hour", but not many. In urban and suburban areas, the peak hour normally occurs every weekday, and 200 or more hours will all be about the same. On roads with large seasonal fluctuations in traffic, the peak hour is the hour near the maximum for the year but excluding a few (30 to 50 hours) that are exceedingly high and are not typical of the frequency of the high hours occurring during the season.

Peak Hour Traffic Directional Split

The Peak Hour Traffic Directional Split listing is given after the last route. The listing is by district, route, control station, milepost, leg, one-way peak hour volume (1-way PHV) and shows the 2-way peak hour percent of AADT (K Factor), the percent traffic in the peak direction (D Factor), the 1-way peak hour percent of AADT (KD Factor), the ending hour, day, and month for the AM and the PM peak hours. The data given is for the latest year available at each of the control stations counted in the last three years. A glossary is also included.

Route Location/Miles Closed

A. Regular Winter Closure

- 2 .1 mile east of Kratka Ridge Skilift to Vincent Gap, 11.7 miles.
- 4 Ebbetts Pass, Mt. Reba Road to Jct. Route 89, 29 miles.
- 89 Monitor Pass, Jct. Route 395 to Jct. Route 4, 17.5 miles.
- 108 Sonora Pass, 6 miles east of Strawberry to 7 miles west of Jct. Route 395, 35 miles.
- 120 Tioga Pass, Crane Flat to 5 miles west of Jct. Route 395, 55 miles.
- 120 Mono-Mills Road, 2 miles east of Jct. Route 395 to 6 miles west of Jct. Route 6, 37.6 miles.
- 158 June Lake Loop, Powerhouse to north Jct. Route 395, 8.6 miles.
- 168 Bishop Creek Road, Aspendell to Lake Sabrina, 1.25 miles.
- 172 Mill Creek, Mill Creek P.O. to east Jct. Route 36, 3.2 miles.
- 173 Deer Park Road to Hesperia Road, 1.6 miles.
- 180 Kings Canyon National Park, Hume Lake Road to Deer Cove Creek, 19.8 miles.
- 203 Mammoth Lakes Road, Beginning at Mno/Mad. County line to 1 mile east, 1 mile.

B. Landslide

- 18 San Bernardino County, between Highway 138 and Highway 189.

ACCURACY LIMITS OF AVERAGE DAILY TRAFFIC (ADT)

ADT

The graph shows the percent deviation that can occur for various volumes. If the estimated ADT was compared to an average based on a 365-day count, it probably would be different, but for 90 out of 100 times the percent variation would not be larger than that shown above.
